disclose. Thus, to consider the 'objects' of universal experience as entirely sundered from, or independent of, all subjects, to regard the phenomena of science as the phenomena *per se*, however convenient and harmless it may be for purposes of ordinary discourse and practical scientific investigation and description, is epistemologically false, or, rather, nonsensical. Yet it is precisely by the erection of this colloquial fiction into an epistemological principle that materialism and all kindred forms of thought obtain a fixed foundation. Experience—the only ultimate *datum*, the one thing which cannot be doubted or explained away without involving the assertion of its reality—is always essentially a duality in unity, subjective and objective; either aspect without the other is an impossibility. Science can ignore—so long as it confines itself to its own business—the one element in experience, the subjective, though of course its whole procedure involves subjective activity; and it ignores it so completely that its students have sometimes come to look upon what they have agreed to leave out of sight (it being none of their business) as non-existent. Objects come to be talked of as if they were really subjectless; their independence, their priority, their exclusive reality come to be affirmed. The scientist, leaving himself out of account at the beginning, cannot discover himself at the end; he is thus led to think that his own mind, which has largely shaped his phenomena and made them what they are for him, is but an illusion, an effect, an epi-phenomenon, a shadow cast by the machinery that he is engaged in contemplating. It is small wonder that, when science, without raising the previous question as to the nature of experience and the implications and presuppositions of knowledge, sets out in quest of a metaphysic, it should land in materialism. It is just as natural that, setting out forearmed with knowledge of the elements of the science of knowledge, it should come, when it seeks a metaphysic at all, to adopt the opposite creed of spiritualism.

Once, then, the materialist is allowed the right to talk of objects without implicated subjects, of 'purely objective' facts, of phenomena *per se*, he can proceed to lay before us an array of imposing facts and arguments which, from the standpoint conceded to him, are as irrefutable as they are impressive. But, once the epistemological assumption that objects, as known to us, can exist to be known independently of all experiencing subjects is shown to be impossible, the tables are turned. Not only do the arguments in question lose all their apparent force, but consciousness, which materialism would resolve into an epi-phenomenal effect or property of self-existent matter, is seen to be the primary reality, and matter as we know it is shown to be a conceptual construction of mind. Materialism, we conclude, misunderstands human experience, in which subjective and objective form one whole, while they are gradually differentiated only through increasingly complicated processes of conceptual distinction. The objective, moreover, is not to be identified with the material, as if these were convertible terms. Matter is a conceptual abstraction from experience, and so cannot be taken for the ground or source thereof. Atoms, again, are only figurative ideas; and that they have to be endowed with the very attributes which, in gross matter, they were invented to explain, if not indeed with attributes that contradict all observation, is a sufficient warning against adoption of the naively realistic view that they are corporeal or material particles.

Materialism also involves the old and obsolete assumption that the so-called secondary characters of matter (colour, tone, odour, etc.) are fundamen-

tally different from the so-called primary (extension, impenetrability, etc.). It was one of G. Berkeley's great contributions to philosophy to show that this distinction is untenable. The secondary qualities of matter have been generally admitted to be 'in our mind' and not 'in matter.' But on closer examination it is to be seen that the primary qualities are in precisely the same case. Our idea of extension, for instance, is gained only through touch or sight; and the perceived 'size' of a body depends on our distance from it. That a material object is of the same size, though at one time it may appear larger and at another smaller to a percipient, is an inference, and involves the revision of the evidence of our senses by reasoning. The extension which we attribute to a physical object, then, is inferred, and not perceived, extension; and, if we abstract from our idea of extension the sensation-elements supplied by touch or sight, nothing remains. Therefore matter possesses extension no more than it possesses colour, except as perceived by our minds. If, then, there be anything at all (which Berkeley denied) other than our minds and the direct action of God upon them which causes the sensations whence our idea of extension (or any other quality of matter) is derived, it is obvious that this something cannot be matter as it is perceived. There may be what J. S. Mill called a 'permanent possibility of sensation' independent of us, whose *esse* is not *percipi*; but, if there be, it is an entity wholly different from the 'matter' of physical science and common sense, and, for all we know, may just as aptly be described as mind or spirit. We can, therefore, without self-contradiction ascribe our sensations to God (Berkeley) or to other spiritual existences (pluralism); but we cannot ascribe them to matter as perceived. Either of the views just mentioned would explain our experience; and, unless we ascribe our sensations to the influence of other spiritual existences endowed with 'being for self,' we cannot but assume, with Berkeley, that the noumenal matter, the substratum of sensations, the substance which constitutes the permanent possibility of sensation, is but a medium or means existing solely for our sakes, and one which, from a theist's point of view, must seem superfluous. The concept of matter, then, is built on the basis of sense-impressions; and materialism uses this manifestly conceptual construction to explain the origin of sense-impressions. It thus seeks to derive the undervived from the derived.

There are several other inconsistencies involved in materialistic doctrine, one or two of which may briefly be mentioned. Materialism implies that everything which happens and is accompanied by consciousness of its happening would happen equally well without consciousness; or, in other words, that consciousness makes no difference to the course of the world. But, if so, it is difficult, on the theory of evolution by survival of the fittest, which is the current scientific explanation of the origin and permanence of every organ and every function, as well as of every individual organism and every species, to account for the emergence, and still more for the development, of mind. Materialism, again, of the more thoroughgoing type, regards consciousness as the product or effect of matter, while cherishing the principle of *ex nihilo nihil fit* in its application to what physicists call 'energy.' The law of the Conservation of Energy is often held—though doubtless quite erroneously—to assert that not only is there quantitative equivalence between the energy which, in any physical change, disappears in one form and that which appears in another, but also that the sum-total of energy in the universe is constant. The latter, and illegitimate, part of the generalization

has been a tenet of materialists; and it is difficult to reconcile it with their assertion that mental phenomena are caused by material. For in every such production of consciousness a disappearance of physical energy should take place, unless energy is also attributable to consciousness. The last view is so objectionable on many grounds to materialists, partly because it opens the possibility that mind can produce physical effects, that they have avoided working it out. Lastly, it is generally admitted that materialism cannot explain even the simplest type of conscious process. The difficulty of conceiving how a sensation or a feeling could be the necessary consequence or effect of motion in matter or mass-points, and of imagining how mathematical physics would cope with such a possibility, is overwhelming; and, of course, it has never been faced.

4. Recent substitutes for materialism: hylozoism.—It is not surprising, under the pressure of all these difficulties and in the light of the self-criticism to which the structure of physical science has of late been subjected, that materialism should at the present time be a practically abandoned philosophical theory. Useful as a method, it is wanting as a metaphysic; and representatives of natural science with a leaning towards metaphysical speculation and a preference for materialistic terminology adopt in its stead a monism which has much in common with the ancient doctrine of hylozoism, according to which all matter is not inert—as mathematical physics asserts for its necessary postulate—but living. Thus J. Tyndall was willing to endow primordial matter with 'the promise and potency of life'; and W. K. Clifford, in his 'mind-dust' hypothesis, and Haeckel, in his imaginative theory of atoms indwelt by rudimentary souls, go yet further, and couple hylozoism with pan-psychism.

Hylozoism is as ancient as the Ionian school of Greek philosophy, and was taught in a crude form by Thales. The Stoic doctrine of a world-soul is another form of it, revived and developed by several thinkers in the period of the Renaissance (Paracelsus, Telesio, Bruno, etc.). Hylozoism reappears again in the writings of the Cambridge Platonists (*q.v.*), as well as in the speculations of philosophers such as J. B. Robinet and G. T. Fechner; and pan-psychism—the view that all matter is psychical or has a psychical aspect—which was held by Spinoza ('omnia quamvis diversis gradibus animata' [*Ethics*, ii. prop. xiii. note]) and Leibniz, is common to the numerous advocates whom pluralism finds at the present day. It is doubtful whether hylozoism, with its assertion that all matter is organized or living, can be maintained without the further assumption of pan-psychism, that the real elements of the world, and all that we call 'things,' are psychical entities endowed with 'being for self'; and, indeed, many writers seem to use the term 'hylozoism' as if it included the latter doctrine. But, without this added implication, and taken in the etymological sense alone, hylozoism involves the repudiation of most of the consequences drawn from rigid materialism. For it denies the inertia of matter and the statement that motion is exclusively caused by external forces, crediting material bodies with capacity for self-movement, and regarding life as an inherent or essential property of all matter as such. Thus, as Kant saw, hylozoism is the death-blow to science—'science' being understood, as Kant understood it, to mean *a priori* pure or mathematical physics. The latter kind of knowledge being assumed by Kant to be necessary and universal, he could write thus:

'The possibility of living matter cannot even be thought; its concept involves a contradiction because lifelessness, *inertia*, constitutes the essential character of matter' (*Kritik of Judgment*, tr. J. H. Bernard, London, 1892, p. 304).

While Kant thus saw that hylozoism meant run to science in so far as it involves the calculability (by an intelligence higher than ours, though strictly finite like that imagined by Laplace) of all past and future states of the world from a sufficient knowledge of the position and motion of each of its mass-points at any given moment, modern upholders of the mind-stuff hypothesis, and of Haeckel's hylozoistic or pan-psychic theory, have not been so clear-sighted. They would retain materialism, for all intents and purposes, while changing its name. Qualitative monism is, indeed, in all its forms a position of unstable equilibrium; or, to change the metaphor, it is a half-way house (for temporary lodging) between materialism and spiritualism. And, as retreat upon materialism becomes more and more impossible, as hylozoism is seen to possess greater capacity to explain actuality than the doctrine of dead and absolutely inert matter, and as, finally, life means the power to act or change according to an internal principle, while only one such principle is known to us—*i.e.* thought, together with feeling, desire, and will, which depend upon it—it will doubtless come to be more and more plainly seen that the implications of natural science are not materialistic but spiritualistic.

Ward, *Naturalism and Agnosticism*, London, 1907 (for epistemological questions involved); O. Külpe, *Introduction to Philosophy*, Eng. tr., do. 1897.

F. R. TENNANT.

MATERIALISM (Chinese).—Chinese religion and philosophy have been declared by many writers to be materialistic; one of them¹ went even so far as to regard materialism as a special creed taking rank with Confucianism, Taoism, and Buddhism. This view implies a misconception of materialism: a philosopher who does not believe in a personal God, or who assigns to a Supreme Being a substantial body, is not a materialist. Materialism assumes matter to be the only basis of reality. This is 'cosmological materialism,' to be distinguished from 'ethical materialism,' which sees the aim of life in egotism, pleasure, and sensuality. Both are to be found in China, but they are not at the root of her great religious systems, although materialistic tendencies may be found occasionally. Nobody will seriously think of imputing materialism to the Buddhist faith, which teaches that the visible world is nothing but a semblance, a vision without any reality. Taoism takes a similar view-point: there exists nothing except Tao, the Absolute, a supernatural, incomprehensible entity. But how about Confucianism, which has often been described as materialistic?

Confucius himself owned to a 'benevolent agnosticism,' declining all metaphysical speculations, but was not averse to popular beliefs and customs. To a disciple asking him about death he replied, 'While you do not know life, how can you know about death?' and on another occasion he made the remark, 'Show respect to the spirits, but keep aloof from them.'² He believed in a superior being which he called Heaven, but never used the personal name God—a fact by which he laid himself open to the charge of atheism. Probably he had no clear notion of heaven, but certainly he did not conceive it as an anthropomorphic god. Still more than Confucius himself his followers, especially the philosophers of the Sung period (12th cent. A.D.), have been denounced as materialists, but unjustly. The system of Chu Hsi, the head of this school, is a pure dualism. He recognizes two principles, matter and reason, and to the latter

even concedes priority. Out of their combination the world was evolved. Matter splits into the five elements (metal, wood, water, fire, and earth); reason is the life- and mind-producing element, which also contains the virtues (benevolence, righteousness, propriety, and knowledge).

Another kind of dualism savouring much of materialism was in vogue in ancient China, and seems to have been the starting-point of Chu Hsi's philosophy. At the earlier stages of civilization religion, philosophy, and sciences are usually not yet separated. So it was in China, where we meet with the dualistic theory of *yin* and *yang* in Confucian as well as in Taoist works. It was the first germ of a natural philosophy universally accepted by the Chinese irrespective of their religious convictions or philosophic ideas. In the commentary to the *Yi King* ascribed to Tse-sse, the grandson of Confucius (5th cent. B.C.), we read that the origin of existence is due to the cosmic dual forces *yin* and *yang*; *yang* is the bright, male, generative principle, *yin* the dark, female, and receptive power; *yang* forms the heaven, *yin* the earth. Most Chinese critics look upon these principles as material substances—an interpretation open to doubt. But we have another testimony by the Taoist writer Lieh-tse of the same time, showing that he at least considered the *yin* and the *yang* to be substances. The evolution theory, though not quite scientific, reminds us of that of modern naturalists.

'The sages of old held that the Yang and the Yin govern heaven and earth. Now, form being born out of the formless, from what do heaven and earth take their origin? It is said: There was a great evolution, a great inception, a great beginning, and a great homogeneity. During the great evolution, Vapours were still imperceptible, in the great inception Vapours originate, in the great beginning Forms appear, and during the great homogeneity Substances are produced. The pure and light matter becomes the heaven above, the turbid and heavy matter forms the earth below' (Lieh-tse, 1, 27).

No divine being intervenes in the creation of the world, and yet we are not justified in calling Lieh-tse a materialist, for, notwithstanding this materialistic theory, the highest principle remains Tao, a spiritual being which alone is endowed with reality; the world with all its changes is imaginary.

At an early age the Chinese had further developed this dualistic theory of *yin* and *yang* by enlarging on the working of the five elements which were conceived as physical and as metaphysical essences as well. They were believed to predominate and vanquish one another in regular turns, thus bringing about the four seasons: in spring the element wood reigns supreme, in summer fire, in autumn metal, and in winter water; to earth there is no corresponding season. The elements have their seat in different directions: wood in the east, fire in the south, earth in the centre, metal in the west, and water in the north. They are ruled by five deities, the genii of the seasons and the four quarters.

Whereas this attempt at natural philosophy is nothing but a medley of heterogeneous, more or less fanciful, thoughts, the old dualistic theory was transformed into a consistent materialistic system by the sceptic Wang Ch'ung (1st cent. A.D.). From various utterances it would appear that he thought of *yang* as a fiery and of *yin* as a watery element. The former produced the sun, the moon, and the other stars of heaven, while from water and its sediments earth, the oceans, and the atmosphere were developed. Both fluids are in constant motion, but their movement is not governed by any intelligence or subservient to the purpose of any *spiritus rector*; it is spontaneous and regulated solely by its own inherent natural laws; heaven and earth do not act on purpose, nor are they endowed with consciousness. Wang Ch'ung rejects all anthropomorphisms which have clustered

¹ H. A. Giles, *Religions of Ancient China*.

² *Anal.* xi 11, vi. 20.

round the idea of heaven or God. The human body is formed of the two fluids, the *yin* producing the body, and the *yang* the vital spirit and the mind. At death they again disperse, the *yang*, or heavenly fluid, returning to its original state of unconsciousness. Consequently there can be no immortality, which Chu Hsi likewise disclaims.

Wang Ch'ung's materialism has not had any serious influence on the Chinese people, not because they had a horror of materialism, as many Westerners have, but owing to Wang Ch'ung's bold criticisms on the national sages, Confucius and Mencius, which they have never condoned. So far as we know, Wang Ch'ung is the only Chinese thinker who set forth a scientific system of cosmological materialism.

Already in the 4th cent. B.C. ethical materialism found an advocate in Yang Chu, the philosopher of egoism and pessimism. He maintains that in human life happiness is far exceeded by misfortune, and that this is the result of the badness of the world and of men's own doing. The practice of virtue is of no avail, because in this world the wicked thrive, and the virtuous are visited with disasters. Therefore men ought not to harass themselves in striving after unattainable or useless aims such as wealth, honour, or fame, or sacrifice themselves for others, but should enjoy their short span and be satisfied with the good that they have, for with death everything ends. In consequence of the vehement impeachments of Mencius this doctrine has never got a hold on the Chinese mind.

Both Yang Chu and Wang Ch'ung have been long buried in oblivion, until they were redeemed from it by the congenial interest of foreign admirers.

MATERIALISM (Indian).—I. We possess several comparatively modern works which set forth the various philosophic systems of India—e.g., *Summary of all the Systems*,¹ and *Reunion of the Six Systems*.² The systems are arranged in the order of their increasing orthodoxy, from the author's point of view: the first, for which, as we shall see, materialism is a suitable name, is the worst of all, and the only one which is expressly in contradiction with the general conception of Indian philosophy and mysticism.

In more ancient sources—in the *Mahābhārata*, on the one side, and in the Buddhist scriptures, canonical or scholastic, on the other—we find data concerning this materialistic system which are scanty but generally in agreement.³

As regards the sources that would give us direct

¹ Skr. text, ed. Calcutta, 1858, and Poona, 1906; *The Sarva-darsana-samgraha, or Review of the different Systems of Hindu Philosophy*, by Mādhavāchārya (A.D. 1331), tr. E. B. Cowell and A. E. Gough, London, 1882; Germ. tr. (which owes much to Cowell's work, but does not mention it) in P. Deussen, *Allgemeine Geschichte der Philosophie*, i. iii. (Leipzig, 1908).

² *Saddarsanasa-mucchedaya*, by Haribhadra († A.D. 528), ed. L. Sual, Calcutta, 1905 (the chapter which interests us has been translated into French by L. Sual, in *Museon*, ix. [1908] 277 ff.); among the other 'modern' sources is the *Prabodhachandrodāya*, xxvii. 18 (11th cent.).

³ For the *Mahābhārata* see E. W. Hopkins, *The Great Epic of India*, New York, 1901, and the works on materialism cited in the bibliography; *Bhagavad-Gītā*, xvi. 6 (tr. L. D. Barnett, Temple Classics Series, London, 1905, p. 158).

information about the materialist school only a few citations can be brought forward, and their authenticity is not certain.¹

We are not convinced that a materialistic 'school,' a 'system,' in the exact sense of the word, existed. There have been 'materialists' who have entertained some very well-defined theories, to whom the 'spiritualists,' whether Brāhmins, Buddhists, or Jains, give different names, and whose opinions are, perhaps artificially, grouped in the works of which we have spoken.

The most characteristic name is Nāstikas, literally 'deniers,' 'misbelievers,' those who say *na asti*, *οὐκ ἔστι*.² The most famous are (a) Chārvākas (difficult to interpret; Chārvāka is said to be the founder of the sect; he is undoubtedly the demoniac ogre spoken of in the *Mahābhārata*);³ (b) Lokāyatas,⁴ 'worldly,' 'spread throughout the world' (a term which, according to T. W. Rhys Davids, denotes primarily the knowledge of nature, and whose adherents are said to be the 'explainers of [the genesis of] the world'); and (c) Bārhaspatyas, 'disciples of Bṛhaspati' (the chaplain of the Vedic gods and the lord of wisdom).

2. In the Buddhist *Suttas* the doctrine of materialism is attributed to 'Ajita of the garment of hair,' one of the scholars and famous ascetics of the time of Buddha. He said:

'There is no such thing as alms or sacrifice or offering. There is neither fruit nor result of good and evil deeds. There is no such thing as this world or the next. There is neither father nor mother, nor beings springing into life without them. There are in the world no recluses or Brāhmins . . . who, having understood and realised, by themselves alone, both this world and the next, make their wisdom known to others. A human being is built up of the four elements. When he dies, the earthy in him returns and relapses to the earth, the fluid to the water, the heat to the fire, the windy to the air, and his faculties [=the five senses, and the mind as a sixth] pass into space [or ether]. The four bearers, on the bier as a fifth, take his dead body away; till they reach the burning-ground men utter forth eulogies, but there his bones are bleached, and his offerings end in ashes. It is a doctrine of fools, this talk of gifts. It is an empty lie, mere idle talk, when men say there is profit therein. Fools and wise alike, on the dissolution of the body, are cut off, annihilated, and after death they are not.'⁵

It will be seen (1) that these formulæ show a really authentic character. They are quite independent of Buddhism, for the Buddhists do not believe much more than Ajita in the use of sacrifice and offering. Perhaps they come from the Agnikas or Jātilas (ascetics who give burnt offerings, who have braided hair), who entered in large numbers

¹ Citations in the 'summaries' mentioned in notes 1 and 2 on previous col.; and also in the Buddhist sources (see p. 494, n. 4).

² *Mātrī Upaniṣad*, Manu, *Mahābhārata*; the name originally extended to all kinds of sceptics, deniers of the Vedic gods, or of the Brāhmanic laws (see below).

³ See O. Böhtlingk and R. Roth, *Sanskrit-Wörterbuch*, Petrograd, 1855-75, ii. 997.

⁴ See Rhys Davids, *Dialogues of the Buddha*, i. (Oxford, 1899) 14, 110, 139, 166. O. Bendall (*Athenaeum*, 30th June 1900) rightly remarks that Rhys Davids is wrong in saying: 'Of the real existence of a school of philosophy that called itself by the name [Lokāyata] there is no trace.' The traces are numerous. See also art. LOKĀYATA.

⁵ *Dīgha Nikāya*, i. 55; *Samyutta Nikāya*, iii. 807; *Majjhima Nikāya*, i. 515, and also in the Sanskrit sources. This passage has often been translated. The version reproduced above is that of Rhys Davids, *Dialogues of the Buddha*, i. 78. Attention should be drawn to those of E. Burnout (*Le Lotus de la bonne loi*, Paris, 1852), P. Grimblot (*Sept Suttas pālis*, do. 1876), and R. O. Franke (*Dīghanikāya in Auswahl übersetzt*, Göttingen, 1913). The sacred writings of the Jains contain the same evidence, and confirm the Buddhist tradition (see H. Jacobi, *Jaina Sūtras*, ii. pp. xxiii, 389, 343; *SBE* xiv. [1895]).

A more complete study would describe the opinions of Pūraṇa Kassapa, another materialist contemporary with Buddha (*Dīgha*, i. 52), who denies responsibility, and teaches what is called the 'theory of non-action': 'If with a discus with an edge sharp as a razor he should make all living creatures on the earth one heap, one mass of flesh, there would be no guilt thence resulting, no increase of guilt would ensue'; and the opinions of Makkhali, who denies liberty: 'There is no such thing as power or energy, or human strength or human vigour. . . . Beings are bent this way and that by their fate, by their individual nature,' and comes very near the well-known point of view of the *Mahābhārata*, namely, the omnipotence of fate (*daiva*) and the weakness of human activity (*puruṣakāra*). It was Buddha who said that fate (*daiva*) is only the sum of our former actions.

into the primitive community, and for whom the time of novitiate was shortened 'because they believed in the retribution of actions.'

(2) Ajita does not believe in life after death or re-birth; he believes only in the four elements, earth, water, heat, wind, conceived in a materialistic sense; he therefore denies the fifth element, consciousness or cognition (*vyñāna*), which, under different names and in different manners, constitutes, in the 'orthodox' or 'spiritualistic' systems, the essential of what the West calls the 'soul'.¹ The doctrine attributed to the materialists by later sources, viz. that 'thought develops in the human body from a special mixture of the elements like the intoxicating power of the fermentation of the grain or of the juice of the sugarcane,' arises quite naturally from this ancient theory of Ajita.

(3) Ajita denies the fruit of good and bad actions, and, consequently, morality. He is a Nāstika, a 'denier.' He certainly denies sacrifice, supernatural births, etc., but, of all these denials, the denial of the remuneration of good and bad actions is the most monstrous. The Buddhist works teach that false opinion (*mithyādr̥ṣṭi*) consists essentially in this denial, which destroys the 'roots of merit' and causes a man to commit all kinds of sin.²

Ajita seems to have led an ascetic life; but 'unbelievers,' 'deniers,' are usually 'libertines,' if we believe our sources, which attribute to them sayings like the following:

'As long as we live we ought to live happily, enjoying the pleasures of the senses. How can the body reappear after it has been reduced to ashes?'

3. What leads us to believe that there was, properly speaking, a materialist school, is the double philosophical theory that our texts attribute to the deniers.

(a) 'The only means of knowledge (*pramāṇa*) is the immediate evidence of the senses.' All orthodox Indian schools are wrong in appealing to induction (*anumāna*) or to authority (the word of a competent person, of an omniscient being [*sarvajña*], or of the Veda).

A sentence belonging to the literature of the materialists says: 'There is nothing in man except what is visible to the senses. Look, dear friend, at what these so-called scholars call the traces of the wolf.'⁴ A man who wanted to convert—let us say 'pervert'—a woman to his materialist opinions, went out of the town with her, and on the dust of the road he drew with the thumbs, index fingers, and middle fingers of his two hands, marks resembling the footprints of a wolf. In the morning the scholars said: 'Assuredly a wolf came last night from the forest; for otherwise it would be impossible that there could be a wolf's footprints on the road.' And the man said to the woman: 'See, dear friend, what clever thinkers these men are who maintain that induction proves the existence of supra-sensible objects, and who are regarded as scholars by the crowd.'

(b) Denying induction, these philosophers without philosophy are forced to deny causality. The name Svābhāvika is given to the scholars who

¹ Among the questions which the Buddha refused to examine (see *AGASTYISM* [Buddhist], vol. i. p. 221) occurs this one: 'Is the vital principle (*jīva*) the same thing as the body (*śarīra*)? Is it different from the body?' The Buddha condemns the two opposite opinions and constructs a middle way.

In order to exhaust the Pāli material on the question of materialism, one must read also the *Pāṇḍi Suttanta* (see the tr. in Rhys Davids, *op. cit.* II. 347), in which there is a discussion not only on the existence of another world, gods, etc., but also on the existence of the soul.

² See *Abhidharmakośabhāṣya*, ch. iv., tr. in *Museon*, xv. [1914] 81.

³ *Śāṅkaraśāstra-mūlchaya*; see *Museon*, ix. [1908] 282.

⁴ *Lokātattvanirṇaya* (*Giorn. Soc. asiat. ital.* xvii. [1905] 290); *Śāṅkaraśāstra-mūlchaya*, in *Museon*, ix. 380; *Madhyamakavṛṭṭi*, Petrograd, 1908, p. 360; *Madhyamakavāṭāra*, do. 1909, p. 209.

believe that things, the colour of the lotus and the sharpness of thorns, are born from the *svābhāva*, 'own nature.' Much could be said on the exact value of this word; it probably means: 'Things are not produced by causes; they are because they are.'

L. DE LA VALLÉE POUSSIN.

MATHURĀ (Muttra).—The name Mathurā, or Muttra, is borne by both a district and a town in the United Provinces of Agra and Oudh. The District (1445 sq. m.) lies to the north of the Agra District, and includes many places sacred to the worship of Kṛṣṇa, the most notable being the small towns of Brindāban, Gobardhan, Gokul, and Mahāban (*qq.v.*). Mathurā town or city stands on the right bank of the Jumnā, on the main road from Agra to Delhi, in 27° 30' N., 77° 41' E. (pop. in 1901, 60,042). The city, which is of immemorial antiquity, was placed by early Hindu writers in the country of the Saurasenā, and was reckoned by Ptolemy (c. A.D. 140) to be one of the three cities of the Kaspeiraioi. He calls it Modoura (*Mōdoura*), 'the city of the gods' (VII. i. 50). Arrian writes the name as Methora (*Méthopa* [*India*, viii. 5]), and Pliny (*HN* vi. 19) uses the same spelling. An alternative Hindu literary name was Madhupura, now represented by the village Maholi, which 'is so close to the city as almost to form one of its suburbs' (Growse, *Memoir*, p. 4). Aurangzib, who destroyed the temples, changed the name to Islāmābad or Islāmpur (*ib.* pp. 6, 35), but the new name never became current (see *Num. Chron.*, 4th ser., ii. [1902] 282). The city was plundered by Mahmūd of Ghazni in A.D. 1018-19 and again by Ahmad Shāh Durrānī in 1757. The greater part of the District came under British rule in 1803.

Mathurā, one of the seven sacred cities of the Hindus, is second only to Benares (*q.v.*) in sanctity. The city and the western half of the District, known as the Braj-mandal, are now associated almost exclusively with the legend and cult of the cow-herd demi-god Kṛṣṇa, but in ancient days the locality was as sacred to Jains and Buddhists as it was to Brāhmanical Hindus. The literature concerning the religious history and antiquities of Mathurā is extensive, and new objects of interest are constantly coming to light. It is impossible here to do more than indicate the importance of the locality in the history of Indian religions and the exceptional interest of the broken remains which have escaped from repeated Muslim violence.

Mathurā, being situated between the Muhammadan capitals of Agra and Delhi, was specially exposed for centuries to iconoclastic attacks. Hardly any ancient Hindu building of importance is now standing, and the valuable sculptures which make the district famous among archaeologists have mostly been discovered by excavation. The sculptures and remains of buildings in an extremely fragmentary state are found in the city and for many miles round.

¹ On the Svābhāvavādīnā or Svābhāvika see O. Strauss, *Ethische Probleme aus dem Mahābhārata*, Florence, 1912, p. 242; *Buddhacharita*, ix. 48 (*SBE* xlix. [1894] 99), and C. Formichi, *Acavaghoṣa poeta del Buddhismo*, Bari, 1912, p. 231; *Madhyamakavāṭāra*, p. 205, tr. in *Museon*, xii. [1911] 258 ff.; *Bodhicaryāvatāra*, Calcutta, 1911, p. 541 (*ix.* 117); *Gauḍapādakārikā*, Poona, 1900; *Bull. de l'Ecole française d'Extrême-Orient*, iv. [1904] 1018; on the Svābhāvika sect in Nepal see B. H. Hodgson, *Essays on Languages, Literature, Religion of Nepal and Tibet*, London, 1874.

The objects connected with the Jain cult have been discovered for the most part in the Kankālī or Jainī Tīlā (mound) to the S.W. of the city, which was the site of two Jain temples, one Digambara and the other Śvetāmbara, as well as of a remarkable *stūpa*, the only Jain monument of the kind about which details are known. In its earliest form it dated from remote antiquity, possibly from 600 or even 700 B.C. The Jain faith was vigorous in the Kushān period early in the Christian era, and the images found came down to the 11th century. At the present day Jains are few and unpopular in the Mathurā District, their principal settlement being at Kosi, where there are three temples.

The numerous Buddhist remains, which are of great interest, disclose the former existence of an important monastery founded by Huvīṣka Kushān, probably early in the 2nd cent. after Christ. In Fa-Hian's time (A.D. 405) there were twenty Buddhist monasteries with some 3000 monks in the neighbourhood of Mathurā. When Hiuen Tsiang travelled, more than two centuries later, the number of monks had diminished. The Muhammadan attacks from A.D. 1018 onwards wiped out the Buddhist establishments. There are plain indications that the popular Buddhism of Mathurā included a sensual erotic element, which probably has contributed to the subsequent development of the Rādhā and Kṛṣṇa worship now specially associated with the Mathurā region. Nāga worship was much practised during the Kushān period.

Brāhmanical Hinduism appears to be the most ancient of the Mathurā religions. The Greek writers call the chief local god by the name of Herakles, and the sculpture representing the fight of Herakles with the Nemean lion is one of the most famous of Mathurā antiquities.

The temple of Kesava Deva at the Katrā on the western side of the city, rebuilt early in the 17th cent., was described by J. B. Tavernier (c. A.D. 1650; *Travels in India*, tr. V. Ball, London, 1889, ii. 240) as 'one of the most sumptuous buildings in all India.' Aurangzib destroyed it in 1669, and built a mosque on the site. All the old Hindu temples in the city were destroyed by the Muhammadans at one time or another.

Archæological evidence shows that the cultus of Kṛṣṇa was well established as early as the 4th and 5th cent. after Christ (Bhitari inscr. of Skandagupta, c. A.D. 456; sculptures at Mandōr in Mārwar [*Arch. Surv. Ann. Rep.*, 1905-06, p. 140]), but the Vaiṣṇava cultus of Mathurā in its present form was not developed until the close of the 16th cent. under the influence of the Bengālī Gosāins of Brindāban. The history and character of the cult are well described by Growse, to whose book the reader is referred. The great temple of Viṣṇu under the name of Rang Jī, built between 1845 and 1851 by local merchant princes, is remarkable for being designed on Dravidian lines. It cost 4½ millions of rupees. The notorious erotic sect of Vaiṣṇavas founded by Vallabhāchārya (q.v.) (born A.D. 1479) has its headquarters in the town of Gokul.

Three Christian missions (Baptist, Church Missionary, and Methodist Episcopal) are established in the city.

VINCENT A. SMITH.

MĀTRCHĒṬĀ.—Mātrchēṭa is the name of a Buddhist author, identified by the Tibetan historian of Buddhism, Tāranātha, with Āsvaghōṣa, concerning whom and the identification itself see art. ĀSVAGHOṢA and the works there mentioned. It may be pointed out that the identification is made only by Tāranātha, while a much older writer, the Chinese traveller I-tsing (2nd half of 7th cent. A.D.), plainly distinguishes the two authors; further, the ascriptions of works seem not to betray either in the Chinese tradition or, with one exception (see *Kaṇḍavāchana-samuchchaya*, ed. F. W. Thomas, in *Bibliotheca Indica*, new ser., no. 1309, pp. 25-29), in the Tibetan any confusion. The sole reason for the identification is the fact that both writers stood in relation to Kaniṣka. But this reason will be seen upon reflexion to have actually a contrary bearing; for nothing is more certain concerning Āsvaghōṣa than that he was a figure at the court of Kaniṣka, whereas we have an epistle from Mātrchēṭa declining, upon grounds of old age and sickness, to visit the king. Perhaps this is the reason why Tāranātha, identifying the two poets, makes an untenable distinction between the Kaniṣka of Āsvaghōṣa and the Kanika of Mātrchēṭa.

According to Tāranātha, Mātrchēṭa was the son of a rich Brāhman named Saṅghaguḥya, who married the youngest of ten Buddhist daughters of a merchant belonging to the city of Khorta (Gauda?). The time is given as during the reign of Śrīchandra, nephew and successor of Bindusāra—a statement which reflects the confusion of the Tibetan author's chronological system. The name given to the child at birth is said to have been Kāla; that he was subsequently known as Mātrchēṭa and Piṭrchēṭa is set down to his filial devotion. We must, however, distrust the whole story; Saṅghaguḥya is not a suitable name for a Brāhman, nor is a marriage with a Buddhist woman very probable. The name Mātrchēṭa, which in later times was attached to other persons, means, no doubt, like its equivalent Mātrdāsa, 'servant of the Mother (i.e. Durgā), or of the Mothers (i.e. the forms of Durgā)'; and this is quite in harmony with the fact that Mātrchēṭa was at first a worshipper of Mahēśvara-Siva (Tāranātha and I-tsing) and composed hymns in his praise (I-tsing). He became an expert in *Mantra* and *Tantra* formulas and a master of dialectic. In the latter capacity he entered upon a course of controversy with the Buddhists of Odiviṣa (Orissa), Gauda, Tīraḥṭī (Tirhut), Kāmarūpa, and elsewhere, forcing them to join the heretics, whereby he acquired the sobriquet Durdharsa-Kāla, 'the unassailable Kāla.' At the suggestion of his mother, who hoped for his conversion by the leading doctors of her faith, he proceeded to the great Buddhist centre of Nālanda, where, in fact, he was overthrown in argument and joined the order.

According to Tāranātha, the agent of his conversion was Ārya Deva, who showed him a *sūtra* wherein he had been foretold by Buddha. If we must reject the introduction of Ārya Deva, which involves an anachronism and is due to a certain confusion (see *IA* xxxii. [1903] 346), the incident is confirmed by the statement of I-tsing that Buddha, on hearing the notes of a nightingale,

had said: 'The bird, transported with joy at sight of me, unconsciously utters its melodious notes. On account of this good deed, after my Departure (Nirvāṇa) this bird shall be born in human form, and named *Mātriketa*; and he shall praise my virtues with true appreciation' (*Record*, tr. Takakusu, p. 156 f.). We recognize here one of the prophecies (*vyākaraṇa*, *vikurvaṇa*) narrated in connexion with many Buddhist divines and others, in this case involving, perhaps, also an interpretation of the name in Prākṛit form, *Mātrichita* = *mām atichitta*, 'transported with joy (at sight of) me.' However this may be, we have in *Mātrcheta*'s own work (*Varṇanārhaṇa*, vv. 1-3 and 30 f.) allusions both to his previous heretical poems and to the supposed prophecy of Buddha.

The remainder of *Mātrcheta*'s career may be recorded in the words of Tāranātha (tr. Schiefner, p. 91 f.):

'At the time when *Mātrcheta* was converted to the Buddha-doctrine, the number of heretics and Brāhmins in the Vihāras of the four quarters, who had entered the order, was very great. It was thought that, if the greatest ornament of the Brāhmins, Durdharga-Kāla, had shaken off his own system like the dust of his shoes and turned to the Buddha-doctrine, that Buddha-doctrine must be in truth a great marvel. Consequently there were in Nālanda alone more than a thousand Brāhman monks, and an equal number from the heretics. The Āchārya, being full of great service to religion, collected on his daily perambulations in the city for alms immense quantities of food, wherewith he entertained five hundred Bhiksus, namely two hundred and fifty sunk in contemplation and two hundred and fifty studying, leaving them to their uninterrupted occupation. . . . The hymns composed by him are also spread abroad in all lands: as finally singers and strollers chanted them and faith in Buddha grew mightily among all the people in the land, greater service was, through the hymns, rendered to the spread of the doctrine. Towards the end of his life King Kanika sent an envoy to invite the Āchārya, who, however, as he was prevented by old age from going, composed an epistle and converted the king to the doctrine. He sent his own pupil Jñānapriya to the king as instructor. Respective of the *Jātaka* stories found in the *Sūtras* and other works, he desired to put into writing the ten times ten birth-stories, corresponding to the ten *Pāramitās*, which were transmitted from ear to ear by the Paṇḍits and Āchāryas: but after composing thirty-four he died. According to some biographies, it is related that, having reflected that the Bodhisattva had given his body to a tigress and so forth, he had thought he could do the same, as it was no unfeasible act. Seeing, accordingly, a hungry tigress attended by her young, he essayed to surrender his body, but at first could hardly accomplish it. But, when a still stronger faith in Buddha was kindled in him and he had with his own blood written down the prayer in seventy verses, he first gave the tigress his blood to drink, whereby he lent her weakened frame a little strength, and then surrendered his own body. Others assert that the person who thus acted was an Āchārya Parahitasvarakāntāra, who came after *Mātrcheta*. The latter composed the abstract of the *Pratyūpāramitā* and many other *Sāstras*, and wrought many benefactions to the Bhiksus of both the Great and the Little Vehicle: as he (*Mātrcheta*) did not confine himself to the Mahāyāna alone, and the Śrāvakas were very devoted to him, he is greatly renowned as a general hero of the orthodox.'

The testimony of I-tsing, earlier by some 900 years, is not less emphatic (p. 157 f.):

'He composed first a hymn consisting of four hundred slokas, and afterwards another of one hundred and fifty. . . . These charming compositions are equal in beauty to the heavenly flowers, and the high principles which they contain rival in dignity the lofty peaks of a mountain. Consequently in India all who compose hymns imitate his style, considering him the father of literature. Even men like the Bodhisattvas Aśaṅga and Vasubandhu admired him greatly.'

Throughout India every one who becomes a monk is taught *Mātriketa*'s two hymns as soon as he can recite the five and ten precepts (Śīla).

This course is adopted by both the Mahāyāna and Hinayāna schools. . . . There are many who have written commentaries on them, nor are the imitations of them few. Bodhisattva Gṇa (Dignāga) himself composed such an imitation. He added one verse before each of the one hundred and fifty verses, so that they became altogether three hundred verses, called the "Mixed" hymns. . . . A celebrated priest of the Deer Park, Śākyadeva by name, again added one verse to each of Gṇa's, and consequently they amounted to four hundred and fifty verses (slokas), called the "Doubly Mixed" hymns.'

He proceeds to include Nāgārjuna and Aśvaghoṣa among those who imitated *Mātrcheta*. The renown and influence echoed in these statements are further substantiated by the fact that the two hymns particularized were translated, as well as others, into Tibetan, and one of them, the 'Hymn

in One Hundred and Fifty Verses' also (by I-tsing himself) into Chinese; moreover, the originals have been found in various fragments among the MS. *trouvailles* from Chinese Turkestan, so that in due time it will be possible to form a first-hand appreciation of the poet's work. Pending the complete publication, we may base our estimate upon what has already been made public and upon the very literal Tibetan versions and the English rendering of a portion of the *Varṇanārhaṇa* hymn, and of the whole 'Epistle to King Kanika.'

The former, the 'Delineation of the Worthy to be Delineated,' is represented with obvious correctness as the earliest of the author's Buddhist compositions. Abjuring his previous heretical poems, he celebrates with great verve and abundance of poetic imagery the peerless excellences of Buddha and his doctrine. The hymn consists of four hundred verses, divided into twelve chapters with separate titles.

The 'Hymn in One Hundred and Fifty Verses' is quite similar in style and matter, as may be seen from the fragments already published, extending to about half of the poem. The amplified version (*samasyā*) with one hundred and fifty additional verses by Dignāga, constituting the 'mixed' (*miśra*) hymn, quite corresponds to the description of I-tsing quoted above; the further amplified edition of Śākyadeva is not known. Concerning the minor hymns nothing need be said.

There are also two short tracts in verse, entitled respectively *Chaturviparyaya-kathā* and *Kaliyuga-parikathā*, the former treating of the miseries and deceptions of life, and the latter of the evils of the present Iron Age.

Undoubtedly the most interesting of *Mātrcheta*'s writings is the 'Epistle to King Kanika' (*Mahārājakanika-lekha*). Beginning with excuses for not accepting the great king's invitation and for boldness in offering advice, he proceeds to counsel the young sovereign as to his moral policy, the concluding twenty out of eighty-five verses containing a pathetic appeal on behalf of dumb animals and deprecating the chase. The latter topic was familiar on Buddhist lips, as we may see from the Edicts of Aśoka. The whole epistle is full of mildness, gracious courtesy, and moral worth; that it is an old man's writing appears on the surface, and no doubt it is the latest of *Mātrcheta*'s compositions.

The statement that *Mātrcheta* set the type for all later hymnologists is certainly so far true that all subsequent *stotras* are in the same form. This may fairly represent his quality as a poet: he displays great art in the use of language, much rhetorical skill, flow, and copiousness of matter. But the abstract nature of his conceptions, which are largely concerned with the dogmatic characteristics of the person and teaching of Buddha, and in consequence their often conventional character, place him upon a different level from his junior contemporary, the author of the *Buddhacharita*. Concerning the other writers who have been identified with him, Ārya-Sūra, Triratnadaśa, and Dhārmika-Subhūti, reference may be made to the literature given below.

LITERATURE.—I. LIST OF *MATRCHETA*'S WORKS (for details of versions see the works cited below, iii.).—*Varṇanārhaṇa-stotra*, *Satapañchāśatika-stotra*, *Samyagbuddhalakṣaṇa-stotra*, *Triratnamāṅgala-stotra*, *Ekottarika-stotra*, *Sugatapañchatriṅśat-stotra*, *Triratna-stotra*, *Ārya-Tārādevi-stotra*, *Mātrcheta-gītī*, *Chaturviparyaya-kathā*, *Kaliyuga-parikathā*.

MATRIARCHATE.—See MOTHER-RIGHT.

MATTER.—In metaphysics matter is one of the ultimate principles or 'substances' of which phenomena are appearances or manifestations (dualism), or the sole substance in terms of which the universe is ultimately to be explained (materialistic monism, or materialism [*q.v.*]). In this sense matter is the reality, unknowable in itself, which underlies the properties of all particular things, in which those properties inhere, or by which, as impressions made on our senses, they are caused. It is the support, or substratum, of such qualities, supposed to be necessary in order to explain, in any given case, their constant co-existence as a group. The British empiricists, Locke, Berkeley, and Hume, minimized the importance of the conception of substance. Locke found the concept obscure and of little use; Berkeley dismissed matter as an abstraction and a superfluity; and Hume similarly banished spirit. Kant retained the conception in the sense of the permanent in all change. Modern phenomenism, in so far as it preserves at all the concept of substance, and consequently of matter, regards it as denoting the unknown existent upon which physical properties somehow depend.

In the physical sciences matter is the substance—not in the sense of a metaphysical first principle, but rather in that of the 'stuff'—of which the sensible universe is composed. Its supposed action upon our sense-organs and nervous system gives rise to the totality of changing physical phenomena. Physical science dispenses with metaphysical 'matter,' as perhaps an anthropomorphism, and employs 'matter' to denote simply what is common to all material or sensible bodies, after subtraction of all their particular and diverse characteristics. In the time of Descartes, Boyle, and Locke a distinction was drawn between the primary and the secondary qualities of matter. The properties regarded as primary were extension, figure, and solidity, or impenetrability; and these were believed to inhere in matter, and to be in no way conditioned by our mind. The secondary qualities, such as colour, sound, and taste, on the other hand, were held not to subsist in matter itself; the ideas that we have of them were not supposed to be copies of anything existing independently of the mind—*i.e.*, whether perceived or not—but were regarded as due to sensations occasioned by the different size and motions of the minute particles of which matter is composed. It is doubtful whether in this respect there is any difference between the primary and the secondary qualities; and modern science retains the distinction only in so far as it tends to resolve the secondary qualities into quantitative relations, and to describe them in terms of analogies with the primary.

Absolute impenetrability, as a universal and essential property of matter, is not suggested by actual observation. Indeed, it was in all probability the observed penetrability of gross matter, especially in the gaseous form, that led to the first attempt to explain the properties of matter in terms of its atomic constitution. The happy guess of Democritus, scarcely based upon experiment or observation, was revived as a genuine scientific

theory at the beginning of the 19th cent. by Dalton. The observed fact which seemed to this investigator to demand an atomic hypothesis of the constitution of matter was that chemical elements combine with one another in definite and invariable proportions by weight. This would naturally ensue if combination were the union of one or more atoms of the one element with one or more atoms of another, the atoms of each element being precisely alike in weight and in other respects, but different from those of other elements. The atomic theory has ever since Dalton's time been the foundation of the science of chemistry; and without some such hypothesis its facts and laws would be unintelligible.

But the notion of simple, impenetrable, hard atoms, such as Democritus postulated, is not free from difficulties. These atoms must be endowed with elasticity if they are to serve to explain certain physical phenomena; and this is incompatible with their simplicity. Difficulties of this kind led to the suggestion of Boscovich, that the atoms composing matter are not extended, hard bodies, but points, and centres of attractive and repulsive forces—forces whose magnitude varies with the distance between the points in such a way that no force, however great, can bring the points into coincidence. Thus extension and impenetrability were eliminated from the properties of the atom; but Boscovich's theory was never generally accepted because of the scientific prejudice against 'action at a distance,' or, in other words, because of the ingrained tendency to regard interaction between atoms to be conceivable only in terms of the kind of action with which we are familiar, *viz.* contact action, collision or pushing.

Another hypothesis as to the nature of the atom, and, therefore, as to the constitution of matter, is that devised by Lord Kelvin, according to which an atom is a vortex-ring of 'ether,' in an ethereal plenum capable of transmitting vibrations or waves. This hypothesis escapes at the same time the difficulties attending the notion of the impenetrable, solid, elastic atom, and those besetting the idea of action at a distance, or between isolated points. The ether had been postulated to explain the phenomena of light, and, later, those of electricity. It now also served to explain the constitution and properties of matter. It has not furnished an explanation of gravitation, and it seems to require modification if it is to supply a mechanical representation of what physicists call an electric charge. Inasmuch as the ether is non-material, it is indeed unreasonable to expect it to admit of mechanical description; for mechanical conceptions are derivable only from acquaintance with matter. On the other hand, the success which has attended such mechanical, or semi-mechanical, descriptions suggests that, if ether be not matter, it is at any rate very like it.

Lord Kelvin's kinetic theory of matter, which resolves matter into non-matter in motion, differs from that of Boscovich in that it offers a plenum instead of isolating and empty space; this plenum provides for action and reaction without resort to the notion, distasteful to physicists, of action at a distance. It differs again from Newton's in dispensing with hard atoms, while furnishing atoms which are not only extended, but also, in virtue of their rotational movement, elastic.

It has been claimed on behalf of this kinetic theory of matter that it enables the physicist to deduce material phenomena from the play of inertia involved in the motion of a structureless primordial fluid, and so achieves the ideal of ultimate simplification which scientific description or explanation seeks. This is so, though it must be borne in mind that the explanation attained is an explanation of the world only as it has been first artificially

simplified by science. The further claim that physics is thus capable of reduction to a branch of pure mathematics is, however, not allowable; in going too far it refutes itself. For physics professes to deal with the real or sensible material world; it indeed passes, as it becomes more and more abstract, into 'pure' physics; but then it no longer is a science of the real, but only of the ideal or conceptual. Conceptual or pure science applies to the real world, indeed, but only partially or fragmentarily; it exhaustively describes the world in one aspect only, and leaves others out of account. Thus pure or abstract science of the material is valid, within limits, for economical description; it is not adequate to full explanation. That this is true in particular of the kinetic theory of matter can be seen at once when we grasp the fact that the primordial fluid—the non-matter to which matter is reduced, or which science substitutes for matter—is not a real thing, but an abstraction. A perfect fluid, in the first place, is a fiction, not anything known to observation. In the second place, Lord Kelvin's medium, in so far as it is describable by the negative terms incompressible, frictionless, inextensible, and structureless, differs in no respect from empty space. The one property in virtue of which it has been argued that the ether differs from space is that of inertia. But, as Ward has maintained (*Naturalism and Agnosticism*, vol. i. lect. v.), inertia, in the qualitative sense, does not suffice to supply determinateness to the primordial fluid; inertia is a property of matter, but not of modes of motion, and it is precisely the property of mass in molar bodies that, as both Clerk Maxwell and Lord Kelvin recognized, the kinetic theory of matter fails to explain. This theory of the constitution and nature of matter, therefore, belongs to the realm of symbolic description, not to that of explanation or interpretation. Science, indeed, in its higher or more abstract reaches, falls so far short of furnishing, as it was once jubilantly asserted to furnish, a complete philosophy of the world in terms of Newtonian mechanics that it professes to do no more than describe natural phenomena in so far as these are to be regarded as changes in the motion of masses. It abstracts from the qualitative properties and changes of matter, because these are not amenable to scientific method, and replaces them by hypothetically representative movements of ideal 'masses.' Matter, with its diversities of quality for perceptual experience, is not only one in kind for abstract science; as the goal and limit of abstraction is reached, or as physics passes into pure mathematics, matter becomes indistinguishable from space. It may similarly be shown that causality is eliminated by abstract science, and replaced, for descriptive purposes, by identity, change being explained and further explained until at last it is literally explained away. The development of scientific generalization in the direction of the ideal of unification and simplicity has thus not established a materialistic metaphysics or a mechanical philosophy, but has only provided a provisional symbolical description of certain aspects of the material world, valid so long as other aspects may be neglected. Such is the philosophical outcome of the scientific mode of dealing with matter.

Until recently matter was regarded as divisible only so far as to the chemical atom. There were held to be some four score fundamentally different, simple or irresolvable, kinds of matter. Matter was the primary concept of the physicist, and electricity was described more or less in terms of it. Matter was held to be strictly unchangeable in its elementary forms, the atom being supposed to be indestructible. Quite lately, however, all

these beliefs have been reversed. It has been found, by a series of researches mainly conducted at, or in connexion with, the Cavendish Laboratory, Cambridge, that the atoms are not simple, but that portions of them can be split off and exist separately, and that these detached fractions, called by J. J. Thomson 'corpuscles,' are identical, from whatever different kinds of atoms they may have been broken off, and possess the same 'mass' or inertia. Thus it has become necessary to regard the atoms as complex systems, and, in spite of their differences, as built up of parts or corpuscles which are identical. Further, the corpuscle has been found to bear, or to be, a constant electrical charge (electron). Corpuscle and electron would seem to be identical, because the whole mass of the corpuscle appears to be due to its electric charge and its motion. Thus 'mass,' the most fundamental and characteristic property of matter, becomes resolvable into an electrical phenomenon; the electron is the fundamental unit alike of electricity and of matter, and matter is 'explained' in terms of electricity. An atom, in fact, is composed of a large number of units of negative electricity (electrons or corpuscles) associated with an equal number of positive units of electricity.

The full importance of the discovery and isolation of electrons cannot be indicated in an article dealing with matter, because they serve to explain the cause of the excitation of the ether-waves which produce light, and also render comprehensible other phenomena not belonging to the realm of the material. But it may be noted that the atomic (or, rather, the ultra-atomic) structure of matter, hitherto a supposition or indirect inference, has at length been experimentally demonstrated. The recent discovery and investigation of radium and other radio-active substances have led not only to the proof that the chemical elements are transmutable—helium, *e.g.*, is produced by the breaking up of radium—but also to the revelation of single atoms.

'Single atoms of Helium, shot off by Radium as α rays, have been revealed in two ways. Each atomic projectile produces a long train of electric ions as it passes through a gas before its energy is exhausted, perhaps by knocking loose corpuscles out of the molecules it encounters in its path. These ions have two effects. They make the gas a conductor of electricity, while they exist, so that, by placing the gas in a circuit with a battery and an electrometer, Rutherford has shown the effect of each particle by the sudden throw of the needle of the instrument. Secondly, the ions act as nuclei for the condensation of mist, and, in this way, C. T. R. Wilson has made visible as a line of cloud the track of each particle' (W. C. D. and C. D. Whetham, *Science and the Human Mind*, London, 1912, p. 240).

Recent progress in science has thus furnished new light upon the question of the constitution of matter. But the ultimate question as to what matter is remains, as before, unsolved, and perhaps, as P. G. Tait (*Properties of Matter*, Edinburgh, 1885, p. 14) seemed to think, insoluble. To have learned that matter is electricity is not to have diminished the mysteriousness of its nature. To physical science indeed, matter, like a 'thing' or a 'fact,' is a datum. The data of science, however, are for philosophy or the theory of knowledge *constructs*. Hence it is to philosophy that we must betake ourselves if we are to hope for further elucidation of the problem contained in the question what matter is. As we have already seen, the more abstract departments of science cannot help us, because they proceed from an artificial definition of matter derived simply to make abstract science a possibility.

'The bodies we deal with in abstract dynamics are just as completely known to us as the figures in Euclid. They have no properties whatever except those which we explicitly assign to them' (J. Clerk Maxwell, in *Nature*, xx. [1879] 214).

The fundamental property thus conventionally assigned to matter with a 'let it be granted' is mass or inertia; and the science of matter is then

valid of matter if it be wholly inert, or in so far as it is characterized by inertia. Whether any matter is wholly inert is a question; that *everything* is inert must be denied. The science of matter is no basis for a materialistic metaphysic.

For other philosophical questions connected with matter see art. MATERIALISM.

F. R. TENNANT.

MAURICE. — The position of Frederick Denison Maurice (1805-72) in the history of English 19th cent. theology is difficult to define. He regarded himself as a simple old-fashioned Christian; but to the religious world of his time he was a most obscure and dangerous heretic. Julius Hare spoke of him as the greatest thinker since Plato, and Mill thought his intellect one of the most powerful of the age; but to most of his contemporaries Maurice seemed an obscure mystic, with a strange love for the Athanasian Creed and the Thirty-nine Articles, which much of his teaching appeared to contradict. Described as a leader of the Broad Church Party, he indignantly repudiated the epithet 'broad,' and still more the suggestion that he belonged to any 'party.' He spent much of his energy in controversy, sometimes bitter and occasionally hardly fair. Yet he was constantly on the look-out for points of agreement with his opponents, and those who knew him best were deeply impressed by his spirituality and goodness.

The paradoxes of his position may be partly accounted for by his family circumstances, and by the character of the age in which he lived. He was the son of a Unitarian minister, whose wife and daughters were converted to various forms of Evangelicalism, chiefly dissenting and Calvinistic. They were pious, clever people, much addicted to argument; and Frederick learned much from each, though he was repelled by all their theological systems. He combined his father's enthusiasm for the Fatherhood of God with his mother's conviction of the Divine Will as the root of all. His intense reverence for family relationships, together with the discordant doctrines of his loved ones, drove him to seek for some ground of unity more fundamental than doctrinal agreement. This he ultimately found in the conception of the Church as the divine family, and in the conviction that what God feels about us is far more important than what we feel about God. His view of Christ as ethically absolutely at one with the Father separated him from his Evangelical mother as well as from his Unitarian father. It precluded all idea of the Atonement as a changing of the Father's Will, as a bargain, or as a legal fiction. Similarly the popular beliefs about the Bible, the future life, and all the divine ways of working seemed to Maurice tinged with materialism. He was especially repelled by all sects, because he found in himself tendencies to fall into what he believed to be their errors. His controversial bitterness was often directed in reality against elements which he knew to be lodged in his own nature. Everywhere he discovered good, but also evil; and his position was generally a puzzle to his contemporaries.

His attitude towards politics showed the same characteristic. Growing up in the Tory reaction that followed the French Revolution and the Napoleonic wars, he was naturally disgusted by the brutalities and bigotries of this reaction. But he was almost equally opposed to a Liberalism which consisted mainly of destruction of abuses. The forces which carried Wordsworth and Coleridge into

Conservatism and High Churchmanship operated strongly upon Maurice, with his reverence for the past and his attraction towards sacramentalism. For a time he hesitated. At Cambridge, after a distinguished career, he refused to take a degree, because this would have involved a profession of Churchmanship. He wrote a novel, edited the *Athenæum*, and engaged in various literary ventures. Then he decided to offer himself for ordination, and, as a preparation for this, to go through another undergraduate course, this time at Oxford. Then he published a defence of the tests by which acceptance of the Thirty-nine Articles was required from all who would obtain an Oxford degree. His arguments were, of course, fundamentally different from those used by ordinary Tories, and perhaps equally unreasonable. He afterwards admitted that his main position was untenable.

Maurice's first really important book was *The Kingdom of Christ* (1842). The book was primarily intended for Quakers. Their doctrine of 'the Inner Light' and of the supreme value of the spiritual was enthusiastically accepted by Maurice; but he set himself to proclaim the sanctity of the visible. Forms are witnesses to the invisible, and channels through which the divine spirit works. The Church is a spiritual kingdom, asserting human brotherhood, and protesting against human self-assertion and individualism, which would, if uncontrolled, destroy society. The author sometimes seems intensely Evangelical, sometimes a pronounced Catholic, sometimes a rationalist and a sort of socialist. He passes from an obscure mysticism to teaching so simple that it seems commonplace; he glances through the whole history of philosophy and theology; everywhere he discovers two tendencies, 'one belonging to the earth, one claiming fellowship with [the] Divine'; and the upward tendency is the search for that kingdom which God has provided in the Catholic Church. All this seemed orthodox enough. Its implications were not generally recognized, and in 1846 Maurice was elected to the professorship of Divinity at King's College, London.

It was characteristic that his next book dealt chiefly with the value of the non-Christian religions, the pagan philosophies, and the mediæval theologies. *The Religions of the World* appeared in 1847, and one form of the *Moral and Metaphysical Philosophy* in 1848. The latter had originally been published in 1836, but it was expanded in a series of later editions. It illustrates the wide learning of Maurice and his extraordinary capacity for discovering his points of agreement with diverse and mutually contradictory thinkers. As a history it is open to the criticism that, instead of giving a well-balanced account of systems, it presents only those aspects of them towards which the writer was attracted.

At this period Maurice was keenly interested in social movements. He invented the phrase 'Christian Socialism' as a protest against unsocial Christians and un-Christian socialists. He recognized the good in the aims of Chartists and Revolutionists. He sympathized intensely with their protests against the condition of the poor and the competitive basis of society. He set himself sternly against appeals to force, and was utterly distrustful of democratic ideals; but he started little newspapers, like *Politics for the People* and *The Christian Socialist*, with more revolutionary friends. Naturally Maurice was made responsible for the views of his less eminent associates, whom he warmly defended against the abuse of the propertied classes and their representatives. Moreover, the co-operative schemes at which he worked were regarded as an attack on capitalism, on the leading political economists, and on what was con-

sidered as the due subordination of the working classes. The 'respectable' press, secular and religious, fulminated against Maurice, and at length the Council of King's College appointed a committee to investigate the matter. But there was nothing in the Christian Socialism of Maurice inconsistent with his duties or his position as a Divinity professor.

The attack was then shifted from charges of socialism to charges of theological heresy. In 1853 Maurice published the volume called *Theological Essays*. On most points the new book was only reiterating and expanding views previously expressed; but it made clearer the author's divergence from traditional and conventional theology, especially on the subject of eternal death. He maintained, in effect, that 'eternal' means spiritual. Knowledge of God, love, truth, and the like are eternal life. Eternal death is not a matter of time or place, but of spiritual separation from the divine. The locality and duration of future punishment were matters outside Maurice's message, and he seems to have believed that it was also outside the message of the Bible and of the Anglican formularies. The religious world felt that much of the book was fatal to what passed as Christianity, but it was expressed in such orthodox language that it was difficult to see how Maurice could be convicted of heresy. He must, therefore, be ejected from his professorship without the formulation of any specific charges. The Council of King's College refused to adopt Gladstone's suggestion that Maurice's writings should be submitted to theological experts; and they compelled him to resign. The responsibility for their decision cannot be laid on any one party in the Church. It represented the view of the High, the Low, and the Moderate. Some High Churchmen had been at first attracted by the fervid sacramentalism of Maurice; but they soon came to suspect that his meaning was something very different from theirs. At length Pusey declared that Maurice and he were not worshipping the same God. Low Churchmen were even more disgusted with books full of intensely Evangelical sentences, which were yet fundamentally opposed to their whole scheme of salvation, their doctrine of the Fall and of the Atonement, and of the doom awaiting those who did not accept the Evangelical tenets. Broad Churchmen alone protested against the expulsion, and even they were puzzled as to how one who was so much in agreement with their hostility to the prevalent doctrines of the religious world could yet enthusiastically accept much that seemed to them superstitious and out of date. Nevertheless, the Broad Churchmen stood by Maurice, though he vigorously repudiated Broad Churchmanship. The Evangelicalism of Wilberforce and Simeon and the Anglo-Catholicism of Keble and Newman were the dominant forces in the religious world. Maurice had learned much from both. But at bottom he was opposed to both powerful parties, and few were disposed to forgive this attitude, in consideration of his enthusiastic support of some at least of their cherished principles.

Time has revolutionized the situation. At present many of the best High and Low Churchmen speak with grateful reverence of Maurice, and appear to ignore the great gulf which separates his views from their own. The fervent sincerity and piety of the *Theological Essays* are unmistakable, though to most readers much of the book seems tantalizing and obscure. More popular are *The Prophets and Kings of the Old Testament* (1853) and *The Patriarchs and Lawgivers of the Old Testament* (1855). Maurice meant by revelation a literal unveiling of truth, and especially of God's character, by a direct intercourse of the divine with the human. God literally spoke to the hearts of the

old heroes, and He speaks no less directly to men's hearts in all ages. This conviction attracted Maurice especially to the Johannine books, on all five of which he wrote valuable commentaries, in which, however, he almost ignored what Higher Criticism had to say. His attitude towards the Bible was in some respects vague. Without claiming for it infallibility, he was pained by any criticism of its contents, and disposed to re-interpret rather than reject. He would not join in the outcry against Colenso and *Essays and Reviews*; but he disliked the critical spirit, and had little sympathy with plain speaking which hurt pious souls, except when it was in defence of some spiritual truth. Nevertheless, he was always ready to scandalize the religious world in cases where the traditional views seemed to him profoundly irreligious. Thus Mansel's *Bampton Lectures* (1858) practically declared that man could have no knowledge of God, except what was given him by the Bible. Such orthodox agnosticism was horrible to one who believed in a Light that lightens every man. Mansel taught, in effect, that men had no right to assume that words like 'fatherhood,' 'righteousness,' and 'justice' meant, when applied to God, all and more than what they imply in human relationships. To Maurice this seemed practically atheism; and in his book *What is Revelation?* (1859) he poured out the vials of his wrath upon the Bampton lecturer. There followed a very bitter controversy, in which Maurice for a time received little support. Gradually, however, the more spiritually-minded men of all classes rallied to his side.

Maurice's later years were spent in comparative quiet. The number of his actual disciples remained small, but his ideas spread, and the charm of his personality exercised a wide influence. It was also noticed that this mystic had proved singularly right in many of his ideas of practical reform. His Working Men's College and College for Women were imitated with more or less modification in numbers of institutions all over the country. His co-operative schemes, though unsuccessful, helped to pave the way for a great movement, conducted on less idealistic principles. Christian Socialism, under that or other names, became a great force; and meanwhile the more obnoxious features of the popular theology passed into the background, when they were not altogether dropped out of the conventional religion. Accordingly, though Maurice in books and sermons continually reiterated his old teaching, he aroused little fresh opposition. He continued to protest against popular doctrines, orthodox or liberal, but he had little to add to his old arguments. In 1866 he was appointed to the professorship of Casuistry, Moral Theology, and Moral Philosophy at Cambridge, and threw himself heartily into the duties of that position. Experts are divided as to the value of his contributions to metaphysics and to philosophy. For all departments of thought and life he claimed a theological basis, in a Father revealed in a Son through the operation of a Spirit, and witnessed to by a Catholic Church, with Bible and sacraments. Those to whom these things were either incredible or at least disconnected with philosophy and reason could regard him only as a somewhat muddle-headed mystic, however much they might reverence his character, learning, and ability.

LITERATURE.—Frederick Maurice, *The Life of Frederick Denison Maurice*, 2 vols., London, 1884, is an excellent compilation in which the editor has kept his own views and personality admirably in the background; shorter and more controversial, but adequate, biographies are given by C. F. G. Masterman (London, 1907) and W. E. Collins (do. 1902). See also T. Hughes, preface to Maurice's *Friendship of Books*, do. 1874, Leslie Stephen, art. 'Maurice,' in *DNB*, do. 1894; and the references to Maurice in J. McLeod Campbell, *Memorials*, do. 1877, and Caroline Fox, *Memories of Old Friends*, do. 1882. J. E. SYMES.

MAY, MIDSUMMER.—Agricultural peoples throughout the world have established a ritual, more or less elaborate, about the critical periods of their common industry. This ritual, in effect, is the farmer's religion, and it may be considered the culmination of all pre-ethical animism, and its most important development prior to the great organized faiths. In the form of holiday customs its semblance survives abundantly throughout Europe, and probably not a little of its belief is latent underneath Christianity to-day.

We shall discuss its meaning below. This is perhaps less complex than has been supposed; but it is clear that the agricultural meaning is associated with the popular attitude towards the changes of the seasons, lunar and solar movements, and the growth and decay of vegetation in general. The calendar of this cult is that of the countryside, and this is even suggested by the three categories to which the terms May, midsummer, and harvest belong.

1. **May.**—The typical European celebration of May Day is well known. Trees, green branches, or garlands are carried round, and a King and Queen of May are appointed from among the young people. According to Mannhardt and Frazer, these objects and persons represent the tree-spirit or spirit of vegetation:

'The intention of these customs is to bring home to the village, and to each house, the blessings which the tree-spirit has in its power to bestow.'¹

They had 'originally a serious and, so to speak, sacramental significance; people really believed that the god of growth was present unseen in the bough. . . . The idea of the spirit of vegetation is blent with a personification of the season at which his powers are most strikingly manifested.'²

The custom of setting up a May Tree or May Pole has been widely spread in Europe. A typical case is that of Swabia; on the first day of May a fir-tree was brought to the village, decorated with ribbons, and set up, and the people then danced round it. It remained on the village-green till the next May Day, when a new tree took its place.³

At a later stage, at least in England, the May Pole was permanent, while in Bavaria it was renewed at arbitrary periods of three, four, or five years.

'When the meaning of the custom had been forgotten, and the May-tree was regarded simply as a centre for holiday merry-making, people saw no reason for felling a fresh tree every year and preferred to let the same tree stand permanently, only decking it with fresh flowers on May Day.'⁴

Instead of a tree or a branch, a branch decked with flowers, or simply garlands of flowers, are frequently employed. English children use two hoops of osier or hazel, crossing at right angles, and twine flowers round them; or a pole is carried with a bunch of flowers fixed on the top.⁵ In modern English folk-custom the essence of the May Pole is the long ribbons attached to the top; each of these is held by a child, and as they dance round the pole the ribbons twine round it, to be untwined when the dancers reverse.

The tree-spirit is often embodied in human form or in a living person. English children carry a doll in the garland, sometimes styled 'The Lady of the May.'⁶ In Alsace a little girl is selected to be the Little May Rose, and carries a small May Tree. The Russian Lithuanians crown the prettiest girl and address her 'O May! O May!' In Brie a boy is wrapped in leaves; he is styled 'Father May.' The 'Green George' of Carinthia and Rumania is a boy covered with green branches; at the end of the procession an effigy of him is flung into the water.⁷

Here is what Frazer terms the double or bilingual representation of the tree-spirit by a tree and doll

or a living person.¹ Instances of the single representation by a living person are numerous, such as the Little Leaf Man of Thuringia, the English Jack-in-the-Green, usually a chimney-sweep, who wore a framework covered with ivy and holly, and the innumerable May Kings and May Queens.² These still, in many cases, remember to announce the coming of spring, as well as to wish the people good luck.

Often the symbolism is that of a wedded pair, king and queen, lord and lady, bridegroom and bride. Trees, Frazer notes, are sometimes married to each other.³ In some cases one party is a 'forsaken sleeper,' who is awakened by a kiss or the like. In a few cases there is an indirect representation of a marriage between the May couple.⁴ The folk-drama of the marriage of Zeus and Hera in ancient Greece may be similar to the above, and certainly that of the Queen to Dionysus was identical. According to Frazer, the principle is that marriage promotes fertility.

One aspect of these customs is that the symbolic figure is supposed to ensure fertility to women and cattle as well as to vegetation and the crops. This is brought out in German and English folk-custom. The European customs are certainly to be correlated with those of other peoples, whose definite object is to promote the growth of the young crops or of the seed. In N. Morocco, for instance, during May, or at any time in spring, the women engaged to weed fields make a doll. A villager mounted on a horse runs away with it. A regular pursuit follows, and, if a man from another village succeeds in carrying it home, the village where it was made must buy it back, usually with a feast. The doll is termed *Māta*, and is dressed up as a girl.⁵

Another element besides that of the spirit of vegetation is detected here by Westermarck.

'The doll *Māta* is obviously a personification of the wheat, its vital energy; she is regarded as the bride of the field, and the ceremony itself I have heard called "the wedding of the wheats." Considering how commonly violent movements, contests, and racing are found as rites of purification, I venture to believe that the ceremony of *Māta* is originally meant to serve a similar purpose, that it is essentially a magical means of cleaning the corn, which is added to the more realistic method employed by the women on the field. At the same time, however, there may also be an idea of distributing *baraka* over the fields by racing about with the doll. Sometimes a large wooden spoon is used' for the frame of the doll.⁶

The two polar ideas of Moroccan magical belief are *l-bas*, evil magic, and *baraka*, holiness or good magic, each being a force or substance. The negative method of assisting the latter by first eliminating the former is conspicuous in Berber custom. But it would be futile to attempt to decide which method is the earlier; they are obviously complementary. A consideration to be adduced later may, however, have some significance here.

The negative aspect of agricultural ritual, viz. the imposition of tabu, has traces in European custom, especially in the prohibition of unlucky acts or times. Tabu is best exemplified, however, in lower cultures. The Dayaks of Borneo, for instance, consider the whole period of farming and all its operations to be subject to supernatural influences, while planting and harvest are especially critical times. The most elaborate tabus are imposed, and omens are constantly taken. Merriment and feasting follow the period of tabu.⁷

The Assamese proclaim a *genna* (communal tabu) at planting and harvest. The idea 'underlying the various restrictions is that men must not give time and attention to anything but the care of the crops.'⁸

If the Christian Lent was developed out of a period of agricultural tabu, there is complete continuity between the old and new faiths.

The question of date may here be noticed. European folk-custom has a large body of similar ritual celebrated previously to and during Lent, such as the Death of the Carnival, the Burial of Shrove Tuesday, Carrying out Death, Saving the Old Woman, followed by a dramatic advent of Spring, Summer, or Life.¹ The former generally are dated on Shrove Tuesday, sometimes at Mid-Lent, the latter sometimes follow immediately, or at a later date—the fourth Sunday in Lent, for instance—while in Russia similar ritual in both forms is celebrated in spring and at midsummer, and also on St. Peter's Day.² These dates suggest that the old agricultural calendar was altered to suit the ecclesiastical.

In the majority of these Lenten customs the tree or branch or doll or person is termed Summer or Summer-tree.

'The "customs" of bringing in the May and bringing in the Summer are essentially the same. . . . The Summer-tree must likewise be an embodiment of the tree-spirit or spirit of vegetation.'³

With regard to the representation of Death, more prominent in the 'Summer' (Lenten) ritual than in that of May Day, Frazer's view is that it is 'an embodiment of the tree-spirit or spirit of vegetation,' the Summer-tree being often a 'revivification of the effigy of Death.' The idea is 'the death and revival of the spirit of vegetation in spring.'⁴ There is also, as already noted, a natural identification of season or date with the spirit. The death is represented frequently by killing, and this may be connected with the idea of slaying the incarnate or embodied spirit while still vigorous, in order that its successor's vigour may be guaranteed.

Another feature of May ritual is the kindling of bonfires,⁵ though this is most conspicuous at Midsummer-tide.

The Beltane fires of Scotland were kindled on May Day as late as the 18th century. The traces of human sacrifices at them were particularly clear and unequivocal. The most significant example is that of the north-east of Scotland. Here the Beltane fires were lit not on the first but 'on the 2nd of May, O.S. They were called *bone-fires*. The belief was that on that evening and night the witches were abroad in all their force, casting ill on cattle and stealing cows' milk. To counteract their evil power pieces of the rowan-tree and woodbine, chiefly of rowan-tree, were placed over the byre doors, and fires were kindled by every farmer and cottar. Old thatch, or straw, or furze, or broom was piled up in a heap and set on fire a little after sunset. Some of those present kept constantly tossing up the blazing mass, and others seized portions of it on pitch-forks or poles, and ran hither and thither, holding them as high as they were able, while the younger portion, that assisted, danced round the fire or ran through the smoke, shouting, "Fire! blaze an burn the witches; fire! fire! burn the witches." In some districts a large round cake of oat or barley-meal was rolled through the ashes. When the material was burned up, the ashes were scattered far and wide, and all continued till quite dark to run through them still crying, "Fire! burn the witches."⁶

In Ireland, Sweden, and Bohemia bonfires were lighted on the first day of May; and in the last-named country the 'burning of the witches' is prominent.⁷

Bathing, washing the face with dew, and drenching effigies and mummers are common customs on May Day. The European May customs are also, among some peoples, celebrated at Whitsuntide. This date is especially marked in Russia, but also occurs in the Altmark, Bavaria, and other parts of Germany, Denmark, and Austria-Hungary. They are elsewhere celebrated at Midsummer, and on St. John's Eve or St. John's Day. One or two

⁷ GB³, pt. vii., *Balder the Beautiful*, i. 157, 159, pt. i., *The Magic Art*, ii. 65.

other dates are elsewhere found, cases apparently of arbitrary selection of a spring or summer critical day. The Swedes celebrate a minor form of the ritual on May Day, but are remarkable among European peoples for concentrating these customs upon Midsummer-tide, when May Pole, garlands, arbours, and jumping over bonfires are in great evidence.¹ It is curious that parts of Bohemia have the same date, while in Russia both Whitsun and Midsummer are celebrated similarly. The same ideas and practices are more or less equally applicable to May Day and Midsummer Day, but a Pyrenean custom suggests a special causal connexion. Here a tall tree is cut down on May Day and kept until Midsummer Eve, when it is ceremonially burned.²

Similarly there is a continuous connexion between the ritual and beliefs belonging to the whole trio of the critical periods, May, midsummer, and harvest. In Morocco the first day of summer (17th May) is the death of the earth, the first day of a new season, and the first day of harvest.³ It is quite natural that green trees and green branches should be most conspicuous on May Day, and corn sheaves and the like at harvest; the preponderance of bonfires at midsummer, however, is a curiously difficult problem, whether on the theory of the tree-spirit with its corollary of sun-charms or on that of purification and *baraka*.

2. Midsummer.—Turning now to the midsummer celebrations, we find that in Sweden May Poles are set up and decorated, and the people dance round them, and bonfires are lighted to be danced round and jumped over. In Bohemia the May Pole itself is burned.⁴

In Russia on St. John's Eve a figure of the mythical personage, Kupalo, is made of straw, and 'is dressed in woman's clothes, with a necklace and a floral crown. Then a tree is felled, and after being decked with ribbons, is set up on some chosen spot. Near this tree, to which they give the name of Marena (Winter or Death), the straw figure is placed, together with a table, on which stand spirits and viands. Afterwards a bonfire is lit, and the young men and maidens jump over it in couples, carrying the figure with them. On the next day they strip the tree and the figure of their ornaments, and throw them both into a stream.'

In some parts of Russia the ceremony is accompanied by weeping and wailing for the destroyed effigy, or by a mock combat between those who attack and those who defend it.⁵ In Sardinia there is a ritual which seems to be a survival of the ancient Greek 'Gardens of Adonis.' The village swain proposes to a village girl early in spring. Then in May she sows in a pot a handful of corn, which is well grown by Midsummer Eve, when it is called *Erme* or *Nenneri*. On Midsummer Day the young couple go in a procession and break the pot against the church door. Feasting follows, and in some districts a bonfire is lighted, round which the people dance. A young couple who wish to be 'Sweethearts of St. John' clasp hands across the fire. The two 'gossips,' suggests Frazer, may correspond to the Lord and Lady of the May, and ultimately represent in flesh and blood the reproductive spirit of vegetation.⁶ In Morocco smouldering fires are made on Midsummer Day or the evening before.

'Men, women and children leap over them, believing that by doing so they rid themselves of the *bas* or evil, which may be clinging to them; the sick will be cured and married persons will have offspring. Nobody is hurt by the fire since there is *baraka* in it.'⁷

In the Moroccan custom the smoke is more

important than the blaze; the practical point is fumigation of men, cattle, trees, and various belongings.

It is also noteworthy that in Morocco at midsummer magic forces are supposed to be active in certain species of vegetation.¹ Fumigation by burning certain kinds of plants and the mere application of leaves and branches promote fertility, act as charms against the evil eye, and assist general well-being. There is also a custom of eating, in a quasi-sacramental manner, special foods, in which there is *baraka*.²

There is probably no corner of Europe in which it has not been the custom to kindle bonfires at Midsummer-tide. Besides the leaping through the fire, there are customs of throwing blazing disks through the air and of rolling burning wheels downhill.³ A certain sanctity, as in the need-fire ceremonies, attaches to the kindling of the fire in some instances. A frequent custom is that of making gigantic figures of wicker-work, which are paraded and then burned, these midsummer giants being apparently analogous to the May Kings in their leafy garb. There are also traces of burning animals alive.⁴

Frazer derives these customs of modern Europe, especially those of N. France, from the 'sacred rites of the Celts of ancient Gaul,' as typified in the druidical sacrifices, and mythically in the death of Balder.⁵

Two main interpretations of these fire-rituals have been put forward. Mannhardt, originally followed by Frazer, explained them as sun-charms.⁶

At the 'great turning-point in the sun's career,' the summer solstice, primitive man 'fancied that he could help the sun in his seeming decline—could prop his failing steps and rekindle the sinking flame.'⁷

The wheel and disk are suggestive shapes. Frazer also noted the purificatory aspect of these customs.⁸ Fire is a cleanser, and is frequently used for the purpose, as in the need-fire. Westermarck emphasized this aspect.

'Their primary object in many or most cases is to serve as a protection against evil forces that are active at Midsummer.'

In the Moroccan customs cleansing by fumigation is the chief idea, although there is also the ascription of positive virtue to the smoke. Westermarck finds no evidence for the sun-charm theory.⁹ Later Frazer regarded the two views as being not mutually exclusive, but admitted the purificatory theory as being the more probable.¹⁰

Traces exist of what has been interpreted as human sacrifice by drowning on this date. Various similar customs have been interpreted as rain charms.¹¹ In Morocco, however, midsummer ceremonial bathing is connected with the idea of securing health by cleansing, and the same idea is attached to the European custom of rolling in dew.¹² Various kinds of divination, as is natural on special dates introductory of a new season (as midsummer is often regarded), are practised. Mock fights, tugs-of-war, games, and abuse of the ceremonial figure are common incidents. These have been interpreted as dramatic survivals of a ceremonial and magical representation of a struggle between good and evil influences, or designed to produce by homoeopathic magic 'movement' in the weather or in the growth of the crops.¹³ Magic plants are gathered at midsummer

(see art. DEW); such are fern-bloom, fern-seed, mistletoe, and St. John's wort.¹

For the special harvest-rites see art. HARVEST.

3. Basis of agricultural rituals.—The general theory of agricultural ritual propounded by Frazer can be connected with such primitive magical rites as the Australian *intichiuma* for developing the growth of food-plants and animals. But in many European cases it seems that the main object is to purify the sphere in which the corn grows, and many rites are concerned not with a spirit of vegetation but with vaguely-imagined evils, often in the form of witches.² The burning or destruction of the tree-spirit is often a doubtful proposition. It is impossible to dogmatize on the origin and first intention of these agricultural rites, but it is necessary to bear in mind the possibility that beliefs in corn-spirits and the like, and even the magical practices themselves, may be late accretions upon some simple psychological and even utilitarian facts. There is also the sense of crisis, very strong in the primitive mind. Thus, psychic reactions in sympathy with the objects concerned might lead to dramatic, but unconscious, imitations—e.g., jumping to make the corn grow; in the same way imitative explanations might be made of such necessary processes as weed-burning. When established, these *ex post facto* explanations, magical, mythical, or theological, obviously tend to usurp precedence.

LITERATURE.—This is very extensive, but the main critical works are cited in the text. A. E. CRAWLEY.

MĀYĀ.—*Māyā*, 'illusion, appearance,' is a term in the philosophy of the Vedānta applied to the illusion of the multiplicity of the empirical universe, produced by ignorance (*avidyā*), when in reality there is only One, the *brahman-ātman*. It is not till a somewhat late period that the word assumes the technical meaning of the cosmic illusion, although this development of its sense is not an unnatural one. The word *māyā* is not uncommon even in the Rīgveda, where it has the meanings 'supernatural power,' 'cunning,' 'mysterious will-power.' Sāyana usually explains it by *prajñā*, 'mental power,' or *kapata*, 'cunning,' 'guile,' 'deception.' Indra, e.g., is said to assume many forms *māyābhaḥ*, 'by magic wiles, or mysterious powers'; as the possessor of this power, he is called *māyin*.

[The use of the term in the Rīgveda has been thoroughly analyzed by A. Bergaigne (*Religion védique*, Paris, 1878-88, iii. 80-88; cf. A. Hillebrandt, 'Māyā,' *WZKM* xlii. [1899] 316-320). It, or such derivatives as *māyin*, *māyāvant*, is applied to the wiles of the demons conquered by Agni (v. ii. 9, etc.) and Sarasvatī (vi. lxi. 3), and especially by Indra, whether alone (i. xxxi. 4, etc.) or accompanied by Viṣṇu (vii. xcix. 4). By overcoming the *māyā* of the demons Indra won the Soma (vii. xcvi. 5). Men of evil craftiness are *māyin* (i. xxxix. 2) or *durmāyū* (iii. xxx. 15); the sorceress uses *māyā* (vii. civ. 24); but the *māyin* cannot overcome 'the primal firm ordinals of the gods' (iii. lvi. 1). The *Asvins* conquer the *māyā* of the evil *Dasyu* (i. cxvii. 8).

On the other hand, the terms are applied to good deities. Through *māyā* Mitra and Varuṇa send rain and guard their law (v. lxiii. 8, 7); through *māyā* the sun-bird is adorned (x. cxcvii. 1). The Maruts employ it (v. lxiii. 6) and are *māyin* (v. lviii. 2), or *sumāyā* (i. lxxviii. 1, etc.). *Māyā* is known to, or used by, *Ivaṣṭ* (x. liii. 9), the *Adityas* (ii. xxvii. 16), and Varuṇa and Mitra (i. cii. 8, etc.); and it is a characteristic of Varuṇa (vi. xlviii. 14, etc.); while by it the *Rihus* attained divine dignity (iii. lx. 1). It was also employed by Agni (iii. xxvii. 7) and Soma (ix. lxxiii. 8), and in the former deity the *māyās* of the *māyins* are united (iii. xx. 3). It was a mark of the *Asvins* (v. lxxviii. 8, etc.), and even earthly sacrificers are *māyin* (ix. lxxiii. 8). Through *māyā* Indra triumphs over the *māyin* demons (i. xi. 7, v. xxx. 6, etc.), and he 'has much *māyā*' (*purumāyā*, vi. xviii. 12, etc.). Germs of the later development of the word are found in such passages as iii. llii. 8, where Indra 'assumes form after form, working *māyās* about his body,' and vi. xlvii. 18, where 'through *māyās* Indra goeth in many forms' (cf. also iii. xxxviii. 7). Sun and moon succeed each other in virtue of *māyā*

(x. lxxxv. 18), and *māyā* explains the double form of Pūṣan and Agni (vi. lviii. 1, x. lxxxvii. 6). Perhaps most significant of all is the passage x. lv. 2: 'When thou didst go, O Indra, waxing in body, speaking mighty things among folk, *māyā* was that which they called thy battles; neither now nor hitherto hast thou found a foe.'

In the Atharvaveda *māyā* was born from *māyā* (viii. ix. 5); it was milked from Virāj (on whom see Hillebrandt, *Ved. Myth.*, Breslau, 1891-1902, ii. 50-52, and Muir, *passim*), and on it the Asuras (demons) subsist (viii. x. 22). Luck in gambling is invoked by the aid of *māyā* (iv. xxxviii. 3); the black snake assumes wondrous forms (*vapus*) 'by the Asura's *māyā*' (vi. lxxii. 1); sun and moon follow one another by *māyā* (vii. lxxxii. 1; cf. xiii. ii. 11); the sorceress prevails by its means (viii. iv. 24); by *māyā* the sun makes 'the two days' (i.e. day and night) of diverse form (xiii. ii. 3); through Agni the *māyās* of the Asuras are repelled (iv. xxiii. 5, viii. iii. 24); yet the gods (*deva*) go about with Asura *māyā* (iii. ix. 4).

Some idea as to the original meaning of the term *māyā* may be gained from its etymology. It has been connected with Skr. *mā*, 'to measure' (O. Bohtlingk and B. Roth, *Sanskrit-Wörterbuch*, Petrograd, 1855-75, v. 732); with Skr. *man*, 'to think' (H. Grassmann, *Wörterbuch zum Rig-Veda*, Leipzig, 1873, col. 1034; similarly P. Persson, *Studien zur Lehre von der Wurzelweiterung und Wurzelvariation*, Upsala, 1891, p. 120; the closest cognate would be Gr. *μῆτις*, 'wisdom, cunning, craft'); with Gr. *μῆτος*, 'imitator' (G. N. Chatzidakis, *Ἀκαθῆνα. Ἀντιγράμματα*, Athens, 1902-04, i. 260); with Lat. *mīrus*, 'wonderful' (H. Ehrlich, *Zur indogerm. Sprachgesch.*, Königsberg, 1910, p. 75). The most probable connexion, however, is with a Balto-Slavic group (with which *μῆτος* may be connected) represented by O. Bulg. *na-mayati*, 'to nod, indicate by a sign', Russ. *na-mayam*, 'I indicate by signs, deceive', *ob-mayakū*, 'deceiver', Bulg. *za-mayvam*, 'I enchant, deceive', Let. *māt*, 'to nod', *ap-māt*, 'to blind, enchant'. More distant cognates are, e.g., Bulg. *iz-mama*, 'deceit, swindle', Russ. *ob-manū*, 'deceit', Lith. *mōnai*, 'sorcery', Let. *mānīt*, 'to enchant', O. H. G. *meim*, 'falsehood' (Germ. *Meineid*, 'perjury'), Little Russ. *mara*, 'phantom, dream, deception', O. Ch. Slav. *machati*, 'to swing', Russ. *makhū*, 'error', Czech *mateha*, 'ghost', Polish *matat*, 'to swindle, lie, deceive' (E. Berneker, *Slav. etymolog. Wörterbuch*, Heidelberg, 1908 ff., ii. 7, 15, 17 f., 4 f., 25). In Avesta we have the word *māyu*, 'skilful, clever'. The basal meaning seems to be 'to move', hence 'to change, to deceive'. LOUIS H. GRAY.]

In Upaniṣadic literature *māyā* is first found in the *Śvetāśvatara Upaniṣad* (iv. 10) with the meaning 'cosmic illusion'; it is no longer applied simply to the juggler's art, but now connotes the illusion created by him. It is in the latter sense that the word is henceforth mainly used in philosophical literature. Sankara, in his commentaries on the *Vedāntasūtras*, always used the word with the meaning 'illusion,' and the technical term employed by him became more or less stereotyped by his successors.

Although it is occasionally asserted that the idea of *māyā* is as late in origin as the use of *māyā* to describe it, there is little foundation for this view, and passages may be found in the Rīgveda which show that even then it was felt that there was an underlying unity beneath apparent multiplicity; indeed, the doctrine that phenomena are unreal in relation to absolute being is common to all metaphysics.

In Rīgveda, i. cxi. 40, *ekam sad viprā bahudhā vadanti*, 'that which is one the sages call by many names,' it is felt that all plurality is a matter of words only, or in x. xc. 2, where the whole universe is said to be *puruṣa* alone, it is implied that all else but *puruṣa* is illusion.

It was with the introduction of the doctrine of the *ātman* in the Upaniṣads that this denial of the existence of the empirical universe became firmly established in India as a philosophic doctrine. The conception of an all-pervading *ātman*, the 'self' of the universe, necessitates the exclusion of all that is not the self, and hence implies its unreality. The substance of the teaching of the Upaniṣads is '*Brahman* is real, the universe false, the *ātman* is *brahman* and nothing else.' Although it is not possible to quote early forms of the statement that the universe is *māyā*, or illusion, it is frequently insisted that the *ātman* is the only reality, which means the same thing—i.e., all that is not the self (world, etc.) is not real; it is mere appearance or illusion. This is the teaching of Yājñavalkya in the *Bṛhadāraṇyaka Upaniṣad*:

'When the self is seen, heard, perceived, and known, the whole universe is known'; 'he who imagines there is plurality goes from death to death' (iv. iv. 19, v. 6).

With the knowledge of self phenomena become known as phases of it; they are provisionally real to a certain extent, but ignorance of the *ātman* regards them as independent of the *ātman*. We have not quite reached the stage of the later Vedānta, which regards phenomena as absolutely unreal, like a mirage. Ignorance, in the Upaniṣads, is an absence of true knowledge; in the later Vedānta it is rather an active force which conjures up the illusion of phenomena for the delusion of the self. In the Upaniṣads also we find a kind of pantheistic compromise which grants that the world does exist, but holds that the sole reality of the *ātman* is not in the least degree affected, for all is the *ātman*. This view pervades the *Chhandogya Upaniṣad*, e.g.:

'The *ātman* is above and below, behind and in front. The *ātman* is all the world' (vii. xxv. 2).

As time went on, *māyā* gained an ever-increasing independence as the substance *prakṛti* (nature), which was at first subordinate to the *ātman*. In post-Upaniṣadic literature the term appears frequently in a non-philosophic sense; a *mṛgamāyā* is an 'illusion gazelle' (i.e. not a real gazelle); a man who craftily seeks to gain money does it through *māyā*; *amāyayā*, lit. 'without *māyā*,' means 'honestly.' In these cases (for further references see Bohtlingk-Roth, *loc. cit.*) the original meaning of *māyā* persists.

In the philosophical sections of the *Mahābhārata* the term is used in its philosophical sense. Thus Viṣṇu, speaking as the supreme god, says: 'Entering into my own nature (*prakṛti*), I arise through *māyā*' (vi. xxviii. 6 f.); this explains the famous *avatāras* of the deity, 'Māyāvin' is one of the thousand names of Śiva (xiii. xvii. 1214). (On the question of *māyā* in the epic see E. W. Hopkins, *The Great Epic of India*, New York, 1901, pp. 138-142.)

The doctrine of *māyā* in the Vedānta forms the cardinal distinction from its great rival system, the Sāṅkhya (*g.v.*) philosophy. Vedānta is the system of *advaita* (non-duality); the phenomenal world does not exist; it is only *māyā*, arising from *avidyā*, that makes us erroneously think it to be real; *māyā* is overcome when he who ignorantly believed himself to be an individual realizes that in actuality he is one with the *ātman*; then only is salvation (*mokṣa*, lit. 'liberation') finally won. In the Sāṅkhya system, on the contrary, the phenomenal world is real; the Vedāntic *ātman* is ignored (Sāṅkhya is atheistic); the soul (*chit*, lit. 'thought') is involved in the woe of life because of *aviveka* (failure to distinguish between matter and soul), due to *avidyā*, etc.; salvation is gained by the complete isolation (*kaiṇalya*) of the soul from matter; and the soul then exists as an eternal, but unconscious, individuality. (On the distinctions between Vedānta and Sāṅkhya see especially Max Müller, *Six Systems*, p. 279 ff.)

One of the most important of the early works on Vedānta is the *Kārikā* of Gauḍapāda (8th cent. A.D.), one of whose pupils was a teacher of Sankara. He is an uncompromising advocate of the doctrine of *māyā*, and strongly denies the existence of the universe. The waking world is no more real than the world of dreams. The *ātman* is both the knower and the known; his experiences exist within him through the power of *māyā*. As a rope in a dim light is mistaken for a snake, so the *ātman* is mistaken for the variety of experience (*jīva*). When the rope is recognized, the illusion of the snake at once disappears; when true knowledge of the *ātman* is attained, the illusion which makes us think of it as a multiplicity of experiences vanishes. The world has no more real existence than the snake, and, as one cannot remove or cast off what does not exist, it

is wrong to speak of obtaining freedom from it. The *ātman* cannot be said to create or cause the universe any more than the rope creates the snake. Production would be either from the existent or from the non-existent; but the former is impossible, for it would be producing what already exists, and the latter is equally impossible, for the non-existent—e.g., the son of a barren woman—cannot be the cause of anything; it cannot even be realized by the mind.

Gauḍapāda's monism assumed its final form in the commentaries of Śaṅkara (b. probably A.D. 788). Śaṅkara is well aware of the difficulties in the way of reconciling the various views of the Upaniṣads, and is further perplexed by the fact that as *śruti* ('revelation') they all ought to have equal weight; the latter difficulty he overcomes by his classification of knowledge as of two kinds: a higher, the knowledge of *brahman*, and a lower, including all that is not this metaphysical knowledge. He then investigates the cause of ignorance (*avidyā*), and concludes that it is to be sought in the knower. The phenomenal world is considered real so long as the unity of the *ātman* is not realized, just as the creations of a dream are thought to be real till the dreamer awakes. Just as a magician (*māyāvaṃ*) causes a phantom, having no existence apart from him, to issue from his body, so the *ātman* creates a universe which is a mere mirage and in no way affects the self. It is through *māyā* that plurality is perceived where there is really only the *ātman*. Multiplicity is only a matter of name and form, which are the creations of ignorance, being neither the *ātman* nor different from it, through the power of illusion (*māyāśakti*). The Highest One manifests himself in various ways by *avidyā* as a magician assumes various forms by his wiles. Śaṅkara further defines two kinds of existence, empirical and metaphysical, for the first time emphasizing clearly a distinction which seems, however, to be known even in the Upaniṣads. The phenomenal universe is a fact of consciousness, and therefore has a sort of existence; all experience is true so long as the knowledge of the *ātman* is not attained, just as the experiences in a dream are real to the sleeper, until he awakes.

'... Therefore before the consciousness of identity with *brahman* is aroused, all worldly actions are justified' (on *Vedāntasūtras*, II i. 121).

In spite of the discussion that has raged round it since Śaṅkara's time, the doctrine of *māyā* as enunciated by him still holds the field in India to-day and, as one of the fundamental doctrines of his Advaitist school, pervades the philosophy of the great mass of thinkers in India.

MAYANS.—The territory of what is now the Republic of Guatemala, adjoining parts of the Republic of Honduras and of the Mexican States of Chiapas and Tabasco, and the peninsula of Yucatan, was inhabited in ancient times, as it is

to the present day, by a number of different tribes, speaking allied idioms and forming a linguistic family usually designated as 'Mayan,' from the name of its most conspicuous members, the people of Yucatan. This population is to be regarded as the second of the great culture-nations of Mexico and Central America, equal to the Mexicans in material and intellectual civilization and in some ways surpassing them, but, unfortunately, much less known than the Mexicans, as regards the special traits of their civilization, their history, and the elements of their daily life. The chief ancient monuments in Central America—Palenque in Chiapas, Menche Tinamit on the Usumacinta river, Quirigua in Guatemala, Copan in Honduras, Uxmal and Chich'en Itzá in Yucatan—are the work of members of that family. They were the great astronomers and mathematicians who calculated the duration of the revolution of Venus and, perhaps, of other planets as well, and were wont to write down and handle numbers exceeding a million. They had elaborated a system of hieroglyphic writing far superior to that of the Mexicans, but only partially deciphered as yet. They were unexcelled in the apprehension and reproduction of living forms of animals and men. As a whole, their civilization and their religion were closely allied to those of the Mexicans.

In their religious practices they were not so sanguinary as the Mexicans, human sacrifices being much less numerous and in many cases being replaced by the killing of dogs. They resembled the Mexicans in their methods of prayer and offerings, fasting, and torture, and in piercing their ears and tongues and drawing threads through the holes. They also sacrificed living animals by fire to the god of fire, and in some places tortured themselves by running with naked feet over burning coals.

Like the Mexicans, the Mayans divided the year into eighteen periods of twenty days each, and they also commenced their ceremonies early in the year, in our month of January, by renewing all kinds of ceremonial utensils—incense-burners, clay-idols, and the like. This feast was called *Ocna*, and was devoted to the *chac*, the gods of labour, i.e. the rain-gods. When they had to make a new wooden image or, as they said, to create a god, the work began in the preceding months, and with great precautions (fasting, etc.), the artisans being confined to the house as long as the work went on. In March they had a great fire-ceremony, performed by the old men and directed to the rain-gods (*chac*) and to the old god Itzamná, who may be considered the god of life and the god of fire. This ceremony was called *tupp-kak*, 'extinguishing the fire.' They brought together every species of animal that was at hand; and, after having kindled a great fire, they killed them by cutting the breasts and tearing out the hearts, which were cast into the flame. The larger animals, such as jaguars, pumas, caimans, were not so easily captured, so they made imitations of their hearts from copal, which was their incense, and threw these into the fire. The hearts having been consumed, the priests extinguished the fire by pouring water from their jars upon it. This ceremony was intended to secure sufficient rain for the crops of the new year. Another ceremony was connected with this performance. They made a kind of terraced pyramid of stones, which seems to have been regarded as an image of the clouds. The priests anointed the lowest step with mud and the upper ones with blue colour, invoking the *chac* and Itzamná. This was, no doubt, another ceremony for bringing rain.

In April the cacao planters, who were also the great merchants, cacao being the staple merchan-

dise of ancient Central America, celebrated a great feast to the black god Ekchuah, the god of the catavans and the merchants, to the *chac*, and to Hobnil, the god of the bee-hives. They killed a dog of the spotted colour of the cacao-pod and offered blue iguanas, feathers of wild fowl, and incense. In the month of May there was another great feast, called *Pacumchac*, celebrated to Cit chac coh, the god of war. It began with a five nights' watch in the temple of the god of war, and during this time the war-chief, called *nacom* and elected for four years by the members of the tribe, was seated on a throne in the temple of the god of war and venerated like a deity with incense-burning. The people performed a dance called *holkon-okot*, 'warrior-dance.' At the end of the five days they performed the fire-ceremony described above, after which the war-chief was taken in a solemn procession all round the temple; a dog was sacrificed, and the heart offered to the god. The heart was put into a bowl and covered by another bowl, after which the assistant priests dashed to pieces some great jars full of water—undoubtedly another ceremony intended to produce rain for the crops. A great banquet of mead and general drunkenness followed. The same banquets and drinking-bouts were repeated in the course of the next three twentieths in all the smaller villages. These feasts were called *Zabacil than*, and it is expressly stated that they were made in order that the new year might be a fertile one and bring rich crops.

The month of July was reckoned as the beginning of the new year by the Yucateans at the time of the conquest. The twentieth (*uinal*) in question was called Pop, 'straw-mat,' meaning 'dominion,' 'reign.' They swept their houses and the village streets and renewed all objects of domestic use—plates, jars, bowls, wooden chairs, garments, and the wrappings of their idols—throwing the old ones on the dust-heaps. The priests, who had fasted for one, two, or three months, eating only once a day and abstaining from sexual intercourse, assembled in the temple and kindled new fire by friction, twirling a wooden stick in the hole of another; this new fire was put into the brazier before the idol, and all the priests and principal men burned incense with it to the idol. In the following months all the professional instruments of the different classes of the people—the books of the priests, the implements for casting lots and the fetishes of the doctors, the weapons of the hunters, and the fishing-nets of the fishermen—were consecrated by anointing them with blue colour. This feast was called *Pocam*. In the month of September the bee-keepers had a special feast at which they brought offerings of incense and honey to their god Hobnil. In the month of October, called Xul by the Yucatecans, there was a great ceremony in the village of Mani, dedicated to the god Kukulcan, the 'feathered snake,' the Yucatec translation of the Mexican god Quetzalcoatl, who was venerated as a culture-hero in Yucatan, some of the most important towns of the peninsula, Mayapan, and Chich'en Itzá, having been founded by Mexican emigrants. The last feast in the year, celebrated at the time of our months November and December, corresponded in a way to the Mexican *Iccalli*, ceremonies being performed to promote the growth of the youth and to strengthen them. Contrary to the custom of the Mexicans, the Yucatecans performed very particular and important ceremonies in the last five days of the year, which they called *ama kaba kin*, 'days without name,' i.e. 'unlucky' days, the names of which it is dangerous to pronounce. On these days they set up in the midst of the village the image of the deity that was to govern the

coming year, this god being one of four who corresponded to the four cardinal points and followed each other in turn. These gods were: (1) for the east and the years corresponding to the east, Ah bolon tz'acab, the god of fertility; (2) for the north and the years corresponding to the north, Kinch ahau, the sun-god; (3) for the west and the years corresponding to the west, Itzamná, the old god, the moon-god and the god of fire; (4) for the south and the years corresponding to the south, Uacmitun ahau, the 'lord of the six under worlds,' the god of the dead. A number of different ceremonies and offerings were performed in honour of these gods, and the evil that was to befall the village, according to the character of the new year and of the heavenly quarter corresponding to the god thereof, was taken, represented by the figure of a demon, out of the village in the direction of the coming year.

The priests were called *ah-kin*, 'lords of days,' i.e. 'lords of day-signs,' 'dealers in prognostics,' 'sooth-sayers.' They were the leaders and teachers of the people—the learned men whose principal occupation was with books, pictographs, and all the traditional knowledge embodied in them. There is one marked difference between Mexican and Mayan priesthood: in Yucatan the office of sacrificer (*nacom*), who had to kill the victim, was not a highly honoured one, whereas in Mexico the highest priests and—in extraordinary celebrations, such as the inauguration of a newly-built temple—the kings themselves acted as sacrificers.

MĀZANDARĀN.—The Persian region of Māzandarān,¹ or Tabaristān, is bounded on the north by the Caspian Sea and on the south by the Alburz Mountains, and extends from Astarābād in the east to the Pul-i-Rūd in the west. The winds from the Caspian bring abundant rain, and the country is heavily wooded, in contrast to the arid regions south of the Alburz. The climate is decidedly unhealthy, and the difficulty of access to the country, increased by lack of good roads, has combined with Māzandarān's insalubrity to exclude it from any generous share in the progress of Persia. It is to these disadvantages that the district owes its place in the history of religion in Irān.

Of the aboriginal inhabitants of Māzandarān we know nothing beyond the statement of Strabo (p. 515; cf. 520) that it was their custom to 'give their married women to other men after they themselves had had two or three children by them.' The *Bundahishn* (xv. 28) has a fantastic tradition of their origin, and the *Dinkart* (IX. xxi. 19) describes them as filthy and dwelling in holes.

In regard to the latter point, we may note that Firdausi (*Shāh-nāmah*, tr. A. G. and E. Warner, London, 1906 ff., II. 58) makes the Māzandarāni White Div inhabit a cavern, although one thinks involuntarily of the repeated Avesta statement that demons hide under earth or dwell in caves (*Ys.* ix. 15; *Yt.* xix. 81; *Vend.* III. 7, 10).

In the Avesta Māzandarān is the abode of the Māzainya *daēvas*, concerning whom E. W. West (*SBE* xviii. [1882] 93, n. 10) expresses the general

¹ The meaning of the name Māzandarān is not certain. The old native etymology (Ibn Isfandiyyār, tr. Browne, p. 14) makes it a later form of *Mūzandarān, 'within [a mountain named] Mūz' (so also Curzon, *Persia*, I. 354 f.; Darmesteter's etymology [*Zend-Avesta*, n. 373, n. 321] is incorrect); but it more probably means 'Land of the Māzan Gate' (T. Nöldeke, *GfP* II. [1904] 178, n. 1). Tabaristān, the Arab. form of Pahlavi Tapuristān (on coins) or Tābaristān (*Bund.* xii. 17, xiii. 15, xx. 27), is the land of the *Tārovopai* of Ptolemy (vi. II. 6) and the *Tārvopai* of Diodorus (II. 3) and Athenaeus (442 B; Marquart, *Brānsakr.*, p. 129). F. Windischmann's identification of Māzandarān with Media (*Zoroastr. Stud.*, Berlin, 1868, p. 228) was wrong.

view when he says that 'these demons were, no doubt, merely idolaters,' while M. N. Dhalla (*Zoroastrian Theology*, New York, 1914, pp. 8, 160) sees in them the nomads of Māzandarān and Gilān, 'who poured down in great numbers and pillaged the possessions of the Iranians.' A number of the Avesta references to the Māzainya *daēvas* give no information as to their nature or habitat (Ys. lvii. 17, 32; Vend. ix. 13, x. 16, xvii. 9f.). We have, however, more precise indications as to their location in the account of the threefold sacrifice by the hero Haoshyangha Paradhāta on Mt. Hara to gain the victory over 'two-thirds of the Māzanyan demons' (Yt. v. 22. ix. 4, xv. 8. xix. 26), for Hara (or, as it is also called in the Avesta, Hara Berezaiti, 'lofty Hara') is generally—and probably correctly—identified with Alburz, though construed in a mythological, rather than a geographical, sense (e.g., Spiegel, *Erän. Alterthumskunde*, i. 191, 463, 482; Darmesteter, i. 101, n. 28; K. Geldner, *GrP* ii. 38, and especially Geiger, *Ostiran. Kultur*, pp. 42–45), and the 'peak' (*āstra*, Yt. xv. 7; cf. xii. 25; Bund. v. 4; Ys. xlii. 3) of Hara is probably Mt. Damāvand (Geiger, *loc. cit.*). The identification of Mazan (the noun from which Māzainya is derived) with Māzandarān is also made by Neriosangh (c. A.D. 1200), who, in his Skr. paraphrase of the Pahlavi version of the *Yasna*, renders 'Māzainya' by 'Mājandara' or 'Mājandaradešiya' (Ys. lvii. 17, xxvii. 1, lvii. 32).

Closely associated with the Māzainya *daēvas* are the Varenyan *daēvas* and *dregvants*, or 'adherents of the Lie demon' (Ys. xxvii. 1; Yt. v. 22, xiii. 137, xv. 8, xix. 26; cf. Darmesteter, ii. 373, n. 33; Yt. x. 97, xiii. 71, and Vend. x. 14 are unimportant in this connexion). The land of Varena was the fourteenth best created by Ahura Mazda, but Angra Mainyu cursed it with 'untimely infirmities and non-Aryan over-lords' (Vend. i. 17).¹ It was 'four-eared' (*čathru-gaoshā*, i.e. four-square or quadrangular [?]; cf. Darmesteter, ii. 14, n. 38), and was the birthplace of the hero Thrāštaona or Faridūn, who overcame Aži Dahāka (Vend. i. 17; Yt. v. 33)—a tale which was discussed at length in the lost *Sūktar Nask* of the Avesta (*Dinkart*, ix. xxi. 17–24; cf. also VIII. xiii. 9, ix. xxii. 4).² The location of Varena is a matter of some dispute. It was certainly near Tabaristān (Spiegel, i. 545), but is hardly to be identified with the modern village of Verek, south of Sari, as argued by Spiegel (i. 72, n. 2, 545) and F. Justi (*Handb. der Zend-sprache*, Leipzig, 1864, p. 270 [with earlier literature], *GrP* ii. 404). Equally uncertain is the view of C. de Harlez (*Avesta trad.*, Liège, 1875–77, i. 87, n. 2) that it was the modern Kirmān. A. V. W. Jackson (*GrP* ii. 663) and Dhalla (*loc. cit.*) identify it with Gilān, and Darmesteter (ii. 14, n. 38) with Tabaristān or Dailam. Tabaristān was formerly preferred by Geiger (*Ostiran. Kultur*, pp. 127f., 184); his later view (*GrP* ii. 391), identifying Varena with the Caspian Gates, seems scarcely an improvement. Neriosangh was ignorant of the meaning of the term, for he renders *Varenya* by *vidhramakara*, 'confusing,' and *kāma*, 'love' (on Yt. i. 19; Ys. xxvii. 1), confounding the epithet with the later Pahlavi Varenō, the demon of lust (Jackson, ii. 660, 663; Darmesteter, ii. 373, n. 33; L. C. Casartelli, *Philosophy of the Mazda-yasnan Religion under the Sassanids*, Bombay,

¹ With these 'non-Aryan over-lords' Geiger (p. 185, n. 2) compares the *Avapiāka*, a tribe dwelling along the Caspian (Strabo, pp. 507f., 514; cf. W. Tomaschek, in Pauly-Wissowa, i. 2063; F. Andreas, *ib.* 2195).

² In a Turfan fragment Aži Dahāka, who was imprisoned in Damāvand, is called 'Mazan.' The adjective has thus far been found in two other passages, but in both cases the accompanying names are illegible (C. Salemann, *Manichäische Studien*, i. [Petrograd, 1908] 95). For the local Muhammadan version, according to which Solomon imprisoned in Damāvand the *jinn* who stole his ring, see Ibn Isfandiār, p. 86.

1889, pp. 91, 166). On the whole, Gilān appears to be the most probable identification.

It would seem that the legend of Haoshyangha refers to an early invasion of Māzandarān and Gilān by Iranians, and their conquest of it, at least in part. This is borne out by the local tradition of the early 13th cent., for Ibn Isfandiār (p. 15) held that

'until the time of Jamshid it was in the possession of the demons. He conquered them, and bade them level the mountains with the plains, fill up the lakes, drain the fens into the sea, open up the country, and distribute the rivers and streams.'

The Iranian religion found some place, at all events, in Māzandarān, for tradition sees in Spitī and Erezrāspa, who are mentioned in Yt. xiii. 121, two pious men who came from Frashaoshtra, the father-in-law of Zarathushtra (*Dinkart*, ix. xxi. 17–24).

In the Pahlavi texts the most interesting passage in the present connexion is found in the *Shikand-gimānīg Vījār* (xvi. 28–36), which records a belief closely similar to the frequent Gnostic concept of the entanglement of light in darkness combined with a touch of the Iranian heresy of Zarvanism.

'The rain was the seed of the Māzandarāns for the reason that when the Māzandarāns are bound on the celestial sphere, whose light is swallowed by them, and, in order to pass it from them through a new regulation, discrimination, and retention of the light of Time, the twelve glorious ones show the daughters of Time to the household-attending male Māzandarāns, so that while the lust of those Māzandarāns, from seeing them, is well suited to them, and seed is discharged from them, the light which is within the seed is poured on to the earth. Trees, shrubs, and grain have grown therefrom, and the light which is within the Māzandarāns is discharged in the seed.'²

In the *Shāh-nāmāh* Māzandarān is described with little geographical accuracy (Nöldeke, ii. 178), and the Kargasārs ('Vulture-heads'), who are frequently mentioned as inhabiting the country, like the Sagsārs ('Dog-heads'), Buzgūsh ('Goat-ears'), and Nampāi ('Strap-feet', *ἵπποπόδες*), betray the influence of pseudo-Callisthenes upon Firdausi (Nöldeke, ii. 146, n. 3). In his proper shape the king of Māzandarān had a boar's head (Warner, ii. 75). The land itself was

'The home of warlock-divs and under spells
Which none hath power to loose; . . .
To go or e'en to think of going thither
Is held unlucky!' (*ib.* 26f.).

Nevertheless, it was invaded unsuccessfully by Kai Kāūs and successfully by Rustam (*ib.* 30–41, 42–44, 57–78), one of the great achievements of the latter being the slaying of the 'White Demon,' whom Warner (ii. 27f.) holds to be a personification of the Māzandarānis, rendered pale by the unhealthiness of their climate. This 'White Div' was

'mountain-tall,

With shoulders, breast, and neck ten cords across' (*ib.* 55).

The magic exercised by the 'White Div' against Kai Kāūs reads like a description of a severe hail-storm (*ib.* 40); the only other point worth noting is that his blood cured failing sight (*ib.* 62).

Even in the Arab period Māzandarān remained imperfectly Islāmized. As late as the 10th cent. many of the inhabitants of Dailam and Gilān were 'plunged in ignorance' (i.e. heathenism), and some were Magians, this being particularly the case with those in the mountains, valleys, fortresses, and other inaccessible places (Mas'ūdi, *Pravires d'or*, ed. and tr. C. Barbier de Meynard and Pavet de Courteille, Paris, 1861–77, ix. 5). It was a

¹ The zodiacal signs, appointed as celestial leaders by Ahura Mazda (*Dīn-i-Mānīg-i-Xrat*, viii. 13).

² According to Darmesteter (ii. 373, n. 32) and West (*GrP* ii. 110), the Pahlavi *Jāmdap-nāmak* raises the question whether the Māzandarānis were demons or men, and where their souls went after death, the reply being that they were all men, that some of them followed the religion of Ahura Mazda and others the law of Angra Mainyu, and that most of them went to heaven; but the text, as edited and translated by J. J. Modi (Bombay, 1906), contains no statement whatever on this matter.

centre of the Hurramite and Zaidite sects of Muhammadanism (*ib.* vi. 188, vii. 117; cf. also Ibn Isfandiyyār, pp. 158, 189-193).

The Zaidites call for no special remark, but the Hurramites may be briefly described, as being one of the many attempts at religious syncretism in W. Asia.

The exact meaning of the name is not absolutely certain. It is usually explained as from Pers. *zurram*, 'cheerful' (i.e. 'Epicurean'; so T. Haarbrucker, in his note to his tr. of al-Shahrastānī's *Religionspartheien und Philosophenschulen*, Halle, 1850-51, ii. 410, and Flügel, *ZDMG* xxiii. 531, note), but it has also been derived from the town of Hurram near Ardābil, which appears to have been an ancient centre of Mazdakite teaching (A. Müller, *Islam*, Berlin, 1886, i. 505, note). The present writer is inclined to trace the term to the name of Mazdak's wife, Hurramah, who, after her husband's execution, fled to Ray, where she carried on a successful propaganda of Mazdakite heresy, calling her teachings *Hurram-dīn* (cf. also C. Schefer, *Chrestomathie persane*, Paris, 1883-85, i. 170-175, where the relevant passage of Niẓām-al-Mulk's *Kitāb al-Siyāsat* [ed. and tr. in full by Schefer, Paris, 1893] is given in text and translation, for the Mazdakite heresy see art. MAZDAK).

The Hurramites were divided into the Bābakīyah and Māzyāriyah (the latter also called Muhāmirah, 'red-badged'). While there is abundant material regarding the rôle played for more than twenty years (815-838) in Ṭabaristān by Bābak (the Arabic spelling of the Persian name Pāpak),¹ as well as by Māzyār,² for a knowledge of the special features of their sects we have only two sources—the *Fihrist* of Muhammad ibn Ishāq al-Nadīm (written in A.D. 987-988, ed. G. Flügel, Leipzig, 1871-72, pp. 342, 350-344, 18, tr. Browne, *Lit. Hist.* pp. 324-327) and the *Tabṣīr fī al-dīn wa-tamayyūz al-firqaq al-naḡīyat 'an al-firqaq al-hālikīn* of Abū-l-Muḡaffār Ṭāhir ibn Muḡammad al-Isfarāīnī († A.D. 1078; the passage in question is ed. by Flügel, *ZDMG* xxiii. 533, note).³

From the *Fihrist* we learn that Bābak was the natural son of an oil-seller who migrated from Ctesiphon to the village of Būlābādīh, not far from Ardābil and Arrājān, and married, after an illicit amour with her, a one-eyed woman who later became the mother of Bābak. One day, while the boy was asleep, his mother saw a drop of blood under each hair on his breast and head, and from this she inferred that he 'was destined for some glorious mission.' Bābak later entered the service of Jāvidān,⁴ a Hurrami leader, and, when the latter died, in consequence of a wound received from the rival Hurrami chieftain, Abū 'Imrān, Jāvidān's wife, who had engaged in an intrigue with Bābak, and who had concealed from the public the news of her husband's death, told her lover that she would tell Jāvidān's followers that he had decided to die and cause his spirit to pass into Bābak, who was to slay the present rulers, restore the Mazdakites, and enrich his adherents. The plan was completely successful, and Bābak became the acknowledged leader of the sect, claiming to be God incarnate. After this, Bābak's mistress 'called for a cow, and commanded that it should be slain and flayed, and that its skin should be spread out, and on the skin she placed a bowl filled with wine, and into it she broke bread, which she placed round about the bowl. Then she called them, man by man, and bade each of them tread the skin with his foot, and take a piece of bread, plunge it in the wine, and eat it, saying, "I believe in thee, O Spirit of Bābak, as I believe in the spirit of Jāvidān"; and that each should then take the hand of Bābak, and do obeisance before it, and kiss it.' She then 'brought forth food and wine to them, and seated Bābak on her bed, and sat beside him publicly before them. And when they had drunk three draughts each, she took a sprig of basil and offered it to Bābak, and he took it from her hand, and this was their marriage' (Browne, p. 327).

It is thus clear that Bābak held the doctrines of *ḥulūl* (the incarnation of God in human form), *tanāsuh* (passing of the soul from one body to another), and *ruḡ'ah* (reincarnation), so that he belonged to the 'immoderate' Shi'ites as described by al-Shahrastānī (tr. Haarbrucker, i. 199 ff.; cf. Browne, p. 328). He appears to have been hostile to Islām, for Ibn Isfandiyyār states (p. 153) that he 'ordered the Muhammadan mosques to be destroyed and all traces of Islām to be removed.' It is doubtful whether he was of Persian origin, for, according to the *Fihrist*, his father sang songs 'in

the Nabatean tongue,' and Bābak's own tongue 'was cramped by outlandish speech' (see, further, Browne, *loc. cit.*).

To this information al-Isfarāīnī adds that the Māzyāriyah 'appealed to the religion of the Muḡammirah,' and he says:

'By night the Bābakīyah in those mountains [of Ṭabaristān] agree upon every kind of depravity with women and flute-playing, etc.; and therein [i.e. at night] the men and the women agree together. Then the lamps and fires are extinguished, and every one of them rises up to one of the women who chances to sit with him. And these Hurramīyah assert that in the Ignorance they had a king named Sharvīn,⁵ whom they deem greater than the prophets; and when they mourn for the dead, in his name they pay tears and lamentations, (even) their grief for him.'⁶

It is clear that the Bābakīyah were only a later phase of the sect founded by Mazdak, but in a degenerate form, marred by the cruelty which characterized the career of Bābak, who is said to have slain at least 255,600 persons during his years of power.

LITERATURE.—F. Spiegel, *Brānische Alterthumskunde*, Leipzig, 1871-78, i. 66-70, 585-592; W. Geiger, *Ostiran. Kultur im Altertum*, Erlangen, 1882, pp. 42-45, 124 f., 127 f., 184, 187; J. Marquart, *Brānsahr*, Berlin, 1901, pp. 129-135; G. N. Curzon, *Persia and the Persian Question*, London, 1892, i. 354-389 (with abundant references to earlier travellers); G. Melgunoff, *O yuznomū berege kaspiskago morya*, Petrograd, 1868 (Germ. tr. by J. T. Zenker, *Das südliche Ufer des kaspischen Meeres*, Leipzig, 1868); B. Dorn, *Muham. Quellen zur Gesch. der sud. Küstenländer des caspischen Meeres*, 4 vols., Petrograd, 1850-58 (edd. of the local historians Zāhir al-Dīn [cf. also H. Ethé, *GlRP* ii. 362], 'Alī ibn Sams al-Dīn, 'Abd al-Fattāḥ Fūṣṣanī, and a volume of miscellaneous extracts); Muḡammad ibn al-Ḥasan ibn Isfandiyyār, *Hist. of Ṭabaristān*, abridged tr. by E. G. Browne, London, 1905; G. Flügel, 'Bābek, seine Abstammung und erstes Auftreten,' *ZDMG* xxiii. [1869] 531-542; E. G. Browne, *Literary Hist. of Persia from the Earliest Times till Firdausī*, London, 1902, pp. 323-331. Much early literature on the history of the country has been lost—e.g., 'Alī ibn Muḡammad al-Madāīnī's 9th cent. *Book of the Victories of the Mountains of Ṭabaristān and Book of Ṭabaristān in the Days of Rāzīd*, mentioned in the *Fihrist*, 103, 15. For the Māzandarānī dialect see W. Geiger, *GlRP* i. ii. [1901] 345 ff. (with copious references to earlier literature).

LOUIS H. GRAY.

MAZDA.—See ORMAZD.

MAZDAK.—i. History.—Mazdak, son of Bāmādāh, a Persian (probably a native of Susiana), was the leader of a communistic sect which towards the end of the 5th cent. A.D. became a formidable power in the Sasanian empire. According to some accounts, the original founder of the sect was a certain Zarādusht, son of Khurragān,⁷ on whose behalf Mazdak is said to have carried on propaganda among the populace, but in any case it was under Mazdak that the sect first gained importance. His temporary success was largely due to the state of anarchy then prevailing in Persia. The emperor Kawādh, who ascended the throne in A.D. 488, finding himself opposed by the nobility and the influential Zoroastrian priesthood, entered into a close alliance with the arch-heretic and embraced his revolutionary doctrines. The governing classes were strong enough to depose Kawādh in favour of his brother Jāmāsp; but after his restoration, which took place a few years later, the power of the Mazdakites continued to increase, though Kawādh does not seem to have supported them very actively. In the concluding years of his reign a bitter struggle was waged over the succession, which the Mazdakites endeavoured to secure for one of Kawādh's sons who was devoted to their cause, while the Zoroastrian priests, in agreement with the emperor himself, regarded

¹ See Justi, p. 290.

² Perhaps we may compare the nocturnal orgies against which the Gāthās polemicize (Ys. xxxii. 10, xlviii. 10; cf. C. Bartholomae, *Gāthās des Awesta*, Strassburg, 1905, p. 38 f.; J. H. Moulton, *Early Zoroastrianism*, London, 1913, pp. 72, 129); possibly, however, it was merely a current bit of scandalous gossip without much foundation.

³ The Mazdakites are called Zarādushtakān in the Syriac *Chronicle of Joshua the Stylite*, ed. W. Wright, Cambridge, 1882, § 20.

¹ See the references given by Browne, *Lit. Hist.* p. 328, n. 3; C. Huart, in *BE* i. [1913] 647, and Justi, *Iran. Namenbuch*, Marburg, 1895, p. 242.

⁴ Cf. Justi, p. 113.

prince Khusrau as the presumptive heir to the throne. The course of the events which culminated in the massacre of Mazdak together with many thousands of his followers is uncertain. According to the narrative of a Persian official who was converted to Christianity and assumed the name of Timotheus (Joannes Malalas, in *PG* xvii. 654; Theophanes, *ib.* cviii. 395), Kawādh pretended to yield to the Mazdakites, and, having appointed a day for his abdication, caused his soldiers to cut down all the Mazdakites who had assembled with their wives and children in the neighbourhood of Otesiphon to witness the ceremony; he then gave orders that the surviving members of the sect should be seized and burned, and that their property should be confiscated. Most Muhammadan writers place this massacre in the reign of Khusrau, but the truth appears to be that, although it was carried out under Khusrau's direction and probably at his instigation, it preceded his accession (A.D. 531) by two or three years. Nöldeke assigns it to the end of 528 or the beginning of 529 (*Gesch. der Perser und Araber zur Zeit der Sasaniden*, Leyden, 1879, p. 465). The ruthless energy displayed by Khusrau on this occasion earned for him, it is said, the title of Anūshak-rubān (Anūsharwān, Nūshīrwān), i.e. 'he of immortal spirit', and the further measures which he took were so effectual that henceforward the Mazdakites vanish from history. That they were entirely exterminated is scarcely credible. There is some ground for the suggestion that Mazdak's ideas maintained themselves in secret and found expression in various Antinomian sects which arose in Persia during the Muhammadan period (for an account of one of these see art. MĀZANDARĀN).

2. Doctrine.—It must be remembered that the whole of our information concerning Mazdak is derived from hostile sources. The epitaph written by an intolerant sacerdotal caste over heretics who had brought it to the verge of destruction may fairly be summed up in the words 'de mortuis nil nisi malum'; and, unfortunately, we have nothing from the Mazdakite side to set against the biased narrative of our Zoroastrian and Christian authorities. On the other hand, we cannot suppose that they have altogether obscured the essential character of Mazdakism, however they may have misunderstood or misrepresented it in detail. Its socialistic basis is well described in the following passage of Ṭabārī (Leyden ed., 1879–1901, i. 893. 11 f., translated by Nöldeke, *op. cit.* p. 154):

'Among the commands which he [Mazdak] laid upon the people and earnestly enjoined was this, that they should possess their property and families in common; it was, he said, an act of piety that was agreeable to God and would bring the most excellent reward hereafter; even if he had laid no religious commandments upon them, yet the good works with which God was well pleased consisted in such copartnership.'

In another passage (Ṭabārī, i. 885. 19 f. = Nöldeke, *op. cit.* p. 141) we read:

'They [the Mazdakites] asserted that God placed the means of subsistence (*arzāq*) in the world in order that His servants might share them in common, but men had wronged one another in that respect. The Mazdakites said that they would take from the rich for the benefit of the poor, and give back to those who had little their due portion at the expense of those who had much; and they declared that he who possessed more than his share of wealth, women, and property had no better right to it than any one else. The mob eagerly seized this opportunity, . . . and the Mazdakites became so powerful that they used to enter a man's house and forcibly deprive him of his dwelling, his womenfolk, and his property, since it was impossible for him to offer resistance. . . . Soon things came to such a pass that the father did not know his son nor the son his father.'

While the principle that every man is entitled to possess an equal amount of property involves logically and practically copartnership, the removal of class distinctions, and the abolition of marriage, it may be asked from what point of view the principle itself was regarded by Mazdak, whether these results of its application formed

part of his programme, and how far they were achieved by his followers. To take the last question first, Khusrau, in his speech to the priests and nobles after his coronation (Ṭabārī, i. 896. 15 f. = Nöldeke, *op. cit.* p. 160 f.), dwells upon the ruin of their religion and the heavy losses which they had incurred. The systematic regulations which he made for the purpose of compensating the sufferers, establishing the position of children of doubtful origin, etc., show that the social revolution must have developed considerably, and that the upper classes bore the brunt of it. Our authorities give great prominence to this aspect of Mazdakism, and they are justified in doing so. Mazdak was not a philosopher, like Plato, content to work out on paper a theory of the ideal communistic State. He was a militant social reformer, but he was something more. Nöldeke has remarked that what distinguishes Mazdakism from the organized socialism of modern times is its religious character, a peculiarity in which it resembles all Oriental movements of the same kind (*op. cit.* p. 459; cf. his art. 'Orientalischer Socialismus,' in *Deutsche Rundschau*, Feb. 1879, p. 284 f.). This character is preserved in the hostile Zoroastrian tradition. Mazdak's asceticism—he is said to have forbidden the slaughter of cattle for food—gave offence to the orthodox, who saw in him 'the ungodly fasting Ashemaogha' (Pahlavi commentary on *Vendīdād*, iv. 49; *SBE* iv.² [1895] 48). The passages from Ṭabārī translated above, and still more the epic narrative of Firdausī (*Shāh-nāmah*, ed. Turner Macan, Calcutta, 1829, p. 1611 f.), which reflects the sentiments of the priesthood, bring out quite clearly the fact that Mazdak identified his doctrines of equality and fraternity with the religion of Zoroaster in its original uncorrupted form.

'I will establish this [communism] in order that the pure religion

May be made manifest and raised from obscurity.

Whoever follows any religion except this,

May the curse of God overtake that demon (*dēv*)!

(*Shāh-nāmah*, p. 1613, line 11 ff.)

'Five things turn a man from righteousness;

The sage cannot add to these five:

Jealousy, anger, vengeance, need,

And the fifth one that masters him is covetousness.

If thou prevail against these five demons,

The way of the Almighty will be made manifest to thee.

Because of these five, we possess women and wealth,

Which have destroyed the good religion in the world.

Women and wealth must be in common,

If thou desirest that the good religion should not be harmed.

These two (women and wealth) produce jealousy and covetousness and need,

Which secretly unite with anger and vengeance.

The Demon (*dēv*) is always turning the heads of the wise,

Therefore these two things must be made common property'

(*ib.* p. 1614, line 7 ff.)

Without claiming that Mazdak was animated by no other motives than those which his enemies attribute to him here, we may well believe that he regarded his communistic scheme as the only sure means of enabling mankind to attain the object which Zoroaster had set before them, namely, the defeat of the powers of darkness and the triumph of the spirit of light. The astonishing success of his propaganda is to be explained by the force of his appeal to Persian idealism. He would not have gained extensive support for his social programme unless it had been, ostensibly if not in fact, the instrument by which he hoped to accomplish a great religious reformation. In the main he appears to have held fast to Zoroastrianism, and no reliance can be placed on the statements of Shahrastānī and later writers who credit him with cosmological speculations closely akin to those of Mānī.

LITERATURE.—The principal references to Mazdak which occur in Greek, Syriac, Pahlavi, Arabic, and Persian literature are collected by T. Nöldeke, *Gesch. der Perser und Araber zur Zeit der Sasaniden*, Leyden, 1879, at the beginning of the fourth excursus, 'Ueber Mazdak und die Mazdakiten,' p. 465 f., which

is the best existing source of information on the whole subject, and by E. G. Browne, in his *Literary Hist. of Persia*, I, London, 1902, p. 169. See also F. Spiegel, *Erden. Alterthumskunde*, Leipzig, 1871-78, II, 222-235; G. Rawlinson, *The Seventh Great Oriental Monarchy*, London, 1876, p. 3421; al-Bīrūnī, *The Chronology of Ancient Nations*, tr. C. E. Sachau, do. 1879, p. 192; Shahrastānī, tr. T. Haarbrucker, Halle, 1850-51, I, 291 ff.; Dabistān, tr. D. Shea and A. Troyer, Paris, 1845, I, 372 ff.; Shaikh Muhammad Iqbal, *The Development of Metaphysics in Persia*, London, 1909, p. 13 f. The collection of *riwāyat* of Dārāb Hormazdyār (ed. M. N. Unvālā, II, 214-280—the edition has not yet been published) contains a long poem, written A.D. 1616, on Mazdak and Kawādh (briefly summarized by F. Rosenberg, *Notices de litt. persie*, Petrograd, 1909, p. 51 f.).

REYNOLD A. NICHOLSON.

MEAN.—The historic varieties of significance associated with this term are all evolved from the general idea of that which comes 'between' or in the 'middle.' Hence the term has an implication of double relationship to two other terms, the primitive significance being that which is 'between' two other things in reference to space or time.¹

As subst. and as adj. 'mean' entered Mid. Eng. from late Lat. *mediānus* through O Fr. *moyen*, Mod. Fr. *moyen*. The Lat. original *mediānus* (like Eng. 'middle' through its A.S. original) is connected with one of the oldest and most widely spread roots in human language. Both as subst. and as adj. 'mean,' in the sense here defined, is to be distinguished from adj. 'mean' of A.S. origin (A.S. *gemæne*, O.H.G. *gemein*, Mod. Germ. *gemeine*, akin to *communis*), which, originally signifying 'general' or 'common' to more persons than one, acquired the sense of 'muddling' or 'moderate' and then of 'low' in rank or quality, ethically inferior or ignoble, esp. 'avaricious' or 'penurious.'

The idea of the mean was given an ethical application by Aristotle (*Eth. Nic.* II, 6-8), in whose doctrine of virtue it holds the central place. Virtue consists in reasonable moderation, involving the avoidance, on the one side, of excess, and, on the other, of defect; in this sense virtue holds an intermediate position, and may be said to be a mean. Here the mean is not quantitative, and the notion of 'equal distance' from the extreme is not applicable. Every habit or action may err by excess or defect; between these opposed extremes (e.g., *θρασύτης* and *δειλία*) stands that degree of activity which characterizes virtuous conduct (in this instance, *ἀνδρεία*; cf. *Eth. Nic.* III, 7, 1115^b-1116^a). Its 'distance' from the extremes will depend on the nature of the agent in relation to that of the moral case before him, and is therefore to be determined, not by any abstract considerations, but by the concrete rational judgment of the man of insight (*φρόνιμος* [*Eth. Nic.* II, 6, 1107^a]).

This conception involves that of an adaptation or harmony of agent, act, and environment, similar to the harmony of parts displayed in a work of art; in fact, it expresses the aesthetic aspect of virtue. Aristotle is aware that, in the strictly ethical sense, virtue is always opposed to vice, and is therefore always an 'extreme' (II, 6, 11, 1106^b 22; 17, 1107^a 6; Stewart, *Notes on the Nicomachean Ethics of Aristotle*, II, 208). But, in laying stress on the aesthetic aspect, Aristotle is true to the Greek genius. The traditional Greek view of life made it natural that 'moderation,' 'measure,' and kindred conceptions should be appropriated to express excellence in life and action.

The typical Greek virtue is *σωφροσύνη* (most inadequately rendered 'temperance'), closely related to the traditional maxim *μηδὲν ἄγαν*. Its opposite is *ἄσπρος*. In Homer the object of moral condemnation is of the nature of 'excess,' 'going too far'; above all, 'wickedness' is *ἄσπρος*. In the case of the strong it is the insolence of brutality, especially in reference to the weak and the helpless; in the low and the weak it is irreverence in the presence of something higher.² When a man thinks of doing such things, he feels *αἰδώς*; if he does them, the seen and unseen witnesses feel *νέμεσις*, 'righteous indignation.'

There is an application of the Aristotelian principle of the mean in the general theory of knowledge, not, indeed, explicitly stated by Aristotle, but implicit in much of his thinking, as in that of Plato; it was made by Hegel into the first principle of thought and being in the applications of his Logic—his doctrine of thought as a dialectically progressive movement through the meeting

¹ From the sense of 'that which stands between two things,' the 'mean' (or plural 'means,' often used grammatically as a singular) may be used for that which produces a result, or, more generally, for any resources capable of producing a result.

² The case of Nebuchadnezzar (Dn 4^{27ff}) illustrates a form of *ἄσπρος*, portrayed in a specifically religious setting.

of opposites—to the history of human thought and endeavour; it is this that gives to his expositions of history all their strength and value, notwithstanding the excessively rigid formalism with which the principle is applied by him in certain cases. We can seldom find clearly marked theses and antitheses (in pairs) from the opposition of which the higher truth springs; we can find only conflicting *ἐνέργειαι*, streams of tendency, movements of thought.

A movement involving truth mingled with error is found in conflict with another movement, involving different truths mingled with different errors. What is required is a point of view above both the conflicting principles, from which to criticize them. This is the true 'middle way,' found, not by taking what the two extreme views have in common, and disregarding all their differences, but by finding a principle which contains more truth than either of the extremes, not less truth. The value of the conflicts and oppositions of history is to suggest the need for these higher—or, to vary the metaphor, deeper—truths, and sometimes also to suggest the way to reach them.

I.; W. Wallace, *Logic of Hegel*, Prolegomena, Oxford, 1904, chs. xxvi.-xxxii. For the Buddhist school of the mean see art. MADHYAMAKA, MADHYAMIKAS.

S. H. MELLONE.

MEAN (Chinese).—Outside of Greece, the theory of the mean received formal attention only in China, which produced the classic *Chung Yung*, commonly known as 'The Doctrine of the Mean,' though more exactly rendered 'Equilibrium and Harmony' (see above, p. 90^b), the authorship of which is attributed to the grandson of Confucius, Tzu Ssu, who flourished in the 5th cent. B.C.

Heaven has conferred a spiritual nature on man, and 'an accordance with this nature is called the path [of duty], which must never be abandoned (I, 1-2). The terms *chung* ('equilibrium') and *yung* ('harmony') are respectively absence of 'stirrings of pleasure, anger, sorrow, or joy,' and the state in which 'those feelings have been stirred, and they act in their due degree' (I, 4). Therefore, 'let the states of equilibrium and harmony exist in perfection, and a happy order will prevail throughout heaven and earth, and all things will be nourished and flourish' (I, 5). According to Confucius himself, the superior man embodies this ideal state, and 'perfect is the virtue which is according to the Mean' (II, f.); yet some err by exceeding it, and some by falling short of it (IV, 1)—only the sage is in perfect harmony with it (XI, 3). As an example of the practical value of *chung yung*, Confucius cites the course pursued by the emperor Shun (2255-2205 B.C., according to Chinese tradition), who questioned men, 'took hold of their two extremes, [determined] the Mean, and employed it in [his government of] the people' (VI.); but yet, in spite of all, 'the course of the Mean cannot be attained to' (IX.). In a word, the superior man 'stands erect in the middle, without inclining to either side' (X, 5); if he goes beyond the mean, he checks himself; if he falls below it, he puts forth every effort to attain it (XIII, 4).

Yet 'the path is not far from man' (XIII, 1); but, even if 'common men and women, however much below the ordinary standard of character, can carry it into practice; yet in its utmost reaches, there is that which even the sage is not able to carry into practice' (XII, 2). One is not far from the path when he 'cultivates to the utmost the principles of his nature, and exercises them on

the principle of reciprocity' (xiii. 3); and yet 'were the superior man to speak of his way in all its greatness, nothing in the world would be found able to embrace it; and were he to speak of it in its minuteness, nothing in the world would be found able to split it' (xii. 2). 'The superior man does what is proper to the station in which he is; he does not desire to go beyond this. . . . The superior man can find himself in no situation in which he is not himself,' and, if he fails in anything, he blames only himself (xiv. 1 f., 5). He advances in regular order from stage to stage (xv. 1), and constantly strives to advance and develop his virtuous nature that he may pursue the path of the mean (xxvii. 6). 'When occupying a high situation, he is not proud, and in a low situation, he is not insubordinate' (xxvii. 7); and it is characteristic of the superior man, though 'appearing insipid, yet never to produce satiety; while showing a simple negligence, yet to have his accomplishments recognized; while seemingly plain, yet to be discriminating' (xxxiii. 1). Among the many virtues of Confucius, special mention is made of the fact that he never swerved from the mean (xxxi. 1).

The remainder of the *Chung Yung* is devoted to laudation of filial piety, and to the duties of government, the obligation of absolute sincerity, the path of the sage, and the character of the ideal ruler—all of which depend on the cultivation of *chung yung*.

The mean is mentioned a number of times in the other Chinese Classics; e.g., the *Yi King* says (xln. 3) that the ruler should 'be sincere and pursue the path of the Mean'; but these texts add nothing to the main discussion in the *Chung Yung*.

LITERATURE.—The *Chung Yung* is most conveniently ed. and tr. by J. Legge, *Chinese Classics*, Hongkong and London, 1861-73, i. 246-298 (cf. also his *Prolegomena* to this vol., pp. 85-65), and again tr. by him in *SBH* xxviii. [1886] 800-829.

LOUIS H. GRAY.

MECCA.—Mecca (Arabic Makkah) is a city in Central Arabia, famous as the birthplace of Islām, and, except for a short period at the commencement of the system, at all times its chief sanctuary. A variety of the name, Bakkah, occurs once in the Qur'ān (iii. 90), and this is probably the earlier form, though the etymology is uncertain. The classical geographers, who devote considerable attention to Arabia, are apparently not acquainted with this settlement; for the Makoraba of Ptolemy (vi. vii. 32) is derived from a different root. The 'Chronicles of Mecca,' of which the earliest extant is by Azraqi († 245 A.H.), so far as they treat of the pre-Islamic period, are collections of fables, in the main based on the Qur'ān, but to some extent influenced by the later history also. It would appear that, when Islām arose, there were no chronicles in existence dealing with the affairs of Central Arabia, and for some generations the days of paganism were regarded with a sort of horror, which prevented the preservation of precise information concerning them.

The references to the city in the Qur'ān throw little light on its early history. A *sūra* incorporated near the end of the collection (cv.) reminds the Prophet of the Owners of the Elephant, who were destroyed by birds (*abābil*), which flung at them stones of *sijjil*. The tradition interprets this as an expedition by Abyssinians against the Meccan sanctuary, miraculously frustrated, but it is possible that this story is an invention of exegetes, who coupled *sūra* cv. with cvi., which more decidedly deals with Mecca, and is itself a fragment, scarcely to be construed in its present form. In it the Quraish (the tribe in possession of the Meccan sanctuary) are advised to worship the Lord of this House, who has given them food after hunger and safety after fear. These two pheno-

mena, plenty and safety, are mentioned elsewhere in connexion with the Meccan sanctuary, the former as a result, it would seem, of visits from pilgrims, whereas the latter probably means safety for refugees; but the texts are not very clear. The sanctuary itself is called in the Qur'ān either 'the house,' or 'the house of Allāh, the Sanctuary,' or the Ka'bah (a word said to mean no more than 'house,' and perhaps the Ethiopic word for 'double,' i.e. two-storeyed), or 'the place of prostration, the Sanctuary.' In iii. 90 f. it is called 'the first house established for mankind, blessed and a guidance to the worlds, containing manifest signs, the station of Abraham, and whoever enters it is secure.' This would by itself imply that the Ka'bah was the first house ever built, as a model for all others, and that Abraham took refuge there and made it his abode. Elsewhere (xiv. 40) Abraham states that he had settled his family by it (or in it) in spite of the sterility of the valley, in order that they might pray there regularly; and he prays that the town (and not the house only) might be secure. In xxii. 27 he is represented as doing in his time much the same as was afterwards done by Muhammad: he was told to purify the house for those that perform the four ceremonies called *ṭawāf*, standing, inclination, and prostration. In ii. 119 f. Ishmael is coupled with Abraham; they laid the foundations of the house, and were told to purify it as before, the ceremony called *'ukūf* being substituted for 'standing.' What may be inferred from these texts is perhaps that prior to Muhammad's time the Ka'bah was a sanctuary which enjoyed some popularity in part of Arabia, and that the right of sanctuary had to some extent been associated with the settlement of Mecca and with its inhabitants. The biography of the Prophet certainly implies that the Meccans had the very strongest objection to bloodshed, and possessed little aptitude for warfare. The association of Mecca with Abraham is unlikely to have been earlier than the Prophet, except so far as the N. Arabian tribes were known by monotheists, on the authority of Genesis, to be descended from the patriarch. It seems clear, however, that the Ka'bah was only one of many sanctuaries which were visited, and, if the word *ḥijjah*, which is used for 'pilgrimage,' be explicable from the Hebrew *hūg*, 'draw round,' the Arabian month which is called after it is likely to mean 'month of going-round,' i.e. the round of the sanctuaries, as opposed to the preceding 'month of squatting' at home. The word technically used of going round the Ka'bah, *ṭawāf*, seems also to be properly used of going a round, as, e.g., is done by a sentinel, and this ceremony may be due to a confusion of thought. The pilgrimage which became stereotyped in Islām involves visits to places which are likely to have been seats of distinct sanctuaries, some at a considerable distance from Mecca.

The difficult *sūra* cvi. speaks of 'winter and summer journeying,' which is traditionally interpreted of Meccan caravans, and in the biography of the Prophet these play an important part. The Muslim archaeologists suppose that the Quraish, owing to their character as 'Allāh's people,' enjoyed immunity from attack, and so had special facilities for the carrying trade. It is not easy to reconcile this with the primitive conditions which very clearly prevailed in Mecca at the rise of Islām, and the complete ignorance which the Qur'ān assumes for its inhabitants. If there be any truth in this carrying trade, it is likely to have been on a small scale.

In the Qur'ān Mecca is sometimes called 'the Mother of the villages,' i.e. the chief village; elsewhere the number of the villages is given as two, which the commentators suppose to mean Mecca

and Taïf; it is more probable that only Mecca is meant. Of walls we first hear in the reign of Muqtadir (A.D. 908-932), and these did not surround the settlement, which was naturally protected by mountains, but merely blocked the passes. Snouck Hurgronje¹ is probably right in thinking that the community first gathered round the well Zamzam, which furnishes a constant supply of brackish water. The tradition gives us the names of the tribes which formed the community, but scarcely hints at any sort of municipal organization or government. Still more surprising is the absence of all mention of priests, such as we should have expected to be associated with a sanctuary. The wealth of the tribes is likely to have consisted mainly in camels, but other forms were probably known; visitors to the shrine have at all times had to pay more or less heavily for the privilege, and this source of wealth is, as we have seen, indicated in the Qur'ān. We possess only casual notices of the amounts demanded in later times, but these indicate that the piety of pilgrims often afforded a considerable revenue. The Fātimid khalifs expected the governor of Mecca to make the pilgrim-tax his chief source of revenue; besides this visitors' fee, they had to pay for admission to the sanctuary, and those who brought goods had to pay import duty. Attempts were made by pious sovereigns to abolish these dues, but they had a tendency to revive, and their analogues doubtless existed in the period before the rise of Islām.

Prior to the rise of Islām it would appear that some notions of Christianity had penetrated to Mecca, and the biographies of the Prophet profess to give us the names of persons who had either adopted that system or showed some leanings towards it. There appears to be no recollection of the existence of any Christian place of worship at any time in this city. The tradition represents the pagan inhabitants as tolerant towards religious innovators and dissentients, so long as the local beliefs and practices were not assailed; but the life of such a community was so intimately bound up with the local religion that it is difficult to suppose that dissent could remain quite immune from persecution.

There is reason for thinking that the Prophet's original attitude towards the Meccan religion was uncompromising, and that his success would have involved the abolition of the ceremonies of which the Ka'bah formed the centre. His rejection by the Jews of Medina (*q.v.*) caused him to contemplate a partial return to the system which he had abandoned, and some time before the taking of Mecca he obtained a truce enabling him to perform the pilgrimage with some ostentation. Doubtless this performance paved the way for the subjection of the place. But, when Mecca had become Islāmic, its position was modified in two important ways. On the one hand, it became the only sanctuary in Arabia; on the other hand, the presence of non-Muslims at the festival was forbidden. Since the pilgrimage was now made compulsory, Mecca lost nothing by this innovation.

It is uncertain whether the Prophet contemplated retaining Medina permanently as his capital or at some time making his native place the seat of government. There is no doubt that there were jealousies between the two places before the Prophet's death. None of his successors (except perhaps 'Abdallāh b. Zubair, whose occupation of the khalifate lasted some ten years) seems to have regarded Mecca as a suitable metropolis for political purposes, but its position as the central sanctuary has rarely been endangered. Certain fanatical sects, such as the Carmatians and Wahhābis (*qq.v.*), have at times done damage to its monuments, and

the substitution of Baghdād or Jerusalem for it is said to have been considered by Umayyad and 'Abbāsīd khalifs, although they recognized in time that such experiments would have been fatal to Islām or to their thrones.

For the history of Mecca since its adoption of Islām we possess a series of Chronicles, of which those published by F. Wustenfeld² cover the first millennium from the Hijrah, and to these Snouck Hurgronje³ has added the substance of certain unpublished records which carry the history up to our time. Regular government was then introduced, perhaps for the first time, a prefect appointed by the sovereign being responsible for the maintenance of order. This personage was leader of the ceremonies at the time of the pilgrimage, unless the sovereign either came himself or sent a special representative. The governorships of the three towns, Mecca, Taïf, and Medina were at times united in the same person, at times distinct; the first was much the most important of the three. In 'Abbāsīd times it was the custom, at least for a considerable period, to appoint to the governorship some member of the reigning family. It would seem that the 'Alid pretenders, who rose in a fairly constant series, usually found some support in both sanctuaries, and on several occasions they fell for a time into the hands of these persons. After the reduction of the Baghdād khalifate to impotence—a process which began in the second half of the 3rd cent. of Islām—it would appear that the dependence of the sacred cities on the central government became lax, though historical details are wanting. About A.D. 960 an 'Alid named Ja'far made himself master of Mecca, and introduced the rule of the Sharifs, which has lasted to our day; this word, signifying 'noble,' is applied in Muslim countries to the descendants of the Prophet. He submitted to the suzerainty of the Fātimids now established in Egypt, but in most respects was an independent ruler. His successors shifted their allegiance from Cairo to Baghdād and back, according to the value of the gifts received; and throughout the subsequent history of Mecca recognition has been granted without difficulty to the suzerain who offered the highest price. According to Ibn Jubair,³ who visited Mecca in the years 1183 and 1185, the Sharifs were of the Zaidi sect, which, while recognizing the rights of the Prophet's descendants to the succession, held that considerations of expediency might justify their being ousted; the practice of the Sharifs was then in accordance with this doctrine. The dynasty founded by Ja'far was displaced at the beginning of the 13th cent. of our era by another, also claiming descent from 'Alī. The founder was one Qatadah, who appears to have energetically supported the rising Zaidite dynasty of San'a, but whose successors fell back into the former practice of recognizing the power which for the time was capable of displaying the greatest generosity. The 'Chronicles of Mecca' consist largely of the quarrels between Qatadah's descendants, which not infrequently had to be settled by the active interference of the Egyptian Sultāns, who, from the fall of Baghdād until the conquest of Egypt by the Ottomans, were ordinarily recognized as suzerains by the Sharifs. The Sharif 'Ajlan (1346-75), who for a time transferred his allegiance to the Mongol rulers of Persia, definitely rejected the Zaidi system and made that of Shāfi'i dominant in Mecca, though the other orthodox systems were recognized; the dominance of the Hanifite school, which is the official system of the Ottoman government, dates from a much later time. A permanent garrison was first established

¹ *Chroniken der Stadt Mekka*, Leipzig, 1858-61.

² *Op. cit.*

³ ed. M. J. de Goeje, London, 1907, p. 101.

¹ *Mekka*, The Hague, 1888, I. 5.

in the neighbourhood by the Egyptian Sultān Jaqmaq (1438-53). On the Ottoman conquest of Egypt in 1516 the allegiance of the Sharifs was transferred without difficulty to the Sultān of Constantinople. The new rulers interfered with the authority of the Sharifs to a greater extent than their predecessors, and the presence of a Turkish governor at Jeddah has constituted a permanent restriction upon it. The introduction of Turkish suzerainty also led to the adoption by the Sharifs of an intolerant attitude towards the Shi'ites of Persia, who could only with difficulty and at some risk obtain admission to the pilgrimage. In the 17th cent., owing to the decline of the Ottoman power, the Sharifs, who were almost always involved in family quarrels, became somewhat less dependent on Constantinople, and could even at times defy the representative of the metropolis at Jeddah. Both the sacred cities were threatened by the rise of the Wahhābīte movement towards the end of the 18th cent., and indeed in 1793 and 1798 appeals for help against this new power were addressed to the Ottoman Sultān. This was not forthcoming, owing to the European complications in which the Porte was involved, and in 1803 Mecca was evacuated by the Sharif, and presently occupied by the Wahhābīs, who reformed the place according to their ideas. The Sharif was, however, after a short time re-installed on his professing to adopt the Wahhābī tenets; and for some years Turkish subjects were excluded from the pilgrimage. In 1813 an expedition sent by Muḥammad 'Alī, founder of the khedivial family in Egypt, succeeded in recovering the sacred cities, and a Turkish Pasha was installed in Mecca, where, however, the rule of the Sharif was nominally continued. After a time the Ottoman power was again represented by the governor of Jeddah.

Both the meaning and the limits of the sanctuary (*haram*) were extended by Islām. The sense of this Arabic word is 'to forbid,' and a sanctuary is a place where certain acts are forbidden, of which the most important is bloodshed; it is unlikely that this prohibition before Islāmic times extended beyond the Ka'bah itself. Azraqī is very likely right in asserting that at this time the dwellings of the citizens surrounded the Ka'bah, leaving only a small area (*ḥanā*); the growth of the Muslim community rendered the destruction of these dwellings necessary; and operations of this kind were undertaken by the second and third khalifs. The area was further enlarged by the pretender 'Abdallāh b. Zubair, but the actual mosque surrounding the Ka'bah was first built by the Umayyad al-Walid I. (A.D. 705-715), who erected a colonnade with marble pillars and other luxurious decorations. Further additions to the area were made by the 'Abbāsīd Maṣṣūr (in 755), who also built a minaret, and who, in the inscription placed on his work, claims to have doubled the area. Further large additions were made by his successor, Maḥdī, who at great cost had a torrent diverted with a view to bringing the site of the Ka'bah into the centre of the mosque. Yet further extensions were effected by Mutawakkil (856), who also introduced luxurious ornamentation. The frequent repairs required by the mosque were due in part to the floods by which Mecca was repeatedly visited, and to some extent to damage done during civil disorders. Under the khalif Mu'tamid considerable extensions and restorations were again carried out in the years 894-896, and the like are recorded for the year 918 under Muqtadir. Under this khalif serious mischief was wrought by the Carmatians, who massacred the pilgrims, and for a series of years practically put a stop to the institution; their atrocities culminated with the seizure in 317 A.H. of the Black Stone, which they conveyed to their headquarters in Hajar, whence

it (or some substitute) was sent back twenty years later. This fetish had already been seriously injured in the time of 'Abdallāh b. Zubair, when the Ka'bah was burned down, and, in spite of great precautions, it again suffered violence at the hands of an Egyptian Shi'ite in the year 414, and not long afterwards was broken into three pieces by some Persian fanatics. The kissing of this object, which forms one of the pilgrimage rites, is not mentioned in the Qur'an, but probably is a survival from pagan times.

In 1399 a large part of the mosque was destroyed by fire, and orders were presently given by the Egyptian Sultān Faraj for its restoration with increased magnificence; this was finished by 1404. In 1551 the Ka'bah itself was found to be in need of repair, but before this could be effected the question was raised whether this sacred building could lawfully be touched by the builders; and the fanatical populace were inclined to side with those holding the negative view. The precedent of Abraham and Ishmael (Qur'an, ii. 119) finally decided the question in favour of the restoration. In 1571 orders were given for the complete rebuilding of the mosque by the Ottoman Sultān Salīm II., who, however, did not live to complete the work; this fell to the lot of his successor Murād III. In the colonnades the principle was followed that three marble columns should be succeeded by one of black stone from a local quarry. Details of the numbers and the location of the columns in the old and in the new mosques are given by Wüstenfeld (iv. 318, 9), together with other statistics and dates. The existing mosque appears to be substantially that erected by Salīm and his successor.

It appears, then, from this sketch of the history of the mosque that little remains in Mecca for which any considerable antiquity can be claimed. The archæological taste has rarely developed in eastern countries, and no trouble was taken either in Mecca or in Medina to preserve historic buildings or retain ancient sites. The theoretic sanctity of Mecca has never stood in the way of leaders who wished to effect their objects by violence; and the Umayyad Yazīd, whose besieging forces were to some extent responsible for the burning of the Ka'bah in 64 A.H., did no more than would have been done by any other Muslim ruler who was engaged in suppressing a rebellion. Various buildings which figure in the early history of Islām were cleared away as the need for enlarging the temple area arose, and little regret was felt for them. On the other hand, many myths arose which have no justification in the Qur'an; thus a stone which is called 'the station of Abraham' has acquired great sanctity, but in the Qur'an (ii. 119, iii. 91) this phrase seems to mean only 'the dwelling-place of Abraham.' The jurist Mālik († 179 A.H.) asserts that this was restored by Omar to a place which it had occupied before the Days of Ignorance, on the faith of a chart preserved in the treasury of the Ka'bah.¹ As we have seen, the Black Stone, which is supposed to represent the 'right hand of Allāh,' is of very doubtful authenticity.

Besides the prohibition against bloodshed which theoretically covers the area occupied by the city, there are other legal peculiarities belonging to it. Closely allied to this prohibition is that against the chase, which is even extended to the cutting of trees and the plucking of herbs. This ordinance is modified in a variety of ways; it seems clear that the slaughter of noxious beasts is generally permitted, and weeding to a certain extent is also lawful. The slaughter of game has to be atoned for by compensation, on a scale fixed by the Qur'an. There is some difference of opinion between jurists on the question whether rent may be taken for

¹ *Mudawwanat*, Cairo, 1823, ii. 212.

houses in Mecca; according to modern travellers, this question is purely academic, since the inhabitants largely earn their living by letting their houses to pilgrims.

The place of Mecca in the Muslim religion is otherwise not free from anomalies. On the one hand, it is clear that the standard of morality and piety practised by the inhabitants has at no time been particularly high, and various travellers have been shocked by their experiences; on the other hand, there is no doubt about the sanctity of the place and the spiritual benefits that accrue to those who go thither. These are not indeed free from danger; for, just as the value of good actions is higher in Mecca than elsewhere, so the debt incurred by evil deeds is there increased; and, according to the Sūfis, evil thoughts and intentions are punished in Mecca, but not elsewhere. If Abū Tālib al-Makki († 386 A.H.) is right, pious men in early times who went thither on pilgrimage used to pitch two tents, one within and another outside the sacred area, devoting the former exclusively to religious exercises.¹ The resulting danger was one of the reasons why continuous residence in Mecca was discouraged; two others urged by Ghazālī² († 505 A.H.) were the fear lest familiarity should breed contempt and the fact that absence makes the heart grow fonder. It could also be urged that, according to the Qur'ān, 'the House' is a place of returning, i.e. one to be visited, not made a place of residence (ii. 119).

The various sovereigns who have been protectors or 'servants' of the sanctuaries have ordinarily been lavish in marks of their favour and somewhat jealous of munificence exercised by rival potentates; among the public works executed by these benefactors the greatest amount of space appears to be devoted in the Chronicles to the aqueducts; one which conveys water from Mt. Arafat to Mecca, utilizing a channel originally constructed by order of Zubaida, wife of Hārūn al-Rashīd, occupied fourteen years (965-979 A.H.) and cost enormous sums, owing to the difficulty of piercing the rock and the primitive character of the methods in use. Numerous colleges, hospitals, and almshouses have been erected by Islāmic sovereigns and their ministers, many of them furnished with endowments. The fate of all pious foundations in Mecca, according to Snouck Hurgronje,³ is the same: most of the houses that have any value have been at some time or other purchased in order to serve as endowment, but gradually passed from hand to hand in such a way that they retain the name *wagf* (on which see *ERE* vii. 877 f.), without serving any pious purpose. The name, however, prevents their being legally sold, yet sale is often necessary, and this is effected in fact, though new names are employed to serve instead of 'sale' and 'purchase.' An attempt was made by a Turkish resident in the middle of the 19th cent. to declare all such transactions invalid, but his removal was procured before this could be carried out.

The erection of the places of learning has not had the effect of rendering Mecca at any time a university centre, and its printing-press has contributed very little to Arabic literature; nevertheless as a gathering-place for the pious it has regularly served for the dissemination of ideas, which are worked out elsewhere. A. Le Chatelier, indeed, attributes the part played by Mecca in recent times to the influence of the Sanūsīs:

'La confrérie nouvelle rendit à la Mecque le rôle de foyer du fanatisme musulman, que lui avait fait perdre la caste sacerdotale' (*Les Confréries musulmanes du Hedjaz*, Paris, 1887, p. 19).

The author of a dialogue on Islāmic revival be-

³ *Op. cit.* p. 182.

tween Muslims of various nationalities recently placed the scene in Mecca.¹ Yet the cosmopolitan character of the pilgrimage appears from the time of the early Islāmic conquests to have rendered this sanctuary the place where it was easiest to address the Muslim world as a whole. Deeds of settlement of succession to the khalifate were issued and deposited here by Hārūn al-Rashīd.² If a man wished to procure a copy of a rare work, he would have a crier advertise the want among the pilgrims.³

In spite of the rule which forbids access to Mecca on the part of non-Muslims, many Europeans have undertaken the pilgrimage, some indeed having adopted Islām for the purpose of carrying out this project. In *Christians at Mecca* (London, 1909) Augustus Ralli gives accounts of sixteen such visitors, beginning with Ludovico Varthema, 'a gentleman of the city of Rome,' who reached the forbidden city in 1503. Since the publication of Ralli's collection two more English travellers have been added to the list: Hadji Khan and W. Sparrow, *With the Pilgrims to Mecca, 1902*, London, 1905; and A. J. B. Wavell, *A Modern Pilgrim in Mecca*, do. 1912. Among the records of these pilgrimages that by R. F. Burton (*Pilgrimage to El-Medinah and Meccah*, London, 1855-56) is classical; it adds, however, very little topographical information to that which had been given to the world by J. L. Burckhardt (*Travels in Arabia*, London, 1829). Of the others the account of the city by Snouck Hurgronje (*op. cit.*, 1885) is the most important. In several cases the travellers were so fully occupied with the task of preserving their lives that they had no time to make observations of value; and in not a few instances the veracity of the narrators has been questioned, not without cause. Besides these accounts by Europeans there are many in existence by Muslims, some of whom have employed the French language. It is asserted that the number of the former who have succeeded in witnessing the pilgrimage and returning to tell the tale is small compared with that of those who have sacrificed their lives in the attempt; and those who have accomplished the task safely have in most cases done so by the exercise of great cunning and ingenuity. The plan of H. Maltzan (*Wallfahrt nach Mekka*, Leipzig, 1865), who, in order to pass for a Muslim, borrowed the personality of an Algerian, the latter undertaking to remain in hiding for the necessary period, may be commended both for boldness and for astuteness; it was not, however, free from danger.

MEDALS.—See COINS AND MEDALS.

MEDIAN RELIGION.—The religion of the ancient Medes is one of the most difficult and disputable questions in ancient Oriental history. The statements of the earlier classical authorities are not easy to reconcile with the Iranian Avesta, and fresh elements of difficulty have been introduced by the decipherment of the cuneiform inscriptions.

The actual facts are these. As far back as the 14th cent. B.C. the cuneiform documents of Boghaz Keui have shown that there was an Aryan, but not as yet Iranian, population in Mesopotamia who worshipped the gods Mithra, Varuna (written Uruwana and Aruna), Indra, and the two Nāsatyā, the Vedic correspondents of the Dioscuri (cf. E. Meyer, *SBAW*, 1908, pp. 14-19). In the 9th cent. B.C. this Aryan population had become Iranian,

and was settled east of the Zagros mountains, where it was known to the Assyrians as Madā, or Medes, a name also written Amadā, like Amardi for Mardi. From this time forward the names of the kings and chiefs of Media and the neighbouring districts mentioned on the Assyrian monuments are Iranian, and in a list of Median princes conquered by Sargon in 714-713 B.C. we find the name of Mazdaku, proving that Zoroaster's god Mazdā, 'the Wise,' was already worshipped (cf. also F. Hommel, *PSBA*, 1899, p. 132). The name of 'Mitra,' the sun-god, is also found in the tablets from Assur-bani-pal's library at Nineveh. On the other hand, Istuvegu, or Astyages, the last king of Ekbatana, is termed in the inscriptions, not 'King of Media,' but 'King of the *Umman Manda*' or 'Hordes,' an archaistic title given by the Babylonians in early times to the northern barbarians, but applied in the Assyrian age to the Cimmerians and Scythians (*q.v.*). The similarity of the names Madā and Manda raises the question whether the Medes of the classical writers who were conquered by Cyrus were not really Scythians whose religious beliefs and practices have been transferred to their Median subjects or neighbours.

Like the Medes, the Persians also were Iranians.¹ But here again the inscriptions make it doubtful whether Cyrus and Cambyses, the founders of the Persian empire, were of pure Iranian stock, and whether the religion of Cyrus, at all events, was not the polytheism of Susa (cf. art. ACHÆMENIANS, vol. i. p. 70). Both he and his son conformed to the ancient worship of Babylonia. Gaumāta (Gomates), 'the Magian,' is expressly stated by Darius (*Bh.* [Pers. text] i. 63 f.) to have destroyed the *ayadanā*, or 'prayer-chapels,' of Persia, a word which is translated 'temples of the gods' in the Babylonian version of the Behistūn inscription. These Darius claims to have restored, along with other possessions of the Persian and Median peoples, through the help of the 'great god Aura-mazdā,' the creator of the earth and heavens, who in the Susian version of the Behistūn inscription (iii. 77, 79) is specially called 'the god of the Aryans.' In the eyes of Darius he occupied much the same place as that occupied by Jahweh in the OT: he was the national god of the Persians and Medes and supreme over all other gods. The existence of the latter, however, was admitted: at Behistūn Darius says that he was assisted not only by Aura-mazdā but also by 'the other gods, all that there are.' Opposed to the righteous law of Aura-mazdā was 'the Lie' (*drauga*), the Achaemenian equivalent of the Zoroastrian Angra Mainyu (Ahriman [*q.v.*]). But there is no reference to the Zoroastrianism of the Avesta in the inscriptions of either Darius or his successors; their priests, moreover, were not Magians, whose overthrow and massacre were, on the contrary, commemorated in the festival of the Magophonia;² and the bodies of the Persian kings seem to have been buried in the ordinary way instead of being thrown to dogs or birds of prey.³ This, Herodotus says (i. 140), was a Magian custom.⁴

The date of Zoroaster (Zarathushtra) is uncertain,

¹ This is the general view, but J. H. Moulton (*Early Zoroastrianism*, London, 1913, pp. 228-235) doubts whether it is correct. He hints that the Medes were the aboriginal inhabitants, and that the Magi (*q.v.*) were their priests. If this be so, the Medes were neither Iranians nor Semites. He directly states (above, p. 243) that the Medians 'belonged to neither of the two great races which divided Nearer Asia between them.' Prášek (*Gesch.* i. 8 ff.) urges, in more detail, a similar view.

² For a somewhat different explanation of the Magophonia, see art. FESTIVALS AND FASTS (Iranian), vol. v. p. 874 f.

³ See Moulton, pp. 163, 192 f., 202 f., 217; and cf. art. DEATH AND DISPOSAL OF THE DEAD (Pers.), § 5.

⁴ The statement of Agathias (ii. 22), that the Medians buried the dead, whereas the Persians exposed them, is almost certainly wrong.

but modern scholarship is inclined to assign it to the 6th cent. B.C.; and Jackson¹ seems to be right in concluding that he arose in Media rather than in Bactria, the tradition which makes him a Bactrian being late.

Zoroaster is unknown to both Herodotus and Ctesias, the earliest mention of him occurring in a fragment questionably ascribed to Xanthus of Lydia and in Plato (*Alcib. I.*, 122). Herodotus makes the Magi a Median tribe (i. 101),² but he also implies that they were a class of priests (i. 140), and he describes certain of them as interpreters of dreams (i. 107). He further ascribes to them the Zoroastrian practices of reverencing the dog and destroying noxious animals (i. 140). No sacrifice could be offered without the presence of a Magus, who accompanied it with a hymn (the Avestan *Gāthā*); and there was neither altar, fire, nor libation (i. 132). The Greek historian adds (i. 131) that 'the Persians' (whose priests were the Median Magi) had 'no images of the gods and no temples or altars, considering the use of them a sign of folly.' They sacrificed to Zeus (Ahura Mazdā) on the summits of mountains, as well as 'to the sun and moon, to the earth, to fire, to water, and to the winds.' The worship of the goddess Anāhita, and presumably also of Mithra, the sun-god, referred to in two inscriptions of Artaxerxes Mnemon (*Susa* a, 4 f., *Ham.* 5 f.) was borrowed at a later date from 'the Arabians and Assyrians' (Herod. i. 131).³

On the other hand, the scourging of the Hellespont by Xerxes (Herod. vii. 35) is inconsistent with the belief that water was divine,⁴ and in Herodotus's account of Magian religion Avestan dualism is conspicuous by its absence. So, too, is any reference to the doctrine of a resurrection. The simplest way of explaining these anomalies is to suppose that the religious system described by Herodotus was that of the Medes, among whom the Magi were a sort of hereditary priests, like the Levites in Israel; and that the religious system of Darius represented the religion of the Persian aristocracy, but that the origin and fundamental principles of the two were the same. The conquest of Media by Persia would have introduced the Median forms of theology among the Persian people, though their influence would have been momentarily checked by the overthrow of Gomates and his party, who perhaps would have stood in much the same relation to the Achaemenian aristocracy as the Pharisees did to the Sadducees. Meanwhile the reformer Zarathushtra had appeared in Media, where he built upon pre-existing religious beliefs and practices and attracted the Magi to his side. The result in the course of centuries was the Mazdæism of the Avesta.

A. H. SAYCE.

MEDIATION.—Mediation is a word of extreme vagueness, but is here considered only in its technical or quasi-technical applications in religion. In a sense all we are and have is mediated to us somehow. Our very being comes to us through our parents. The society into which we are born and in which we are trained mediates to us most of

¹ *Zoroaster*, pp. 219-225.

² For the argument that Magianism was Median in origin see esp. Prášek, ii. 114 ff.

³ W. Geiger (*Ostirän. Kultur im Altertum*, Erlangen, 1882, pp. 488-492) derives the Zoroastrian fire-priests (*athravans*) from Media.

⁴ See, however, Moulton, p. 215 f.

what we think of as intellectual, moral, and religious convictions. The greater part of what comes under these headings is not original achievement of our own, but inheritance or education; it comes to us in some way by the mediation of others. It may be possible to make our own what is thus mediated to us, and to become possessors, as it were, in our own right of what we have inherited or been taught; but, to begin with, every creature born in time owes to mediation of some sort the whole capital with which he adventures upon independent life.

1. The NT use of the term 'Mediator.'—The technical use of the word is most easily grasped if we start from that application of it which is most definite and concrete, viz. its application to the work of Christ. There are four NT passages where this is found: 1 Ti 2⁵, He 8⁶ 9¹⁵ 12²⁴. In all these passages Christ is represented as mediating between God and man. God and man have been estranged. The relation which normally subsists between them has been destroyed, and the work of the mediator is to restore it. In 1 Timothy this work is explicitly connected with the redemptive death of Christ; there is one mediator between God and men, Himself man, Christ Jesus, who gave Himself a ransom for all. The same connexion is implied in all the passages in Hebrews; there Jesus is spoken of as the mediator of a new or a better covenant. The covenant is the religious constitution under which God and men form one society, or live a common life. The old and inferior constitution, under which the ideal of religion was not realized, was the Levitical one. This was annulled because of its ineffective character, and in place of it, through the mediation of Jesus—i.e., by means of, and at the cost of, His incarnation and sacrifice—comes the Christian relation of men to God. In this the ends of religion are really attained. There is real forgiveness of sins, real purification of conscience, real and abiding access to God, and all due to the mediation of Christ. This use of the term 'mediation,' which may be called the specifically Christian one, is that which has been mainly developed in later theology. Christ's work as mediator is that in which He interposes between the holy God and sinful men who are estranged from each other, and makes peace. This specifically Christian use of the term, however, is only a continuation of its use in ordinary relations. In ancient as in modern times a State or a person could offer to 'mediate' between other States or persons at war. The substantive *μεσότης* is used side by side with such terms as *διαλλακτήης*, *διατηρητής*, and is defined by Suidas as = *εἰρηνοποιός*, 'peacemaker.' The verb *μεσιτεύειν*, which occurs once in the NT without an object (He 6¹⁷, though some here would supply *τὴν ὑπόσχεσιν*, 'His promise') is elsewhere usually transitive: *μεσιτεύσαι τὴν διάνυσιν ἐνδοικῶς* (Polyb. xi. xxxiv. 3) = 'to achieve the settlement by friendly mediation.' A state of hostility or estrangement, in which the making of peace is the work of a third party, and can therefore be called mediation, is the background of the primary Christian use of the term.

2. Extension of mediation in the NT from redemption to creation.—But even in the NT it is not limited to this use. It is not only that peace with God, or the forgiveness of sins, or reconciliation, or eternal life for the spiritually dead is mediated through Christ and His redemption; Christ is presented also as the mediator of creation. All that has come into being through Him. We find this stated without explanation, as if it were self-evident, or an agreed proposition among Christians, in 1 Co 8⁶. It is expanded in Col 1^{16a} with a view to securing to Christ, who has just been referred to as the mediator of salvation (in whom

we have our redemption, the forgiveness of sins [v. 14]), a place of dignity above all angelic powers. In Colossæ, apparently, such powers were recognized by some as mediating between God and man in a way which trenched on Christ's prerogative as the one mediator; and it was an effective method of precluding this to show that all such powers, whatever they were called, owed their very being to Christ, and could therefore in no sense become His rivals. The connexion of ideas in He 1² is similar. It speaks of a Son whom God has appointed heir of all things, through whom also He made the worlds. The 'also' implies that the making of the worlds through the Son is what naturally corresponds to His being heir of all things. Probably no idea in the NT is so hard to enter into as this. When we think of Christ as mediating between God on the one hand and men alienated from God by sin on the other, we know where we are. We can speak on the basis of experience, and tell how Christ has come to us in our own estrangement, and made peace between us and God. We can speak of Him as mediator, because that is what He has been to ourselves. But creation is not a process, or an act, of which experience teaches us anything; it is not apparent that it needs to be, or that it can be, 'mediated' at all. The OT simply says that in the beginning God created the heaven and the earth. How does Paul come to say (Col 1¹⁶), In Him—that is, in Christ—were all things created? How did the thought originate in his mind? What exactly did it mean to him? We cannot accept it merely on his authority, as a piece of information about the beginning of things; the content of revelation—what a man knows by the inspiration of God—never has the character of information. Unless we can enter into the origin and process of the Apostle's thought, we can never really appropriate the idea in which it rests. The idea that not redemption only but creation as well is mediated through Christ, that to Him is due and by Him must be determined not only all that we can call reconciliation but all that we can call being, is so unexpected and so astounding that we cannot but ask how it took possession of his mind.

3. Rationale of this extension in Paul.—So far as can be seen, there are only two possible explanations of Paul's attitude. One is purely formal, and reduces the idea of mediation, so far as it applies to all being, to a pure formality. It assumes that Paul had identified Christ with some supernatural being to whom this attribute or function of mediating creation already belonged, and that with the identification there went, as a matter of course, the ascription of this attribute or function to Christ. This is supposed to explain why Paul, when he introduces the idea of creation through Christ, does it *simpliciter*, without any justification or explanation: he is only doing what every one would concede who agreed with him in identifying Jesus with the Christ. But to this there are many objections. As far as can be known, there was no trace whatever in the Pharisaism in which Paul was reared of any such idea as that the Messiah was participant in the creation of the world. Further, though this may be discounted as a subjective impression, Paul writes in Colossians with passionate earnestness on this subject, and not like a man manipulating borrowed ideas which have no vital relation to his experience. And, if it be said that it is not the Jewish eschatological Messiah with whom Jesus is identified by Paul, but a supernatural being of another sort—the Logos of popular Greek philosophy, of whom such things were predicated as Paul predicates of Christ in connexion with creation—then the further question is raised, How did Paul come to

make this identification? He never mentions the Logos by name. There is no indication in his writings that he knew anything about philosophy or that he had any interest in its problems. The Logos of the current philosophy, which did mediate somehow between God and the universe, was the philosophical solution of a difficulty which he had never felt: namely, how the transcendent God was to come into any relation to a material world. Paul was not troubled by this any more than the OT prophets or Jesus Himself, nor does he ever bring his doctrine of creation through Christ into any relation to it. The motive and the meaning of that doctrine must be sought elsewhere.

A real clue to his thought, as opposed to this formal one, may perhaps be found in another way. In Paul's experience as a Christian, Christ was everything. He had reconciled him to God and made him a new creature. He had put him in possession of the final truth and reality in the spiritual world, that which could never be transcended and could never fail. When he lived in Christ, he lived in the eternal world, and he felt that to that world and to the believer's interest in it everything else must be subservient. He could say, 'All things are yours' (1 Co 3²¹); 'All things work together for good to them that love God, to them that are called according to his purpose' (Ro 8²⁸). And 'all things' here must be taken without restriction. It means not only all that happens, but all that is. Creation must in the last resort be in alliance with the God and Father of our Lord Jesus Christ, and in league with His purposes. As J. Orr put it (*The Christian View of God and the World*, Edinburgh, 1893, p. 323), it must be built on redemption lines. That is the same as to say, it must be built on Christian lines; the world in which Christians live must be essentially a Christian world. It is not a world in which anything can defeat God's purpose in Christ; it is not a world in which the final sovereignty of Christ can be frustrated; it is a world which is essentially related to Christ, to His work of reconciliation, and to His supreme place at last as heir of all things. Now, is it not legitimate to say that a world which was created for Christ was created in Him and through Him? The difficulty of apprehending what is meant by the creation of the world through Christ is only one aspect of the difficulty of apprehending Christ's pre-existence, and that again is only one aspect of the omnipresent and insuperable difficulty of defining the relations of eternity and time. If pre-existence is a legitimate way of expressing the absolute significance of Jesus—the fact that what we see in Him is the eternal truth of what God is, and that therefore He belongs to the very being of God, 'before the foundation of the world'—then the mediation of creation through Christ is a legitimate way of putting the conviction that in the last resort, and in spite of appearances, the world in which we live is a Christian world, our ally, not our adversary, or, if our adversary, one who is necessary, that in conflict with and victory over him we may prove that we have found the way of salvation. Paul does not start with the speculative idea that creation could not be immediate, and that all material and spiritual existences—things on earth and in heaven, things visible and invisible—must owe their being to the mediation of some supernatural power which is identified in his mind, we cannot tell why, with Jesus. He does not start thus, and then give this vague speculative idea a particular application when he comes to explain the Christian redemption. On the contrary, he starts with Christ and with the experience of redemption which, as a matter of fact, is mediated through Him. But the redemption thus mediated

is something of absolute significance. It involves contact with ultimate realities, with the eternal truth and love of God in Christ; it kindles a light in the soul which must fall on everything in the world if we are to see it as it is; it involves no smaller a conviction than that the world is essentially a Christian world, and it is this conviction, which is still involved in Christian faith, that forms the vital content of Paul's doctrine that all things were created through Christ.

That the world has this character may, of course, be doubted. It may even be argued that no moral life, no life involving moral probation, is possible except with a background of nature which is morally indifferent; it is only in a world which is indifferent to the distinction of good and evil that man can prove his devotion to good for its own sake. But there is really no such world, though the lightning does not shun the good man's path. What the doctrine of creation mediated by Christ implies is that in the very constitution of nature it is possible to discover the same principles as are revealed in the life and work of Christ. If it were not so, no one with roots in nature would understand Christ when He appeared. The ultimate task of Christian philosophy is to discover spiritual law in the natural world. This is what Paul felt; it is what every idealistic philosophy teaches; it is the inspiration of the highest poetry; Wordsworth found in nature not an adversary or a neutral, but 'the soul of all my moral being.'

4. Mediation in the Fourth Gospel.—Without using words like *πατρις* and *μετ' αὐτοῦ* the Fourth Gospel makes perhaps a more conscious and continuous use of the idea of mediation than any other book of the NT. Leaving the Prologue out of account, it is mediation in the specifically Christian sense, just as in Paul and Hebrews. The whole book might be summed up in the phrase of 14¹, 'No one cometh unto the Father, but by me.' It is to Jesus that men owe all the blessings which constitute salvation. They are variously described, most frequently as 'life' and 'eternal life,' but they come to men through Him and Him alone. Yet a counter or complementary truth is presented in the same Gospel. No man comes to the Father but by Jesus, yet no man comes to Jesus but him who is drawn by the Father (6⁴⁴). It is as though there were powers in the world antecedent to the historical Jesus which had Him in view, which prepared men to understand Him, and to welcome His mediation when He came. In the constitution of nature, in the impression which it makes as a whole on the spirit of man, in human life itself with its various experiences of success and failure, of wronging others and being wronged, of forgiving others and being forgiven by them, there is a sum or complex of forces which bears witness to Christ and constitutes a providential drawing of men by the Father to the Son.

But it is only when we receive the Son and believe in Him that we truly come to the Father. The earlier stages of religion are mediated to us through all the experiences of life; these provide for it a broad and indisputable basis here and now, and make it independent of any particular historical mediation—i.e., of any mediation through persons or facts which have their place in the past. But this immediate experience of religion—a religion, as some might call it, of pure inwardness and spirituality, which has its certainty in itself, and is not at the mercy of a historical criticism for which no fact is beyond question—does not, according to the Evangelist, enable men to dispense with what is mediated through Jesus; it only enables and prepares them to appreciate it. It is consummated through Him. Only he who has seen Jesus has seen the Father. And, para-

doxical as it may seem, this historical mediation does not shake the certainty of religion; the perfect religion does not become doubtful because the mediator of it lived in time. We are 'in Him that is true,' and he that believeth hath the witness in himself (1 Jn 5^{10, 20}).

In the prologue the idea of mediation is even more explicit than in the body of the Gospel, and it is wider in its range. The first three verses are more speculative than anything in Paul, and it is difficult to think otherwise than that the author has identified Jesus with the Logos of the current philosophy, and that he is speaking of Him in terms whose antecedents are philosophical rather than evangelical. The very ambiguity of the term Logos (*ratio, oratio*) may have commended it to him. It suited him equally well to have Jews feel that in Christ they had God's last word to man, and to have Greeks feel that in Christ they were in contact with the *reason* of the world, the rational principle or truth in which all things lived, and moved, and had their being. The one knowledge and the other alike, he would have held, were mediated to men through Jesus. It is by no means clear, however, that the prologue makes the Logos, as distinct from the historical Jesus, the mediator either of a universal revelation of God to man or of a special revelation of God to Israel. The interest of the Evangelist in such speculative ideas is perhaps less than has been assumed. The traditional and somewhat grandiose interpretation of the prologue, according to which the Incarnation does not appear until v.¹⁴—an interpretation which has so commended the passage to those who delight in the idea of a general revelation in nature and history culminating in a final and adequate revelation in Christ—is almost certainly wrong. The movement of thought in the prologue is spiral. The Incarnation appears already in v.⁴, and the history of Christianity up to the time of the writer is summarized in v.⁶. Revelation in its full and specifically Christian sense, the mediation to men of that knowledge of God which is eternal life, is accomplished only through Jesus, the Word made flesh. The difference from Paul may be said to lie in this: in Paul Jesus mediates revelation through redemption (we know God as Father because He saves us by His Son), whereas in John He mediates redemption through revelation (we are saved from sin and death because through Jesus we have the knowledge of the Father). But the distinction is true only when it is not pressed. In both writers it is the specifically Christian sense of mediation that is vital: Jesus is the mediator between God and men. The wider sense of mediation, according to which Jesus mediates creation as well as redemption, while it is found in both, has not the same emphasis. The apostles seem to feel that their religion ultimately implies this, but it is not this that directly inspires or sustains it.

5. Mediation and Jesus' consciousness of Himself.—The most important of questions to the Christian religion is whether this specific sense of mediation, which is not only recognized by but pervades all the apostolic writings, is confirmed when we turn to the mind of Christ Himself. He never speaks of having anything to do with the creation of the world, but was He conscious of being in any sense a mediator between God and men? Did He stand between them to any intent? Did men in any sense owe to Him either the knowledge of God or reconciliation to God, or were these supreme spiritual blessings immediately open to them, in independence of Him? The questions have been answered in both ways. Harnack's famous dictum (*Das Wesen des Christentums*, Berlin, 1900, p. 91), that in the gospel as preached by Jesus the

Son has no place, but only the Father, is so qualified by other statements that its author can hardly be cited for the negative. Much more uncompromising representatives of this side are J. Weiss and W. Heitmüller. The former, in *Das Urchristentum* (Göttingen, 1914, p. 364), in discussing the relations of faith in Christ and faith in God (in Paul), explicitly renounces the idea of a necessary mediator of salvation. Christ was there, as a matter of fact, and therefore Paul had to give Him a place in his religion somehow; but Weiss, with a sense of his own daring,¹ declares that there was no necessity for His mission and work in the nature of God, and that God's eternal love, though Paul knew it only through Christ, must have had its way even if Christ had failed the redeeming work of the Father, or if God in the fullness of His love had been able to dispense with the sacrifice of Christ. There is not, indeed, any appeal here to the mind of Christ, with regard to mediation, but there is the expression of a conviction which forecloses any such appeal. In Heitmüller's *Jesus* (Tübingen, 1913) the denial is even vehement:

'It is quite beyond doubt that according to the preaching of Jesus we have to do in religion only with an immediate relation of man to God: between God and man nothing and no one has place, not even Jesus. Religious significance in the proper sense Jesus in any case does not claim' (p. 78).

But Heitmüller feels a certain embarrassment when he deals explicitly with some words of Jesus. He admits that they disclose not merely a prophetic but a superprophetic consciousness—e.g., the well-known passage Mt 11²⁷. To be the bearer of a unique revelation, the Son *simpliciter*—it almost terrifies us to think of it. It is not a divine self-consciousness, but it is almost more than human. It might impel us to ask whether it was compatible with soundness and clearness of mind. 'Here is the point at which the form of Jesus becomes mysterious to us, almost uncanny' (p. 71). Further on, he speaks of the riddle as insoluble (p. 89), but apparently he thinks that he has reduced it to less disquieting proportions when he writes (p. 126) that Jesus seems to have claimed for Himself *only* that He is the way to the Father. It is difficult to see how He could have claimed more. The opposite view, that the place which the NT generally assigns to Jesus, as the indispensable mediator between God and men, is in harmony with Jesus' consciousness of Himself, is argued in the present writer's *Jesus and the Gospel* (London, 1908, p. 159 ff. on the self-revelation of Jesus). The argument covers both the Johannine idea of the mediation of the knowledge of God (as in Mt 11²⁷) and the Pauline idea of the mediation of redemption (as in Mk 10⁴⁵). What it does not expressly extend to is the speculative idea that creation as well as revelation and redemption is mediated through Christ.

6. Other mediators than Jesus.—Emphasis is laid in the NT on the exclusive character of Christ's mediation: there is one God, and one mediator between God and men. This is the idea of such passages as Ac 4²³ ('none other name'), Col 2⁹ ('in him dwelleth all the fulness of the Godhead bodily, and in him ye are made full'), and He 7²⁴ (the priesthood which does not pass to, or cannot be trenched upon by, another), as well as of Jn 14⁶. What is in view in these passages is the idea that Christ in His work of reconciliation may have rivals or competitors, powers which in independence of Him prepare for His work, or supplement it, or enable men to dispense with it. This is unambiguously and exhaustively denied. The idea of mediation in the Christian sense has no application but to Him. Spiritual beings, whatever their name or degree—principalities, powers, dominions—owe their own being to Him, and have their functions,

¹ 'Wir müssen es aussprechen . . . ehrlicherweise muss man sagen' (ib.).

whatever they are, in a world which He has reconciled to God.

The exclusiveness of His mediation with regard to nature (being) as well as redemption is strongly asserted both in Col 1¹⁶ and in Jn 1³. Probably in both these passages, as well as in 1 Ti 2⁵, there is reference to forms of Gnosticism which it is difficult for us to define. For ancient thought generally, and therefore for ancient religion, the world was full of invisible powers of a personal or quasi-personal sort, and these easily asserted a place for themselves in the religious life. They came between God and the soul in ways that we cannot appreciate, and the interest of the apostles is to expel from the relations of God and the soul every power but that of Jesus. Their argument is that of experience against uncontrolled imagination. The controversies of later theologians, Catholic and Protestant, on the mediation (intercession) of saints are like this, but not identical. Those who admit that we can pray for one another have no ground for denying that the saints can pray for us. All that is to be said is that we do not know anything about it; but whatever the saints may do for us they can do only in dependence on Jesus, not as mediators who might bring us to God apart from Him. For statements on opposite sides of this question see Calvin's *Institutio*, III. xx. 20-27; *Westminster Confession*, ch. xxi. 2; Thomas Aquinas, *Summa Theol.*, III. qu. xxvi. art. 1 f.; S. J. Hunter, *Outlines of Dogmatic Theology*, London, 1895-96, §§574, 607; K. von Hase, *Handbuch der protestant. Polemik*, Leipzig, 1900, p. 294.

7. Mediation in the OT.—If we look back from the NT to the OT, we find much everywhere which can be described in terms of mediation, though *μεσότης* occurs only once in LXX (Job 9³²), where, according to T. K. Cheyne (*EBi*, col. 3003), it answers to מִשְׁכָּל, and means a person who could interpose with authority between Job and his imperfect or arbitrary God—an arbitrator who would see justice done. This is akin to the *διαμετρήτης*, defined by Aristotle as *ὁ μέσος*, and often found in Greek as a synonym of *μεσότης*; but it is hardly the equivalent of the NT *μεσότης*, whether we regard revelation or reconciliation as that which comes to men through Him. If we confine our attention to the relations of God and man, in which the term mediation is properly applied, both aspects of it pervade the OT. Revelation, or the knowledge of God, is mediated to men through the prophet. It is not necessary to ask here how it is mediated to the prophet himself; for the purposes of religion he obtains it immediately. He stands in God's council and hears His voice; it is the voice of God Himself, or such an echo of it as the prophet's voice can utter, that is heard when He speaks. There is no external criterion for distinguishing the true voice of God from a voice which speaks lies in His name. The secret of the Lord is with them that fear Him (Ps 25¹⁴); they have, without knowing it, what the NT calls (1 Co 12¹⁰) the gift of 'discernment of spirits.' As revelation is mediated through the prophet, so in the largest sense is reconciliation through the priest. The Levitical system may have been very imperfect—it was destined, indeed, to perish by its inadequacy; but the idea of it was to enable men to approach God, to give them peace with Him, to put it in their power, in spite of all that they had done, to have communion with God, living as members of a society of which He was the head. The Levitical system does not, of course, exhaust what the OT exhibits of the mediation of reconciliation. Much importance is attached to prayer: the hour of irremediable ruin is come—the final breach between God and His people—when Jeremiah hears that, though intercessors like Moses and Samuel stood before Jahweh, they could not

turn His heart toward Israel (Jer 15¹). The ministry of intercession mediates for man to God, as well as the ministry of sacrifice—unless we reduce the latter to the former, and regard sacrifice as in essence 'embodied prayer.' It is another form, possibly a form inferior to intercession because less spiritual, of showing the cost at which reconciliation is mediated to sinful men.

8. Later developments of mediation.—Though the main content of mediation in the OT may be condensed under prophecy and priesthood, it is not quite exhausted there. Especially in post-Exilic literature, where the transcendence of God is emphasized till it depresses the soul, we find intermediate beings appear whose functions are wider and less defined. Sometimes they have to do with the creation of the world, sometimes with its government in nature or in history; sometimes they are specially concerned with Israel's fortunes, or with the giving of the law; sometimes they are interested in individual men, attaching themselves to pure souls and making them prophets or sages. Foreign influences as well as philosophical necessities determined the form of such thoughts, and they grew to have a larger and larger space in many minds. In A. Bertholet's *Bibl. Theol. des alten Test.*, Tübingen, 1911, § 32, there is a sufficient account of this faith in intermediate beings (*Hypostasenlehre*), so far as it can be derived from the Greek Bible. The most important of them was Wisdom, though Wisdom, curiously enough, in spite of Mt 11¹⁹, Lk 11⁴⁹, seems to have fallen out of favour in the NT, and is not once mentioned where we might most have expected it, in the Johannine writings. Perhaps this was due, as J. Grill has suggested (*Untersuchungen über die Entstehung des vierten Evangeliums*, Tübingen, 1902, p. 199 f.), to the frequency with which in Gnosticism *σοφία* represented a lost *eon* which had to be redeemed (cf. *ERE* vi. 236 f.). Next in importance to Wisdom came the Word or Logos. On this see W. Bousset, *Die Religion des Judentums*, Berlin, 1906, p. 399, and cf. art. LOGOS, § 2. The doctrine of the Logos as 'mediating' is developed at great length and with infinite inconsistency in Philo. It can be best studied in E. Bréhier, *Les Idées philosophiques et religieuses de Philon d'Alexandrie*, Paris, 1908, ii. ch. ii. f. It is perhaps not unfair to say that in Philo the Logos mediates between God and the *κόσμος*; that it mediates, further, between God and man as made in the image of God and participant in reason, but that it is not a mediator in the specifically NT sense of the term, i.e., a mediator of redemption between God and sinners. The verbal coincidences between Philo and the NT often, perhaps always, conceal a wide divergence of meaning. A full discussion of what Jewish belief in mediating powers eventually came to may be found in F. Weber, *Die Lehren des Talmud*, Leipzig, 1886, ch. xiii. He enumerates five: (1) the angel Metatrôn, (2) the Word, or *Mēmra* (q.v.), of Jahweh, (3) the *Shkkināh*, (4) the Spirit of God, and (5) the *Bath Qôl*, or heavenly voice through which revelation is given. Where the mind starts with these generalities, whether in a more speculative or in a more religious interest, it does not seem able or impelled to bring them to any convergence upon a single mediator; but the NT writers, starting from their experience of Christ as the only and the real revealer of God and reconciler of sinners to Him, are able to regard all these doctrines of mediating hypostases as hints or suggestions of what they possess in Jesus, and are not afraid in a manner to identify Him with them all. Whatever they promised or were intended to secure has been finally made good and secured through Him. He is the Wisdom of God—the Key to the world of nature, of history, and

of all human life; He is the Word made flesh; Paul can even say (2 Co 3¹⁷) that in His exaltation He is the Spirit. All mediation between God and sinful men is summed up and exhausted in Him. He is Himself our Peace. But all mediation, if the name is legitimately extended in this sense, between God and creation is also transacted through Him. The last, however, is not the starting-point; the mind rises to it only inferentially through an overpowering impression of the absolute significance of Jesus as the mediator of reconciliation; it is one way of expressing the conviction that He is the Beginning and the End, the First and the Last.

9. Subordinate sense of mediation (means of grace).—Mediation in a subordinate sense is the subject of the whole doctrine of the means (*media*) of grace; that is, of the divinely appointed ordinances through which the salvation of Christ is brought home to man. Grace is mediated through these ordinances, especially, according to Protestant theology, through the Word, sacraments, and prayer. The conditions under which the use of them becomes effectual for salvation—i.e., the terms on which grace really is mediated through them—are stated in all the confessions in more or less experimental and argumentative forms.

Comparative religion offers examples of mediation more or less analogous to those here considered. Wherever there are religious institutions and customs, they are mediatorial. It is through them that the spirit of a religion is conveyed to those who are brought up within its pale. Sometimes there are what A. M. Fairbairn used to call 'developmental coincidences' between other religions and Christianity where there is no real interdependence. Thus Mithra was called *messias* in the first instance as dwelling in the air which is midway between heaven and hell. But the local meaning deepened into a moral one. Mithra became mediator between the inaccessible and unknowable God who reigns in the ethereal spheres and the human race which lives its restless life here below. He is addressed as great Mithra, messenger of the gods, mediator of the religion of the elect (F. Cumont, *Les Mystères de Mithra*², Brussels, 1913, pp. 129, 139, 146). Similar phenomena are abundant in the religions of India. But we nowhere find a religion of which we can say, as has been said of Christianity, that it is what it is because of the presence in it of the mediator.

LITERATURE.—As the idea of mediation involves that of the nature of Christianity, and especially raises the question whether Christ has a necessary place in the Christian religion, and, if so, what precisely that place is, and what it implies as to Christ Himself (Christology), the literature is really co-extensive with that of Christian theology. Older discussions of main aspects of the subject are to be found in J. Butler, *Analogy of Religion*, ed. J. H. Bernard, London, 1900, pt. ii. ch. v., and J. Martineau, *Studies of Christianity*, do. 1875, 147 ff. Besides the works mentioned in the article, all modern writings on NT theology are more or less relevant, but the formal treatment of it, even in the Jesus-Paul literature, is not frequent.

MEDICINE.—See DISEASE AND MEDICINE.

MEDICINE-MEN.—See SHAMANISM.

MEDINA.—Medina, in Arabic with the article, means 'the Town,' as opposed to the desert (Qur'an ix. 102, 121), and is the name usually given to the city whither Muhammad fled from Mecca, sometimes interpreted as 'the Prophet's City.' Its proper name was Yathrib (*ib.* xxxiii. 13), evidently the Ἰαθρίβ of Stephanus Byzantinus (*s.v.*) and the Ἀαθρίβ of Ptolemy (vi. vii. 31), apparently identical in origin with the Egyptian Ἰαθρίβ (indeed a form Athrib is mentioned). Another name which is sometimes cited is Faibah or Tabah, to be compared with the Hebrew Tōb (Jg 11², etc.), and perhaps with the

Greek Θάβη, meaning 'fragrant' or 'good.' Many more names are collected by Samhūdī (893 A.H.) in his monograph on Medina (*Khulāṣat al-wafā*, Cairo, 1285), but these are mostly honorific epithets; one, however, which he quotes from the OT is Salqah, which should rather be Salkah (Jos 12⁹, etc.); but this identification is certainly erroneous.

Since Stephanus Byzantinus gives the relative adjective of Yathrib as Ἰαθρίβινος, it must have been the home of some persons known to the Græco-Roman world not later than the 6th cent. A.D.; and to the end of the 7th cent. there probably belonged one 'John of Yathrib' mentioned in a letter of James of Edessa 'to John Stylites'; this Yathrib is identified with Medina by some writers (*ZDMG* xxiv. [1870] 263), but it is difficult to suppose that there can have been a 'presbyter of Yathrib=Medina' at that time. For the early history of the place, then, as well as the later we have to rely exclusively on Muslim authorities, who naturally have much to say about a town which played so important a part in the history of their system. It is unfortunate that their notices of its pre-Islamic history are mainly fabulous, though they must contain a little fact as well.

The settlement, which is often called 'Between the two lābas,' i.e. volcanic formations, was at the commencement of Islām a joint one of Arabs and Jews. The former were grouped in two tribes, the Aus and the Khazraj, whereas of the latter three tribal names are handed down—Qainuqā', Quraish, and Nadīr. The native Jewish tradition appears to know nothing of these colonies, whose names surprise us; for the last two are clearly Arabic, and the first apparently so. They are supposed to have had a dialect (or jargon?) of their own, some fragments of which are preserved in the Qur'an (iv. 48), but are exceedingly puzzling. This fact would seem to militate against the supposition that they were Arabs who had adopted Judaism. If we are justified in attributing to them some of the Jewish matter that is found in the Qur'an, they must have been acquainted with portions of the Oral Tradition, to which there are occasional references; and it is practically certain that the early Islāmic lawyers were indebted to proselytes from these communities for certain technicalities and even whole maxims. The personal names which are preserved are partly Hebrew, partly Arabic.

The Muslim tradition represents the Jews as further advanced in civilization than the Arabs of Medina, and engaged both in trade, including lending money on security, and in cultivation of the soil; the date was the most important product. Further, they are said to have had schools, and to have written Arabic in Hebrew script, as was done at a later time and is done even now. They were under the protection of their Arab neighbours, and were occasionally compelled to fight in the tribal wars, much against their inclination.

Between the Aus and the Khazraj there was a long-standing feud, which led to the parties summoning the Prophet in the manner recorded in his biography.¹ Hellenic antiquity, which furnishes many analogies to that of the Arabs, provides illustrations of this expedient for putting an end to civil strife. He called his new adherents Anṣār, 'Helpers,' a name which, according to the Qur'an (iii. 45, lxi. 14), originally belonged to the apostles, and doubtless is a popular etymology of Nazarene.

Like many other statesmen, the Prophet found in external warfare the best remedy for civil strife; and, since at least for some years all new adherents were required to migrate to Medina, the

¹ Ibn Hisham, ed. F. Wüstenfeld, Göttingen, 1860, p. 236 ff.

town grew vastly in magnitude and importance during his despotism. Neither he nor his immediate successors had any taste for architecture or other forms of art, and, though building must have gone on for the housing of the increasing population, it was, like the Prophet's mosque and domestic quarters, of a primitive kind. There are traditions, probably deserving credit, that the former had to be repeatedly enlarged and repaired during this period; but reconstruction on a considerable scale appears to have taken place first in the time of the Umayyad Walid b. 'Abd al-Malik, who gave orders in the year 88 for the destruction of the older building and the houses of the Prophet's wives, and the inclusion of the whole area in a new mosque covering 200 × 200 cubits. According to Tabari (*Chronicle*, Leyden, 1879-1901, ii. 1194), the khalif demanded and obtained assistance from the Byzantine emperor, both in materials and in workmen. The new mosque was elaborately decorated, and rewards were offered to the artists, who, however, according to Samhūdī's authorities, were at times guilty of profanity. The whole was under the direction of Omar b. 'Abd al-'Azīz (afterwards khalif), who introduced a *mihrab* and four minarets.

In 160 A.H. further additions were made by order of the khalif Maḥdī, and his successors repeatedly repaired and decorated it. The whole building was burned down in the year 654 A.H., and restored chiefly by the Egyptian Sultāns, whose successors continued to adorn and enlarge it. It was again burned down in 886 A.H., and rebuilt by order of Qāitbāi with great magnificence. This was in the time of the local historian Samhūdī, who was absent at the time of the fire, but lost much of his property owing to it. Qāitbāi's is the existing mosque. Architectural details connected with the various buildings are given by R. F. Burton (*Pilgrimage to El-Medīnah and Meccah*, London, 1855-56, vol. i. ch. xvii.), who also adds some details for the period since Samhūdī. Apparently a certain amount of destruction was effected by the Wahhābīs, who also plundered the treasures; but, when they had been forced to evacuate the place in 1815, the damage was made good.

Visitation of Medina is not incumbent on Muslims, but it is regarded as a dutiful act, the Prophet having said: 'Whoso performs the pilgrimage and fails to visit me deals undutifully by me' (quoted by Ḥarīrī, *Maqāma* xxxii.). The visit is, of course, to the Prophet's grave, which is the chief object of interest in the sanctuary; for the Sunnis those of his first two successors and his daughter, who lie beside him, are also of importance. For a description of the tomb itself, which is screened off, Burton goes to the traveller Ibn Jubair (ed. M. J. de Goeje, London, 1907, p. 121), neither having seen it himself nor having met any one who had. According to Ibn Jubair, a place is supposed to be left vacant beside the others for Isā b. Maryam (i.e. the Christian Saviour). The European fable of Muhammad's coffin being suspended by a magnet between heaven and earth seems to be unknown to Islāmic writers, though it bears some resemblance to a story told about that of Timur-Lenk, which, according to Ibn Iyās (*History of Egypt*, Cairo, 1311, i. 347), had to be so suspended because the earth was unwilling to receive it. Various superstitions connected with this tomb are to be found in the works of European travellers, especially that of J. F. Keane (*Six Months in the Hejaz*, London, 1887, p. 225). By some puritan sects the visitation of the tomb is regarded as idolatrous, but this view is unusual.

Medina remained the political capital of Islām during the reigns of the Prophet's first three successors, but lost that position in the civil wars

which followed the death of the third. In normal times it counted as an annex of Mecca (*q.v.*), whose governor was responsible for it; hence there is a dearth of native chronicles, and Samhūdī makes use of the casual notice in the travels of Ibn Jubair, somewhat as modern European writers use the passage. On the other hand, owing to the continued residence of the Prophet's widows and such of his companions as were students or devotees, it became the first university of Islām, where what are called 'the Islāmic Sciences' were founded. Numerous jurists arose in Medina, and presently a canon of seven was formed. The people of the place claimed that the governors should consult them about all cases which came before them for trial. As late as 200 A.H. its jurists or traditionalists were regarded as more scrupulous than others (D. S. Margoliouth, *The Early Development of Mohammedanism*, London, 1914, p. 73). On the whole, the school of Medina, associated with the name of Mālik ibn Anas (*q.v.*), was supposed to attach more importance to tradition and less to inference than the school of 'Irāq, which had been founded by Abū Ḥanifa. The differences which resulted were not of primary importance, though discussion at times raged fiercely (see LAW [Muhammadan]).

For at least the Umayyad period Medina was supposed to be the seat of literary criticism as well. When a question arose in Damascus at the court of one of these khalifs concerning the source of a certain line of poetry and the relative merits of certain poets, the khalif sent to the governor of Medina, ordering him after his sermon in the mosque to refer these matters to the congregation, which proved able to decide them (*Aghāni*, Cairo, 1285, viii. 180). It would seem that the beginning of Islāmic libraries is to be sought in Medina; the poems of the Prophet's court-poet, Ḥassān b. Thābit, were kept there, and the copy was renewed when it showed signs of evanescence.

LITERATURE.—Of the work of Samhūdī cited above the abridgment was published 1285 A.H.; the original, of about thrice the bulk, exists in the Bodleian Library. The portion of it which deals with places of interest in the neighbourhood is summarized by F. Wüstenfeld, *Das Gebiet von Medina*, Göttingen, 1878. Accounts of the modern condition of the place are to be found in many of the records of pilgrimages, most recently in those of Hadji Khan and Wilfred Sparrow, *With the Pilgrims to Mecca, 1908*, London, 1906, and A. J. B. Wavell, *A Modern Pilgrim in Mecca*, do. 1912.

MEDITATION.—See DEVOTION AND DEVOTIONAL LITERATURE.

MEDITATION (Buddhist).—See BODHISATTVA, vol. ii. p. 752 f., DHYĀNA.

MEEKNESS.—1. OT conception.—The Hebrew word for meekness (רַחֻם) is closely connected with the ideas of humility, poverty, and affliction. A great feature of OT literature is the attempt which it constantly reveals to reconcile with the facts of experience the principle that righteousness brings prosperity, while wickedness is inevitably followed by disaster. In view of the apparent contradiction of this principle by the facts of life, some OT writers (Ps 37, Job) attempt to vindicate the ways of God to man, and to establish the ultimate reality of this principle by insisting that the suffering of the righteous and the success of the wicked are only temporary. In the end divine justice will compensate the 'meek' (who are thus identified with the righteous), while the transient prosperity of evil-doers will end in calamity and downfall.

2. NT conception.—Christian teaching derives the conception of meekness from the OT, but enlarges and spiritualizes its meaning and application. The deep significance attached to this con-

ception in the NT lies in its identification of the loftiest ideal with the profoundest reality. The meek man is thus defined as one who not only 'counts it better to suffer than to do wrong' (Plato), but as one who 'resists not evil' (Mt 5³⁹). He is the one who surrenders the *immediate* interests of life, but in so doing he is not emptying his life but rather filling it with larger interests. 'In ceasing to contend for his own rights against others he makes the rights of all others his own.' Accordingly, Jesus calls upon His disciples to surrender even the most obvious rights of property (Mt 5⁴⁰). But the ground of such surrender is not the denial of individual rights on the part of Christ. On the contrary, He assigns the highest importance to individual work, and He confers upon the meek a title not only to the Kingdom of Heaven, but also to the inheritance of the earth (Mt 5⁵). Such possession, however, is to be realized only through spiritual development; that is to say, such possession is not to be won by self-assertion or by insistence upon individual interest, but only as the individual identifies the common welfare of men with his own. Hence Christ's refusal to take part in a selfish struggle for private gain, and His ultimate conquest of all opposition by depriving others of the very power of setting up interests in opposition to His own.

3. *Philosophical conception.*—(1) *Its place in the history of ethics.*—While other ethical systems have in many cases been characterized by lofty ideals of conduct, the profound conception of meekness indicated in the preceding paragraph is distinctive of Christian ethics. The ethical ideal has generally been conceived as pleasure in some form or other. Hedonism (*q.v.*) conceives it as the pleasure of the moment, but the objection to this view is that such transient pleasure cannot satisfy a consciousness that is not momentary. Eudæmonism (*q.v.*) seeks to repair this defect by setting up the happiness of the life as a whole as the *summum bonum*, but a fatal limitation of this view is that the happiness of life as a whole is incalculable. The balance of pleasures and of pains cannot be adjusted, and the values of competing pleasures cannot be quantitatively determined though they may be qualitatively distinguished. The same criticism applies to Utilitarianism (*q.v.*), for the greatest happiness of the greatest number is still less calculable than the happiness of the individual life as a whole. A further criticism applies to all three forms of Hedonistic ethics—the criticism that pleasure, if sought for itself, is not found. This radical defect can be met only by a radical change of ethical ideal. What the nature of the new standard is to be will depend upon the point of view taken. If this be the standpoint of Christian ethics, then the ultimate moral standard cannot be lower than the attainment of perfection; and an essential factor in the rule of conduct by which this ideal is to be realized is the quality of meekness (*πραότης, πραΰτης*, later form *πραΰτης*). True humbleness, gentleness, consideration for others, self-respect without vanity, reverence, and perfect humility—for all these qualities are connoted by the term 'meekness'—alone lead, according to Christian ethics, to the realization of moral perfection, and at the same time to the attainment of real temporal prosperity. In NT phraseology the meek are most truly happy (or blessed), because theirs is not only the Kingdom of Heaven, but also the inheritance of the earth.

But how is such a quality of character, which has for its distinctive feature an utter absence of self-assertion, actually to achieve the conquests and acquire the possessions which are thus ascribed to it?

(2) *Its relation to the doctrine of evolution.*—According to the principle of natural selection, it has been argued that in the evolutionary process the unworthy or 'unfit' must be set aside in order to make way for the survival of the fittest. There are some, therefore, who maintain that by supporting such institutions as hospitals, almshouses, and sanatoria we are retarding the process of evolution. It is argued that we are thus breeding degenerates and criminals, consumptives and lunatics, and, worst of all, taxing the sane, healthy, and law-abiding citizens for their support.

But this view fails to recognize all that the doctrine of evolution implies. It confuses this principle with that of letting the weakest go to the wall. It is hardly necessary to point out that by adopting such a principle we should blunt our finer feelings and should therefore sink in the moral scale. And the cost in time, money, and efficiency for other pursuits that is entailed in our care for the aged and diseased is negligible when compared with the moral gain. Thus we find that the preservation of the infirm and consideration for the weak are strictly compatible with, and, indeed, an essential factor in, the law of evolution, inasmuch as they tend to develop a quality of human character which has the highest survival value. The growth of the spiritual Kingdom and the dominance of the world by meekness and humility are thus progressively realized.

LITERATURE.—HDB, art. 'Meekness'; cf. art. 'Sermon on the Mount', vol. v. p. 19. W. S. Bruce, *The Ethics of the Old Testament*, Edinburgh, 1895, *The Formation of Christian Character*², do. 1908; H. Sidgwick, *Outlines of Hist. of Ethics*, London, 1886, esp. ch. iii.; J. S. Mackenzie, *Manual of Ethics*⁴, do. 1904. A. J. HORROCKS.

MEGARICS (Μεγαρίκος).—Euclides of Megara is generally regarded as the founder of the Megaric school, though it would be more correct to keep the name for his successors a generation or two later. Euclides himself was an Eleatic and also an 'associate' (*ἐταῖρος*) of Socrates. The account of his philosophy given by E. Zeller (*Philosophie der Griechen*, II. 1⁴, Leipzig, 1889, p. 244 f.) is vitiated by his adoption of Schleiermacher's identification of the Megarics with the 'friends of the forms' (*εἰδῶν φίλοι*) of Plato's *Sophist*. It is quite impossible to reconcile the few facts we know about the teaching of Euclides with the theory of plurality of forms, and Proclus, in his commentary on Plato's *Parmenides* (p. 149, ed. V. Cousin, Paris, 1820–27), states quite distinctly that the 'friends of the forms' were the 'wise men of Italy,' that is to say, the Pythagoreans. On such a point Proclus's testimony is conclusive, for he had access to and was familiar with the works of Plato's immediate successors.

The most trustworthy account that we have of the Megaric doctrine is that of Aristotle, the teacher of Alexander of Aphrodisias (2nd cent. A.D.), some extracts from whose *History of Philosophy* are preserved in the *Præparatio Evangelica* of Eusebius (xiv. 17). Its Eleatic origin is at once apparent from these, and Aristotle expressly says that it was first the doctrine of Xenophanes, Parmenides, Zeno, and Melissus, and later of Stilpo and the Megarics. In the first place, they made it their business to 'throw' (*καταβάλλειν*, a metaphor from wrestling) all sensation and appearance, and to trust in reasoning alone. The method which they adopted was that elaborated by Zeno, a method which was known as 'dialectic' by its admirers and as 'eristic' by its critics. It consisted in showing that two contradictory but equally cogent conclusions could be established with regard to everything without exception, and that there was therefore no truth at all in any of the appearances presented to our senses. That is

what Plato calls *ἀντιλογία*, and we still possess a curious fragment of a work in the Doric dialect, generally known as the *Dialektikoi* (the name is without authority), which applies the method to certain ethical antinomies. It is most natural to regard this work as a product of Megara, and we know that the Megarians clung with special tenacity to their native dialect.

The effect of this criticism is to leave us with nothing but the One or the Whole (τὸ ἓν, τὸ ὅλον) and to deprive the Many and the Parts of all claim to reality. That was the doctrine of Parmenides, but there is evidence that Euclides understood it in a rather different sense than the founder of his school, and it is here that we can trace the influence of Socrates. The One of the Eleatics had been a continuous, corporeal *plenum*, whether finite (Parmenides) or infinite (Melissus), but Euclides took the step of identifying it with the Good, which was 'called by many names, such as God, Wisdom (φρόνησις), and Mind (νοῦς).' It was in this way that 'the Absolute' made its first appearance in the history of philosophy, and its claim to be the sole reality was based on the inherent contradictoriness of all appearance.

The philosophy of Euclides had a very great influence on Plato, who had taken refuge with him at Megara after the death of Socrates, and it is to this influence that we may most probably ascribe the unique position assigned to the Good in the *Republic*. It was impossible, however, for Plato to acquiesce permanently in an Absolutist doctrine of any kind; for that excluded from Reality what he was most interested in, the Soul, and especially the best Soul of all, namely God. The *Parmenides* and the *Sophist* are chiefly occupied with this problem, and it is plain that Plato believed himself to have disposed finally of the Absolute. That led, of course, to a breach between the Academy and their fellow-Socratics of Megara, and from this time forward we may discern the beginnings of a distinct Megaric school. As was natural, the negative dialectic was more zealously cultivated than the central doctrine of Euclides. When an abstract Absolute has been set up, there is not much more to be said about it, but the dialectical method is always available for the criticism of rival philosophies. Aristotle was naturally the chief object of the Megaric attack, which was led by Eubulides. Aristotle's own logical theory was to a large extent moulded by this situation, and the title given to his course on fallacies, the *Sophistici Elenchi*, bears witness to it; for, since the time of Plato's *Sophist*, the old term had been revived as a name for thinkers of the class known later as Megarics. The fallacies exposed by Aristotle are, in fact, for the most part, Megaric arguments, and that is the explanation of the sense in which the words 'sophism' and 'sophistry' have been used from that time to the present day. Many of these sophisms are well known, such as the Liar (ψευδόμενος), the Veiled Man (ἐγκαταλυμμένος), the Heap (σωρείτης), and the Bald Man (φαλακρός). As an extreme specimen, we may take the argument of the Horns: 'What you have not lost, you have. You have not lost horns. Therefore you have horns.' Some of the arguments are more serious, however, and raise the problem of continuity. The influence of Zeno is still felt in the *ratio ruentis acervi* (σωρείτης λόγος), referred to by Horace (*Epist.* II. i. 45). The most important of all from a historical point of view, however, was the *κυρίων* of Diodorus Cronus († c. 307 B.C.), which continued to be discussed in the schools for centuries. Aristotle's favourite doctrine of potentiality and actuality (δύναμις and ἐνέργεια) was specially objectionable to the Megarics, and Dio-

dorus set himself to destroy the conception of possibility altogether. The argument may be stated thus: 'Nothing impossible can proceed from anything possible. But it is impossible that anything in the past should be other than it is. If it had ever been possible still further in the past for it to be other than it is, then an impossibility must have proceeded from a possibility. Therefore it was never possible that it should be other than it is. Therefore it is impossible that anything should happen which does not actually happen.' Chrysippus confessed that he could not solve this, and Epictetus still busied himself with it.

The definite constitution of the Megaric school as a philosophical sect was the work of Stilpo of Megara, who for some time after the death of Aristotle (322 B.C.) was the most important philosophical personality in Greece. When Ptolemy I. took Megara in 307 B.C. he tried to induce Stilpo to return with him to Alexandria, but the invitation was declined. From the few facts that are told of him it is plain that he revived the positive side of the doctrine of Euclides and insisted on the sole reality of the One. He argued that to speak of man is to speak of nobody; for it is not to speak of A any more than of B. In the same way, he refused to admit that a cabbage shown to him was cabbage. There was a cabbage in just the same sense ten thousand years ago. As he further denied the real existence of forms or species (*εἶδη*), whether in the Aristotelian or in the Platonic sense, it followed that everything was mere appearance. But what distinguished Stilpo from all his predecessors, so far as we know, and what made Megaricism a reality for the first time, was the ethical principle which he deduced from this apparently barren Absolutism. It was the only ethical principle that such a doctrine can yield, that of quietism and insensibility. Plato's nephew Speusippus had already maintained that pleasure and pain were both evils, and that good men aim at imperturbability (*ἀσχητοσύνη*), and the word 'apathy' (*ἀπάθεια*) occurs in the Platonic *Definitions* (413 A), which belong to the early Academy. In his *Ethics* (1104^b, 24) Aristotle alludes to those who define the various forms of goodness as *ἀπάθειαι* and *ἡρεσίαι*. But it was Stilpo who made the doctrine live. Teles, who was his fellow-citizen and a little later in date, holds him up as the great example of indifference to the vicissitudes of fortune. It is unnecessary to suppose that he was influenced in this direction by the Cynics; for the doctrine follows quite naturally from his denial of reality to the world of sense, which he certainly derived from a very different source. As Zeno of Citium was a disciple of Stilpo, we may certainly regard him as a spiritual ancestor of Stoicism. The same tendency was represented by the school of Eretria, whose chief representative was Menedemus (c. 352-278 B.C.), and which regarded itself as an offshoot of the school of Elis, which looked upon Phædo as its founder. We know little about it, but its existence bears witness to the growth of the quietist ideal and its intimate connexion with a metaphysical theory which rejects the appearances of the world and holds fast to the One conceived as absolute.

LITERATURE.—There is little literature dealing with the Megarics outside the general histories of Philosophy, and what there is may be regarded as antiquated. It will be sufficient to mention C. Mallet, *Histoire de l'école de Mégare et des écoles d'Elis et d'Eretrie*, Paris, 1845.

JOHN BURNET.

MEIR. — Rabbi Meir, a Jewish sage who flourished in Palestine in the 2nd cent., belonged to the fourth generation of the Tannaim (Rabbis of the age of the Mishnah); he was one of the foremost disciples of Rabbi Aqiba, and helped, with

them, to give a new impulse to 'the study of the Law' (i.e. the consolidation and development of Jewish religious thought and practice) after the troubles attending the persecution under Hadrian. So great was the estimation in which he was held that, by one authority, those disciples are styled 'Meir and his associates' (*Midr. Rab.* to *Lev* 1¹¹). Learning, mental acuteness, and a ready wit combined with a lofty character to make him the remarkable man he was. His parentage and birthplace are either uncertain or unknown. Contrary to the Talmudic practice, he is cited without a patronymic, and his doubtful descent gave rise to the legend which made him a son of Nero, a fabled convert to Judaism (*Gittin*, 56a). Even his real name, Meashah (Moses), was half-forgotten. When Aqiba, flouting the edict of the Roman authorities, continued to teach, Meir stood by him (*Tōs. Berākhot*, ii. 6). His other masters were Rabbi Ishmael, to whom he went because he deemed himself intellectually unequal to the task of following Aqiba's discourses, and—a still more interesting fact—Elisha ben Abuyah, who was later to become an apostate and a declared friend of the Romans. From the latter, recreant though he was, Meir did not altogether dissociate himself in after years. He listened to his doctrine, and made discreet use of it.

'Like one who eats dates, he devoured the fruit, but threw away the stones' (*Hagigah*, 15b). His motive was not exclusively love of learning; there united with it grateful regard for one who had once been a cherished teacher, and likewise the hope of winning back the renegade; but his relations with Elisha were viewed with suspicion, and were partly the reason why his reputation with his contemporaries fell short of his posthumous fame.

Returning to Aqiba later on, Meir was ordained by that master, and began to teach in the Rabbinical schools. In his discourses he availed himself largely of the Haggādā (the homiletical method of Scriptural interpretation) and also of fables and parables. Thus it was said of him in later times that 'when Rabbi Meir died the parable-makers died with him' (*Sōtāh*, 49a). He is credited with being the author of three hundred fables, of which only a few have been preserved in the Talmudic writings (*Sanhedrin*, 38b). His knowledge of Latin and Greek also helped him in his Biblical lectures. His acquaintance with the sacred text was so extensive and precise that, when once, on his travels in Asia Minor, he entered a synagogue on the eve of the Feast of Purim and found that there was no copy of Esther forthcoming for public recital, he wrote out the entire book from memory (*Tōs. Megillāh*, 2). For this intimate knowledge of the sacred text he was doubtless largely indebted to his profession as a scribe. Compared with the exegetical methods of his immediate teachers, his own mode of interpretation may be said to have been rationalistic. Keen and bold dialectic played a large part in his expositions, so that it was said of him (*Sanh.* 24a) that, in his lectures, he was like one who uprooted mountains and ground them together. He amazed and perplexed his colleagues by his daring decisions.

¹He would declare the unclean permitted and the forbidden clean, and give his reasons' (*Erubhin*, 13b).

It was usual to regard consecutive passages in the Bible as necessarily having a common subject-matter; Meir, however, held a different opinion. There are many such passages, he declared (*Siphre* to *Nu* 25¹), which have no organic connexion. This originality of his was viewed differently by different minds. Some admired his rationalism and courage; 'Meir's very staff,' they cried, 'teaches knowledge' (*Jerus. N'dharim*, ix. 1). Others disapproved. 'Enough, Meir,' protested his

colleagues when once he was more than usually daring (*Midr. Rab.* to *Ca* 1¹²). Nevertheless, as Hamburger remarks (ii. 707; as to the protest see I. H. Weiss, *Gesch.* ii. 15), in virtue of his qualities of mind and heart, he breathed into Judaism the breath of a new life. As to the *Hālākāh* (the body of decisions on ritual practice), his orderly and logical arrangement of the material contributed greatly to make the compilation of the Mishnā possible. He was a stringent upholder of the ritual Law; but he was even more strict with himself than with others.

¹²'Never have I presumed to set aside, in my own personal practice, the decisions of my colleagues when those decisions have been more stringent than mine' (*Shabbāth*, 134a).

His strength of character is further illustrated by his opposition to Simeon ben Gamaliel II., then presiding over the Sanhedrin at Usha. To Meir had been assigned the office of *hākhām* of that body (as to the duties of that functionary see *JE*, art. 'Hakam'). Holding Simeon's knowledge of the Law inadequate, and resenting the President's excessive regard for his own dignity, he conspired with Rabbi Nāthān, one of his associates, to secure the Patriarch's deposition. Simeon, however, defeated the plot, and it was the conspirators who were ejected. Later on Nāthān was re-admitted, but Meir sturdily refused to make the necessary submission, and he narrowly escaped excommunication in consequence.

His domestic life was at once happier and sadder. His wife Beruria (Valeria) is one of the great women of the Talmud. The daughter of the martyr Rabbi Hananiah ben Teradion, who suffered under Hadrian, she was noted for both learning and moral worth. The touching story which records her wonderful fortitude in the hour of crushing calamity has been told again and again.

During Meir's absence at the academy one Sabbath eve, their two sons suddenly died. Beruria withheld the sad tidings from her husband until the day of peace was ended. Then she told him of it in a parable. 'A friend,' she said, 'left me some jewels to keep for him years ago—so long ago that I had come to look upon them as my own. Now, of a sudden, he has claimed them; but I find it hard to part with them. Must I really give them up?' 'Why ask such a question?' answered Meir, 'you should have restored them already.' 'I have done so,' she replied, as she led him to the death-chamber (*Midr. Mishlē* to *Pr* 31¹⁰).

This is not the only instance in which the Talmud is just enough to admit that one of its greatest sages was taught by a woman; Beruria instructs her husband in the higher knowledge on another notable occasion.

Annoyed by the pin-pricks of uncouth neighbours, Meir angrily calls down imprecations upon his tormentors. His wife rebukes him. 'Rather,' she protests, 'let us pray that they may live to repent; for the Psalmist's supplication is not "Let sinners be consumed out of the earth," but "Let sin be consumed"' (the allusion is to *Ps* 104³⁵, where the Hebrew is susceptible of Beruria's interpretation; for the story see *Br.* 10a).

The Rabbi, despite a certain severity and intolerance, was worthy of his wife. His defects were the defects of his qualities. If sometimes he set his face like a flint towards other men's weaknesses, he was strong and brave when life's sorrows touched himself. He, too, could preach and practise the great duty of submission.

Echoing *Ec* 5², he says, 'Let thy words before God be few; school thyself to say, "Whatever God doeth He doeth well"' (*ib.* 6b). And, again, 'As we should thank God for the good, so should we praise Him for evil' (*ib.* 48b). God Himself suffers with His sorrowing children (*Mish. Sanh.* vi. 5).

Expounding in novel fashion the verse, 'A good name is better than precious ointment; and the day of death than the day of one's birth' (*Ec* 7¹), he said that death, the common lot of men, is good for those who pass hence with a good name (*Br.* 17a). Again, he said that what, according to *Gn* 1³¹, God saw and proclaimed 'very good' at the Creation was death (*Midr. Rab.* to the verse). The section of the Mishnā known as *Abhōth*

(Ethics of 'the Fathers') assigns a typical maxim to each of the great Talmudic Rabbis. The maxim associated with Meir reads as follows:

'Limit thy toil for worldly goods and give thyself to the Torah; but be lowly of spirit towards all men' (*Abhōth*, iv. 10).

Meir was clearly no Pharisee of the baser sort; to be a sage was, for him, to have an incentive not to pride, but to humility. To study the Law, too, was not an end in itself; it must be made an impulse and inspiration to the noble life. Thus in another utterance of the sage he pictures God as saying:

'Devote thyself with all thy heart and soul to know my ways and to watch at the gates of my Law. Keep my Law in thy heart and my fear before thine eyes; guard thy mouth from sin, and purify thyself from all transgression. Then will I be with thee always' (*Ber.* 17a).

Equally notable are his teachings concerning social duty. Men are not to be judged by outward appearances.

'Look not at the flask, but at what it contains; there is many a new flask that contains old wine, many an old flask which has not even new wine in it' (*Abhōth*, iv. 20).

Nor are men to be judged by the honey of their words. If we have two friends, one of whom admonishes us and the other flatters, we should love the former, for he is leading us heavenwards (*Abhōth d' R. Nāthān*, 29). He preaches sincerity even in the small things of social intercourse; he warns us against inviting a friend to dinner when we know that he will not accept the invitation, and against offering him a present which we believe he will not take (*Bōraithā Hūllin*, 94a; *Tōs. Bābhā Bathrā*, vi. 14). It is a man's duty to adapt himself to the ideas and customs of the community in which he lives; in Rome he should do as Rome does. The angels, the sage points out, when they came down to earth and appeared to Abraham, ate like mortals; when Moses went up to heaven, he neither ate nor drank (*Midr. Rab.* to Gn 18). Applying to Aaron the words (*Mal* 29), 'he did turn many away from iniquity,' Meir thus characterized the great high priest:

'If Aaron chanced to meet a bad man, he was careful to salute him; so that, when the latter next time meditated an evil deed, he said to himself, "Woe is me! how shall I then look Aaron in the face?" In like manner, if two men quarrelled, Aaron would go to one of them and say, "See, my son, what thy friend is doing; he is beating his breast, rending his clothes, and crying: "Woe is me! how can I look my friend in the face, seeing that I have sinned against him?" Then he would go and say the same to the other; so that at length they embraced and were reconciled' (*Abhōth d' R. Nāthān*, 12).

Meir has left many maxims on the self-regarding duties also. He exhorts us to contentment with our worldly lot. 'Who is rich?' he asks, and he answers, 'He that hath peace of mind with his riches' (*Shab.* 25b). 'He that feels shame,' he says elsewhere, 'will not quickly be led into sin' (*N'dhārīm*, 20a). The sin of Samuel's sons (1 S 8), he declared, lay in their demanding what was due to them (*Shab.* 56a). The Law (*Ex* 22) ordains that a man who steals an ox must make fivefold restitution; but, if he steals a sheep, the restitution is only fourfold. The difference is to be explained by the fact that, unlike sheep, the ox is a toiling animal. 'Here,' cries Meir, 'is a proof of the worth of labour in the sight of God!' (*M'khilā* to the verse). In common with the Rabbis who lived under Roman rule, and with the early Christians (see E. Gibbon, *Hist. of the Decline and Fall of the Roman Empire*, London, 1901-06, ii. 17), he condemns the theatre and the arena. The one is 'the seat of the scornful' (*Ps* 1), the other a place of execution (a reference to the cruelties of the gladiatorial contests) (*Abhōth d' R. Nāthān*, 37; *Abhōdhāh Zārāh*, 18b). He emphasizes the futility of human ambitions by an apt remark: man, he says, is born with his hands clenched as though he would grasp the whole world; he dies with his hands wide open, for he takes nothing with him (*Midr. Rab.* to Ec 5¹⁴).

Unbending to the ignorant ('*am ha-areṣ* [*q.v.*]) and the schismatic among his own people, Meir shows himself tolerant and liberal towards men of alien creed.

The Gentile who gives himself to the study of the Law is as worthy as the Jewish High Priest; for Holy Writ (*1v* 189), speaking of God's statutes, says that if a man do them, he shall live by them—a man, not a priest or a Levite (*Bābhā Qamā*, 38a; *Sanh.* 59a).

He had many conversations with Gentiles, chiefly polemical.

One of these opponents designates Israel a people condemned of God, driven by the Master from His house, and put in subjection to other lords. 'God,' argues the controversialist, 'has made you exiles in our midst; why, then, do you not assimilate with us?' Meir protests against the theory. 'Rather,' he affirms, 'we are to be likened to a son whom his father has discarded because of his evil life, but whom the paternal heart is ready to take back if he return penitently' (A. Jellinek, *Bih ham-Midrash*, Leipzig, 1883-78, i. 21). 'If,' asks another disputant, 'your God loves the poor, why does He not sustain them?' 'In order,' Meir replies, 'to give us an opportunity of escaping Gehenna by the practice of loving-kindness' (*Bābhā Bathrā*, 10a).

Like Aqiba, his master, Meir is pictured by the Talmud (*Qiddūshin*, 81a) as undergoing the temptation of St. Anthony. Satan, so runs the legend, appears to the sage in the form of a beautiful woman, who would entice him with her wiles. But he escapes them. The legend puts in concrete shape the traditions concerning the Rabbi's unyielding rectitude which gathered about his name. Another story tells of a journey which he once made to Rome in order to rescue from a house of ill-fame his wife's sister, who had been taken captive after her father's martyrdom. It is said that his mission was successful (*Abhōdhāh Zārāh*, 18a).

Born, it is believed, in Asia Minor, Meir died in that country. He enjoined his disciples to bury him on the seashore, so that the waters which laved the land of his fathers might touch his bones (*Jerus. Kilayīm*, 32c). 'He had no equal in his generation' is one Talmudic appreciation of him (*Erūbhūn*, 13b); and, in a public eulogy pronounced on him at Sepphoris, Rabbi José declared him to be 'a great man and a saint, but humble withal' (*Jerus. Ber.* ii. 7).

Of all the Tannaim, Meir's name is most widely known among the people. In the house of every pious Jew there is a money-box hung on the wall, in which the inmates deposit their alms for the poor of Palestine. This box bears the inscription 'Meir, Ba'al han-Nēs' ('Meir, the wonder-worker'), an allusion to the miraculous power attributed to him in Talmudic and popular lore (see *J.E.* viii. 435).

LITERATURE.—W. Bacher, *Die Agada der Tannaiten*, Strassburg, 1890-1903; Hamburger, artt. 'Beruria,' 'Meir R.,' 'Religionsgespräche'; H. Graetz, *Geschichte der Juden*, Leipzig, 1866-78, iv. (Eng. tr., London, 1891-92, ii.); *J.E.* art. 'Meir'; I. H. Weiss, *Geschichte der jüd. Tradition*, Wilna, 1904, ii. 90 ff. MORRIS JOSEPH.

MELANCHOLY.—In Greek physiology the bodily constitution of an individual, his appearance, his liability to disease, and also his mental character were explained by the proportions in which the four humours were distributed in his framework. These were blood, yellow bile, black bile, and phlegm, the predominance or excess of which gave respectively the sanguine, the choleric, the melancholic, and the phlegmatic 'temperament.' Melancholy (*μελας* and *χολη*) was thus the mental disposition of the melancholic temperament. The terms passed into literary and popular use, although the doctrine of the four humours, on which the distinctions were based, was forgotten or discarded. The names seemed, in fact, to correspond to certain broad differences, bodily and mental, among men, and writers on insanity are still careful, in their description of cases, to indicate the 'temperament' of each patient. The differences are now made to depend either upon the blood or upon the nervous system, or both. If the blood is decisive, the difference may be sought either in its substance—the number of red cor-

puscles, etc.—or in its circulation; if the nervous system, in the strength or the rate of reaction, or both. Henle made use of the conception of nerve-tone, which has since been retained and developed (*Anthropologische Vorträge*). No part of the nervous system, he showed, is ever wholly at rest during life; every stimulus finds a certain degree of excitation already present in the nerve-endings and nerve-fibres on which it acts; what we call rest is, therefore, a moderate degree of activity, which may rise or fall, and which is maintained by internal stimuli, acting through the blood. This is the 'tonus' of the nerves, their preparedness for action; the higher the tonus, the stronger the reaction. On the nerve-tone will, therefore, depend the sensitiveness of the individual, his prevailing emotional attitude, and his quickness and firmness of response. A low tone shows itself in the dull, heavy expression of face (in the phlegmatic, e.g.), the relaxed muscles, the deliberate movements, the tendency to 'run to fat'; a high tone in the vivid complexion, alert expression, and quick movements of the sanguine or choleric. The melancholic, according to Henle, has also a high nerve-tone, but reacts through the emotional or affective system, rather than the voluntary; whereas the choleric relieves feeling by prompt and strenuous action, the melancholic is denied this advantage; his melancholy is the brooding upon and nursing of emotions, a habit from which genius, or, it may be, merely hypochondria and hysteria, spring. Wundt's simple formula has been widely accepted: that temperament is primarily a question of emotion, that emotion undergoes two forms of change, one in intensity, or strength, the other in rate; hence the fourfold division: strong and quick—choleric; strong and slow—melancholic; weak and quick—sanguine; weak and slow—phlegmatic. Strong emotions under modern conditions mean a predominance of pain; slowness of change means that the mind takes time to follow out its own thoughts, is not wholly absorbed by the present but looks to the evil ahead. These tendencies characterize the melancholic (*Grundzüge der physiol. Psychologie*, iii. 637). The scheme is too simple to fit the complexities and subtleties of human character, however, and there is no general agreement even as to the number of distinct temperaments, as many as nine having been suggested.

1. Melancholy and pain.—Melancholy differs from the other dispositions in being a well-recognized temporary emotion or mood, as well as a prolonged or permanent trait, and also in being in an extreme form the most prominent symptom of a definite form of insanity—melancholia or mental depression. It has formed the theme of one of the most wonderful books in our language—*The Anatomy of Melancholy*, by Robert Burton, first published in 1621.

The melancholy with which he deals, and of which the 'causes, symptoms, prognostics, and cures' are set forth with such fertility of illustration, is 'an habit,—a chronick or continue disease, a settled humour,' but it is built up, as he recognizes, out of 'melancholy in disposition,' which is 'that transitory Melancholy which comes and goes upon the smallest occasion of sorrow, need, sickness, trouble, fear, grief, passion, or perturbation of the mind, any manner of care, discontent, or thought, which causeth anguish, dullness, heaviness and vexation of spirit, any ways opposite to pleasure, mirth, joy, delight, causing frowardness in us, or a dislike. In which equivocal and improper sense, we call him melancholy that is dull, sad, sour, lumpish, ill-disposed, solitary, any way moved, or displeased.' . . . Melancholy in this sense is the character of Mortality' (i. 164 [ed. London, 1890]).

It might be said that this temporary melancholy is merely mental pain, however caused, and that the permanent disposition or habit is a state of mind in which mental pain is the dominant tone. The expression of melancholy is that of pain, the pale face, the drawn look, lips and eyebrows turned slightly downwards at the corners; the respiration slow and sighing, the pulse-beat slow, the tempera-

ture lowered, the nutrition-processes, including the appetite, impaired, so that the body seems insufficiently fed. One of the immediate consequences is also a loss of sensitiveness to outer impressions; they lose in clearness and distinctness; the judgment follows suit, and the whole mental character is, even though only for the moment, changed for the worse. In particular, egoism develops:

'The patient thinks only of himself and his sufferings; altruistic passions, family affection yield to an egoism of the most exacting and extreme type' (H. Beaunis, *Les Sensations internes*, Paris, 1889, p. 198 ff.).

Mental pain may be less acute, but it is more persistent than physical pain, and it has the same reverberation throughout the organism. The distinction between the two is probably artificial; mental pain accompanies all physical pain, while in its turn physical pain—discomfort, loss of nervous tone—is a constant accompaniment of mental pain. The most common cause of the former, physical pain, is [the over-excitation or exhaustion of some sensory or motor nerve; so the most common cause of the latter, mental pain, is the over-strain or exhaustion of the brain centres and tracts concerned in ideation, emotion, memory, and will. Love and over-study were two of Burton's causes of melancholy. So melancholy may be regarded as a pain of fatigue, as due to excessive functioning on the emotional or intellectual side, especially when the strain has not been rewarded with success.

The extraordinary persistence of melancholy, the difficulty of distracting the mind from it, is due, as Beaunis urges, not merely to the fact that its causes—the desires, the memories—are persistent, but also to 'the sentiment of the irreparable, which is at the root of almost all mental pains, the idea that all is lost and without hope. The mother who knows that she will never see again the child that has died in her arms, the artist who sees that he will never be able to realise the ideal of his dreams, the inventor whose discovery is held up to ridicule, the poet whose verses, that he believes to be inspired, are laughed at, the thinker who seeks for truth and finds only doubt, the Christian who sees the foundering of his belief and of his faith, all have this sentiment of the irreparable, of the lost beyond return, which leaves behind only nothingness and despair' (ib. p. 234).

2. Melancholy and the sense of values.—Melancholy is the mood of an imaginative mind; it is true that an animal is sometimes described as 'melancholy'; a dog that has lost his master, a wild animal in captivity in a narrow space, a bird deprived of her mate: death, even self-inflicted death, is known to have followed such misfortunes. So a child may be 'melancholy' after the loss of a mother or a playmate. But in the strict sense melancholy is an adult and a human infirmity. Probably the time of its greatest frequency is the period of adolescence; in middle and old age it tends to disappear, to be replaced in senility, occasionally, by a state outwardly similar, but inwardly different. Byron's lameness and Heine's and Leopardi's delicate constitutions have suggested that physical disease may be the predisposing cause to melancholy; but, as Metchnikoff points out, Schopenhauer preserved his melancholy and pessimism to a vigorous old age, while there are innumerable cases of patients suffering from serious and even deadly diseases, yet retaining their native lightness of heart. If anything, melancholy is more common among the young, healthy, and vigorous. It does not really depend upon the health at all, but upon the sense or 'sentiment' of life. The typical case is Goethe, who in his own youth passed through the torment which he describes in *The Sorrows of Werther*, and had thoughts of suicide, but in his old age is described as casting off the sickly and morbid side of his character, replacing it by a serene and even joyous love of life (E. Metchnikoff, *Essais optimistes*, pt. viii.). The intensity of feeling is greater in the young than in the old, both for pleasure and for pain; hence they are more impressionable; but this is not due to the greater vitality or sensitive-

ness of their nervous system, but rather to the fact that the older man is better able, through his experience, to interpret the impressions, to see them in their true perspective, and in relation to life as a whole, whereas for the young each impression is taken in isolation, is weighed only in its relation to the immediate needs or desires of the self. Hence the vivid colouring of their life, the higher happiness, and the deeper pain. In the same way melancholy is more frequent in men than in women, in the northern races than in the southern races of Europe. A northern race, perhaps because its civilization is a more recent growth, is more conscious of itself, and less conscious of the wider group in which the loss of one individual is compensated by the gain of another. It was mainly from Russia, Germany, and Scandinavia that the melancholy school of writers of last century—the *Fin de Siècle*—came. Suicides are said to increase in number northwards, and one of the most common causes of suicide is melancholy (see Burton's discussion on suicide [i. 495]; and Metchnikoff, p. 306). At the back of all melancholy is fear—fear of pain in the first instance, then fear of loss, of failure, of death, of society's judgment upon oneself. The greater the value, or, rather, the greater the appreciation of a good, the greater the pain at its loss, and the greater the pain at the prospect of its loss. Hence melancholy is, paradoxically, more common in the idealist than in the materialist. Paul Bourget, writing of *Bandelaire*, finds the key to the profound melancholy of this rather repulsive figure in the mysticism and idealism of his early faith. When such a faith, the faith in the eternal, has been strongly held, its object deeply adored, the loss of faith in it, and of love, is irreparable. The individual may no longer have the intellectual need to believe, but he still has the need to feel as when he believed. The desires remain, strengthened by habit, and in the sensitive soul their influence is irresistible; yet their satisfaction is impossible. Melancholy then is the effect of failure of adaptation to the environment, in matters of faith and belief. The stronger the resistance of facts to the realization of the thinker's dream, the deeper his melancholy. To the mystic soul faith is not the mere acceptance of a formula or of a dogma; God is not for it a word, a symbol, an abstraction, but a real being in whose company the soul walks as a child in its father's, who loves it, knows it, understands it.

Once an illusion so strong and so sweet has gone, says Bourget, no substitute of less intensity will suffice; after the intoxication of opium, that of wine seems mean and paltry. Driven away at the touch of the world, faith leaves in such souls a gap through which all pleasure slips away. The more the sufferer tries to escape, the more securely is he held, until at last there remains as his only satisfaction 'the redoubtable but consoling figure of that which frees from all slaveries, and delivers from all doubts,—Death' (Paul Bourget, *Essai de psychologie contemporaine*, Paris, 1892, p. 21).

Still deeper is the melancholy of unsatisfied desire, when the failure of satisfaction lies, not in the resistance of external circumstance, but in the inability of the subject to enjoy, an inability which is itself a mark of exhaustion; it is the soul that has lived most, felt most strongly, indulged its passions to the full, till its power to feel is almost destroyed, that finds life most unbearable.

'Le mensonge du désir qui nous fait osciller entre la brutalité meurtrière des circonstances et les impuissances plus irréparables encore de notre sensibilité' (ib. p. 142).

It is the melancholy of nature after the storm, of evening, of the grey light that comes after the sunset, of the brown tints of autumn trees—exhaustion or decay after stress and life.

Less tragic is the melancholy that is associated with pensiveness, deliberation, thought, as in Milton's *Il Penseroso*—the melancholy of the poet

and of the philosopher. Beaunis connects this also with pain, however. When man reflects, he is forced to recognize, according to Beaunis, that he is born to pain, and that pleasure is only an accessory in his life.

'There is no physical pleasure which can compensate for an hour of *angina pectoris*, no mental enjoyment which does not disappear before the pain caused by the death of one we love, no intellectual pleasure which is not annulled when we think of how much is unknown in our fate. Pessimism, an irrefutable pessimism, is at the root of every reasoning, of every meditation' (p. 222).

Happily, he adds, most men do not reflect or meditate upon the fate either of themselves or of others; their interest faces outwards, not inwards; they have no time to worry over problems that great minds have found insoluble; or, if they do worry over them, they are able to set their worries at rest by the acceptance of a solution ready-made, on the authority of the Church or the pastor.

3. Melancholy and exhaustion.—The essential nature of melancholy has been probed more deeply from the point of view of pathology, and in various ways the idea of exhausted or decreased energy has been brought into connexion with the known laws of mental activity.

To Bevan Lewis melancholy means nervous enfeeblement; the subject is no longer able to do easily and smoothly even the most familiar and habitual acts; it is only with effort that he can think, or attend to what he hears or reads.

It appears to us that the true explanation is due to mental operations being reduced in level so far as to establish conscious effort in lieu of the usual unconscious operations, or lapsed states of consciousness which accompany all intellectual processes. The restless movements of the intellectual eye (in the artist, poet, etc.), as well as those of the state of maniacal excitement, bespeak in the former case the exalted muscular element of thought, and in the latter a highly reflex excitability, but in the melancholic these muscles of relational life are usually at rest, the eye is fixed, dull, heavy, sluggish in its movements and painful in effort, the eyelids are drooped, the limbs motionless. The only muscles in a state of tension are those which subserve emotional life, viz. the small muscles of expression' (*Textbook on Mental Diseases*, p. 121). 'Failure in the muscular element of thought has as its results on the subjective side, enfeebled ideation and the sense of objective resistance' (ib. p. 122).

The eye sees less clearly, the mind interprets less accurately; the will acts less vigorously, and less effectively; it may be that the motor ideas, which are the cues, if not the excitants, of action, cannot be formed or recalled accurately in the mind; hence apathy and inaction. The environment, the non-ego, appears as antagonistic or foreign to the self; it is no longer the world in which we moved freely and easily, therefore pleasantly, but one which is new and strange, which resists our efforts and counters our desires. The result is a rise in the subject-consciousness; the mind is thrown back upon itself. The man broods upon his sufferings, which become his wrongs, and, in interpreting or explaining them, suspicion of others is the simplest and therefore the most frequent way out.

According to Pierre Janet's interpretation, melancholy represents a stage on the way to *misère psychologique*, or psychic misery, with its accompanying disaggregation of the personality, and subjugation of the conscious by the subconscious or unconscious self. There are innumerable degrees of attachment and detachment of acts and ideas to the self. In thought-reading and in table-turning we have simple instances of how acts are carried out which correspond to ideas or thoughts in the mind of the subject, yet the acts are neither voluntary nor conscious on his part; he is aware of the result, not of his own agency in it. In spiritualism—the possession of the medium by the supposed spirit of the dead, who gives through the medium information which the latter, in his normal state, is wholly unaware of enjoying—we have a more systematized form of the same thing.

Finally, in hypnotism, in hysteria, morbid impulses, fixed ideas, and obsessions, there are vivid examples of how thoughts, or, rather, systems of thought, though formed by the individual, may yet by the conditions of their occurrence appear entirely foreign to him; he is their slave, they take possession of him, he is carried away by them. Passions, of the source of which the patient is wholly unaware, dating back perhaps to a forgotten childhood, may yet lead to actions for which he cannot recognize his responsibility, which he may indeed forget immediately afterwards and, therefore, wholly fail to connect with his 'real' self. He is unaware even that he was the physical agent; any proof of this that can be brought forward must have a shattering effect upon the self-consciousness; the patient feels that he no longer has a grip of himself, that he may do some incredible act of violence, cruelty, immodesty, or crime. He becomes estranged from himself—and this doubleness is itself an added source of depression; it is the same in effect whether the two personalities succeed each other in time, as alternating personalities, or exist simultaneously, although acting separately; the disaggregation means an impairment of the self, often revealed by an actual loss of intellectual power, weakened concentration of attention and will. The subject becomes morbidly curious about his own feelings, his strength of will, his health, his prospects in life, etc. This subjectivity is the essence of the melancholy disposition. It remains to ask what is the cause of the disaggregation of consciousness, the psychological misery, of which melancholy is so prominent a symptom. According to Janet, the cause may be either physical or mental; physical, as the exhaustion of a prolonged illness, or of a sudden shock, or continued over-exertion, as in heavy physical strain; or mental, as in the shock of terror, excessive grief, prolonged mental worry, strong emotional excitement (e.g., religious). The great vital crises, at puberty, adolescence, and the change of life, with the feeling of strangeness which the loss of old and the gain of new sensations and impulses bring, are common causes of at least a temporary disaggregation and depression. The theory is not widely different in effect from that of Beyer Lewis; in both it is the co-ordinating power that fails, through nervous exhaustion; the elementary impressions and impulses fall apart, as it were, into their primitive independence; the subject seems out of touch with his environment, is unable to face the tasks of his social or occupational life. According to the degree of disaggregation or rise of subject-consciousness, there may be simple melancholy, hysteria, or actual insanity (P. Janet, *L'Automatisme psychologique*, pt. ii. chs. iii. and iv.).

4. Melancholy and personality.—The sense of mystery, of strangeness, of possession, that occurs in melancholy deserves to be considered in detail. In melancholy, as has been shown above (§ 3), the sensations are less clear, their threshold is higher, the perceptions based upon them are blurred, partly from the relaxation of the muscles of attention, partly from the absorption of the mind by the pain, real or imaginary. The individual neither sees nor hears so clearly as before; the commonest objects may look strange, the most familiar voice sound different; but these things are interpreted not as a change in the experiencing subject, but as a change in the objects experienced. One's friends, one's country, one's world have changed, and the subject is unable to face the great activity required to adapt himself to the new sphere. Still greater is the loss of clearness in the memories. The most vivid experiences, when they can no longer be clearly and definitely recalled, tend to lose the

warmth and intimacy which memories of 'my own experiences' should possess, as compared with those of others of which I have merely heard or read. Thus in mental exhaustion and depression the memories of my own life lose their emotional tone; they seem to belong to another than myself. It is true that this state lends itself to analysis, and that the habit of analysis, once formed, may continue when normal life has returned.

Amiel is said to have written: 'The desire to know, when it is turned upon the self, is punished like the curiosity of Psyche, by the flight of the beloved object; the outward-facing look makes for health; too prolonged a looking inwards brings us to nothingness. By analysis I am annihilated.' And again, 'All personal happenings, all special experiences are for me pretexts to meditation. Such is the life of the thinker. He depersonalises himself every day; if he consents to experiment and to act, it is the better to understand; if he wills, it is to know what will be. Although it is sweet to him to be loved, and he knows nothing sweeter, there again he seems to himself to be the occasion of the phenomenon rather than its end. He contemplates the spectacle of love, and love remains for him but a spectacle. He is nothing but a thinking subject, he retains nothing but the form of things' (see L. Dugas and F. Moutier, *La Dépersonnalisation*, Paris, 1911, p. 138 ff.).

This is an exact description of the frame of mind in the milder forms of melancholy, as that of the poet or artist, like Byron, Edgar Allan Poe, Heine, the young Goethe, etc. Shakespeare's Hamlet is a classical instance; they are not real experiencers, real agents, or lovers, but mere play-actors so far as emotion is concerned. Probably, however, their descriptions are the more accurate in that they are not blinded by passion, as is the cheerful ordinary mortal.

A somewhat different way of putting the case of melancholy might be drawn from the writings of S. Freud and others of his or allied schools—viz. that depression springs from the influence of a morbid complex on the personality. The complex may be any strong emotional experience, shock, terror, social disaster, etc. Wishes, desires, more or less closely connected with the shock-complex, are repressed, at first consciously, while suggestive ideas and associations, which arise from the same root, are expelled from the mind when they enter it. But a train of thought, when expelled, and a wish, when repressed, do not on that account cease to exist. They continue to live in the subconscious or in the unconscious, and may, so long as they are incomplete or unrealized, influence the conscious life indirectly. They may do this in two ways: (a) the complex draws off to itself, for its repression, a considerable degree of the available psychic energy; the individual is mentally weakened. As we have seen above, the greater effort required for the simplest, most habitual acts is felt as strain, as exhaustion, as pain; the self, with its distresses and difficulties, becomes more and more the centre of attention. (b) But, further, the complex, though itself driven below the level of consciousness, and shut off from direct connexion by the 'censor' of consciousness, is still enabled during moments of relaxation, half-sleep, reverie, distracted attention, etc., to send disguised messengers through. These take the form of dreams, phobias or terrors, obsessions, sudden impulses, etc. For the most part these dreams and impulsive acts are protective; they are a means of realizing, in however imperfect a way, the wish inspired by the complex; but the subject himself may be wholly unaware of this origin and of their meaning; they seem like an invasion of his personality by a foreign one. Painful experiences and memories have a far greater tenacity of life than pleasant; they have a high degree of 'perseveration,' as it has been called, i.e. the tendency to force their way into consciousness, of their own accord, and without any apparent stimulus or associative link. And, again, even the slightest of associations is enough to drag up the painful complex or its substitutes. On the

other hand, such memories are not 'sociable'; they do not bring other thoughts in their train; especially they lack 'determination'-value, the tendency to direct the mind systematically from one thought to a train of others; they tend to clog thought. The subject becomes more and more conscious of inefficiency in his profession or in his social life; and the consciousness of failure has the usual consequence of making the actual failure all the greater.

5. Melancholy and pessimism.—Melancholy and pessimism are two sides of the same state of mind, the one expressing the subjective attitude and disposition, the other the theoretical interpretation. Happiness becomes a dream which is never realized, and which it seems hopeless to pursue. Subjectively, indifference, apathy, want of feeling; objectively, death, seem the only desirable things. The ideas, imaginations, and suggestions that arise in the mind of the melancholic, according to a well-recognized law (see Störring, *Mental Pathology*, p. 222 ff.), tend to be of the same emotional tone as that of the disposition in which they are called up, i.e. painful, depressing; the melancholic sees only the sad, the tragic, the bitter side of things, the pain that is suffered, the sins and crimes and follies that are committed, not the pleasures, the kindness, the goodness, that are in things. Hence melancholy, whatever its source, has played a powerful part in religious movements. It is not only that religion and its history furnish the melancholy mind with a cohort of images of the most terrifying type, but also that the consciousness of the suffering self sends it to religion, to the idea of sin and its punishment, as the most obvious and nearest interpretation; and, finally, that religion offers the only adequate relief and hope of escape. Religious melancholy is the subject of one of Burton's most curious dissertations (pt. iii. sect. iv. membrum i.), and James's *Varieties of Religious Experience*, lects. vi. and vii., on 'The sick Soul,' give a modern presentation. It is there shown how, as in Tolstoi's case, melancholy may be accompanied by a total change in the estimate of the values of things: things that seemed of the utmost value before now seem worthless; they excite no emotion or interest whatever; and a consequence of this is that the world, and people, look different and are thought of differently—as strange and unreal. It is also shown that in a rational being the strangeness and change of feeling incite to a search for a reason, for an explanation, either directly in oneself or in the action of other beings upon oneself. Either of these ways may lead to religious conversion and relief.

6. Moroseness.—The pathologist Pinel, in his treatise on *Mental Alienation*, depicted melancholics as of two distinct types—the one filled with enthusiasm for art, for literature, for all that is great and noble, or, among ordinary people, merely pleasant, lively, and affectionate, yet apt to torment himself and his neighbours by bursts of anger and chimerical suspicions; the other is the type to which the Emperor Tiberius and Louis XI. of France belonged—men who are gloomy and taciturn, deeply suspicious of others, fond of solitude. Suspicion of others is the dominant mark, with cunning and duplicity of the most dishonourable and cruel kind, which, if power is added, become fiercer and less restrained as age increases (P. Pinel, *L'Aliénation mentale*, Paris, 1809, p. 161). This represents with some accuracy the morose type of melancholy. Moroseness springs from the disposition to regard others as having secret designs upon one's property or life or place, and to avoid them in consequence. It involves extreme self-centring and misanthropy. Melancholy is a disease of the imaginative, moroseness of the unimaginative

mind—the man who does not aspire beyond that which he has already attained, the man of narrow range of ideas, unable to appreciate the values that others place upon things, especially the ideal values. Probably the pivot of the morose character is, like that of melancholy, fear or anxiety.

As de Fursac has said of the miser, 'It is undoubtedly true that from insecurity springs anxiety, and that anxiety becomes a torture and a source of trouble for the mind. It has for effects the diminution of activity, the development of defensive tendencies to the detriment of the expansive tendencies, the cult of absolute security, and the horror of risk. It is intimately bound up with insociability' (*L'Avarice*, p. 23).

This is true also of the insecurity of power or of position, in narrow and selfish characters; there is no sense of the solidarity of the race, even of the family; the morose man sees only the bad side, the weaknesses of his neighbours; he has no sympathy with or any kind of feeling for others; he is vindictive, and, if opportunity allows, savage, brutal, cruel.

LITERATURE.—R. Burton, *The Anatomy of Melancholy*, Oxford, 1621 (by 'Democritus Junior'; the author's name was subscribed to an 'Apologetical Index' at the end of the volume). For the history of the theory of the 'temperaments' see W. Volkmann, *Lehrbuch der Psychologie*, Gothen, 1894 i., i. 205 ff.; J. Henle, *Anthropologische Vorträge*, Brunswick, 1876, p. 101 ff.; and W. Wundt, *Grundzüge der physiologischen Psychologie*, Leipzig, 1902-03, iii. 637 ff.; J. Sully, *Pessimism: a History and Criticism*, London and New York, 1891; W. J. L. MCINTYRE.

MELANESIANS.—I. **Extent and limits of the subject.**—The region of the South Pacific, which is called Melanesia, is well defined, except on the western side. The boundary on the east lies between Fiji, which is Melanesian, and Samoa, which is Polynesian. To the south the Melanesian island of New Caledonia is separated by a considerable space of ocean from New Zealand, which is Polynesian, as are the small islands of Micronesia on the north from the Melanesian Solomon group, but to the west the islands of Melanesia overlap New Guinea. Some of the inhabitants of that vast island are Melanesian, at any rate in language; but, though Melanesians have been called Papuans, there can be no doubt that Papua, or New Guinea, cannot be placed as a whole in Melanesia. Five distinct groups of islands are without question Melanesian: (1) the Solomon Islands, with the groups which connect them with New Guinea; (2) the Santa Cruz group; (3) the Banks' Islands and New Hebrides; (4) New Caledonia, with the Loyalty Islands; and (5) Fiji.

The first discovery in Melanesia was that of the Solomon Islands by Spaniards, under Mendafia, in 1567. In 1595 the same voyager discovered Santa Cruz; and in 1606 Quiros and Torres discovered the New Hebrides and Banks' Islands. The Dutch discovered Fiji in 1643. French voyagers in the latter part of the 18th cent., and finally Captain Cook in his second great voyage, completed the general survey of all the groups. In the records of these passing visits it is vain to seek for information concerning the religion of the natives. The discoverers saw what they believed to be temples, idols, worship and invocations of devils; they interpreted what they saw, as succeeding voyagers have done, according to their own conceptions of savage beliefs. It was not till missionaries, about the middle of the 19th cent., began to live in closer intercourse with the native people and to learn their languages that any certain knowledge

of Melanesian religion could be gained. The following account represents in the main the knowledge which has been gained by the Melanesian Mission of the Church of England. The religion of the Fijians is considered in another article (see FIJI). The account here given has been drawn from the Solomon Islands, the Santa Cruz group, the Banks' Islands, and the Northern New Hebrides. It has been gathered from natives of those groups in native language, and much of it has been gained from what educated natives have written in a native language. Very little, however, has come from the Western Solomon Islands or the Southern New Hebrides; but there is every reason to believe that religious beliefs and practices in these islands do not differ considerably from those of the central parts of Melanesia.

2. *Basis of Melanesian religion.*—From whatever source they may have derived it, the Melanesians generally have held the belief that their life and actions were carried on in the presence and under the influence of a power superior to that of living man. This power, they thought, was all about them, attached to outward objects, such as stones, and exercised by persons, *i.e.*, either by men, alive or dead, or by spirits who never were men. This 'sense of the Infinite,' as Max Müller (*Lectures on the Origin and Growth of Religion* [HL], London, 1878, lect. 1.) calls it, was the foundation of the religious beliefs of the Melanesians; the general object of their religious practices was to obtain the advantage of this power for themselves. This power is impersonal, and not physical in itself, although it is always put in motion by a person; and all remarkable effects in nature were thought to be produced by it. It is not fixed in anything, but can abide and be conveyed in almost anything. All spirits, beings superior to men, have it; ghosts of dead men generally have it, and so do some living men. The most common name for it is *mana* (*q.v.*). The methods by which living men use and direct this power may well be called magical; the controlling force lies generally in words contained in chanted or muttered charms. If worship is addressed to beings who are not living men, and if the use of their power is sought from them to do good or to do harm, it is because such beings have this *mana*; the forms of words have efficacy because they derive it from the beings which have *mana*; a common object, such as a stone, becomes efficacious for certain purposes because such a being gives it *mana* power. In this way the influence of the unseen power pervades all life. All success and all advantage proceed from the favourable exercise of this *mana*; whatever evil happens has been caused by the direction of this power to harmful ends, whether by spirits, or ghosts, or men. In no case, however, does this power operate, except under the direction and control of a person—a living man, a ghost, or a spirit.

3. *Objects of worship.*—The objects of religious worship, therefore, were always persons to whom prayer or sacrifice was offered, or in whose names charms were recited, with the view of gaining supernatural power, or turning it, either directly or indirectly, to the advantage of the worshipper. These personal objects of worship are either spirits or ghosts. By spirits are meant personal beings in whom the spiritual power already mentioned naturally abides, and who never were men; by ghosts are meant the disembodied spirits or souls of dead men. To keep these distinct is essential to the understanding of Melanesian religion. Natives themselves are found to confuse them at times, while Europeans are usually content to call all alike deities, gods, or devils.

(1) *Spirits.*—A native of the Banks' Islands,

where spirits are called *vui*, wrote the following definition:

'What is a *vui*? It lives, thinks, has more intelligence than a man; knows things which are out of sight without seeing; is powerful with *mana*; has no form to be seen; and has no soul, because it is itself like a soul' (see Codrington, *Melanesians*, p. 128).

The *vui* of the Northern New Hebrides is of the same nature. Yet such spirits are seen, in a shadowy, unsubstantial form; and there are many spirits called by the same name to whom the definition does not accurately apply, while the stories concerning them treat them as if they were men with superhuman and quasi-magical powers. Still the natives steadily maintain that these are not, and never were, men. In the Solomon Islands beings were believed to exist who were personal, yet who had never been men, and who lacked the bodily nature of men, but they were very few and enjoyed little religious consideration. The term which is applied to such beings is also applied to some who had undoubtedly existed at some time as men. The question arises whether those beings, concerning whom stories were told and believed in the Banks' Islands and New Hebrides which showed them to be like men of more than human power and intelligence, should not be called gods. Such were *Qat* in the Banks' Islands, *Tagaro*, *Suge* (in various forms of the names) in the New Hebrides, and *Lata* in Santa Cruz. To such as these it would certainly not be improper to apply the word 'god.' But the native word by which they are known, such as *vui*, is applicable also to other beings for whom 'god' is too great a name, this category including elves, fairies, nameless beings of limited influence whose nature is still spiritual, so to speak, not corporeal. To describe all these, to distinguish them from dead men, the best general term seems 'spirit'; and it is to these beings that the religion of the New Hebrides and Banks' Islands looks, as possessing and wielding *mana*, the power which must be called spiritual, which men have not in themselves, and which they seek to obtain for their advantage by sacrifices, prayers, and charms.

(2) *Ghosts.*—It makes the matter clear if this term be used when the beings spoken of are simply men who are dead in the body while that part of them that is not bodily retains activity and intelligence. In the Banks' Islands and New Hebrides the word used is merely 'dead man,' such as *tamate* or *natmas*. In the Solomon Islands a very common word in various forms is *tindalo*. The question again occurs whether these should not rather be called gods. There are certainly some to whom prayers and sacrifices are offered, whose place and time in human life are forgotten or unknown, and whose existence as persons possessed of powers far superior to those of living men is alone present to the belief of the existing generation. Such may not unreasonably be called gods. But, whereas in the Eastern groups such beings are plainly called 'dead men,' it seems more correct, and serves better for clearness, to use an English word which shows them once to have been living men, and separates them from any such beings as are believed never to have belonged to human kind. The word 'god' cannot be a translation of 'dead man.' Where, as in the Solomon Islands, a distinct name, such as *tindalo*, is in use, this objection to the use of the word 'god' does not so plainly apply. Yet the natives emphatically declare that every *tindalo* was once a man, that the *tindalo* is the spirit (*tarunga*) which once was the seat and source of life, intelligence, and power in a man who was then in the body. The living men who worship the *tindalo* regard themselves as possessed of that non-corporeal nature which alone remains in the dead, and is the seat of the dead

man's superhuman power. They believe that some of them have a measure of that power, derived by them from the dead. They believe that, when they are dead, they will also, it may be, receive a great access of this power. The difference which they recognize between themselves and the *tindalo* is that they are alive and have but a comparatively small measure of spiritual power. But it should be understood that every living man does not become a *tindalo* after death. The large majority of men are of no great importance, and show no remarkable powers in their lifetime; alive they are nobodies, and such they remain when dead. But there are always some living men who show qualities which give them success and influence. Such success and influence are not ascribed by the natives to natural qualities, but to the possession of that spiritual power which they have obtained from the *tindalo* with whom they live in communication. When a great man dies, it is expected that he should prove to be a *tindalo*, a ghost worthy of worship, an effective helper, one whose relics will put the living in communication with him. Thus, after the death of Ganindo, a chief, a famous fighting man of Florida, his name was invoked and a sign of his power sought from him. On proof of this power a shrine was built for him, his head, his tools, and his weapons were preserved in it, and sacrifices with invocation were offered to him there. Such a one might, indeed, appear to European visitors to be a god; but to the natives of the place, who now worshipped him, and among whom he had lived as one of themselves, it was his ghost, in the common English sense of the term, who was among them.

Again, the question may arise whether this is not the worship of ancestors. The ghost of a dead man, however, who was well remembered in the flesh, and who was often, no doubt, younger in years than some of his worshippers, is not an ancestor. The natural tendency is, as new objects of worship of this character arise, and as one great man after another dies, to neglect and desert the ghosts and their shrines of the past generation, while the newer wonders and powers attract faith and veneration to new ghosts and shrines. As the object of worship thus became more of an ancestor, he was less an object of worship. But certainly there are some concerning whose time and place of life the natives profess themselves to be ignorant, but whose names, such as Daula and Hauri in Florida, are known to all, and who are now universally believed to be very powerful *tindalo*, though in ancient times they lived in human form on the island. These may be called ancestors, and they are worshipped, but not as ancestors.

The personal beings towards whom the religion of the Melanese turns, with the view of obtaining their *mana* for aid in the pursuits, dangers, and difficulties of life, are thus spirits and ghosts; and it is remarkable that the Melanese are thus divided by their religious practices into two groups. In the Western group, as in the Solomon Islands, there is a belief in spirits who never were men, but worship is directed to the ghosts of the dead; in the Eastern group, as in the Northern New Hebrides, the ghosts of the dead have indeed an important place, but worship is in the main addressed to spirits who have never been men. And in the arts of life and in the advance from savagery towards civilization, the Solomon Islander who worships ghosts certainly ranks before the New Hebrides man who worships spirits.

4. *Prayers.*—The Melanesian native, believing himself surrounded with unseen persons who can help him, naturally calls upon them in distress,

just as he called upon his father as a child. Such appeals are not prayers according to the meaning of the various native words which would be translated 'prayer' in English. Prayers in the native sense are forms of words; and, strictly speaking, they are formulas which are known only to some, and which have in themselves a certain efficacy and even compelling force. It may be said that exclamatory appeals in case of danger at sea and in the extremity of sickness are prayers in a true sense of the term, which yet to the native are not strictly prayers, because they have public utterance and an elastic form. A man in danger by the sea may call on his father, grandfather, or some ancestor to still the storm, lighten the canoe, and bring it to the shore; when fishing he may beg for success, and when successful may thank his helper. But in such cases a formula, if one were known, would always be preferred, and that would be a prayer in the native sense of the word. Charms, muttered or sung under the breath for magical purposes and in the treatment of sickness, are easily distinguished; but it must be said that in Florida, an important centre of Christian teaching in the Solomon Islands, the word used for Christian prayer is taken from these charms.

It is remarkable that in the Banks' Islands and the Northern New Hebrides, where spirits have a more important place in native religion than ghosts, all prayer must be addressed to the ghost of a dead person. Indeed, every proper form begins with the word *tataro*, which is, no doubt, a word meaning 'ghost.' It is true that in danger at sea a man will call on dead friends to help him, but this is not a true prayer (*tataro*) because no formula is employed. It is also true that men in danger call on spirits, either with or without a formula; but neither is a true *tataro*, since it is not addressed to ghosts. Many forms of words, moreover, which are true *tataro* prayers, are formulas for cursing as well as for petition. Such are used when a man throws a bit of his food aside before eating, and pours a libation before drinking *kava*, or when he pours water into an oven, since in them he asks for benefits to himself and mischief to his enemies. A *tataro* prayer is a spell; a call for help in danger is a cry.

5. *Sacrifices.*—There can be little doubt that sacrifices properly so called have a place in Melanesian religion. One simple form is probably universal. A fragment of food ready to be eaten, a bit of betel-nut, and a few drops of *kava* poured as a libation are offered at a common meal as the share of departed friends, who are often called by name, or as a memorial of them with which they will be gratified. This is accompanied with a prayer. With the same feeling of regard for the dead, food is laid on a grave or before a memorial image, and is then left to decay, or, as at Santa Cruz, is taken away and eaten by those who have made the offering. In a certain sense, no doubt, the dead are thought to eat the food. Yet the natives do not apply to these offerings the words which connote sacrifices in the strict sense of the term. In the Western Islands the offerings in sacrifices are made to ghosts and consumed by fire as well as eaten; in the Eastern groups they are made to spirits, and there is no sacrificial fire or meal. In the former nothing is offered but food; in the latter native money has a conspicuous place.

(1) *In the Solomon Islands.*—A sacrifice in San Cristoval, one of the Solomon Islands, has been thus described in writing by a native of the place:

'In my country they think ghosts are many, very many indeed, some very powerful, some not. There is one who is principal in war; this one is truly mighty and strong. When our people wish to fight with any other place, the chief men of the village and the sacrificers, and the old men, and the men elder and younger, assemble in the place sacred to this ghost;

and his name is Harumae. When they are thus assembled to sacrifice, the chief sacrificer goes and takes a pig. . . . The pig is killed (strangled), not by the chief sacrificer, but by those whom he chooses to assist him, near the sacred place. Then they cut it up; they take great care of the blood lest it should fall upon the ground; they bring a bowl and set the pig in it, and when the pig is cut up the blood runs down into this. When the cutting up is finished, the chief sacrificer takes a bit of flesh from the pig, and he takes a cocoa-nut shell and dips up some of the blood. Then he takes the blood and the bit of flesh and enters into the shrine, and calls that ghost and says, "Harumae! Chief in war! we sacrifice to you with this pig, that you may help us to smite that place; and whatsoever we shall carry away shall be yours, and we also will be yours." Then he burns the bit of flesh in a fire upon a stone, and pours down the blood upon the fire. Then the fire blazes up greatly to the roof, and the house is full of the smell of pig, a sign that the ghost has heard. But when the sacrificer went in he did not go boldly, but with awe; and this is the sign of it: as he goes into the holy house he puts away his bag, and washes his hands thoroughly, to show that the ghost shall not reject him with disgust? (Codrington, p. 129 f.).

The pig thus sacrificed was eaten by the worshippers. When this account was written, the older people well remembered Harumae as a living chief.

In the neighbouring island of Mala a native gives the names of seven kinds of sacrifice. (1) A man returning from a voyage puts food before the case which contains the relics of his father. (2) In sickness, or where failure of a crop shows that some ghost has been offended, a pig is offered as a substitute for the man whom the offended ghost is plaguing, and is strangled and burned whole on the stones of a sacred place, together with mixed food. The sacrificer calls aloud upon the offended ghost and upon many others, and sets a bit of the food which he has left unburned before the relic case of the dead man to whose ghost the pig was offered. (3) To 'clear the soul,' a pig or dog is killed and cooked; the sacrificer calls upon the ghost by name to clear away the mischief, and throws the sacrifice into the sea or sets it in the place sacred to the ghost invoked. (4) This is performed in the house of the sick person who is to benefit by it. A pig or dog is cooked and cut up; the names of the dead members of the family to which the ghost to be propitiated belonged are called out, with a petition to each on behalf of the sick man; the sacrificed animal is eaten by the males who are present. (5) (6) (7) are sacrifices of firstfruits—yams, flying-fish, and canarium nuts—which are presented as food to the ghost concerned, with the invocation of his name, and set in a sacred place.

In Florida and Ysabel, both belonging to the Solomon group, sacrifice is of the same character. There are those who know, having been taught by their fathers or mother's brothers, how to approach the powerful ghosts of the dead, some of whom were the objects of a more public and some of a more particular worship. Such a ghost of worship, called a *tindalo*, had his shrine in which his relics were preserved. The officiating sacrificer is said to 'throw the sacrifice.' A certain *tindalo*, whose worship and influence are not local, is called Manoga. A native writes:

'He who throws the sacrifice when he invokes this *tindalo* heaves the offering round about, and calls him, first to the East where rises the sun, saying: "If thou dwellest in the East, where rises the sun, Manoga! come hither and eat thy mashed food." Then turning he lifts it towards where sets the sun, and says, "If thou dwellest in the West, where sets the sun, Manoga! come hither and eat thy food." There is not a quarter towards which he does not lift it up. And when he has finished lifting it he says, "If thou dwellest in heaven above, Manoga! come hither and eat thy food. If thou dwellest in the Pleiades or in Orion's belt; if below in Turivatu; if in the distant sea; if on high in the sun or in the moon; if thou dwellest inland or by the shore, Manoga! come hither and eat thy food"' (Codrington, p. 131 f.).

Whether, as in this case, the offering be vegetable food or whether it be a pig, a piece is consumed in the fire within the shrine, and the people without partake of the sacrificial food. In these islands, moreover, the sacrifice of the firstfruits must precede the general use of the products of each season.

Human sacrifices were occasionally made, and such were thought most effectual for the propitiation of an offended ghost. In this case the victim was not eaten by the assistants as when a pig was offered; but a piece of flesh was burned for the ghost's portion, and bits were eaten by young men to get fighting power, and by the sacrificer who had made the offering.

In the island of Santa Cruz the flesh of pigs or vegetable food is placed before the stock of wood that represents a person recently deceased for him to eat; feather-money and betel-nuts are laid out for ghosts, and food is thrown to them at sea. These are distinctly offered for the ghost to eat or use, but they are soon taken up and disposed of by the offerers as common things. Such offerings resemble those of food laid on graves or at the foot of an image in the Solomon Islands, which would not there have the name of sacrifices; but the full sacrifices of the Solomon Islands, as has been shown, have the sacrificial characteristics of intercession, propitiation, substitution, and a common meal.

(2) *In Banks' Islands and New Hebrides.*—To offerings here, no doubt, the name of sacrifice is far less properly applied, and yet it is almost necessary to employ it. The offerings are made in almost all cases to spirits, but in some cases to the ghosts of dead men. The offering is generally native money; nothing is killed or burned, nothing eaten; and the offering is laid upon a stone, cast into water, or scattered upon a snake or some other creature, the stone, the creature, or the sacred spot being chosen because of its connexion with the spirit who is to be conciliated or from whom benefits are sought. Access to the spirit is to be obtained through the sacred object; but the common worshipper or suppliant cannot obtain this access by himself, and is consequently obliged to use the services of a go-between who knows the stone or whatever it may be and through it is able to know and to approach the spirit. The worshipper generally gives native money to the 'owner,' as he is called, of the sacred object, who then gives a little money to the spirit, and perhaps pours the juice of a young coco-nut on the stone, while he makes his request on behalf of his client. There is thus an intercession, a propitiation, an offering of what the suppliant values and the spirit has pleasure in receiving. So far it is a religious action of a sacrificial character, and is distinct from prayer. In the New Hebrides, besides similar sacrifices to spirits, offerings are made to the ghosts of powerful men lately deceased, either at their graves or in the places which they haunt. Men who know these and have access to them take mats, food, and pigs (living or cooked) to the sacred place, and leave, or profess to leave, them there. Nowhere in these islands is there an order of men who can be called priests. The knowledge of the spirits and of the objects through which access to them can be obtained is open to all, and is possessed by many. Most of those who possess it have received it secretly from their fathers or elder relatives, but many have found it by happy accident for themselves, and have proved their connexion with the spirit by the success of their ministrations.

6. *Sacred places and objects.*—The sanctity which belongs to such stones or sacred spots as have been mentioned in connexion with sacrifice has, of course, a religious character. Native life in Melanesia is, for the most part, in continual contact with the prohibitions and restrictions which belong to this religious feeling. The sacred character of the object, whatever it may be, is derived from one of two causes: it may lie in the nature and associations of the thing itself, or

it may be conferred by men who have the *mana*, the spiritual power, to confer it. It may be said, generally speaking, that among these sacred objects there are no idols, in the strict sense of the term. It is true that images are made more or less in all quarters to represent the dead, being set up as memorials at funeral feasts, in burial-places, in canoe houses, and in places of general assembly. They are treated with respect; offerings of food are made, and other valuable things are occasionally laid before them; but the images are memorials of men deceased, likenesses to some extent, and representations; they are not worshipped, and are sacred only because of what they represent.

(1) *Stones*.—Sacred places almost always have stones in them. The presence of certain stones gives sanctity to the place in which they naturally lie; and, when a place has for other reasons become sacred, stones which have that character are brought and placed there. Here again recurs the important distinction between spirits and ghosts. The stones of the burial-place of a powerful man receive *mana* from him, or a man who had *mana* is buried near sacred stones, thus connecting the ghost and the stone. In other cases, the stone is believed to have such a relation to a spirit, who never was a living man, that it acquires a mysterious quality, and becomes the means by which the man who has the knowledge of the stone can have access to the spirit. Many sacred stones then are sepulchral, and this is usually the case in the Solomon Islands. The sacrifices already described are offered upon stones. A stone is also frequently sacred in the Eastern Islands because a *vui* (spirit) belongs to it. In this group stones may be divided into those that naturally lie where they are revered and those which have *mana* derived for various reasons from a spirit, and which are carried about and used for various purposes, and as amulets. The natives emphatically deny that the connexion between stones and spirits is like that which exists between the soul and body of man. Certain stones are kept in houses to protect them from thieves; and, if the shadow of a man falls on one of these, the ghost belonging to it is said to draw out his life and eat it. It has been supposed that the ghost which consumes the man's life must correspond in the stone to the soul in a living man; but the natives do not believe that the ghost dwells in the stone, but by it or, as they say, at it; they regard the stone as the instrument used by the spirit, which is able to lay hold on the man by the medium of his shadow.

(2) *Trees, streams, and living creatures*.—Trees are sacred because they grow in a sacred place, or because they have a sacred snake, e.g., that haunts them. Some have a certain inherent awe attaching to their kind. The natives deny that they ever regarded a tree as having anything like a spirit of its own corresponding to the soul or *animus* of man. Streams, or rather pools, are sacred as the haunts of ghosts in the Western, and of spirits in the Eastern groups. The reflexion of a man's face upon such water gives the ghost or spirit the hold upon the man's soul by which it can be drawn out and its life destroyed. Among living creatures which are sacred, sharks have a conspicuous place. If one of remarkable size or colour haunts a shore or rock in the Solomon Islands, it is taken to be some one's ghost, and the name of the deceased is given to it. Before his death a man will give out that he will enter into a shark. In both cases it is well understood that the shark to which the ghost has betaken himself was, before it was thus occupied, a common shark; but, now that he is in it, the place where the man lived is visited by the fish, and the neighbours and relatives of the deceased respect and

feed it. A spirit, known to some one who sacrifices for it, can, in like manner, be introduced in the Banks' Islands into a shark, which thus becomes familiar. In the Solomon Islands a crocodile may be a *tindalo*, since the ghost of a recent ancestor may possibly have entered it, or may be known to have entered it. Almost any living creature that haunts a house, garden, or village may well be regarded as conveying a ghost. Among birds the frigate-bird is conspicuous for its sacred character in the Solomon Islands; the ghosts of deceased men of importance find their abode in them, and indeed ancient and widely venerated *tindalos* dwell in them. In all the groups there is something sacred about kingfishers. Snakes receive a certain veneration wherever they are found in a sacred place. The original female spirit, that never was a human being, believed in San Cristoval to have had the form of a snake, has given a sacred character to all snakes as her representatives. In the Banks' Islands, and still more in the New Hebrides, snakes with which certain *vui* associate themselves, and which therefore have much *mana*, are worshipped and receive offerings of money in sacred places. One amphibious snake is firmly believed to appear in human form to tempt a young man or woman.

Is, then, the religion of the Melanesians altogether an animistic religion? Nowhere does there appear to be a belief in a spirit which animates any natural object, tree, waterfall, storm, stone, bird, or fish, so as to be to it what the soul of a man, as they conceive it, is to his body, or, in other words, so as to be the spirit of the object. The natives certainly deny that they hold any such belief; but they believe that the spirit of a man deceased, or a spirit never a man at all, abides near and with the object, which by this association receives supernatural power, and becomes the vehicle of such power for the purposes of those who know how to obtain it.

7. *Magic and charms*.—The belief in magic and the use of magic and charms do not perhaps properly belong to religion; but among Melanesians it is hardly possible to omit this subject. The foundation of religion is the belief in the surrounding presence of a power greater than that of man; and in great part the practice of religion comes to be the method by which this power can be turned by men to their own purposes. The natives recognize, on the whole, a regular course of nature in the greater movements of things which affect their lives, but at every point they come in touch with what they take to be the exercise by men of the power which they derive from either ghosts or spirits. By means of this power, men who know the proper formula and rite can make rain or sunshine, wind or calm, cause sickness or remove it, know what is beyond the reach of common knowledge, bring good luck and prosperity, or blast and curse. No man has this power of himself, but derives it from a personal being, the ghost of a man deceased, or a spirit of a nature which is not human. By charms (certain forms of words muttered or chanted, which contain the names of the beings from whom the power is derived) this power becomes associated with the objects through which the power is to pass. These things are personal relics, such as hair or teeth, remains of food, herbs and leaves, bones of dead men, and stones of unusual shape. Through these objects wizards, doctors, weather-mongers, prophets, diviners, and dreamers do their work. There is no distinct order of magicians or medicine-men, just as there is no separate order of priests; the knowledge of one or more branches of the craft is handed down from father to son, from

uncle to sister's son, or, it may be, is bought and sold. Many men may be said to make a profession of magic, and to get property and influence thereby. A man cannot, it may be said, be a chief without a belief that he possesses this supernatural power. There is no doubt that those who exercise these arts really believe that a power resides in them, though, indeed, they are conscious of a good deal of deceit.

A great part of this is sympathetic magic, and seems to the people to have reason in it. The failure of some charm or of some magician does not discredit charms or magic, since the failure is due to the counteraction of another and stronger charm; and one doctor who has failed has been, secretly or openly, opposed by another who has on his side a more powerful ghost or spirit. Thus the people were at every turn in contact with the unseen world and its powers, and in this religion was certainly at work. It is not necessary to go into this subject in any detail. With regard to sickness, it is often said that savages do not believe that any one is naturally sick. That is not the case in Melanesia, in the case of such troubles as fever and ague; but any serious illness is believed to be caused by ghosts or spirits; and the more important the patient is the more reasonable it seems to ascribe his sickness to some ghost or spirit whom he has offended, or to the witchcraft of some enemy. It is not common to ascribe sickness to a spirit in those groups where spirits have so great a place in the religious regard of the people. There it is the ghosts of the dead who inflict sickness, and can be induced to remove it; for there is a certain malignity belonging to the dead, who dislike to see men well and living; a man who was powerful and malevolent when alive is more dangerous than ever when dead, because all human powers which are not merely bodily are believed to be enhanced by death. So, whether to cause sickness or to remove it, the doctor by his charms brings in the power of the dead. A wizard is paid by a man's enemy to bring the malignant influence of the dead upon him; he or his friends pay another to bring the power of other dead men to counteract the first and to save the endangered life; the wizard who is the more powerful—who has on his side the more or the stronger ghosts—will prevail, and the sick man will live or die accordingly. Two parties of such hostile ghosts are believed in San Cristoval to fight the battle out with ghostly spears. All success and prosperity in life, as well as health and strength, are held to depend on the spiritual power obtained by charms or resident in objects which are used with charms; the Melanesian in all his employments and enterprises depends upon unseen assistance, and a religious character is thus given to all his life.

8. Tabu.—This word, commonly *tapu* or *tambu* in the islands of Melanesia now under consideration, and established as an English term, was taken from the islands of Polynesia. In Melanesia the belief prevails, clearly marked by the use of distinct words in some islands, that an awful and, so to speak, religious character can be imposed on places, things, and actions by men who have the *mana* to do it. A place, e.g., in which a powerful man has been buried, where a ghost has been seen, which a spirit haunts, is holy and awful of itself, never to be lightly invaded or used for common purposes. But a man who has the proper power can tabu a place as he chooses, and can forbid approach to it and common use of it. Behind the man who exercises this power is the ghost of the dead or the spirit whose power the man has. Tabu implies a curse. A chief will forbid something under a penalty. To

all appearance it is as a chief that he forbids, and as of a chief that his prohibition is respected; but in fact the sanction comes from the ghost or spirit behind him. If a common man assumes the power to tabu, as he may and sometimes does, he runs a serious risk; but if, on the other hand, he forbids the gathering of certain fruit, and sets his mark upon it, and then, as often naturally happens, some one who has disregarded his prohibition and taken the fruit falls ill or dies, this is at once a clear proof that the tabu is real, and any future prohibition made by him will be respected. Thus to a considerable degree, in the Banks' Islands at least, men of no great consequence, as well as the societies which are there so numerous, set marks of prohibition which meet with respect. Every such prohibition rests upon an unseen power; there is in it no moral sanction, but there is the consciousness of the presence of the unseen which certainly works much for morality. What is wrong in itself is by no means always tabu; but what is tabu is very often what the natives recognize as wrong in itself. For it must not be supposed that Melanesians know no moral distinction of right and wrong. Disobedience to parents, unkindness to the weak and sick, are no doubt common, but there is a general feeling, both strong and marked, that it is right to respect and love parents, and wrong to be unkind. Neighbours will carry food to the sick whose friends neglect them, and very plainly express their blame. Those who lie freely upon occasion respect truthfulness, and say that it is bad to tell lies.

9. Totemism.—If totems, properly so called, exist among Melanesians, they must be considered in treating their religion. A totem is defined by J. G. Frazer (*Totemism and Exogamy*, London, 1910, i. 3 f., 8) as being 'a class of material objects which a savage regards with superstitious respect, believing that there exists between him and every member of the class an intimate and altogether special relation.' The relation between a man and his totem has partly a religious and partly a social character. It is held that 'the members of a totem clan call themselves by the name of their totem, and commonly believe that they are actually descended from it.' Each one, moreover, 'believing himself to be descended from, and therefore akin to, his totem, the savage naturally treats it with respect. If it is an animal he will not, as a rule, kill or eat it.'

(1) Florida, in the Solomon Islands, where the native system as it is understood by themselves has been carefully explained by natives of some education, affords probably the best field for consideration of the subject. The people are divided into six exogamous kindreds, called *kema*, each with its distinguishing name, descent following the mother. Two of these kindreds are named from living creatures, a sea-eagle and a crab. Each of the six has some object which its members must avoid, and which they must abstain from eating, touching, approaching, or beholding. This is the *mbuto* of the *kema*. In one case, and one case only, this *mbuto* is the living creature from which the kin takes its name. The Kakau kin may not eat the kakau crab, and that crab might accordingly be regarded as the totem of that Crab kindred. But the other kin which takes its name from a living creature, the Eagle kindred, is quite at liberty to kill or eat that bird; it, therefore, cannot be the totem of that kin. Again, a member of the Eagle kindred may not eat the common fruit pigeon, which is his *mbuto*, and would say that the pigeon was his ancestor. Here, then, the pigeon appears as the totem of the Eagle kin; they cannot eat it; it is their ancestor. But was a pigeon their ancestor

in the sense that they are descended from it? Decidedly not. It was a human ancestor who associated himself with the pigeon; the pigeon represents the dead man, the pigeon is a *tindalo*, a dead man of power. A native writes:

'We believe these *tindalo* to have been once living men; and something that was with them, or with which they had to do, has become a thing forbidden, *tambu*, and a thing abominable, *mbuto*, to those to whom the *tindalo* (once a living man) belongs' (Codrington, p. 81 f.).

That is to say, the pigeon represents the human ancestor; the man begat the generations of his kindred before he died and entered into a pigeon. The pigeon is not truly an ancestor, nor is it truly a totem. The native writer goes on to give the example of another kindred which avoids the giant clam, the traditional ancestor of which haunted a certain beach. That ghostly ancestor is represented by the clam on that beach, and a native will say that the clam is his ancestor, but without meaning more than he means when he says that an ancient weapon in a shrine is a dead chief, a *tindalo*, that is, belongs to him.

(2) In another of the Solomon Islands, Ulawa, not long ago the people would not eat the fruit of the banana, and had ceased to plant the tree. The elder natives would give to the fruit the name of a powerful man whom they remembered living, and say that they could not eat him, thus accounting for their avoidance of the banana as food. The explanation was that this man, before his death, announced that after death he would be in banana fruit, and that they were not to eat it. Soon he would have been an ancestor, the banana would be an ancestor, while clearly there was no descent from a banana in the belief of the people. This, then, is no totem, though it may illustrate the origin of totems.

(3) In the New Hebrides, in Aurora Island, there is a family named after the octopus. They do not call the octopus their ancestor, and they freely eat it; but their connexion with it is so intimate that a member of the family would go to the reef with a fisherman, call out his own name, and say that he wanted octopus, and then plenty would be taken. This, again, seems to approach totemism.

(4) In the Banks' Islands and New Hebrides, however, there is what comes very near to the 'individual totem.' Some men, not all, in Mota conceived that they had a peculiar connexion with a living creature, or it might be a stone, which had been found, either after search or unexpectedly, in some singular manner. If this was a living thing, the life of the man was bound up with its life; if an inanimate object, the man's health depended on its being unbroken and secure. A man would say that he had his origin in something that had presented itself to him. In Aurora also, in the New Hebrides, a woman dreams or fancies that there is something—e.g., a coco-nut—which has a particular relation to her unborn child, and this the child hereafter must never eat.

10. *Societies, mysteries, and dances.*—(1) *Societies.*—A very conspicuous feature of native life in the Torres Islands, Banks' Islands, and New Hebrides is the universal presence in those groups of a society, called by some form of the name *supwe*. There are, or were, certain objects commonly in view which, at first sight, could not fail to connect this with the religion of the people. The visitor to a village would see platforms built up with stones, with high, pointed, shrine-like little edifices upon them, within which were the embers of a fire below and images in human form above. If he hit upon a festival, he would see such images carried in the dance. But such appearances show, as a matter of fact, nothing else than the presence of this society, since they are merely the hearth and the emblems of the men of high rank in the

supwe, an institution which is entirely social, and has no religious character. To gain advance and distinction in it requires, no doubt, the spiritual power of *mana*, as does every other form of success, and so sacrifices, prayers, and charms are used; and doubtless the *supwe* is under the sanction of tabu. It is also true that a man's position after death is believed to depend in some measure on his rank and his liberality in this society. But the account of it cannot come under the head of religion.

(2) *Mysteries.*—A religious character attaches much more truly to the mysteries, the mysterious secret societies which hold an important place in native life in the Solomon Islands and in the Eastern groups. The lodges of these societies appear to visitors to be temples and seats of religious worship; the images within them seem to be idols. The mysteries are closely fenced by a strict initiation, and a rigid tabu guards them; to those outside the secret and unapproachable retreats the mysterious sounds and the appearance of the members in strange disguise convey a truly religious awe. In fact, the mysteries are professedly methods of communion with the dead, the ghosts which are everywhere, more or less, objects of religious worship. In the Banks' Islands the name of the mysteries was simply 'the Ghosts.' Yet, although within the mysterious precincts the ordinary forms of sacrifices and prayers were carried on to gain the assistance of the dead and communion with them, there was no esoteric article of belief made known and no secret form of worship practised. There were no forms of worship peculiar to the society, no objects of worship of a kind unknown to those without. There was no 'making of young men,' no initiation without which the native could not take his place among his people. The women and the children, perhaps, really believed that what they saw and heard was ghostly, but many an accident betrayed the neighbour in disguise; and the neophyte, when introduced into the sacred place, found himself in the company of his fellows of daily life. Still, since the presence of the dead was professed and believed, and since so much of the religion of the Melanesians, particularly in the Solomon Islands, was concerned with the ghosts of the dead, it is true that these secret societies and mysteries belong to the religion of the people.

(3) *Dances.*—This is by no means the case with dances. All the societies have their dances, which are part of the mysteries, and which it is the first task of the neophyte to learn. But there are dances everywhere in the public life of the people which, however difficult, all boys and young men desire to learn, and have to learn in secret before they can perform them at the feasts. The ghosts in Hades, in their shadowy life, dance as living men do. Visitors are too apt to speak of 'devil dances' and 'devil grounds'; but it may be said to be certain that dances, as such, have no religious or superstitious character in Melanesia.

11. *Creation, cosmogony.*—The consciousness of the relation of men to a creator is commonly accepted as a chief ground of natural religion. Consequently, when natives are asked (perhaps very imperfectly) who made them and the things around them, and they give the name of the maker to whom their origin is ascribed, they are thought to name their creator; and it is assumed that this creator is the chief object of their worship. Thus Qat, under the name Ikbat, was thought at first to be the chief deity at Mota; and the name of the supposed creator has elsewhere been taken as the name of God. But creation, the making of men and things, is by no means a proof of very great power, or a ground for great reverence, among Melanesian people. It

may almost be said that relation to a creator has no religious influence at all, though reference to Qat as the maker of men is made in correcting children in the Banks' Island. The existence of the world, as the natives conceived of it, and the course of all the great movements of nature, are quite independent of that creative power which was ascribed to certain spirits. The makers were spirits. In the Solomon Islands the belief in Kahausibware is characteristic. She was a female spirit in the shape of a snake; she made men, pigs, coco-nuts, fruit-trees, and food in San Cristoval; death had not yet appeared. There was a woman who had a child. The snake strangled the child; the mother chopped the snake in pieces; thenceforward all good things changed to worse, and death began. Respect is shown to snakes as the progeny or representatives of this female spirit, but she cannot be said to be worshipped.

In the Banks' Islands and the New Hebrides, as has been stated before, spirits are the principal objects of worship, and they are also believed to have had much to do with the fashioning of the world of man. Yet it must be borne in mind that they are by no means held to be originators; they came themselves into a world existing under circumstances such as those in which men now live, where there were houses and canoes, weapons and ornaments, fruits and gardens. In the Banks' Islands Qat held the highest place. He was born the eldest of twelve brothers, who dwelt in a village in Vanna Lava. There Qat began to make men, pigs, trees, rocks, as the fancy took him, in a land which already existed. His chief assistant in his work was another spirit (*vui*) named Marawa ('spider'); his brothers envied and thwarted him; when he made a wife for himself, they tried to kill him; he instructed them and played tricks on them. There were other spirits in the world when he was born, some enemies whom he had to overcome. From one of these spirits, dwelling in another group, named Night, he bought the night to relieve the tedium of perpetual daylight. Finally, when the world was settled and furnished, he made a canoe in the middle of the island of Santa Maria, where now is the great lake, collected his wife and brothers and living creatures into it, and in a flood caused by a deluge of rain was carried out into the sea and disappeared. The people believed that the best of everything was taken away by Qat, and looked for his return. Though no longer visible, he still controlled to a great extent the forces of nature, and he heard and answered the cries of men. In a way the natives looked upon him as an ancestor as well as their creator, but they were emphatic in their assertion that he was never a man himself; he was a spirit, a *vui*, of a nature different from that of man; and, because a spirit, he was master of all magic power, and full of that *mana* which was at work in all around. It is, however, scarcely possible to take him very seriously or allow him divine rank, even though he is the central figure in the origin of things and his influence is present and effective. In the New Hebrides nearest to the Banks' Islands Tagaro takes the place of Qat. He is no doubt the Tangaroa of Polynesia. He made things as Qat did; he had his brothers, ten of them, and there was another, Supwe, who thwarted Tagaro and made things wrong. Tagaro also went back to heaven. In other islands Supwe appears as the chief of this band of great spirits. In Santa Cruz, Lata corresponds, but not very closely, to Qat and Tagaro, since he also made men and animals.

These greater spirits are named and known as individual persons. Besides these, in all the islands are spirits innumerable and unnamed. These are

they whose representative form is very often a stone, who haunt the places which their presence makes sacred, who associate themselves with snakes, sharks, birds, and the various things through which men can communicate with them and draw from them the spiritual power from which comes all manner of success in life, and which can be turned to injury as well as succour. It may safely be said that these spirits were not malignant beings, though they were spiteful at times and were willing to do mischief to the enemies of their worshippers. The multitude of beings who in the Solomon Islands have power in storms, rain, drought, calms, and especially in the growth of food—the *vigona*, *hi'ona*, and others—seem to belong rather to the order of spirits than to that of the ghosts of the dead, and such they are acknowledged to be, though the natives speak of them as ghosts.

Thus the world of the Melaneseans was populous with living beings, visible and invisible, with men, with the ghosts of the dead, with spirits great and small; and pervading and surrounding all was a power which belonged to all spirits, to the dead as such, and to many men; all these could direct it and employ it, and it was everywhere at hand. The world so inhabited was bounded to the Melaneseans by the circle of the sea which surrounded the islands which were known to them, a circle which varied in place and size according to the position of the centre. The old world of the Banks' Islanders did not include the Solomon Islands; that of the Solomon Islanders was a much wider world. Wherever the circumference of the circle fell the sky was supposed to shut down fast upon it. Under this firmament the sun and moon made their journeys; and the stars hung in it. The heavenly bodies were not thought to be living beings, but rather rocks or islands. In the sun and moon were inhabitants with wives and families, in whom the sun and moon were personified and about whom many stories were told; but these have no religious character.

12. Death and after death.—Without some belief in a life after death, as well as in a power superior to that of living man, it is plain that the Melanesian religion could not be such as has been described. This implies a belief in a soul of man, though what that is they find it difficult to explain. They naturally use different words in their different languages, and these words convey various metaphors, when they are properly understood, the use of which probably involves a certain inconsistency. It may safely be said, however, that, whatever word they use, the Melanesians mean that there is something essentially belonging to man's nature which carries life to the body, which is the seat of thought and intelligence, which exercises a power which is not of the body, which is invisible, and which, after it has become separate from the body in death, still has an individual existence. It is in a sense a spirit, and in some islands is so called; but it is quite distinct from those spiritual beings that never were the souls of men and therefore never disembodied. The soul can go out of a man in a dream or a faint; it can be drawn out of the body or injured in the body by magic or spiteful ghosts or spirits; when finally separated from the body in death it becomes a ghost. Such a soul is peculiar to man. It is true that, as will be seen in the account of Hades, there is something which is like the ghost of a pig, of a weapon or ornament, something that remains and has a shadowy form; but the natives will not allow that even a pig, an intelligent and important personage with a name, has a soul as a man has.

(1) *Death*.—It was not part of the original nature

of men that they should die. In stories the first men are represented as changing their skins, as snakes cast their slough, and returning to youth and strength, until by some accident or folly life could no longer be so renewed, and death came in. When it came, the way to the abode of the dead was opened and men departed to their own place, Hades. The funeral rites do not require description. The disembodied spirit is not thought generally willing to depart far from the body which it has left or the place in which it has lived; but, the body being buried, or otherwise disposed of, the ghost proceeds to its appointed place.

(2) *Hades*.—There is a great difference between the conception of the Solomon Islanders and that of the Banks' Islanders and New Hebrides people with regard to the place where the dead take up their abode. In the Eastern Islands Hades is in the under world; in the Solomon Islands the dead, though there is an under world, depart to islands and parts of islands belonging to their own group, and from Florida they were conveyed in a ghostly canoe, a 'ship of the dead.' In all parts of Melanesia alike the condition of the dead in these abodes is an empty continuation of the worldly life; in all parts the ghostly life is not believed to be eternal, except in so far as the native imagination has failed to follow their existence with any measure of time. But, though the dead congregate in Hades, they still haunt and frequent the homes of their lifetime, are active among the living, and, as has been shown, in the Solomon Islands the religion of the living is mainly concerned with the worship of the dead. In these islands the weapons, ornaments, and money of a man of consequence are buried with him or placed on his grave. Whether these decorate the dead or serve his use in Hades is uncertain. It is as when a dead man's fruit-trees are cut down, as they say, as a mark of respect; he ate of them, it is said, while he was alive, he will never eat again, and no one else shall have them.

The notion is general that the ghost does not at first realize its position, or move with strength in its new abode; and this condition depends to some extent on the period of the decay of the body; when that is gone, the ghost is active. It is to expedite this activity that in some parts the corpse is burned.

While in a general way the ghosts of the dead pass to their Hades above ground, there are some which have their principal abode in the sea. Before his death a man may declare his purpose of taking up his abode in a sea-bird or a shark, or the dead body may be sunk into the sea and not buried. These sea-ghosts have a great hold on the imagination of the natives of San Cristoval and the adjacent islands, and were frequently represented in their carvings and paintings. They appear as if made up of fishes, and fish are the spears and arrows with which they shoot disease into the living.

In Santa Cruz the dead, though they haunt the villages, go into the great volcano Tamami and pass below. In the Banks' Islands the common Hades has many entrances; in this they have villages in which they dwell as on earth, but in an empty life. The ghosts hang about their graves for a time, and it is not desired that they should remain, though at the death-feasts they have a portion thrown for them. The great man goes down to Panoi with his ornaments, that is, with an unsubstantial appearance of them. In the Northern New Hebrides there are passages to Hades at the ends of the islands, the northern or southern points, by which ghosts go down, and also return. In Lepers' Island the descent is by a lake which fills an ancient crater. Living persons

in all these islands have gone down to see their dead friends; they have seen the houses, the trees with red leaves, and the flowers, have heard the songs and dances, and have been warned not to eat the food of the ghosts.

(3) *Rewards and punishments*.—There remains the important question whether the condition of the dead is affected by the character of the living man; whether the dead are happier or less happy, in better or in worse condition, according as they have been, in native estimation, good men or bad on earth.

(a) *Solomon Islands*.—It cannot be said that in these islands the moral quality of men's lives affects their condition after death. When the canoe of the dead took the ghosts of Florida across to the neighbouring island of Guadalcanar, they found a ghost of worship, a *tindalo*, with a rod which he thrust into the cartilage of their noses to prove whether they were duly pierced. Those who passed this test had a good path which they could follow to the abodes of the dead; those who failed had to make their way as best they could with pain and difficulty. In Ysabel they present themselves to the master of their Hades at a pool, across which lies the narrow trunk of a tree. They show their hands; those who have the mark of the frigate-bird cut in them are allowed to pass; those who have not the mark are thrown from the trunk into the gulf beneath and perish.

(b) *Banks' Islands and New Hebrides*.—In these islands there is something which approximates to a judgment of a moral kind. It is true that, as a man's rank in the world has depended very much upon the number of the pigs he has slain for feasts, so the ghost fares badly who has not so done his duty by society. So in Pentecost Island, when the ghosts leap into the sea to go below, there is a shark waiting which will bite off the nose of a man who has not killed pigs; and in Aurora a fierce pig is ready to devour the ghost of a man who has not planted the tree that supplies material for the mats which are so highly valued. But there is a kind of judgment, a discrimination between good and bad, which has a moral character, and is, perhaps, well worthy of remark. Thus in the Banks' Islands it was believed that there was a good Hades and a bad. If one man had killed another by treachery or witchcraft, he would find himself opposed at the place of descent by the ghost of the man whom he had wronged; he dreaded the path which led to the bad place, and wandered on the earth. If a man had been slain in fair battle, his ghost would not withstand the ghost of the man who slew him. The bad, they said, were not admitted to the true Panoi, the Hades where there were flowers, though but shadows, and the empty semblance of social life. But who was the evil man? It was answered, 'One who killed another without cause or by charms, a thief, a liar, an adulterer.' Such in their Hades quarrel and are miserable; they haunt the living and do them what harm they can. The others, who lived as they ought to live, abide at least in harmony in Panoi after death.

It is very likely that these notions of something like retribution in the under world have not entered very deeply into the native mind, and are not generally entertained. But that such beliefs should have been received at all is enough to show that their sense of right and wrong has been carried by Melanesians into their prospect of a future state, a view which can hardly have failed to have something of a religious tendency, even if it cannot be said to prove in itself the existence of a religion which these islanders undoubtedly possess.

MELETIANISM.—There were two Meletian schisms, each having considerable influence on the fortunes of the Arian controversy. The earlier took its name from the Meletius who was bishop of Lycopolis in Egypt; the later from the Meletius who was consecrated bishop of Antioch in A.D. 360.

1. The Meletian schism in Egypt.—*Μελέτιος* (Epiphanius) or *Μελέτιος* (Athanasius) was bishop of Lycopolis in Egypt, and his dispute with Peter, bishop of Alexandria, led to a schism which received attention at the Council of Nicæa. According to Athanasius (*Apol. c. Arianos*, 59), Meletius was condemned about A.D. 305 or 306, so that the quarrel was already of long standing when the Council assembled. The origin of it is extremely obscure. As Hefele points out (*Councils*, Eng. tr., i. 343 ff.), there are three separate accounts: (1) in documents discovered by Maffæi and published in M. J. Routh, *Reliquiæ Sacræ*, Oxford, 1814-18, iv.; (2) in the writings of Athanasius; (3) in Epiphanius. All these differ in their details as to the origin of the schism. The first of the three documents preserved in Routh is a letter of certain Christians in prison who were afterwards martyred by Diocletian (*Eus. HE viii. 10*). It is supposed that the actual writer of the letter was Phileas, bishop of Thmuis. Meletius is addressed as a fellow-minister (*κομμινιστήρ*), the document being preserved in Latin, so that the schism has evidently not yet begun, and he is blamed for ordaining clergy in strange dioceses, without the consent of his fellow-bishops or even of Peter of Alexandria. The second document is a note, added by an anonymous hand, to say that after the martyrdom of the bishop Meletius had gone to Alexandria and found two discontented men, Arius and Isidore, and proceeded to excommunicate the visitors (*περιόδευται*) appointed by Peter, who thereupon wrote the letter which makes the third of our documents, to the people of Alexandria, bidding them to avoid all communion with Meletius. From this very early and contemporary evidence we learn that Meletius's offence was that of trespassing on the rights of Peter and the other bishops by conferring orders out of his own diocese. It is to be noticed that these irregularities took place before the deposition of Meletius. Athanasius says nothing about the irregular ordinations. In his *Apology against the Arians* (ch. 59) he gives as the cause of the deposition of Meletius that he had been guilty of many offences, particularly of having sacrificed to idols and of having calumniated the bishops of Alexandria, Peter, Achillas, and Alexander (ch. 11). In his *Letter to the Bishops of Egypt and Libya* he asserts (ch. 22) that the Meletians were declared schismatics fifty-six years before, and that the Arians thirty-six years ago were convicted of heresy. Socrates (*HE i. 6*) gives practically the same account as Athanasius, and may, as Hefele suggests, have copied from him. The third version of the origin of the schism, however, differs materially from those which we have hitherto considered. It is given by Epiphanius (*Hær. lxxviii.*), and printed in Routh (iv. 105). Meletius, says this writer, was a perfectly orthodox bishop. Indeed, he credits him with having accused Arius to Alexander, with whom Meletius, though a schismatical bishop, was on good terms. The real cause of the dispute was, according to Epiphanius, the question of the treatment

of the lapsed. But Epiphanius's account, as Hefele shows, is full of inaccuracies, and contradicts the earliest evidence, as when, e.g., he makes Meletius a fellow-prisoner with Peter. But he may have been correct as to the underlying cause of the schism, Meletius being, like Novatian at Rome and the Donatists in Africa, the representative of the severe disciplinarians. Epiphanius had, moreover, special knowledge of the Meletians from their schism having spread to his native place, Eleutheropolis. Perhaps because of his doctrinal orthodoxy, Meletius and his party were treated very leniently by the Council of Nicæa. It may be that canon 6, affirming the authority of the bishop of Alexandria, was directed against them; but in the synodal letter (*Soc. HE i. 9*) Meletius was not permitted to ordain or appoint clerics any more, and those whom he had ordained were to be admitted to the Church (*μυστικωτέρᾳ χειροτονίᾳ*) and to rank below the clergy ordained by Peter and his successors. Athanasius was much troubled by those schismatics who joined his opponents; and from their ranks came his bitter enemies, the priest Ischyrius, Arsenius, and many others. Athanasius bitterly regretted the decision of Nicæa in this matter (*Apol. c. Arianos*, 71 f., where a list of the followers of Meletius is given). The schism lasted down to the middle of the 5th century (*Soc. HE i. 8*).

Stanley, *Lectures on the History of the Eastern Church*, London, 1884; H. M. Gwatkin, *Studies of Arianism*, Cambridge, 1900; H. Achelis, art. 'Meletius von Lykopolis,' in *PREB.*

2. The Meletian schism at Antioch.—The importance of the disputed episcopal succession at Antioch is due to the fact that it hindered the good understanding between the Roman and Alexandrian Churches and those Asiatic Christians who, though at heart orthodox, were less uncompromisingly Nicene than many of the Athanasian party. The dispute, which lasted for more than fifty years, ranged the great saints and Fathers of the later years of the 4th cent. in opposite camps. Against St. Basil, St. Gregory of Nazianzus, St. Flavian of Antioch, and St. John Chrysostom were opposed St. Damasus of Rome, St. Ambrose of Milan, St. Peter of Alexandria, and, much against his will, St. Athanasius himself. The merits of the controversy are perhaps as evenly distributed as the names on either side. To understand it aright it is necessary to trace the divisions of the patriarchal Church of Antioch from the days of the Nicene Council. Eustathius, the bishop, who had been one of the foremost champions of the accepted creed, was the first to suffer in its cause, being deprived of his see in A.D. 330, though not without a serious tumult in the city, owing to the machinations of Eusebius of Cæsarea and the 'conservative' faction. The see of Antioch was now filled by prelates who were hostile to the Nicene formula—Eulalius, Euphronius, Flacillus, Stephen, and Leontius, the last of whom, by prudently concealing his real opinions on vexed questions, preserved peace till his death in 357. He was succeeded by Eudoxius, 'the worst of all the Arians,' who was installed as bishop of Constantinople in A.D. 360. It now became necessary to provide a successor at Antioch, and Meletius was chosen, being supposed to be a man of peace in accord with the party in power (F. Cavallera, *Le Schisme d'Antioche*, p. 72, note). In his sermon, however, on Pr 8th he declared himself on the side of the Nicenes (Epiph. *Hær. lxxiii.*), and was at once deposed and exiled, and Euzoïus put in his place. Thus Meletius, once the Arian nominee, had become a Catholic confessor. Since the deposition of Eustathius, the faithful Nicene remnant had remained apart under the care of the

priest Paulinus, and did not enjoy the prospect of communicating with the followers of Meletius, who, unlike them, had not borne the burden of the contest. The party of Paulinus, however, was not considerable—perhaps its insignificance induced Euzoius, who is said to have had a regard for its leader, to allow it the use of a small church. Meletius's party, on the other hand, was numerous and increasing owing to the popularity of the bishop, and it seemed probable that under him the Catholics would ultimately be united. In 362 Athanasius held the small but important Council of Alexandria (see ARIANISM, vol. i. p. 780). A synodal letter, the *Tomus ad Antiochenos*, was sent to Antioch by the hands of the bishop Eusebius of Vereelli, who had attended the Council; but on his arrival he found that his companion in exile, Lucifer, bishop of Callaris in Sardinia, had taken upon himself to consecrate Paulinus bishop of the old Nicene party at Antioch. As far as Antioch was concerned, the schism was unimportant. Meletius was universally beloved, and his moderation in regard to the points at issue in the controversy was more in consonance with Asiatic and Syrian Christianity than the uncompromising attitude of Alexandria and the West. Nor was Athanasius averse to a settlement, which let bygones be bygones, and allowed the good work done by Hilary of Poitiers in reconciling the bishops of Asia Minor to the Nicene Creed to bear fruit. But, not wishing to disavow Lucifer, the bishop of Alexandria recognized Paulinus, as did also the Roman see. The dispute had now reached a stage at which principles were involved not unlike those which made the unhappy Donatist schism so incurable in Africa—the difference being that the Donatists (*q.v.*) rejected bishops who had been unfaithful in regard to heathenism, and the Eustathians of Antioch those who had once been infected with heresy. The Roman see under Damasus declared unhesitatingly for Paulinus; but throughout the East Meletius was regarded as the champion of orthodoxy; and he was a sufferer under Valens for his adherence to the Nicene Creed. The Cappadocian fathers, Basil and the two Gregorians, were devoted to Meletius, and John Chrysostom belonged to his church and was first ordained reader and afterwards deacon by him. The schism at Antioch embittered the life of St. Basil, who in vain appealed to Athanasius to recognize Meletius, and was seriously troubled by the uncompromising support which Damasus gave to Paulinus. Things were further complicated by Apollinaris, the famous bishop of Laodicea, who, though condemned for his erroneous opinions, is recognized not only as a defender of Nicene theology, but also as one of the profoundest thinkers of his time (see APOLLINARISM). Among his friends was the presbyter Vitalius, who had been made priest by Meletius, but was ultimately consecrated by Apollinaris as rival bishop to Paulinus (c. 375). Thus, including the Arians, the Church of Antioch was now divided into four parties, the three Nicene bishops being Meletius, Paulinus, and Vitalius. Strangely enough, not a shadow of suspicion rested on any one of these three rivals in regard to character. Meletius and Paulinus were both recognized as saints, while, despite the suspicious orthodoxy of his consecrator, Vitalius was highly respected by the most honoured churchmen of the day. Some hope of ending the schism was given when the six leading presbyters of the Church agreed to recognize either Meletius or Paulinus, if one survived the other. In 381 Meletius was at Constantinople, taking a leading part in the Second General Council. This Council was destined to affirm the creed of Nicæa and reunite the Church, though it proved unable to bring

peace to the distracted community at Antioch. Meletius died during the Council; and, for some unexplained reason, Flavian, one of the six presbyters who had agreed to recognize Paulinus if he survived, consented to be consecrated successor to Meletius. His action appears on the face of it indefensible; but, as he proved a remarkably saintly bishop, there may be some extenuating circumstances for his conduct of which we are not aware. The appointment of Flavian was one of the reasons for the Roman see's regarding the Council of Constantinople with disfavour. Paulinus was supported by the bishops of Egypt, Cyprus, and Arabia, whilst Palestine, Syria, and Phœnicia adhered to Flavian. Theodosius recognized Flavian, and, when the serious affair of the statues was causing anxiety in the city, it was he as its bishop who pleaded the cause of the people at Constantinople (A.D. 387). Paulinus died in 388; and before his death he consecrated Evagrius in his place—a most uncanonical proceeding. The Westerners seem to have supported the claims of Evagrius, and Ambrose urged Theodosius to compel Flavian to come to Italy and submit his claims to the decision of the Church there; Theophilus of Alexandria was naturally opposed to him, as were Epiphanius and Jerome. When, however, Evagrius died, no rival bishop was consecrated. On Chrysostom's appointment to Constantinople (398) he managed to heal the schism so far as Alexandria and Rome were concerned; and Flavian placed the names of his two rivals—Paulinus and Evagrius—on the diptychs of the Church. The Eustathians continued to hold separate meetings till the time of Alexander (414–415), who healed the schism by an act of Christian courtesy, visiting the Eustathian church on Easter day and being accorded a hearty welcome by the congregation. The schism was finally ended when Kalandion, patriarch of Antioch (481–485), brought back the relics of Eustathius. The schism of Antioch would be no more than a somewhat dull chapter in ecclesiastical history were it not for the underlying causes, indispensable for the right understanding of the intricate questions which make the religious divisions of the East so complicated. As has been indicated, there was a singular absence of bad feeling and, we may add, of bad motives. We hear nothing of the disorder and even crimes which mark the course of the Donatist schism. But throughout we can see how incompatible were the ideals of the great patriarchates of Rome and Egypt with those of the East. Meletius, Flavian, John Chrysostom, and Nestorius, the great Antiochenes, all felt the encroachments of the bishop of Alexandria supported—except in the case of Chrysostom—by Rome. What has been called the Meletian schism was a foreshadowing of troubles to come which rent the Church asunder, and it is a phase in the long struggle between the rival theologies of Alexandria and Antioch, which dates from the days of Origen.

F. J. FOAKES-JACKSON.

MEMORY.—1. Use of the term.—(a) The term 'memory' can be used in a wide biological sense to signify retention of the effects of stimulation. In this sense it is regarded by some writers as a fundamental attribute of living matter—a view

which was put forward by Ewald Hering in 1870, in a paper read before the Imperial Academy of Science at Vienna, 'On Memory as the Universal Function of Organized Matter.' Wherever there is life with growth and development, there memory must be predicated, since each new process is the outcome of the old and implies its retention.

Memory is a faculty not only of our conscious states, but also, and much more so, of our unconscious ones. . . . Our ideas do not exist continuously as ideas; what is continuous is the special disposition of nerve substance in virtue of which this substance gives out to-day the same sound which it gave yesterday, if it is properly struck. . . . The reproductions of organic processes, brought about by means of the memory of the nervous system, enter but partly within the domain of consciousness, remaining unperceived in other and not less important respects. . . . The memory of the so-called sympathetic ganglionic system is no less rich than that of the brain and spinal marrow. . . . A muscle becomes stronger the more we use it. . . . After each individual action it becomes more capable, more disposed towards the same kind of work, and has a greater aptitude for repetition of the same organic processes. It gains also in weight, for it assimilates more matter than when constantly at rest. We have here . . . the same power of reproduction which we encountered when we were dealing with nerve substance. . . . This growth and multiplication of cells is only a special phase of those manifold functions which characterize organized matter. . . . Reproduction of performance, therefore, manifests itself to us as reproduction of the cells themselves, as may be seen most plainly in the case of plants, whose chief work consists in growth, whereas with animal organism other faculties greatly preponderate.¹

Hering states the doctrine of the heredity of acquired characteristics with great simplicity.

'We have ample evidence of the fact that characteristics of an organism may descend to offspring which the organism did not inherit, but which it acquired owing to the special circumstances under which it lived. . . . What is the descent of special peculiarities but a reproduction on the part of organized matter of processes in which it once took part as a germ in the germ-containing organs of its parent, and of which it seems still to retain a recollection that reappears when time and occasion serve?'²

For Hering the marvels of instinct are but the marvels of habit handed on from generation to generation.

'He who marvels at the skill with which the spider weaves her web should bear in mind that she did not learn her art all on a sudden, but that innumerable generations of spiders acquired it toilsomely and step by step.'³

Samuel Butler, in *Life and Habit* (1877), set forth the same doctrine, although he was at that time ignorant of Hering's paper. Into a later book, entitled *Unconscious Memory*, he incorporated a translation of the German lecture.

At the present day a similar view of memory is presented by such biologists as Francis Darwin, R. Semon, and H. S. Jennings. It should be noticed that in such a biological doctrine of memory there is no necessary reference to consciousness. The structural development and behaviour of plants and animals may testify to memory in this wide sense without thereby giving evidence of consciousness.

(b) In a psychological use of the term such a reference is essential. As generally understood in psychology, memory denotes the retention of experience, and its subsequent reproduction with the consciousness that it belongs to the past. To remember is to refer back. The distinction between memory as a conscious experience and memory as a biological fact has been emphasized by H. Bergson in his distinction between the memory which imagines and the memory which repeats. All our bodily habits are memory in the latter sense, but not necessarily in the former. Acquired skill implies practice with the retention of past progress, but in the exercise of skill there need not be any conscious reference to those past exercises whereby this skill was acquired. Both forms of memory may be combined when performed habit or acquired skill is guided on any occasion by a conscious reference back to past efforts, successes, and failures. For Bergson the relation of the two forms of memory

portrays the relation of body to soul; each may enter into the service of the other.

'The bodily memory, made up of the sum of the sensori-motor systems organized by habit, is then a quasi-instantaneous memory to which the true memory of the past serves as base. . . . the memory of the past offers to the sensori-motor mechanisms all the recollections capable of guiding them in their task and of giving to the motor reaction the direction suggested by the lessons of experience. . . . But, on the other hand, the sensori-motor apparatus furnish to ineffective, that is unconscious, memories, the means of taking on a body, of materializing themselves, in short, of becoming present. For, that a recollection should reappear in consciousness, it is necessary that it should descend from the heights of pure memory down to the precise point where action is taking place.'¹

James Ward would subscribe to the biological doctrine of memory, but finds it meaningless save as interpreted in terms of the psychological.

'Nay, the bare term "retention" itself, and all cognate terms, such as "trace" or "residuum," are meaningless unless some present circumstance can be related to the past; thus they presuppose memory. The analogy of inscribed records is a favourite resort of those who strive to elucidate the nature of memory by physical imagery; we find it again and again in Locke, for example. Such an analogy is about on a par with that between the eye and a telescope—the one is a natural, the other an artificial, organ or instrument of vision; but neither will explain seeing as a psychological fact.'² 'Records or memoranda alone are not memory, for they presuppose it. They may consist of physical traces; but memory, even when called "unconscious," suggests mind; . . . the mnemonic theory then, if it is to be worth anything, seems to me clearly to require not merely physical records or "engrams," but living experience or tradition.'³

(c) 'Memory' may be used to denote the retention of past experience without reference to the explicit reproduction of such experience. The essential difference of this use of the term from the biological use lies in the word 'experience' with its implication of mental processes. Writers on psychiatry, such as Morton Prince, S. Freud, and C. G. Jung, use the term 'memory' for the influence of past on present experience, whether the subject is conscious of such influence or not.

'When we conceive of memory as a process we have in mind the whole mechanism through the working of which this past experience is registered, conserved and reproduced, whether such reproduction be in consciousness or below the surface of consciousness.'⁴

In this sense all perception and all behaviour involve memory. Not only so, but these writers would include in their reference past experience of which the individual took no conscious note. Sensations received, and actions performed, with no consciousness of their occurrence, are said to be remembered and to be of great importance in determining future experience.

(d) As usually interpreted, memory belongs to cognition, but, inasmuch as all experience cannot be reduced to processes of cognition, so, it may be urged, neither can the retention and reproduction of experience. Such a theory requires that the emotional aspect of experience, feeling-tone, and conation be reproduced in memory as emotion, as feeling-tone, and as conation. Just as these aspects of consciousness are never experienced alone 'in abstracto' but always in a concrete whole of experience, so they will never be reproduced 'in abstracto,' but in a concrete whole with an idea or with an object of sense-perception in this or that action. In this article memory will be treated as implying the retention of past experience and the explicit reproduction of such experience in the form of ideas.

2. Reproduction of ideas.—It is a disputed point whether ideas of past experience ever arise spontaneously in consciousness or are always suggested by the datum of present consciousness. Evidence in favour of the former view is found in the experimental work of G. E. Müller and F. Schumann, A. Binet, and other experimental psychologists.

¹ Bergson, *Matter and Memory*, p. 197.

³ Ward, *Heredity and Memory*, p. 551.

⁴ Morton Prince, *The Unconscious*, p. 2.

¹ Ap. S. Butler, *Unconscious Memory*, pp. 109, 116, 117 f.

² *Ib.* pp. 113, 122.

³ *Ib.* p. 129.

The latter view certainly represents the commoner form of memory. The attempt to classify the relation in which the suggested idea stood to the present consciousness gave rise to the 'laws of association.' The types of relationship, contiguity in time and place, similarity and contrast, were erected into principles of explanation. The present datum x was said to suggest the past experience y because previously x and y had been contiguous in time or place, or because they were similar, or, again, because they contrasted—three very different lines of explanation (see art. ASSOCIATION). Modern writers seek to find an explanation for this association of past and present in the direct and indirect connexions of experience brought about through our purposeful activities. Association is but a special form of the bonds existing between different moments of experience in virtue of the organization of experience into systems. Direct or indirect participation in some common system or whole constitutes the bond of union which enables a present datum to suggest past experience. The laws for the organization of experience, for the formation of spatial wholes, temporal wholes, trains of perception, trains of ideas, systems of conduct, are the ultimate principles of association. The conditions which determine the actual line of association followed on any given occasion are of two kinds—those which relate to the whole in which the present datum and a particular past experience participate, and those which relate to the special circumstances of the present moment of suggestion.

A whole which is closely organized will form a stronger basis for association than one which is loosely organized or which lacks a definite principle. A whole which has occurred repeatedly or recently is more influential than one which is of rare or long past occurrence. Experimental investigations have served to demonstrate the efficacy of close organization, intrinsic interest, repetition, and recency in determining suggestion. As illustrative of the influence of close organization one may cite H. Ebbinghaus's work with nonsense syllables. The only principle for organization was the spatial arrangement and time sequence of a string of syllables—e.g., duk, lil, bap, pom, etc.—memorized by reading aloud. Any interference with the spatial and temporal organization of the series rendered remembering of the same syllables slower, and the difficulty of remembering the syllables was in proportion to the degree to which the original spatial and temporal organization was disturbed. As compared with a whole which has meaning—e.g., a passage of prose or verse—these strings of nonsense syllables are more difficult to memorize, a fact which illustrates the influence of an intrinsic interest as a basis of organization. The work of L. Steffens and P. Ephrussi has emphasized the importance of attention with respect to the basis of organization. It has proved more economical to memorize material by repeating it as a whole than to memorize it piecemeal, provided the material is such as can be attended to without undue difficulty. Continuity of interest is preserved by this so-called 'global' method, whereas it is destroyed by the artificial sections of the 'partial' or piecemeal learning. The value of rhythm in organizing a sequence of experiences has been shown by Müller and Schumann, and is a commonplace of school practice. The influence of repetition in rendering suggestion certain and swift is illustrated by Müller and Schumann's researches. Experimental work by Müller and A. Pilzecker demonstrated the effect of recency in determining which of two possible lines of association suggestion should follow.

Of the conditions relating to the moment of

suggestion, two seem to be predominant—the emotional attitude of the individual, and the trend of his ideas. The influence of the first on the line of association is demonstrated by the emotional congruity between the attitude of the present and that of the experience recalled; in a Micawber-like mood we forget failures and recall only ambitions and achievements. The importance of the trend of present consciousness has been shown in much recent work. An investigation by H. J. Watt brought out the control over association exercised by the *Aufgabe*, or task, before the mind at the moment. On the relevance or irrelevance of the reproduced idea depends very largely the serviceableness of our memory in any given difficulty. Appositeness for the purpose of the present moment, for what W. James termed 'the topic' of the stream of thought, will give one line of association the advantage over another.

A question which has become important for psychology is dissociation. Some writers hold that, just as experience becomes organized into wholes and these wholes are interrelated one with another in still larger organizations, so also there takes place the opposite process, viz. dissociation. Through dissociation certain episodes of past experience or certain aspects of that experience drop out of a given organization; such episodes cannot then be reproduced; no suggestion of normal consciousness can connect itself with the dissociated contents of past experience. The theory is of great importance to psychopathology in its bearing on the amnesia of hypnosis and hysteria and on multiple personality. The process whereby the insulation of non-suggestible memories is brought about is described differently by different writers. Dissociation is the line of description followed by Morton Prince; repression (without the implication of dissociation) in virtue of some pain value is the line of description followed by the Freudian school.

3. Obliviscence and reminiscence.—The failure of reproduction, whatever may be the view taken as to disintegration, is by no means the same psychical fact as failure of retention; inability to recall does not in itself prove obliviscence or the decay of past experience. Whether there can be total obliviscence, whether any experience can cease to be influential in mental life, may be open to dispute. Certainly it would seem that many experiences cease to be retained as explicit ideas. In the absence of any interest to organize items of experience obliviscence would be the natural fading out of processes which had fulfilled their function. Ebbinghaus's experiments with nonsense syllables, already referred to, furnished a typical curve of the rate of forgetting such items. The principle of organization was mere spatial and temporal contiguity; no interest gave value to the series of syllables or rendered one syllable of greater worth than another. Ebbinghaus's curve shows that after an interval of twenty minutes 41.8 per cent of any series learnt was forgotten, after an interval of an hour 55.8 per cent was forgotten, after twenty-four hours 66.3 per cent, after six days 74.6 per cent, after thirty-one days 78.9 per cent. The fading away of the processes is rapid at first and very gradual afterwards. Experimental work, however, would also seem to indicate that experience does not necessarily begin to fade from the moment when it ceases to be 'present' experience. On the contrary, there is a certain amount of evidence that processes ripen or mature, the reproduction of past experience being clearer or fuller after some short lapse of time than immediately after the original occurrence. Some of the experimental work of A. Jost suggested this, and recent work with school-children has brought out the same feature. Thus, if the amount of ballad poetry

which children aged 12 can reproduce correctly immediately after learning be represented by 100, the amount which they can reproduce forty-eight hours later without any further learning will be 110. A similar increase in content reproduced is found in other kinds of school material. In the case of non-sense syllables, although forty-eight hours later some syllables can be reproduced which have not been remembered immediately after learning, the total amount reproduced is less. This tendency for 'reminiscence,' as it has been termed, is more marked in children than in adults. The greater organization of adult consciousness would enable any experience to attain its full value and association speedily, and, when reproduced, it is already developed, and henceforward decay rather than growth will be its life-history. In the case of the less organized experience of the child it may well be otherwise. The meaning and association of an experience would develop more slowly, and might be incomplete when the demand for reproduction followed at once upon its first reception.

4. **Function of imagery.**—Past experience reproduced as ideas depends very largely upon imagery. Imagery is of the same character as sense experience—visual, auditory, tactual, motor, etc. Francis Galton proposed grouping individuals into classes according to the kind of imagery used in reproduction—e.g., an audile, one who reproduced past experience in terms of auditory imagery, heard words descriptive of the facts recalled. Most people were said to belong to a mixed type, i.e. to use all varieties of imagery. It would seem, however, that the kind of imagery used, even by a so-called audile or a visualizer, depends very largely upon the idea reproduced and the purpose for which it is reproduced. The fragmentary character of images, their instability and lack of localization as compared with sense presentations, has always been recognized. The schematic and symbolic character of imagery with respect to the idea for which it stands has received more attention in recent research. The function of imagery would seem to be to provide a focus for attention, and thereby to give clearness and definiteness to ideas. It has been noticed that, where the process of reproduction takes place with difficulty or where a train of ideas develops slowly, there the presence of imagery is marked, and the imagery seems indispensable to the realization of the ideas in question. Where, on the other hand, ideas are reproduced easily or a train of ideas develops rapidly or is familiar in its character, there imagery is sketchy and in some cases scarcely recognizable. The question has been raised whether reproduction is possible without imagery, without even the symbolic imagery of words standing for the ideas reproduced. Here, as in so many other psychological problems, no dogmatic answer is possible in the present state of knowledge. There is much patient research in connexion with the question, and from it there should arise a clearer conception of the problem and of its solution.

On the development of memory and memory training see art. **DEVELOPMENT (Mental)**.

BEATRICE EDGELL.

MĒMRĀ.—The tendency of Hebrew imagery to personify abstract powers, such as sin, sheol, wisdom, is evident also in the manner in which the divine word or speech is represented in poetry and

elevated language. God's fiat by which creation came into being and continues to exist is spoken of as emanating from Him to execute His will. By the word of Jahweh 'were the heavens made' (Ps 33⁶). 'He sendeth his word, and healeth them' (107²⁰). In Is 55 the word proceeding from God's mouth assumes form and accomplishes His will as His plenipotentiary. In the Apocrypha also we meet with a few instances where the word stands for God:

It was the word that descended on the offspring of the fallen angels to pierce them with the sword (*Jub.* 5¹¹); it entered Abraham's heart (12¹⁷); it slew the first-born in Egypt; 'thine all-powerful word leaped from heaven out of the royal throne' (*Wis* 18¹⁵).

But, while these instances are of rare occurrence in the Targumim—though nowhere else in Jewish post-Biblical literature—the word is already hypostatized under the form of *Mēmra*. The Aram. *mēmar*, emph. state *mēmra*, from *emar*, 'to speak,' signifies, like *lógos*, from *λέγειν*, 'a word,' without the additional meaning of 'reason' connoted by *lógos*. It occurs about 180 times in the Onkelos Targum, 100 times in the so-called Jerusalem Targum, and 320 times in the pseudo-Jonathan (in the last two also מְרָא) for God.

It stands either in the const. state—e.g., Gn 16⁸ 'He believed in Jahweh' (Onk. renders 'in the Mēmra of Jahweh'), Ex 19¹⁷ 'Moses brought forth the people before the Mēmra of Jahweh' (in Jonathan 'before the Šekhīnāh'), Nu 23²¹ 'The Mēmra of Jahweh their God is their support, and the Šekhīnāh of their king is among them'—or with suffixes: 'It is a sign between my Mēmra and you' (Ex 8¹³); 'This Mēmra is a consuming fire' (Dt 9³); 'I will shield thee with my Mēmra until I have passed by' (Ex 33²²). It was employed by the Targumists in the place of God wherever anthropomorphisms, anthropopathisms, or any act inconsistent with the nature of a transcendent God, are predicated. Thus, 'By my Mēmra I have founded the earth, and by my strength I have hung up the heavens' (Is 48¹³). The mouth of Jahweh becomes the Mēmra of Jahweh (Gn 38¹⁰). The Israelites said: 'Behold, Jahweh our God has shown us his glory (šēkāra), and his greatness, and we have heard the voice of his Mēmra' (Dt 5²⁴). It is His Mēmra that repents (Gn 6⁶ etc.); God swears by His Mēmra (Nu 14³⁰); 'for my sake' is rendered 'for the sake of my Mēmra' (Is 48¹¹). The Mēmra gave the Law (Ex 20). 'These are the statutes . . . which Jahweh made between his Mēmra and the children of Israel' (Lv 26⁴⁵). The Mēmra accomplished the exodus from Egypt (Ex 3¹², etc.). 'Jahweh thy God, his Mēmra, is thy help who brought thee out of the land of Egypt' (Dt 20¹). Isaiah saw 'the glory of the Šekhīnāh of the King of the worlds Jahweh Šēhāōth' (Is 6³), and then heard 'the voice of the Mēmra' (6⁸).

The above are only a few typical passages of the use of the *Mēmra* (for an exhaustive list see F. Weber, *Jüdische Theologie*, Leipzig, 1897, p. 180; A. Edersheim, *Life and Times of Jesus*, London, 1887, ii. 659 ff.; he was followed by W. Fairweather in *HDB* v. 284). What, then, did the Targumists understand by the *Mēmra*? A cursory glance at the Aramaic version will be necessary before we answer this question. The demand for a version in the Aramaic vernacular by the returned exiles must have been supplied very early; it is difficult to say how far back we are to place the institution of the office of the *Methurgmān* ('Dragoman,' 'Interpreter'), who rendered into the vernacular each verse of the Law and each three verses of the Prophets, as they were read publicly in the synagogue (cf. the office of the ἑρμηνεύτης in the early Christian communities). The frequent repetition must have produced a stereotyped version. The exclamation of Christ on the Cross in the Aramaic of Ps 22¹ indicates that the Bible was familiar to Him in that language; and St. Paul's quotation of Ps 68¹⁸ in Eph 4⁸ is more in accordance with the Targum than with our Mas. Text or the LXX. A written Targum on Job existed at the time of Gamaliel (*Šab.* 115a). Although neither Origen nor Jerome mentions the existence of a Targum, that of Onkelos had already at that time the position of a kind of authorized version.

'R. Jehudah says, whosoever transplants a verse (of the Bible) as it stands misrepresents the text, and whosoever adds to it is a blasphemer. Let him render it in accordance with our Targum' (*Šab.* 40a).

Jewish scholars agree that this refers to Onkelos (e.g., Maimonides, in *Yad*, Ishūth viii. 4; see also L. Zunz, *Gottesdienstliche Vorträge*, Frankfurt, 1892, ch. v.). The aim of the version was to give a correct rendering of the text. Where he differs from the original he does so in favour of the *Halakhā* and popular usages:

Ex 23¹⁹ 34²⁴, Dt 14²¹ are rendered 'Ye shall not eat flesh with milk'; 'the fruit of the goodly tree' (Lv 23⁴⁰) is already called *ethrog*. 'The Passover shall be eaten in one assembly' (Heb. 'one house') (Ex 12⁴⁶) in accordance with *Pesah*, 86a.

It is obvious that the version was intended to embody Palestinian theology for popular use, and deviation from the original in the case of the names and acts of God was to guard against misconception of the nature and irreverent usage of the name of God. We find, accordingly, the divine unity insisted on:

Elōhim with a plural predicate is rendered in the singular (Gn 35⁷); Dt 4³⁵ is translated 'to know that Jahweh is God, there is none beside him'; 'Who is like unto thee among the gods?' (Ex 15¹¹) becomes 'There is none beside thee. Thou art God'; so 18¹¹ 'Jahweh is great, and there is no other God.'

Jahweh may not even be contrasted with other gods. Not even may the term 'god' be applied to other divinities.

They are either 'errors,' 'abominations' (Gn 35²), or 'terrors' (31³²); 'he brought him up to the high place of his terror' (Heb. 'Ba'al') (Nu 22⁴¹).

To avoid contrasting God with man or ascribing the same action to both, Onkelos would introduce a paraphrase: 'They believed in the Mēmra of Jahweh and in the prophecy of Moses' (Ex 14²¹), 'the people murmured against the Mēmra of Jahweh and strove with Moses' (Nu 21^{5,7}); or the construction would be changed into the passive: 'Let it not be spoken to us from before Jahweh' (Ex 20¹⁸). The same construction is employed when human actions and passions are ascribed to God:

'The voice of the lad was heard before God' (Gn 21¹⁷); 'the labour of my hands is revealed before God' (31⁴²); 'it is revealed before me' (Heb. 'I know') (Ex 3¹⁹); a Mēmra from before Jahweh came to Abimelech (Gn 20³); 'Balaam met with a Mēmra from before Jahweh' (Nu 23^{8,4}). This construction explains Onkelos's rendering of Dt 33²⁷, which accidentally resembles Jn 1⁹ 'By his word the world was created.' In the place of *וְיָרַע עוֹלָם*, 'the everlasting arms,' he reads, like the Peshitta version, *וְיָרַע הָעוֹלָם* 'he (the Mēmra) sowed (=created) the world,' which in the passive assumed the above rendering.

It is evident that a version made under the influence of rigid uncompromising monotheism and accepted as embodying Rabbinic theology would avoid the assumption of an intermediate being distinct from God. To compare the Mēmra with Philo's Logos would credit the Targumists with more theosophy than they otherwise claim, and it would be also unaccountable why only this term and nothing more of Philonic exegesis and mysticism should have found its way into the Targums. Its use in all the Targums rather warrants the assumption that its adoption is older than the Alexandrian Logos. We are inclined to think that it was introduced by the Mthurg-mānīm when the name IHVH ceased to be pronounced and before Adonai was substituted, some time during the Persian period. The Mēmra, therefore, is the deity revealed in its activity, just as the Sh^hkhnāh and ʾĪkārah represent the divine majesty and glory. The term is based on Gn 1³, emphasizing the fact that the world came into being by divine command.

Onkelos uses Mēmra when speaking of human authority:

'The Mēmra of Pharaoh' (Heb. 'the mouth of Pharaoh') (Gn 45²¹), 'he does not receive our Mēmra' (Heb. 'will not obey our voice') (Dt 21²⁰).

LITERATURE.—Besides the works referred to in the art. see *JZ*, art. 'Memra': S. D. Luzzatto, *Philoxenus*, Vienna, 1830; W. Bousset, *Die Religion des Judentums im neutestamentl. Zeitalter*, Berlin, 1906, p. 399. A. E. SUFFRIN.

MEN, THE.—In the Gaelic-speaking portion of Scotland 'the Men' were for about two centuries the recognized leaders of religious thought, and the popular representatives of spiritual and

evangelical worship. They were called 'the Men' because they were laymen, and not ministers. The circumstances in which they arose varied in different districts; the causes to which they owed their origin admit of little doubt.

In the reign of James VI., Robert Bruce, the eminent Edinburgh preacher, was banished to Inverness. In a letter, written in Feb. 1613, to Sir James Semple, the laird of Belvise, the exiled minister says:

'If his Hieness wold command me to the scaffold, I have a good conscience to obey him, and it wold be more welcome to me nor this lingering death that I am in' (D. Calderwood, *Hist. of the Kirk of Scotland*, Edinburgh, 1842-49, vii. 183).

The 'lingering death' which Bruce deplored resulted in the establishment in Inverness of meetings for prayer and fellowship, and in the gathering together of bands of godly men whose influence continued to mould the religious life of the Highlands for many generations.

After the restitution and re-establishment of Episcopacy in Scotland in 1662, nearly 300 ministers relinquished their livings, and their places were filled in the greater number of parishes by ministers who did not possess the confidence of the people. In the more populous districts of the South, the unity of the people, and their devotion to Presbyterianism, enabled them to maintain their religious zeal by means of 'conventicles,' meetings for purposes of worship held in despite of the law. In the North a number of the ministers readily turned Episcopalian, and retained their livings. The people were less devoted to Presbyterianism, but, even so, the more devout among them were roused to opposition by the manner in which the vacant livings were filled. The parishes were large, the population was sparse, and combined action for the holding of religious meetings was almost impossible. Religious instruction was for a time neglected. The 'curates,' as the new incumbents were called, exercised little or no influence. When ministers were no longer regarded as leaders of the people in sacred things, there rose to take their place men of devout lives, of integrity of character, familiar with the Scriptures, and recognized as possessing spiritual gifts, who, going from parish to parish to hold meetings, were accepted as religious guides.

At a later period, the arbitrary manner in which patronage was exercised in the Presbyterian Church, and acquiesced in by Church courts, revived the influence and importance of an institution which had already obtained a foothold in many districts. Bands of earnest Christians boldly denounced legal arrangements which ignored religious needs and aspirations, and the people honoured them for doing so. Interest in a common object drew them together. They deplored the low state of religion in the land, they yearned for spirituality of worship and a greater knowledge of Holy Scripture among their countrymen. They held monthly or quarterly meetings for prayer and fellowship. These were occasions of high spiritual enjoyment. Sometimes the company sat up during the whole night, and passed the time in prayer and praise and spiritual conversation.

In order to prevent any misconception of their aims they provided themselves in some cases with carefully drafted constitutions. A document, dated 17th September 1788, setting forth the objects and rules of the society of the Men in Ross-shire shows that, while they deplored the low state of religion throughout the land, they did so not in a spirit of self-righteousness; they were at the same time faithful in dealing with one another. Among various evils they note, 'thrusting in ministers on reclaiming congregations with the force of the law of patronage—pastors who have nothing in view but the fleece.' The same docu-

ment gives as one of the rules of the society: 'Thirdly, as the Word of God requireth, that we should consider one another, to provoke unto love and good works; therefore, if one or more of us see or hear anything unbecoming in the walk, conduct, or expressions of one another, that we be free with one another according to the Scripture rule: "Go tell thy brother his fault," etc. (Mt 18¹⁵); "Thou shalt not hate thy brother in thine heart: thou shalt in any wise rebuke thy neighbour, and not suffer sin upon him"' (Lv 19¹⁷). It adds: 'We are aware that this our meeting together, out of different parishes, will be misconstrued; but, so far as we know ourselves, we have no divisive views in it; nor do we make a faction, and we desire to give none offence.'

Soundness of judgment characterized their utterances and their conduct. Their activity was far removed from that fanatical enthusiasm into which religious zeal frequently degenerates. One exception, still referred to with bated breath, when referred to at all, indicates their general abhorrence of fanatical excess. They organized meetings for prayer and the reading of Scripture among the people. The first Sabbath school in Ross-shire was opened by one of them—Findlater, known as the 'Quaker merchant.' Before the Bible was translated into Gaelic, many of them were experts in making a running translation from the English version into the language of the people. The more gifted among them expounded the Word, and not a few became eloquent and powerful preachers, though lacking the training of the schools. The deep respect of the people for an ordained ministry was reflected in the fact that these spiritual guides, even when their influence was most powerful, were called not ministers or preachers, but 'the Men' (*na Daoine*).

By 'the Men' the evangelical spirit was kept alive in large districts, and the comforts of religion were administered in many a stricken home and in many a remote hamlet. They generally set apart one night of each week for prayer, and another for fellowship or conference. On the latter a portion of Scripture was selected to be the subject of discussion. This passage was referred to as the *Bonn Ceist*, or the 'Question.' The Men, each in turn, gave an exposition, generally bearing on experimental religion, and thus their gifts of speech and of scriptural interpretation were developed. Fittingness to expound Scripture in public assemblies, combined with blamelessness of life, secured recognition as one of the Men. This exercise became so popular that, whenever the Sacrament of the Lord's Supper was administered, a day was set apart for the Men. Generally it was the Friday between the Fast-day and the day of Preparation. It was known as *là na Ceist* ('the day of the Question'). Great gatherings were expected when popular Men came to 'the Communion.' Worshipers often travelled long distances, and from far and near; multitudes, who never became church members, attended faithfully on the Men's day.

The presiding minister opened the service with praise, prayer, and the reading of Scripture, and afterwards called for the passage which was to become the 'Question.' One of the more highly honoured of the Men announced a passage, indicating its bearing on Christian experience, and requesting speakers to deal with some such topic as 'marks by which God's children are distinguished from the world,' 'marks of true conversion,' 'marks of saving faith,' etc. Then the presiding minister called upon the most aged and experienced Christians present to give the 'marks' to their fellow-Christians. This service was generally held in the open air. Its popularity was such that the largest church could seldom contain

the congregation gathered that day. 'To rise to the question' on a Communion Friday stamped the speaker with the hall-mark of public recognition. Henceforward his position was assured. He was one of 'the Men.'

The popularity of the Men was a menace to the Church wherever its services were not characterized by evangelical faithfulness. Many of them would not partake of the Sacraments at the hands of ministers of whom they did not approve, and approved ministers were prevented by ecclesiastical discipline from receiving those who held aloof from the worship of their own parishes. Resolutions against the Men were passed in Presbyteries and Synods, but all efforts to crush them only increased their popularity. The people believed in them, honouring them for the strictness of their lives, and frequently asserting that they were possessed of the gift of prophecy.

In earlier times, wherever the doctrines of grace were faithfully proclaimed, the Men were faithful to the Church, and they undoubtedly created a taste for the more spiritual and evangelical preaching which began early in the 19th century. With the revival of evangelicalism the special circumstances in which they proved a religious force passed away. But power and influence once acquired are not readily abandoned. In many districts the Men heartily welcomed and warmly supported an evangelical ministry; in others they persistently and fiercely opposed all ecclesiastical influence. The estrangement continued too long. In parts of Sutherland, Inverness, and Ross-shire they continued to stand aloof, and in the more northern districts they formed bodies known as 'Separatists.' The more they diverged from the Church the more they developed contempt for all learning except a literal knowledge of the Authorized Version of Scripture. They became narrow and intolerant. Utterly disregarding all outward culture, they attempted to force upon the people a religion of loveless gloom. From one extreme it was easy to pass to others. Antinomianism was openly professed in some districts, and exorcism was practised in others. These fitful throes were the spurious imitations of a life that had gone. In later times opposition to instrumental music and church choirs, a severe observance of the Sabbath, a blind devotion to the recognized translation of Scripture, a general condemnation of scholarship, and a zeal for the doctrine of election which merged into fatalism characterized generally the scattered fragments of a body whose sway was at one time both powerful and beneficent.

But the old spirit has not altogether disappeared. A different type is occasionally met with. 'Men,' tender-hearted and spiritually-minded, still preserve the best traditions of a past age. In the absence of the minister one of these may be found here and there to conduct the Sunday service in church or meeting-house. Standing at the preacher's desk, equally ready to give an extempore address or to read a portion of some 18th cent. divine, he follows devoutly the usual order of service, except that he does not pronounce the benediction. These Men live saintly lives, they are honoured by the people, and they help to preserve the simplicity and spirituality of religion.

LITERATURE.—A. Auld, *Ministers and Men in the Far North*, Edinburgh, 1891; D. Sage, *Memorabilia Domestica*, Wick, 1889; J. Kennedy, *The Days of the Fathers in Ross-shire*, Edinburgh, 1867. G. R. MACPAILL.

MEN OF GOD.—*Lyudi bozhii*, or 'Men of God,' is the self-assumed name of a Russian sect who regard themselves as the only true worshippers of God; they believe that God is to be found only among themselves, ordinary Christian church-goers being, in their view, worldlings. By the outside

world they are usually known as 'Khlysti,' i.e. 'Flagellants,' though they themselves repudiate this title. As a matter of fact, they are essentially not flagellants but dancers, flagellation being a mere accompaniment of the dance, and not even a universal practice. The name is probably a corruption from 'Christi,' the oldest traceable title by which they designate themselves as those who have Christ in their midst, in their leaders.

Although the Men of God have many 'Christs,' they are not a Christological sect in the proper sense of the word, for their Christology is only one side of their doctrine of spiritual ecstasy; that is to say, they are a secret sect who practise asceticism and fall into trances. Their principal means for drawing down the Spirit is dancing (*radeniye*); other devices are the singing of songs, of which they have a great number, couched in highly poetical language, and fasts. A member of this sect who succeeds in receiving the Spirit in full measure becomes a Christ or even a God Zebaoth (a Christ of the highest rank) or a Mother of God; those who receive the Spirit in a less degree are invested with the title of one of the apostles, or of the ecclesiastical saints, and honoured as prophets or prophetesses. In their belief, even Jesus of Nazareth first became a Christ only through receiving the Spirit at His baptism. While these persons have received the Spirit as a permanent possession, ordinary members of the community may obtain Him temporarily through the same means.

Besides severe and often protracted fasts, complete sexual abstinence is a feature of their asceticism. Those who enter the sect as married people must henceforth live as brothers and sisters. Others are, as a rule, not permitted to marry at all, but may take a young woman into their house as 'spiritual sister' in 'spiritual marriage,' exclusive of sexual intercourse. The latter constituted the trespass of Adam and Eve, and is condemned as the sin *κατ' ἔξοχην*; in accordance with this view, childbirth is regarded as extremely sinful, while children are despised as 'little sins.' Generally speaking, the Men of God aim at a monastic style of living, their houses being arranged as convents and the women wearing a kind of nun's dress. Like all Russian sectaries, they enforce complete abstinence from intoxicating liquors; even coffee, and in many communities tea also, is forbidden. On the whole the Khlystic system of morals lays so much stress on the mortification of the flesh (the resurrection of which they deny) that it has not been able to set up a practical ideal of life. Altruism appears among them essentially as sympathy, which has to display itself in the bestowal of alms. Besides practising asceticism, they lay great stress on the voluntary endurance of persecution from the State and from the Church, and the sect is persecuted even to the present day as 'extremely pernicious.' In earlier centuries the persecution was excessively brutal; attempts were made to crush them by the rack and the scaffold, but in vain, and they furnished many martyrs. Since the beginning of the 19th cent. those methods have been replaced by imprisonment and transportation to the Caucasus and Siberia.

The Men of God, however, seek to show the courage of their opinions not by open confession of their faith, but by concealment of it, and it is precisely their obstinacy in this matter that has often brought upon them increased severity of punishment. This concealment of their belief is due to their view of the Holy Spirit, whom they regard as a power which shuns observation, revealing Himself in secret and averse from publicity. If a man talks about the Spirit, he loses Him. Consequently not only are their ecstatic religious

services secret, but they generally conceal the fact of their adherence to the sect. They outwardly conform to the State Church, and attend Confession and Holy Communion, although they spit out the wine afterwards. They themselves celebrate communion with *kvas* (a sour drink from rye meal and malt) or with water.

Any one who desires admission into the sect must, at an initiatory rite, conducted with an extremely elaborate ceremonial, swear a solemn oath that under no circumstances whatever, not even under the severest persecution, will he disclose his belief either to his nearest relatives or to the ecclesiastical confessor. In reality this sect thoroughly despise the State Church as 'the world,' the kingdom of Satan, and regard the 'popes' (clergy) as Jewish priests and Pharisees. In opposition to the Orthodox Church, they are sure that they are the only true Church, the Kingdom of God on earth, because they alone possess the Spirit of God. The services of the Orthodox Church are useless, since they dispense with dancing, the proper means for bringing down the Spirit from heaven.

The Men of God have also services in which there is no dancing; these are the 'usual conferences,' and consist in singing, and the reading and exposition of Holy Scripture; but they are only assemblies for attracting adherents, and they hint darkly at the 'better services.' In reality the source of revelation for this sect is not Holy Scripture, but the Spirit which descends on them during the dance. Any one who feels the desire for the 'better services' must undergo long preparation before he is received into the sect by one of the leaders and admitted to them. In the 'better services' a kind of frenzied dance takes place, consisting of a series of variously arranged movements performed singly and collectively, while songs are sung without any instrumental accompaniment. The object of the dance is to induce at least some of the performers to fall into an ecstasy (named the 'bath of regeneration,' since the *radeniye* is regarded as the real spiritual baptism in opposition to the mere water-baptism of the Church). The 'Christs,' 'Mothers of God,' prophets and prophetesses especially, but sometimes also the ordinary members of the community, when in the ecstatic state, break into improvised doggerel, and prophesy the 'common fate' of their sect and the 'private fate' of individual members. This secret service closes with a common meal—the 'love-feast'—which is regarded as the true communion. The services generally begin in the evening, and continue far into the night.

The sectaries have also provided a substitute for the other sacraments of the State Church. But the ritual varies in the different congregations and even in the same congregation, according to circumstances. The Men of God do not believe, with the Orthodox Church, that a sacrament must have the prescribed form in order to be efficacious; in their view, the Spirit operates unfettered and creates for Himself whatever form He chooses. They seem to have special rites of their own, such as dancing round a tub filled with water at the summer solstice. Here, doubtless, we have to do with a relic of Slavic heathenism, and vestiges of heathen ideas are also found in their songs and liturgical formulæ. This rite, however, has received a Christian colouring in the vision of the 'golden Christ,' who appears out of the steam above the vessel.

The attribution of sexual excesses and sacrificial rites to the Men of God appears, according to the Russian official reports themselves, to be utterly slanderous and merely a device of the State Church to combat the sect, and brand as hypocritical an asceticism which is more strenuous than her own.

Our earliest sources of information regarding the sect, which they call 'Christovshchina,' are Yevrosin (who wrote in 1691), Dimitri, bishop of Rostov (who wrote between 1702 and 1709), and Theophylact Lopatinski (1745), and further information is found in the reports of two trials of Khlysti held at Moscow between 1733-39 and 1745-57. The first shows the sect reckoning its adherents for the most part in the Moscow monasteries, among monks and nuns and peasants connected with the monasteries; it also comprised some tradespeople. In the monasteries it seems to have marked a reaction against deeply-rooted immorality. It also spread beyond Moscow, to the district of Moscow itself, to Yaroslav and Uglitch, and to the town of Venyov, south of Moscow. In the first trial Prokofi Lupkin, a soldier of the bodyguard (*streletz*), appears as 'Christ,' his wife, Akulina Ivanovna, and the nuns Nastasya and Maria (who were both finally beheaded in Petrograd) as 'Mothers of God.' Altogether more than 300 persons were condemned.

According to the reports of the second trial, the sect had considerably diminished in the Moscow monasteries, but, on the other hand, had spread much more widely among the peasant population as far as Petrograd and in the government districts of Vladimir and Nijni-Novgorod, while, at the same time, Moscow maintained its central position as the head-quarters of the sect.

Moscow was the scene of operations of the 'Christ' Serge Osipov, Vasil Stepanov, and, more famous than these, Andreyan Petrov, who, known as the 'Happy Idiot,' had the entrée to the houses of the aristocracy, and carried on his propaganda there for the sect not entirely without success. The communities of Khlysti in other places also possessed 'Christ' and 'Mothers of God.'

Lupkin and Petrov belong to the seven 'Christ' named by the legend which describes the origin of the Men of God (as the seventh they reckon Selivanov, the founder of the Skoptzy sect, which split off from the Khlystovshchina in 1772). Since the reports of the trials prove the correctness of the assertions of their tradition regarding the seven 'Christ' and the 'Mothers of God' Akulina and Nastasya, the tradition may be trusted as to what it relates concerning the earlier 'Christ' Danila Philipov and Ivan Suslov. Of these the first is said to have also ranked as 'God Zebaoth' and to have founded the sect about the middle of the 17th cent. in the government district of Kostroma, while the second, as his disciple, spread it in the Oka and Volga districts and introduced it into Moscow. The evidence of Dimitri and Theophylact as to the founder of the Khlystovshchina applies to Suslov; but ancient songs of the Khlysti speak of one 'Christ,' Aveyan, who lived in the 14th cent., and of another, Yemelyan, who laboured in Moscow in the time of Ivan the Terrible. The majority of Russian scholars consider the sect much older than historical information reaches. Although the attempt to derive it from the heathenism of the Slavs and Finns must be pronounced unfortunate, owing to the decidedly Christian character of the sect, the suggestion which derives it from the Bogomils (*q.v.*) seems extremely credible; but, on the other hand, the Khlysti are entirely devoid of a trace of the Bogomilian cosmology, and they suggest rather the Messalians or Euchites (*q.v.*).

In the 19th cent. Kostroma and Moscow maintained their central importance in an ideal sense as places hallowed by tradition, especially in consequence of the intense activity of the 'Mother of God,' Ulyana Vasilyevna. The actual centre, however, was shifted in the middle of the century

south-eastward into the government districts of Nijni-Novgorod, Samara, and Tambov, through the activity of Radayev and the 'Christ' Vasil Shtsheglov and Arvakum Kopylov. The former, with his peculiar mystical teaching, and like some later 'Christ,' takes a special place among the Khlystovshchina inasmuch as, by appealing to the trance-producing spirit, he caused asceticism to fall into abeyance, and shamefully abused the devotion of his female followers. On the other hand, Vasil Shtsheglov and the 'Christ' resembling him have no immoral rites ascribed to them, but merely unchastity.

In the further course of the century the centre of the sect was pushed still further southward into the Caucasus territory, especially through the conspicuous energy of Kopylov's pupil, Perphil Katasonov. He and his followers again took the title 'God Zebaoth,' and ruled not only all the communities of the Caucasus, where the Khlysti, under their new name 'Shaloputy' ('eccentrics'), lead a considerably harassed existence, but also those of Southern Russia upwards to Smolensk, each of which has its own 'Christ.' Many Khlysti communities honour as a Christ the orthodox 'Father John of Kronstadt,' famous through Russia for his faith-healing.

The Khlysti communities are not large, since they depend for their increase, as they must, on account of their sexual abstinence, almost entirely on proselytism. Although they are now generally to be found everywhere in the Russian Empire where there are Russian peasantry, their total number, which can be only approximately reckoned, cannot exceed 200,000. Their significance for the national life, however, is, on account of their sober, industrious mode of life, far greater than this number would lead one to suppose. This article, the attitude of which is very different from that of Russian scholars, is based upon the writer's book, *Die russischen Sekten*, i. (Leipzig, 1907), which, besides the Khlysti, deals with such sects as the Skakuny, Mal'ovantzy, and Paniyashkovtzy, all of which are dependents of the different bodies of the Khlystovshchina. The latter have assumed special forms as they passed from the sphere of influence of the Greek Orthodox Church to that of the Lutherans, the Stundists, and the Molokani ('Milk-drinkers'). Among the Lutheran Finns of Ingermannland the sectaries are called Skakuny ('Hoppers'). Kondrati Mal'ovanny founded a sect intermediate between the Khlystovshchina and Stundism in Tarashtcha in the government district of Kieff about 1890, and his teaching caused an epidemic of trance-phenomena. The Molokani-Khlysti are called Pryguny ('Jumpers'). There were, and still are, numerous other bodies which, on account of some peculiarity, split off from the sect. Although the 'Worshippers of Napoleon,' who used to revere him as a 'Christ,' seem to have died out, the Adamites, who seek to get rid of modesty as a relic of the Fall, and, therefore, go naked at divine service and in their houses, still exist to-day. The sect of the Paniyashka regard the body as not only sinful but directly possessed by the devil, and intensify their asceticism accordingly.

LITERATURE.—The most important Russian works on the sect are: I. Dobrotvorski, *Lyudi bozhii: Russkaya sekta tak nazyvayemykh duchovnykh khristian* ('The Men of God: the Russian Sect of the so-called spiritual Christians'), Kasan, 1869, fragments of this have been translated into German by A. Pfizmaier in *SWA W* civ. [1883] and *DFA W* xxxiv. [1884] and xxxv. [1885]; N. Reutski, *Lyudi Bozhii i Skoptzy* ('The Men of God and Skoptzism'), Moscow, 1872; K. Kutečov, *Sekty Khlystov i Skoptzov* ('The Sects of the Khlysti and Skoptzism'), Kasan, 1882, Stavropol, 1900; A. Rozhdestvenski, *Khlystovshchina i Skoptzhestvo v Rossii* ('Khlystovshchina and Skoptzism in Russia'), Moscow, 1888. There are also numerous articles in newspapers.

K. GRASS.

MENCIUS.—1. Life.—Mencius, or Meng-tse (371-288 B.C.), second only to Confucius in the annals of orthodox Chinese philosophy, was born in Tsou of a family whose ancestral home was in Lu, the native State of Confucius. While still very young, he lost his father; he was educated by his mother, who is famous among the women of China for the care with which she brought up her son. Nothing is known of his other preceptors, except that they were of the school of Confucius, whom Mencius regarded as supreme among men, and proposed to himself as example (Mencius, II. i. 2, IV. ii. 22). When we get certain knowledge of him, he is a person already well known and accompanied by disciples, moving from one State to another according as the reception of himself and his doctrines was favourable or otherwise, accepting such gifts as he deemed consistent with his self-respect, and devoting himself to the exposition of his views on ethics and politics. This he did with acumen and considerable liveliness, frequently using illustrations, some of which are famous.

From the man of Sung, who assisted his corn to grow long by pulling it up, we are to learn the need of patience in the development of character (II. i. 2). The moral absurdity of not putting an immediate end to unrighteous practices is illustrated by the man who stole his neighbour's fowls, and who replied to one who remonstrated with him, 'I will diminish my appropriations, taking only one fowl a month till next year, and then I will make an end of the practice' (III. ii. 8). The Niu mountain, whose natural vegetation is destroyed by axes and bills and the browsing of cattle, is a figure of human nature, which, through the occurrences of daily life, loses its native goodness and cannot regain it during the brief respite of the night or the calm of dawn (VI. i. 8).

In addressing himself to the princes and governors of his time, Mencius may sometimes have been guilty of undue compliance with the faulty dispositions of those with whom he dealt (I. ii. 5); if so, it was from no unworthy motive, but only to secure the more ready acceptance of his teaching. For the most part he spoke his mind with an admirable freedom, not overawed by 'the pomp and display' of the great (VII. ii. 34), but acting according to his own teaching that respect is best shown by giving righteous counsel (II. ii. 2). Mencius is quite conscious of his own worth. He alone in his age could bring tranquillity and good order to the empire (II. ii. 13). His words will not be altered by any future sage (III. ii. 9). He has, accordingly, a keen sense of the respect due to him (II. ii. 11, IV. i. 24), though he occasionally employs unworthy shifts to maintain his dignity (II. ii. 2). Looking on himself as the continuer of the Confucian teaching (VII. ii. 38), he regarded it as an urgent duty to oppose the teachings of Yang and Mo (III. ii. 9). This he did with vigour and acuteness, while always willing to receive repentant heretics without reproaches, not tying up the leg of a pig which had already been got back into the pen (VII. ii. 26). The last twenty years of his life Mencius spent in Lu, where, with the assistance of his disciples, he prepared that sole record of his teaching which is called by his name and now forms one of those standard writings known as *The Four Books*.

2. Ethics.—Mencius's view of human nature is fundamental. Man's nature is good in the sense that 'from the feelings proper to it it is constituted for the practice of what is good' (VI. i. 6). The four cardinal virtues—benevolence, righteousness, propriety, knowledge—are not infused into man from without, but have their rise from the feelings of commiseration, of shame and dislike, of modesty and compliance (reverence and respect [VI. i. 6]), of approving and disapproving (II. i. 6). These four principles are accepted as psychological facts not reducible, *e.g.*, to any form of self-interest (II. i. 6). All that is needed for perfect

virtue, in which a man becomes possessor of himself (III. i. 4), is that these innate principles be developed (II. i. 6, VII. i. 15; cf. also 'All things are already complete in us' [VII. i. 4]); and for this human nature is self-sufficient; failure arises not from lack of ability, but simply from not making the necessary effort (I. i. 7, IV. i. 10). From another point of view Mencius analyses human nature into *chieh* ('mind,' 'will,' *voûs*) and *ch'i* ('passion-nature,' *ψυχή*). The former is supreme, but the latter is not to be violently suppressed, but developed in accordance with righteousness. Otherwise one's nature suffers defeat—as it also suffers defeat through action in which the mind feels no complacency. The mating of the passion-nature with righteousness is to be accomplished only by persistent practice of righteousness; but, given a mind set on righteousness, this result necessarily follows (II. i. 2). The violent suppression of the passion-nature, by which the integrity of a man's being is impaired, must be distinguished from the abscission of desires in an ethical interest (VII. ii. 35). Mencius, in basing his ethics on human nature, appears to have been not unaware of the ambiguity of the term 'nature.' Such seems to be the drift of a Socratic argument in which he maintains that 'the nature is not to be confounded with the phenomena of life' (VI. i. 3 [Legge's tr.]). Elsewhere he points out that there are desires which are natural, but in connexion with them there is the appointment of heaven, and the superior man does not say of them, 'It is my nature.' There are also moral propensities which are the appointment of heaven, but which the superior man recognizes rather as natural (VII. ii. 24). In things equally natural there is a gradation of worth, which can be recognized by thinking (VI. i. 14f.). Moreover, the sense of shame, which a man may not lack (VII. i. 6f.), is indicative of his having a moral constitution, which alone is properly his nature. In the possession of this nature, good in its composition, all men are alike, evidence of this being found in the fact that, as in matters of physical taste, music, and beauty there are common standards, so also is it in morals (VI. i. 7). This originally good nature is the child heart (IV. ii. 12), which differentiates man from the lower animals (IV. ii. 19); and in possessing it the ordinary man is of one kind with the sages (II. i. 2, III. i. 1), who simply have apprehended before me what my mind also approves (VI. i. 7). The sages, however, are spontaneously what other men attain to by effort (IV. ii. 19, VII. ii. 33), though they, too, learned from other men (II. i. 8). The great man is he who does not lose his child heart (IV. ii. 12); but for most men it is lost, and the grand aim of education is its recovery (VI. i. 11). Morality is the supreme task laid on each man (IV. i. 19), which requires unremitting diligence (VI. i. 9, VII. ii. 21). Nothing can be done with self-satisfied conformists to current standards, those 'thieves of virtue' (VII. ii. 37); for it is necessary that morality should criticize itself (VII. i. 5). The way to sage-like virtue begins in ordinary duties (VI. ii. 2), and the carrying out of principles already possessed by all (VII. ii. 31). Vigorous action according to the law of 'reciprocity' is the closest approximation to perfect virtue (VII. i. 4). It is also perhaps hinted that virtue is the mean between extremes (II. i. 9, IV. ii. 6f., 10). For self-direction it is of the greatest importance 'to estimate the mind,' *i.e.*, to become acquainted with the real nature of one's motives (I. i. 7), and second thoughts are often best (IV. ii. 23). Life presents a series of alternatives of which the higher is, by reflexion, to be chosen in spite of

the seductions and obscurations of sense (VI. i. 15). Righteousness is to be preferred before life itself (VI. i. 10). The righteous man is beyond the reach of calamity (IV. ii. 28, VII. i. 21). The only inevitable calamity is self-incurred (IV. i. 8). True greatness is to practise virtue for the sake of oneself and of others, superior to the seductions or threats of riches, honours, poverty, and force (III. ii. 2). To rejoice in virtue breeds unconscious grace of deportment, which is the perfection of music (IV. i. 27; cf. VII. i. 21). Benevolence, righteousness, self-consecration, fidelity, with unwearied joy in these virtues—these constitute the nobility of Heaven (VI. i. 16). Realized virtue is sure of a transforming influence on others (IV. i. 12); failure to evoke a response should lead to self-examination (IV. i. 4). Virtue cannot be selfish; to find purity by withdrawing from all contact with evil one must become an earthworm (III. ii. 10). Each man is responsible to the extent of his moral attainment for the instruction of others (V. i. 7), and to instruct others is the greatest fidelity (II. i. 8, III. i. 4), while neglect of this duty degrades the virtuous to the level of those whom they should teach (IV. ii. 7). Of the special virtues, filial piety is the only one that is referred to in any detail. Mencius quotes the definition of it as serving one's parents with propriety, burying them with propriety, and sacrificing to them with propriety (III. i. 2). The service of parents is the greatest of all services and the root of all others; it has regard not only to physical sustenance, but to the wishes of the parents (IV. i. 19); and it takes unquestioned precedence of duties to wife or children (IV. ii. 30). Filial piety completes itself in the funeral rites (IV. ii. 13); and, in view of the importance of sacrifice to ancestors, lack of posterity is the gravest instance of unfilial conduct (IV. i. 26).

3. Politics.—Mencius has no scheme of social reconstruction. Existing social usages (*e.g.*, concubinage) and the existing political arrangement—an empire consisting of small States, each with its own king, but owning the supremacy of one State whose ruler is emperor—all this Mencius simply accepts. What he is concerned with is the rectification of moral relations within this existent social framework. He follows the current analysis into the five relations of father and son, sovereign and minister, husband and wife, old and young, friend and friend; and desires the cultivation of the corresponding virtues, affection, righteousness, harmony in difference, order, fidelity (III. i. 4). Of these relations that male and female should dwell together is the greatest (V. i. 2); and within the family we have in service of parents and obedience to elder brothers the fundamental exemplifications of benevolence and righteousness (IV. i. 27, VII. i. 15). Mencius opposes any such obliteration of natural relations as he finds in Mo's doctrine of universal love. Men have 'a root,' *i.e.*, they have a special relation to their parents and therefore a special duty corresponding thereto (III. i. 5). So, too, Mencius opposes all pantisocratic schemes, and teaches that society implies a differentiation of function in which those who labour with the mind govern, and those who labour with their strength are governed (III. i. 4), and in which the teacher of righteousness has his due place (III. ii. 4). In Mencius's doctrine of the State two points are to be noted especially: the emphasis on morality and the democratic bias. Rule is based not on force, but on willing submission accorded to virtue (II. i. 3, IV. ii. 16). If the ruler be virtuous, his influence will extend to all his subjects (IV. i. 20, ii. 5). There is no secret of statecraft—it needs only that the ruler give scope to the innate

goodness of his nature (I. i. 7, II. i. 6). Let him dismiss all talk of 'profit,' and think only of benevolence and righteousness (I. i. 1). In the disordered times of Mencius such a benevolent government, having regard for the people's welfare (IV. i. 3, 9), would be immediately successful (II. i. 1). The truly benevolent ruler has no enemy within the empire (VII. ii. 4). Rulers are the shepherds and parents of their people (I. i. 4, 6), and must make it their first business to see that they (the people) have a certain livelihood, for without that they will abandon themselves to crime (I. i. 7). Mencius is very emphatic on the necessary precedence of a sound economic condition.

'When pulse and grain are as abundant as fire and water, how shall the people be other than virtuous?' (VII. i. 23).

Agriculture, therefore, and then education are prime interests of State (III. i. 3). The strength of a kingdom is in its morale (I. i. 5, IV. i. 1). Destruction is only self-incurred (IV. i. 8). A wise prince will be guided by his ministers (I. ii. 9), but he is himself ultimately responsible for the government of his State (I. ii. 6); he must treat his ministers with respect (II. ii. 2), regarding them as his hands and feet, and they will then regard him as their belly and heart (IV. ii. 3). In the appointment of ministers members of old established families are to be preferred, an ancient kingdom being one in which there are families with this tradition of service (I. ii. 7). Indeed, the art of governing lies in securing the approbation of these great families (IV. i. 6). New men, however, are not to be excluded (I. ii. 7); only the ruler must seek those by whom he may be taught (II. ii. 2). The love of what is good is the main qualification for being a minister, since those who have good thoughts will gladly lay them before him (VI. ii. 13). Let the ruler be guided in the appointment and dismissal of ministers by the voice of the people (I. ii. 7). In a State the people are the most important element; the spirits of the land and grain are the next; and the sovereign is the lightest. Therefore to gain the peasantry is the way to become emperor (VII. ii. 14). The voice of the people is determinative of the sovereignty in a kingdom (I. ii. 10), and in accordance with it a prince may rebel even against the emperor (I. ii. 3). For a sovereign forfeits his rights by wickedness and becomes a 'mere fellow' (I. ii. 8), and, if not removed by the members of the royal house (V. ii. 9) or other ministers (VII. i. 31), he may be removed by the leader of a righteous rebellion. He who takes on him this duty of removing his sovereign must be sure that he is 'the minister of heaven' (II. i. 5, ii. 8). He who is such is marked out by the appointment of heaven showing its will by his personal action and his conduct of affairs, which are such as to win universal submission.

'Heaven sees according as my people see; heaven hears according as my people hear' (V. i. 6).

All wars of ambition are condemned (IV. i. 14, VII. ii. 2), and ministers who encourage the ambitions of their prince are 'robbers of the people' (VI. ii. 9). If right government prevails in the empire, the princes of the feudatory States will be submissive one to another in proportion to their virtue, and not in proportion to their strength (IV. i. 7). As for the details of a truly benevolent government, 'never has any one fallen into error who followed the laws of the ancient kings' (IV. i. 1), whence sovereigns should imitate Yao, and ministers Shun (IV. i. 2, VI. ii. 10).

4. Religion.—References in the writings of Mencius to religious worship are merely incidental, and show that he accepted without criticism such worship of spirits and of ancestors as was then current. Of more interest are his references to heaven. He quotes, with approval, from the *Shu King*, or *Book*

of History, the saying that heaven, having produced the inferior people, appointed for them rulers and teachers to be assisting to God (I. ii. 3). As heaven protects all, so, in glad imitation, should the ruler of a great State protect a small State, while the ruler of a small State should recognize the decree of heaven and be willing to serve the great State (I. ii. 3). Such obedience to heaven ensures preservation, while disobedience entails destruction (IV. i. 7). So, generally, 'calamity and happiness are men's own seeking' (II. i. 4), although heaven's decree and man's causality are both recognized:

'That which happens without a man's causing it is from the ordinance of heaven' (V. i. 6).

There is a decree for everything, and a man should receive submissively what can be correctly ascribed thereto; but he who understands what is meant will not stand under a precipitous wall, nor can death under fetters be justly ascribed to heaven's decree, though death in the discharge of duty may be so attributed (VII. i. 2). Man's duty, therefore, is to do the right and leave the issues to heaven (I. ii. 14, VII. i. 1), which in its painful discipline of individuals has moral ends in view (VI. ii. 15, VII. i. 18). From man's nature we can know heaven; and to preserve one's mental constitution and nourish one's nature is the way to serve heaven (VII. i. 1). To have no shame before heaven is one of the things in which the superior man delights (VII. i. 20). Heaven is the realized ideal after which man aspires (IV. i. 12). Specially suggestive is this saying:

'Though a man may be wicked, yet if he adjust his thoughts, fast, and bathe, he may sacrifice to Shang-ti' (IV. i. 25; for the full connotation of Shang-ti see art. GOD [Chinese]).

5. In conclusion a few miscellaneous points may be noted. Mencius indicates the correct method for understanding Nature by obedience and not by violence in the investigation of her phenomena (IV. ii. 26). He gives us a good canon of interpretation:

'Those who explain the Odes [i.e. the classical *Shi King*] may not insist on one term so as to do violence to a sentence, nor on a sentence so as to do violence to the general scope' (V. i. 4).

To this may be added his comment on the *Book of History*, which may perhaps be generalized:

'It would be better to be without the *Book of History* than to give entire credit to it' (VII. ii. 3).

LITERATURE.—J. Legge, *The Chinese Classics*, Hongkong and London, 1861-78, II. The prolegomena and translation, without the Chinese text, are published separately, *The Life and Works of Mencius*, London, 1875. See also E. Faber, *The Mind of Mencius*, tr. A. B. Hutchinson, London, 1882.

P. J. MACLAGAN.

MENDELSSOHN.—Moses Mendelssohn, otherwise Rabbi Moses of Dessau, philosopher, writer, and Bible translator, was born 6th Sept. 1729 at Dessau, where his father, Mendel, was a poor scribe and teacher in a family descended from Rabbi Moses Isserles, a distinguished Talmudist and philosopher of the 16th cent., known as 'Rema.' Moses Mendelssohn was taught Rabinics by the local Rabbi, David Frankel, who published a commentary on the Palestinian Talmud in 1742. Frankel was called to the Rabbinate of Berlin in that year, and the young student followed him there in 1743.

At Berlin Mendelssohn was taught French and English by A. S. Gumpertz, and taught himself Latin and Greek. His taste for philosophy was inspired by the study of Maimonides' 'Guide of the Perplexed.' He earned a precarious livelihood as tutor in the home of a well-to-do Jewish silk merchant, Isaac Bernhard, in whose warehouse he afterwards, and throughout his life, was employed as book-keeper. His evenings and all his leisure he devoted to philosophy. He was a follower of Wolf and Leibniz, but was much influenced by the English School of empirics, especially Locke and Shaftesbury. His acquaintance with Lessing, who

was also born in 1729, began in 1754, when he defended Lessing's drama *Die Juden* against adverse criticism. Lessing became his lifelong friend, and dubbed him the second Spinoza. It was Lessing who had Mendelssohn's first work printed—the *Philosophische Gespräche* (1755). In 1755 they collaborated in an anonymous and piquant attack on the Berlin Academy—*Pope ein Metaphysiker!*, and the next year Mendelssohn translated Rousseau's *Discours sur l'origine... de l'inégalité parmi les hommes*, though he ridiculed the author's partiality for man in a state of nature. Though M. Steinschneider (*Cat. libr. Hebr. in Bibl. Bodleiana*, Berlin, 1852-60) enumerates 39 separate Hebrew works of his, and though he wrote Hebrew poetry when a child of ten, it is as a writer of classical German that Mendelssohn became famous. His essay on aesthetics, *Vom Erhabenen* (1757), was studied by Schiller and Herder. In admiration, rather than in Lessing's pity and terror, he found the moral object of Tragedy. The stories about his friendship with Frederick the Great are legendary. On the contrary, he criticized the king's *Poésies diverses* in 1760, and found fault with him for writing in French. The royal displeasure was so great that he was threatened with expulsion from Berlin, but the Marquis d'Argens intervened, and as a 'philosophe mauvais catholique' pleaded with his Majesty as a 'philosophe mauvais protestant' to grant to the 'philosophe mauvais juif' the privilege of residence.

In 1763 Mendelssohn was awarded by the Berlin Academy a prize of 50 ducats for his essay *Ueber die Evidenz der metaphysischen Wissenschaften*. In 1771 the Academy elected him a member, but Frederick the Great refused to confirm the appointment, and no protest, not even that of Queen Ulrica of Sweden, was of any avail to get the king to alter his decision with regard to the 'berühmter Jude.' Among his own brethren, and especially in Berlin, Mendelssohn enjoyed the highest esteem. In 1764 he was freed from Jewish communal dues, and in 1772 further honour was shown to him by his co-religionists.

His Socratic Dialogue called *Phædon, oder über die Unsterblichkeit der Seele* was published in 1767, and created an immense sensation. It was translated into nearly all European languages. A Hebrew translation by I. B. Bing, with a preface by N. H. Wessely, appeared in 1787, and an English translation by C. Cullen in 1792. That work showed a notable reaction against the free thought of Voltaire, and was welcomed by the learned as well as by those in high places, from Winckelmann to Prince Carl of Brunswick. It was the first book of philosophy read and discussed by Goethe and later by Schiller, and dissuaded from suicide many disappointed or degenerates. Mendelssohn rapidly acquired a unique position among the intellectuals of Berlin. His chief friends, besides Lessing, were Hamann, Gleim, Wieland, and Herder, and the Swiss writers Zimmermann, Iselin, Gessner, and Lavater.

The last was the famous physiognomist, immortalized by Darwin; but it was in his capacity as a very zealous pastor that he caused the Jewish philosopher much trouble and annoyance. He publicly dedicated his translation of C. Bonnet's *Palingénésie philosophique* (1769) to Mendelssohn, and urged him to abandon Judaism and become a Christian. The Jew, having obtained the sanction of the 'Consistorium zur Censur,' replied in his *Schreiben an den Herrn Diakonus Lavater zu Zurich* (1770), manfully defending his position. It was not only yesterday that he had examined the evidences of his own religion. What but conviction would induce him to remain a persecuted Jew? He would never change his religion.

This reply produced a storm of protest. J. B. Kolbe in his *Antiphädon* (1770) was among those who heaped invective upon him in various pamphlets, of which his best biographer, M. Kayserling, gives a full list. Next year an anonymous *Pro memoria* appeared in his defence.

The attack, though it injured his health, turned his thoughts to Judaism and the Jews. As early as 1761 he had prepared a Hebrew Commentary on the Logic of Maimonides, and had presented the MS to one Samson Kalin, who published it as his own.

Perhaps his most important work, so far as his influence on his co-religionists was concerned, was his translation of the Pentateuch into classical German with a *btür*, or commentary, in Hebrew. His first assistant was Solomon Dubno († 1813), who quarrelled with Mendelssohn in 1780. Mendelssohn's brother Saul took Dubno's place in the translation of Exodus, but Hartwig Wessely, a scholar born rich, but afterwards impoverished, later became his chief collaborator. This translation of the Pentateuch met with much opposition from the orthodox Rabbis Landau, Jacob Lissa, Elijah Wilna, and Hirschel Levin (formerly chief Rabbi of London and then of Berlin) because of what they thought a heretical mistranslation in Lv 19th, where 'thou shalt rebuke thy neighbour' was toned down to 'canst'; but the storm of opposition ceased, largely through the aid of Italian Rabbis, who, though orthodox, were also enlightened.

Mendelssohn's translation of the Psalms, which had been begun before 1770, was not completed for thirteen years. During this period the translator took up the work only spasmodically and just when some particular Psalm suited his mood of the moment. It was intended for Christian rather than for Jewish readers, and it was first printed in German characters, not Hebrew. The publisher Maurer bought the MS for 500 thalers and published it in 1783, but lost money by the publication; next year it was published in Hebrew characters with a *btür* by one Joel Löwe. The Song of Deborah and the Song of Songs were the other Bible translations completed by Mendelssohn. His commentary on Ecclesiastes he had published anonymously in 1769. It was clear and sympathetic, but, though greatly admired by Herder, is notable chiefly for a novel division into sections, differing from the traditional chapters. Mendelssohn was a keen opponent of the higher criticism of those days, and scouted Bishop Benjamin Kennicott's textual alterations of the Bible. One immediate result of the translation was a change in the course of education of Jewish boys, and the inculcation of German rather than Jewish ideas. Part of the Jewish Liturgy was also translated by him, viz. the Haggāda, a Passover service—a fact which seems to have escaped the notice of bibliographers.

In 1776 Mendelssohn collected money—and students—for the unsectarian college 'Philanthropin' of Dessau. In 1781 he and his rich disciple, Isaac Daniel Itzig, founded the Jewish Free school in Berlin, the first institution of the kind, where not only Bible and Talmud, but also German, French, and sciences were taught by Jewish and Christian teachers. Similar institutions were afterwards founded on the same plan in Breslau and other cities.

After his wife's death, Lessing had to battle for tolerance in his *Anti-Goeze*, and conceived the idea of meeting the theologians with a comedy. This was the origin of his famous drama *Nathan der Weise*, which appeared in 1779, and which was in some respects a development of his youthful production *Die Juden*. Lessing himself founds the play on the story of the Jew Melchizedek in Boccaccio's *Decameron*. About no German work

except Goethe's *Faust* has so much been written. Nathan is Mendelssohn, Recha his daughter Dorothea, the templar Lessing, the Swiss widow Daja is intended for Lavater, the dervish is Mendelssohn's mathematical friend Abraham Wolf Rechenburg, and so on. The play itself is not a plea for Jews and Judaism, but for toleration and humanity, and an attack upon religious persecution of all kinds. In Vienna it was confiscated. The controversy engendered by *Nathan der Weise* led to a plea for the civil emancipation of the Jews by C. W. von Dohm (*Über die bürgerliche Verbesserung der Juden*, Berlin, 1781), translated into French by Mirabeau (London, 1787). Six hundred copies of this translation were forwarded to Paris for the use of the French States General, but lost in that troublous time, and eventually burnt in the Bastille. In 1782 Mendelssohn published a translation of Manasseh ben Israel's *Esperança de Israel* (Amsterdam, 1650), with an introduction pleading for emancipation. He was again reproached for remaining a Jew, or for being a 'wobbler' between Judaism and Christianity, and this induced him to write his *Jerusalem* (1783), a work on religious power and Judaism. In this book, translated into English in 1783, he vindicated his Judaism and explained why he was not a Christian. It is a plea for the separation of State and Church, and urges that 'Kirchenrecht' is incompatible with true religion. Judaism, he urged, has no dogmas or chains upon belief; Joseph Albo († 1444), who had reduced the thirteen creeds formulated by Maimonides to three (cf. *ERE* iv. 246*), was no heretic. Judaism required conformity with ceremonial law, but tolerated complete liberty of opinion.

In a Reader for his children, Mendelssohn substitutes in the creeds the words 'I recognize as true and certain' for the words 'I believe.' Ceremonial laws he regarded as a sort of living scripture and the great bond between Jew and Jew, urging that, even if their utility were no longer clear, they were still binding. Actions are our duty, but creeds, symbols, and formulas are the fetters of reason. In this way he reconciled the deism of Leibniz and the English deists with revealed law. His *Jerusalem* and his unfinished *Betrachtungen über Bonnet's Palingenesie* are both pleas for toleration, but not for uniformity of belief. In both he warns his disciples against prejudice, superstition, and even enthusiasm. *Jerusalem* excited an enormous sensation. Kant said that it was incontrovertible, and wrote a highly appreciative letter about it; Mirabeau said that it ought to be translated into every European language; Michaelis found fault with its condemnation of Anglican bishops for consenting to sign the Thirty-nine Articles, and Mendelssohn had to explain his position in the *Berliner Monatschrift*, of which he was one of the founders in 1783. By some contemporaries he was attacked as an atheist and by others as a 'Talmud Rabbi,' but he saw no inconsistency between his philosophical belief and his faith. His Hebrew works are written entirely from the Rabbinical standpoint, and he was a good Talmudist, as is proved by his correspondence with Jacob Emden.

Mendelssohn's *Morgenstunden*, like his Bible translation, was in the first instance intended to lead his son Joseph to a true belief in God. Its publication, in 1785, was designed as a refutation of Spinozism itself as well as of the charge that Lessing was a Spinozist. In 1853 Alexander von Humboldt, in a letter to M. Mortara, described how, in his youth, he and Mendelssohn's sons had heard these very *Morgenstunden* given forth by the philosopher in his study. In the first part Mendelssohn proves the existence of God; the nature of the Divine Being and His characteristics

were to be treated in the second part. Its philosophy is an attempt to advance upon the sensualism of Wolf by the help of English empiricism. He claimed that human common sense, when working hand in hand with reason, was infallible.

Though self-taught, Mendelssohn was neither a dilettante nor a popular philosopher. Hegel depreciates him as a philosopher, but, as a writer of German, his style furnishes the best example of German prose after Goethe and perhaps Lessing. Its characteristic was its Socratic irony. A predecessor of Kant, his writings are far easier to understand. Kant himself was proud that the Jewish scholar had attended one of his lectures, and was always polite to him, though he expressed disappointment that Mendelssohn had not reviewed his *Kritik der reinen Vernunft*, when it appeared in 1784. Simultaneously with the publication of the *Morgenstunden* appeared F. H. Jacobi's treatise *Ueber die Lehre des Spinoza an den Herrn Moses Mendelssohn*. Lavater had rebuked him for not being a Christian; Jacobi now charged him with atheism. He was profoundly disturbed by what he considered a cruel attack, and retaliated with his address *An die Freunde Lessings*. He brought the manuscript to his publisher Voss on 31st Dec. 1785, and died two days later of a paralytic stroke. There is little doubt that Jacobi's attack, in which Lavater, Herder, and Goethe had all sided against the Jewish philosopher, brought about his end.

He left three sons and three daughters. His sons Joseph and Abraham founded the famous banking house of Mendelssohn and Co., which still exists. The former in 1840 reviewed Rossetti's *Dante*. The great musician Felix Mendelssohn was Abraham's son; another grandson, G. B. Mendelssohn, edited the philosopher's complete works in 1843-45.

Mendelssohn's first biographer, his pupil I. A. Eichel, described him as short and broad-shouldered, but feeble and pigeon-breasted, with thick black hair, dark complexion, bright eyes, and high forehead, a voice soft and gentle, and in conversation crisp and persuasive, but never long-winded (*Toll-dhóth Kambamán*, Berlin, 1786).

There is much difference of opinion among Jews as to whether his influence has been beneficial to them or not. The general view seems to be that it has proved better for Jews than for Judaism. His chief opponents were the 19th cent. Russian intellectuals known as the Maskhilm, especially Perez Smolenskin, who denounced him for denying Jewish nationalism, belittled his knowledge of the wisdom of Israel, and characterized him as a merchant rather than a Rabbi. Yet without doubt he was the first and most typical of modern Jews, the first to identify himself with another nation and yet remain a Jew.

'Judaism, which hitherto had impressed the whole mental activity of the Jew,' says Segal in *Aspects of Hebrew Genius* (p. 183), 'was narrowed down by Mendelssohn into a mere religion. . . . He separated the man from the Jew. . . . To Mendelssohn's followers such a dual life became difficult. . . . Traditional Judaism did not easily lend itself to be compressed and squeezed. . . . Mendelssohn's followers experienced the conflict between Judaism and Germanism at every step. . . . They threw off the burden of Judaism. . . . But. . . the period of the great apostasy. . . . was followed by a period of religious reform and the readjustment of Judaism to the new conditions of Jewish existence.'

Jewish nationalists of the present time, not quite fairly, regard Mendelssohn as the chief cause of the desire for assimilation felt by a small section of their co-religionists. Mendelssohn was an apologist for religion in general rather than for Judaism in particular. That was his chief merit in a Voltairean age and in sceptical Berlin. The finest epigram about him, and one which he himself would have appreciated, is the distich,

'Es ist ein Gott, das sagte Moses schon,
Doch den Beweis gab Moses Mendelssohn.'

LITERATURE.—M. Kayserling, *Moses Mendelssohn*, Leipzig, 1862, 21888, is the standard biography; H. G. R. Mirabeau, *Sur Moses Mendelssohn, sur la réforme politique des Juifs et en particulier sur la révolution tentée en leur faveur en 1763 dans la Grande Bretagne*, London, 1787; M. Samuels, *Memoirs of Moses Mendelssohn*, do. 1827; M. Schwab, *Moses Mendelssohn. sa vie et ses œuvres*, Paris, 1868; M. Kayserling, *Moses Mendelssohn; Ungedrucktes und Unbekanntes*, Leipzig, 1883; E. Schreiber, *Moses Mendelssohn und seine Verdienste um das Judenthum*, Bonn, 1879; *REJ*, *passim*; M. Tuzber, *Sulqath Mosheh*, Hebrew Manuscript (MS Adler no. 162); A. S. Isaacs, *Step by Step*, Philadelphia, 1910. E. N. ADLER.

MENNONITES.—'Mennonites' is the name applied to those Protestant Christians who, on such subjects as the management of the congregation, baptism, oath-taking, ecclesiastical discipline, civil office, and the bearing of arms, agree wholly or partly with Menno Simons, from whom they derive their name.

1. **Distribution.**—The Mennonites have congregations in Switzerland (1500 souls), Germany (18,000), France (1200), Russia (70,000), the United States (about 120,000), and Canada (about 90,000); those in the Netherlands, though not the greatest in number (65,000), are the most important section.

(a) *Switzerland.*—Their true fatherland is Switzerland; they originated there in 1524, when Konrad Grebel and Felix Manz, members of the congregation of Zwingli, dissatisfied with their leader, condemned the baptism of infants as 'the greatest abomination of the devil and the Roman pope.' They founded a separate congregation in 1525 and baptized their members on confession of faith; a year afterwards they rejected the oath. It is possible, though not probable, that their opinions are connected with those of sects of the Middle Ages, especially the Waldenses. They wished to re-establish the Christianity of apostolic times and preserve only the two 'ceremonies' ordained by Christ; therefore they denied the Christian character of the civil authority, rejected paid ministry and the use of the sword, and demanded the exercise of the apostolic excommunication.

In the persecutions of the 16th cent. many of them died as martyrs or fled to South Germany, where they propagated their tenets. In the 17th cent. also the Mennonites in Switzerland were oppressed by the government; imprisonment and deportation to the Italian galleys greatly diminished their number. Again, at the beginning of the 18th cent., the persecution recommenced, and even in 1811 the Mennonites were molested. In the midst of these sufferings there arose differences between them: the more rigid—called 'Amman-sche' or 'Amische' after their leader Jacob Amman—disapproved of every luxury, and demanded that in case of excommunication all intercourse, even between husband and wife, should be, during the period of excommunication, broken off; the less rigid followed Hans Reist; the names of these parties (also 'Obere Mennoniten' and 'Untere Mennoniten') are still preserved among the Mennonites of America.

At the present day the Mennonites in Switzerland are enjoying a new prosperity. They are now free citizens of the State, which allows them exemption from oath-taking and from military service. They have their own organ, *Der Zionspilger* ('The Pilgrim to Zion').

(b) *Germany.*—The Mennonites in Germany have continued to survive in spite of great difficulties and oppressions. In the year 1807 they were obliged to give up one of their characteristics, viz. their defencelessness. Many of them, however, agreed with the resolution of the government, and obtained permission from it to serve in the baggage-train of the army. Interest in their history has been aroused recently by the writings of L. Keller

and Mrs. A. Brons; and, in 1884, in order to prevent the decline of their little number, the Mennonites founded the *Vereinigung der Mennonitengemeinden im deutschen Reiche* ('Union of the Congregations of Mennonites in the German Empire'). Their periodical, *Mennonitische Blätter*, has been issued since 1854.

They have congregations in Alsace, the Bavarian Palatinate, Baden, Württemberg, Hesse, Nassau, at the lower part of the Rhine, in Westphalia, East Friesland, at Hamburg, Friedrichstadt, and in West and East Prussia.

(c) *France*.—In France the Mennonites held their first conference at Toul in 1901; their paper, *Christ seul*, appeared in 1908.

(d) *Russia*.—An emigration of Mennonites to Russia took place when the celebrated empress Catharine had promised them great territories in her empire, where they would be permitted to live according to their own religion and customs. About 2000 left Prussia in 1788; and many others followed them until 1824. At first they suffered many trials, not the least of which were due to discord among themselves. As they persisted in their belief in apostolic succession, their congregation needed an elder who had received the imposition of hands. They prospered, however, in their new fatherland, which gave a shelter also to the fugitive Mennonites from Hungary. At present they have congregations in the districts of Jekaterinoslaw and Tauria, Warsaw, the Crimea, Saratow, Samara, Caucasus, and Chiwa. In their colonies the school management is excellently ordered, the church affairs are managed by the elders of the congregation, and the preachers, selected from among the brethren, fulfil not only the duties of their ministry, but also those of their civil calling.

In 1874 a great danger threatened the Mennonites: exemption from military service was abrogated, and thus the privilege conceded to them by the empress Catharine and the emperor Paul was annihilated. Large numbers of Mennonites prepared to quit Russia; in the years 1874–80 more than 15,000 left for America. This made an impression upon the Russian government; the emperor sent the minister, F. E. I. von Todtleben, to them; after mutual deliberation the resolution was made that the Mennonites could perform their military duties in the forestry of the State. This favourable arrangement has been maintained ever since; the Mennonites, however, according to their old traditions, have always sought to relieve the sufferings of war.

(e) *America*.—The Mennonites are far more numerous in America than in any other country. The first colonists were Dutchmen who, about 1650, settled in New Amsterdam (now New York). Under the pressure of the heavy persecutions in the Rhine-land, thirteen families at Crefeld resolved to emigrate to the New World. They landed on 6th October 1683, three pioneers having already bought 8000 acres of land in Pennsylvania from William Penn, and they founded Germantown (now part of Philadelphia). Seven other families followed in 1688; and from that time the emigration continued during the whole of the 18th cent. and still more during the 19th. In 1820 Swiss Mennonites came to America, followed in 1836 by many South Germans, and afterwards, as we have said, by whole congregations from Russia, besides one from Galicia and one from West Prussia.

The emigrants formed many friendly connexions with the Quakers and other sects, but they preserved their independence. They came with the hope of remaining free from all hindrances in following their own customs and institutions; some of them even entertained the desire to estab-

lish in the New World the true Kingdom of God according to His Ordinance. It was only after long deliberation that they dared to entrust the ministry of baptism and of the Lord's Supper to an elder who had not received the imposition of hands in Europe; and even now the most rigid of them will not permit their fellow-members to enter a 'church.'

The Mennonites have a great regard for their past history—and not unjustly. Their forefathers were the first to protest against slavery; they committed their scruples to writing on 18th April 1688, and delivered the document to the magistrate. In a manly and Christianlike spirit they declared: 'Freedom of conscience reigns here, which is right and rational, and personal freedom ought to reign here for every one, criminals of course excepted.' In the War of Independence their defencelessness was respected; nevertheless many emigrated in 1786 to Canada, as they could not approve of insurrection against the British government. Conservative in all things, they have not even yet, after two centuries, given up their old language, 'Pennsylvania Dutch.'

The Mennonites in America are divided into: (1) Old Mennonites, who form the great majority; their periodicals are the *Mennonitische Rundschau* and *The Herald of Truth* (the Germ. ed., *Herold der Wahrheit*, has ceased to appear since 1901—an evidence of the decline of the German language among them); (2) 'Amish' Mennonites; and (3) the 'General Conference.' Since 1860 the last-mentioned party has endeavoured to form an organization between all the Mennonites of America, respecting the autonomy and the peculiarities of each congregation. The foundation of Bethel College at Newton, Kans., was favoured by them.¹

2. *Characteristics*.—Wherever Mennonites are found—in Switzerland or in Germany, in Russia or in France, in the United States or in Canada—they are known as excellent husbandmen, simple in their manners, blameless in their behaviour, honest, conscientious, and diligent, so that most of them are in easy circumstances. In consequence of their seclusion the civilization of later times has had little influence on them; they are very conservative and often suspicious of opinions which differ from their own. (An exception must be made in the case of the German Mennonites who live close to the frontiers of the Netherlands—East Friesland, Westphalia, and on the Rhine; they have been influenced by the Dutch Mennonites [see below].) They have remained where their forefathers stood three centuries ago; in order to understand their opinions, it is, therefore, necessary to consult the writings composed by their fellow-believers in the 16th and 17th centuries.

3. *Religious beliefs*.—The oldest defenders of baptism after confession of faith entertained a strong aversion to the papal hierarchy. They would not reform the Roman Catholic Church; they would destroy it by the foundation of separate and wholly autonomous congregations. The preachers were elected by the majority; there was no tie between the congregations except that of community of faith and of love. According to the example of the segregation of Israel, the people of the Lord, from the Gentiles, the congregation of Christ ought to be separated from the world; this was done by the external bond of laws and commandments that formed a sort of fence round the true believers. As the congregation of the Lord consists only of believing and regenerate children of the Lord, only those who are sufficiently advanced in years and experience, and, therefore,

¹ One of the most renowned professors of this college was O. H. Wedel, author of the *Abriß der Geschichte der Mennoniten*, Newton, 1900–04, who died in 1910.

able to believe, can be admitted into the congregation by baptism. Hence they highly valued baptism as a token of the confession of faith, but they did not acknowledge the baptism of children as a baptism; he who was baptized as an infant was not baptized at all. The name of Anabaptists (*q.v.*), therefore, was an undeserved nickname, given them by their enemies.

They sought to maintain the purity of the congregation by excommunication, and taught that true believers must avoid all intercourse with an excommunicated member. The charge has often been brought against them that, since they regard themselves as the perfect or holy congregation of the Lord, they do not admit that they are poor lost sinners. Their lives and their writings, however, contradict this accusation most positively. It is true that they separated themselves from all those who were of a different opinion, but it was from fear of seduction. By the simplicity of their manners and their dress they showed their rejection of the world. A wedding outside of the congregation was a 'worldly,' a sinful, wedding. They were strangers on the earth; therefore no interference with the powers of the world, no using of the sword, was permitted. The oath is forbidden, not only by the gospel (Mt 5³⁴ and Ja 5¹²), but also for conscience' sake, since in the spiritual Kingdom of God on earth the truth is the highest and the only law. By their sharp contrast between the world and the congregation—the natural and the spiritual—they insisted on the necessity of regeneration; but their doctrine on this subject is legal rather than evangelical in character. They teach that regeneration is an OT contrition, awakened in the soul by the threats and the promises of God, who moves us through these to avoid sin and to live according to His will. These threats and promises are written in His word; therefore it is the seed of regeneration. They meant in good faith to be orthodox, but their dislike of all scholastic terms and their desire to use only the phrases of the NT caused them, sometimes, to disagree with the faith of the Church; hence they refused to acknowledge the Holy Ghost as a person—they called Him a power of God—and yet they believed that they professed purely the doctrine of the Trinity. They rejected every dogma from which they feared damage to the practice of their piety, for the tenor of their religious life was above all things practical; hence they repudiated most positively the Calvinistic tenets of predestination, irresistible grace, and the perseverance of the saints. In the doctrine of the Lord's Supper they followed Zwingli; but, for them, it was more a token of mutual love and unity. They combined with it the rite of feet-washing.

Such were the tenets of the community with which Menno Simons (1496-1561) became connected in 1536. He had been a priest at Witmarsum in Friesland, but after a long inward struggle he left the Roman Catholic Church. From that time he defended in sermons, writings, and disputations the opinions of his fellow-believers so eagerly that they were called after him—Mennonites. They had already suffered heavy losses by persecutions; but they struggled bravely on; no torture—not even death at the stake—could terrify them. The congregation in Amsterdam was founded in 1530 by Jan Volkerts Trijpmaker, who died a martyr in 1531. In his preaching he always exhorted his followers to be peaceful and obedient to the magistrate, but Jan Matthijs, by his fanatical impetuosity, prepared the way for the notorious Jan Beukels of Leyden (John of Leyden), whose fatal doctrine was that the time of enduring oppression had passed away, that the sword must be drawn,

and that the true believers were summoned to subjugate the kingdoms of the world, and especially Munster. The majority, however, disapproved of such violence; every day during the winter of 1534 the congregation of Amsterdam enrolled about one hundred additional members; and a party of forty insurgents, who on 10th May 1535 conquered the town-hall of that city, found no support. When the terrible tragedy of Munster had terminated, a separation took place throughout the Netherlands between the rebellious and the moderates—the latter party being called at first Obbenites and then Mennonites.

These increased greatly in spite of all obstacles, but their unity was soon broken by disagreement about the practice of excommunication. The more lenient Mennonites lived chiefly in Waterland (a part of North Holland); hence they were called Waterlanders. The more rigid were the Flemish and the Frisian Mennonites; but among those parties so many schisms have occurred that it is impossible to enumerate them all. Let it suffice to say that the Waterlanders formed the most tolerant and liberal party. They would not apply the epithet 'believing' or 'unbelieving' to any one on account of his particular opinions on articles of faith with which God in His word has not clearly connected salvation or condemnation. They even took an interest in the things of this world; *e.g.*, they supported with their money the great William of Orange in his efforts to liberate the Netherlands from the Spanish yoke. Afterwards many of them held magistracies, but the influence of the State Church has put an end to that.

The Mennonites exercised a remarkably attractive influence upon the Brownists who, from 1593, had settled in Amsterdam to evade the persecution in England (see art. BROWNISM). One of them, John Smyth, came to Holland in 1606; with his friend, Thomas Helwys, he forsook Brownism in 1608, administered baptism on confession of faith, and founded a separate congregation. A year afterwards he tried to amalgamate it with the Mennonites; in this his followers were successful (1615). Helwys, on the contrary, though he entertained friendly relations with the Mennonites, maintained his independence; he returned to England in 1611. His followers, influenced by Edward Barber (1641), came to the conclusion that only baptism by immersion was legal. Henceforth they called themselves Baptists, and broke off community of faith with the Mennonites.

In the 17th cent. Socinianism exercised such a great influence on the Mennonites that the Reformed theologian, J. Hoornbeek, could write: 'Anabaptista indoctus Socinianus, Socinianus autem doctus Anabaptista.' The more conservative desired to defend themselves against the intrusion of this dreaded heresy by maintaining the old confessions of faith—a dangerous measure, for these confessions had never had any binding authority. At last a great schism took place in 1664 between the liberal and the orthodox members ('Lamisten' and 'Zonisten'). With regard to the practice of Christian charity, however, the unity was not severed; the two parties worked together to relieve their suffering brethren in the Palatinate and elsewhere.

In the golden age of the Dutch Republic many of its poets and painters—among them probably the celebrated Rembrandt—were Mennonites. They formed more than one-tenth of the whole population, but as a rule neither the nobility nor the lower classes joined their ranks.

In the 18th cent. their number declined for many reasons. The lay-preachers, elected from among the brethren, no longer satisfied the congregations; consequently, a great number of

families passed into the State Church. The foundation of a theological seminary in Amsterdam (1735) did not produce any lasting improvement. At many places, fortunately, the piety of the forefathers continued, and the spiritual well-being of the people and the spreading of a higher civilization were objects of great care. The *Teyler's Genootschap* ('Society of Teyler') and the *Maatschappij tot Nut van 't Algemeen* ('Society for the Promotion of the General Good')—two institutions that to this day do a large amount of useful work—were founded in 1778 and 1784 by Mennonites.

They fully agreed with the Revolution of 1795, for their old ideals appeared to them to be realized by it; they gladly supported it by many sacrifices, but their prosperity greatly declined in the hard times of Napoleon. To improve this state of things the *Algemeene Doopsgezinde Sociëteit* ('General Society of Mennonites') was founded at Amsterdam in 1811 by some wealthy congregations, and at present all the Mennonite congregations are members of it. This Society took upon itself the care of the theological seminary and the support of the indigent congregations. By its influence the desirable end was obtained that all the congregations, in the course of time, possessed only ministers who had received a university education. From that time their seclusion from the other Protestants ceased. In the theological sciences the Mennonites are diligent and able co-operators (e.g., S. Hoekstra, J. G. de Hoop Scheffer, A. W. Wybrands, C. Sepp, S. Cramer). Often their ministers preach to congregations of another confession—in other words, they exchange pulpits. The professors of their seminary are also professors of theology at the university of Amsterdam.

Still the Mennonites have remained congregationalists; they are zealous for the entire independence of each congregation. Consequently, in the respective congregations there is some difference in the form of public worship—e.g., in the use of psalters and hymn-books—and there is also a difference in the manuals used for religious teaching. Nevertheless, they are strongly attached to each other and to their community, and promote their common interests in fraternal unanimity. Their ministers are elected by the majority of the brethren (and often also of the sisters) or, in many congregations, by the church-committee. They are not ordained and wear no official dress, for they form no class and have no authority.

In regard to baptism and oath-taking the opinions of the Mennonites are unchanged. Self-reliance, evident in the voluntary act of becoming a member of the congregation, is still the condition of membership, so that they would rather abolish the whole rite of baptism than permit the baptism of infants. They have no confessions of faith and would not tolerate them. They dislike dogmatic speculations, and hold that the characteristic of a true believer is not his creed but his life. Hence, their toleration allows persons of very different opinions to live peacefully together in the same congregation. The majority of them are liberal; the more conservative profess a Biblical orthodoxy.

Their original tenets concerning ecclesiastical discipline, bearing of arms, and civil office are at present abolished. Considering that the Mennonites form little more than one-hundredth part of the population, it is a significant fact that an important number of ministers, representatives of the nation, burgomasters, etc., have for many years belonged to them. The connexion with the Mennonites of other countries is maintained chiefly by the means of the missionary society, which propagates the gospel in Java and Sumatra. The missionaries and the contributions come principally from their foreign brethren.

LITERATURE.—The literature concerning the Mennonites is very extensive, but there is no good history of them, based on the advanced science of our days. The most important works on the subject are the following:

i. **GENERAL WORKS.**—J. H. Ottius, *Annales Anabaptistæschæ*, Basel, 1672; C. H. A. van der Smitten, *Kurzgefasste Gesch. der Mennoniten*, Summersfeld, Illinois, 1895; A. Brons, *Ursprung, Entwicklung und Schicksale der Mennoniten*, Amsterdam, 1912; C. H. Wedel, *Abriß der Gesch. der Mennoniten*, Newton, Kans., 1900-04.

ii. **SPECIAL WORKS.**—C. A. Cornelius, *Gesch. des Münsterischen Aufbruchs*, Leipzig, 1855-60; L. Keller, *Gesch. der Wiedertäufer und ihres Reichs zu Münster*, Münster, 1880; M. Schoen, *Mennonitentum in Westpreussen*, Berlin, 1886; J. P. Muller, *Mennoniten in Ostfriesland*, Emden, 1887; D. Musser, *The Reformed Mennonite Church*, Lancaster, Pa., 1878; S. W. Pennypacker, *Hist. and Biographical Sketches*, Philadelphia, 1883; H. P. Krehbiel, *The Hist. of General Conference of the Mennonites of N. America*, Canton, O., 1898; C. H. Smith, *The Mennonites of America*, Goshen, Ind., 1909; S. Blaupoten Cate, *Geschiedenis der Doopsgezinden in Nederland*, 5 vols., Leeuwarden and Amsterdam, 1839-47; S. Hoekstra, *Beginselen en leer der oude Doopsgezinden*, Amsterdam, 1863; a great number of essays in the annual periodical *Doopsgezinde Bijdragen*, 50 vols., Amsterdam, Leeuwarden, and Leyden, 1861-1912; *Bureau of the Census, Special Reports*, 'Religious Bodies, 1906,' in [Washington, 1910] 402-428; Schaff-Herzog, vii. [1910] 299-310. An almost complete bibliography of the writings concerning the Mennonites of all times and all countries will be found in the new catalogue of the library of the congregation of the Mennonites at Amsterdam (at present in the press).

W. J. KÜHLER.

MENTAL RESERVATION.—It seems to be universally admitted that there are cases in which we should do a grave wrong by supplying a questioner with the information which he demands, and that we are, therefore, justified in misleading him. Yet there is considerable difficulty as to the ethical grounds on which such deception can be defended. Does it not necessarily involve either implicit or explicit falsehood? And can a lie ever be right? The problem is an old one, and moralists have answered it in different ways. The doctrine of mental reservation is the solution offered by many theologians both mediæval and modern. This doctrine depends so closely on the traditional Roman Catholic teaching as to the intrinsic malice of lying that in order to explain it it will be necessary first to state briefly what that teaching is.

Roman Catholic theologians are unanimous in holding that a lie is always and necessarily sinful: there can be no such thing as a permissible lie. This is the teaching of St. Augustine (*de Mendacio, contra Mendacium ad Consentium, Enchiridion*, xvii. ff.); and every Roman Catholic theologian of weight is in agreement with him. The utterances of Scripture on the subject are, they believe, quite decisive, and leave no room for dispute. Moreover, the Scholastic theologians reach the same conclusion on rational grounds. A lie, they teach, does not necessarily presuppose the wish to deceive; it consists in the intentional assertion of what is contrary to a man's inward thought ('sermo prolatus cum intentione dicendi falsum'). The liar may know that his lie will not deceive; yet, so long as he intends to assert what is false (and is not manifestly joking), his words are a lie. Nature has provided us with the power to express our thoughts by external signs. He who employs this faculty to convey to others the very opposite of his thought is violating moral order; he is using his power for an illegitimate purpose; and his act contains an intrinsic turpitude. The wish to deceive is an aggravation of the offence; but it is not requisite to make the words a lie (Thomas Aquinas, *Summa Theol.* ii. ii. qu. 110, art. 1, 3). Falsehood is, further, an offence against justice; we owe the truth to our fellow-men. But, even apart from this aspect of it, the act is intrinsically evil.

It is plain that, where so strict a view is taken as to the obligation of truth, the cases which we are considering constitute a grave difficulty. Whatever be the circumstances, a lie can never be justified. Augustine seems to have thought that

the only choice lay between silence and a frank declaration of the truth irrespective of consequences (*de Mend.* xiii.). But it is clear that this does not solve the problem; for in many cases silence is equivalent to an admission; and it may well be that to answer the question proposed, whether by words or by silent assent, would constitute a flagrant breach of justice. A violation of the elementary principles of justice is not a whit less wrong than a sin against veracity.

Here, then, arises the question as to the permissibility of 'mental reservations.' A speaker is said to employ a mental reservation when his statement is true only if qualified by a restrictive clause, and when he does not openly express this clause but 'reserves' it within his own mind. Thus, *e.g.*, should a member of the Government reply to some impertinent inquiry regarding matters of State, 'I do not know,' his answer is in all likelihood qualified by such a reservation, and is to be understood as signifying, 'I do not know in my capacity of a private citizen.'

The general verdict of theologians is that a man may lawfully use mental reservations under certain given conditions, viz. if there be a real need of preserving a secret, and if the external circumstances are such as to indicate that the words may have to be understood in a restricted sense. Where these conditions are present, he may use reservation, even with the full provision that, for one reason or another, his questioner will not advert to the restriction. Thus, to take a classical example, if murderers inquire of a man whether their intended victim is lying concealed in his house, it is allowable for him to reply that no one is concealed there; for the circumstances are such that even the murderers themselves should be aware that the words may have to be understood with a restrictive clause: 'No one is concealed there, of whom I can justly speak to men like yourselves.' Mental reservations of this kind are termed *restrictiones late mentales*. It is only in a loose sense (*late*) that they can be called 'mental'; for their presence is externally recognizable through the circumstances of the case.

It is contended that these statements are not in any sense falsehoods. For it is a principle universally admitted that, in judging of the meaning of words, we must take into consideration the circumstances in which they are used. No one regards the prisoner's plea of 'Not guilty' as a lie. The concrete surroundings show that his words signify only that he is not guilty juridically, in the eye of the law. A priest is not looked on as guilty of falsehood when he professes never yet to have heard of some matter which was long since revealed to him in confession; all are aware that what is spoken in confession is to him as if it were unknown. In each case the circumstances indicate that the words may be employed in a restricted sense. Taken in that sense, they are true: they correspond with the speaker's real judgment. The same holds good in the cases where we are justified in using mental reservation; the circumstances show that there may be a qualifying clause.

It may be urged that in a mental reservation we use language with the deliberate purpose of deceiving another, and that this is, to all intents, falsehood. But the objection is not, in fact, justified. In the first place, our true purpose is not to deceive but to protect our secret—a thing that we have every right to do. We may not, indeed, in order to do so, tell a lie; but we are not bound to supply the questioner with the information which he unjustly seeks to extort. And, secondly, in such cases it is more correct to say that the questioner deceives himself than that we deceive him. He is well aware that to such a question we may be unable to give a full answer without the betrayal of a

secret, and he must expect an evasion. If he chooses to take it as an unqualified statement of the whole truth, let him attribute the error to his own folly. We may be the occasion of his mistake; we are not, properly speaking, its cause.

It stands to reason that mental reservation may be employed only where there is real necessity of preserving a secret, and where there is no other way of so doing; to employ such a method in matters of little moment would not be mental reservation, but plain falsehood. In the ordinary intercourse of daily life men assume that no exception will be taken to their inquiries, and that the replies which they receive will be frank; there is nothing in these matters to suggest to them the possibility of a restricted reply. This, however, is not the case if the restriction is such as to be manifest to all except the extremely unobservant. Under such circumstances a comparatively slight cause—*e.g.*, to set aside an inconvenient question—will be justification enough. Again, if the person who asks has a right to demand the information from us, then, unwelcome as the question may be, we must answer fully. It would not, *e.g.*, be justifiable to practise mental reservation to the income-tax commissioners.

In the 16th cent. a prolonged controversy arose as to the permissibility of the *restrictio pure mentalis*, viz. a mental reservation the presence of which is not indicated by any external circumstances whatever. The first to put forward this opinion appears to have been the famous canonist Martin de Aspilueta ('Doctor Navarrus'; 1491–1586). His authority was so great that he was followed by not a few authors of note, including L. Lessius, A. Diana, etc. On the other hand, theologians no less eminent maintained what is clearly the case, that such reservations differ in no way from falsehoods. This was the view emphatically taught by P. Laymann, J. Azor, G. de Coninck, and many others. In 1679 Innocent XI. condemned three propositions drawn from the works of those who defended the use of the *restrictio pure mentalis* (H. Denzinger and C. Bannwart, *Enchiridion Symbolorum*¹¹, Freiburg, 1911, nos. 1176–1178). Since that time the opinion has been acknowledged to be theologically indefensible.

Protestant moralists reject the doctrine of mental reservation, and those of them who deal with the cases at issue solve the problem by adopting a less rigorous view as to falsehood than is taken by the Roman Catholic theologians. They teach that the malice of lying consists in its being an offence against justice, truth being a debt which we owe our fellow-men; and that, where that debt ceases, falsehood is legitimate—thus, *e.g.*, Grotius (*de Jure Belli et Pacis*, III. i. 11), J. Milton (*Treatise of Christian Doctrine*, in *Prose Works*, London, 1848–53, v. 115–119), Jeremy Taylor (*Ductor Dubitantium*, in *Works*, London, 1823, xiii. 351), W. Paley (*Principles of Moral and Political Philosophy*, bk. iii. ch. 15, in *Works*, London, 1821, i. 135). For reasons given above this view is regarded as erroneous by the Roman Catholic theologians.

LITERATURE.—P. Laymann, *Theologia Moralis*, Munich, 1630, III. iv. 13; T. Raynaud, *Opus de Equivocatione et Mentali Restrictione*, in *Opera*, Lyons, 1665, xiv. 71; D. Viva, *Theses Damnatæ ab Alca. VII.*, Innoc. XI., Alca. VIII., Padua, 1708; G. J. Waffelaert, *Dissertation sur la malice du mensonge*, Bruges, 1864; J. H. Newman, *Apologia pro Vita Sua*, London, 1864, Appendix 8; T. Slater, art. 'Lying,' 'Mental Reservation,' in *CE*; A. Ballarini, *Opus Theologicum Morale*, Prato, 1890, VI. II. 4; and the moral theologians generally. Protestant criticism: R. Sanderson, *De juramenti promissorii Obligatione*, London, 1847, præf. VI. n. 6, E. Stillingfleet, sermon xvii. (1679), in *Works*, London, 1710, i. 253; O. Zöckler, art. 'Reservatio Mentalis,' in *PRE*². G. H. JOYCE.

MERCY.—Mercy, as an ethical quality predicable of both God and man, may be usefully dis-

tinguished from love or kindness as connoting in its object a certain inferiority, whether natural or spiritual. It excludes the idea of equality, in this or that relation, as between giver and receiver. In the Bible the divine mercy signifies active pity for the guilty or the miserable; it is manifested in countless ways, but pre-eminently in the bestowal of salvation in Christ, and may therefore be described as the form assumed by divine love in the presence of the sinful or the frail. Either moral failure or creaturely weakness is sufficient to evoke it, and both things are always found in all men. Hence mercy in God is rather a permanent disposition than merely an intermittent source of specific acts. As exhibited at its noblest in Jesus' personal demeanour, mercy has in it nothing of condescension, which is an attitude bordering on scorn; it was because He sought to establish with them such communion of spirit as might produce inward renewal that Jesus showed compassion to the needy, and under these circumstances mercy became the instrument of His trust in the divine capacities of man. Ere long Jesus was able to call the recipients of His mercy by the closer name of 'friends.'

The ascription of mercy to God implies a positive estimate of religious cognition, or at least the rejection of some negative estimates which have figured prominently in 19th cent. philosophy. To say of mercy, with Shakespeare, that 'it is an attribute to God Himself,' is the equivalent of holding that anthropomorphic judgments do not necessarily or substantially falsify our apprehension of the divine reality, and that moral qualities which faith sees in God are not essentially different from qualities in men called by the same names.

Apart from special tenets of the schools, Christian minds have usually held that the divine mercy is characterized, or even constituted, by two qualities. (1) It is free; it is not forced by any outward constraint, nor does it come to manifestation as the automatic response of reason to the facts of the world. God is love, love which has its measure in the Cross; and His mercy, as everlasting as Himself, is greater than we could either ask or think. It is misleading to speak of Him as constrained to mercy, if we mean simply that His action is the free expression of a perfectly loving Will; His pity is evoked, not by merit, or by tears of repentance, but by the need or ruin of His creatures. (2) It is absolute, and covers the whole of human life; it accepts no limit from human prejudice, but puts all men in debt for every good gift. For St. Paul the mercy of God has the aspect of miracle or paradox as being vouchsafed to the unworthy and even to the actively hostile, whose worth it creates but does not presuppose. Our part is not to measure or explain it, but rather to enjoy it with wonder and adoration.

Yet the best religious thought has never held the divine mercy to be incompatible with hostility to sin. Ethically pure compassion is a real capacity for holy anger; there is no mercy in allowing a bad man to go on in badness. Doubtless to an evil conscience mercy and judgment appear to be in conflict, but for Jesus both were living expressions of the Father's love.

Mercy in God asks for mercifulness in man. In the parable of the Unmerciful Servant (Mt 18²³⁻³⁵) Jesus made this plain for good and all. Mercy for Him is an element in the righteousness of the Kingdom, and it has been pointed out that 'it needed much to be inculcated in Christ's time, when sympathy was killed by the theory that all suffering was penalty of special sin, a theory which fostered a pitiless type of righteousness' (A. B. Bruce, in *Expositor's Greek Testament*, i. [1897] 99).

To seek at God's hands a pity which we refuse to others is insincere; not only so, but in the absence of a merciful spirit we are morally incapable of appreciating the free, unbought mercy of God. Hence the promise to the merciful that they shall receive mercy (Mt 5⁷) expresses one aspect of the moral nature of things.

Human mercy must take the mercy of God as its model and inspiration. Like its exemplar, it is not to be accurately doled out in proportion to the receiver's deserts; in its perfectness it will rather exhibit a certain abandonment and overflowing munificence, and will ask no questions about the offender save as to his penitence. But feeble and complaisant mercy is as demoralizing as indiscriminate charity. 'Be ye merciful, even as your Father is merciful' (Lk 6³⁶) is a call for discipline no less than lenity.

The supreme motive of mercifulness, whether to the guilty or to the necessitous, is not the natural desire to be treated mercifully in our own time of need; it is the thankful memory of pity bestowed on us by God. And the living sense that from the mercy of God all our hopes begin, the sight of its glorious freedom and absoluteness in Christ, is far more than a mood of comfortable security; it is charged with moral inspiration enabling Christian men to do and bear all things for the sake of the unmeasured divine love that for them has made all things new.

LITERATURE.—R. C. Trench, *New Testament Synonyms*, ed. London, 1901; H. Jacoby, *Neutestamentliche Ethik*, Königsberg, 1899; T. C. Hall, *History of Ethics within organised Christianity*, London, 1910; W. Herrmann, *Communion of the Christian with God*, Eng. tr.², do. 1906.

H. R. MACKINTOSH.

MERCY (Indian).—Adequately to discuss the significance and operation of the quality of mercy within the range of the Indian peoples would demand a book or treatise of no inconsiderable length. All that is practicable within the limits of an article is to attempt to exhibit the natural qualities and general tendencies that have been at work, to estimate the efficacy and worth of the influences that have been brought to bear, and to indicate the broad results in the character and disposition of the inhabitants of the country, as they are found in evidence at the present day. It is manifest that environment and ethnological origin and development, no less than religious prejudice and ethical culture, have contributed to a resultant quality or characteristic which can be defined only in the most general terms.

It is clear, moreover, that, from early historical times at least, the expression of this quality in the races of India has been obstructed and almost stifled in two directions, the one more or less a consequence of the other. The barriers raised by caste, which became only more formidable with the lapse of time, while permitting or even enjoining the exhibition of kindness, generosity, and pity within the narrow caste limits, formed insuperable obstacles to the exercise of these qualities without, and therefore tended inevitably to isolation and degradation. And religious pride and prejudice, allying themselves with caste distinctions, promoted the growth of a narrow partisanship and class organization, within which the development of a spirit of fraternity and human kindness was as little practicable as that of community of interest. The earlier periods of Indian history and social life also show clearly the presence of those feelings of mutual hostility and dislike which exist universally among groups of primitive peoples dwelling in a wide land, among whom isolation and the difficulties of communication are an effective ground of suspicion and of perpetual fear of that which presents itself as of unknown char-

acter and intentions. Thus the suspicion engendered by mere strangeness leads not seldom to acts of cruelty, which ultimately obtain the sanction of custom and are fortified by religious precept and rule. An unreasoning dread of that which is exceptional, rather than any other natural impulse, is probably at the basis of all such ruthless practices. The angry and hostile feelings thus aroused check the growth of the spirit of sympathy and mercifulness; and the latter must wait for the rise of a wider and more intelligent and generous outlook upon life and human relationships.

The claims, moreover, of a religious ritual which not only sanctioned, but enjoined, animal sacrifices were hostile to the development of the kindlier qualities of pity and regard for the weaker or less fortunate members of the tribe or community. Familiarity with the taking of life has always tended, not only in India, but elsewhere, to deaden sensibility and to bring into play the harsher and more cruel passions. When the sacrificial act claims the sanction of religion, and is transformed into a sacred rite and duty, the performance of which in all its rigid details is obligatory and of the highest merit, the debasing effect of custom and habit is reinforced by an appeal to the strongest human motives and prejudices. That which in many instances it would revolt a man to do for himself he will do determinedly and with a clear conscience under what he conceives to be divine authority. The elaborate Vedic sacrifices, with their large demands and imposing ritual, could have had in this respect only one consequence—to familiarize men's minds with thoughts of savagery, and to close their hearts and ears to the cry for compassion. With facilities for mutual intercourse and the advance of civilization, and with a higher estimate of the value of life in all its forms, these practices changed their character, or tended altogether to disappear. Offerings of fruit or flowers, or models in paste of animal form, took the place of the living sacrifice at the altar, and bear witness to an alteration of feeling on the part of the worshipper, and a desire to free his ritual from acts and observances which had become repugnant to a more cultivated and sensitive nature.

It is probable also that a distinction should be made—a distinction due to racial characteristic as well as to natural environment—between the primitive peoples of India and the later Aryan tribes, who entered the country in successive bands of invasion from the north-west and north. The latter were swayed by the gentler, more peaceable, and kindly temperament incident always to the pastoral habit of life. Eventually this tendency, though with many a set-back and cross-current, triumphed, and gave its general tone to the character and disposition of the entire Indian people. The primitive tribes, for the most part isolated from one another in gloomy and treacherous forest homes, received a training which developed the suspicious and harsher elements of human nature, brought into prominence the rugged aspects of nature as a whole, and was calculated to present few attractive features of generosity or humanity. Thus they were taught lessons of stern pitilessness and disregard of the life or well-being of others, and more or less unconsciously cultivated a disposition akin to that of the wild beasts against which they had continually to be on their guard. These two currents of thought and feeling may be traced all through the course of Indian history, and are observable at the present time among the racial and caste divisions of the country. It is to the credit of the innate courtesy

and sympathetic kindliness of the native Indian that a merciful and generous spirit has, on the whole, maintained itself against religious and social prejudices, and, in the face of influences from within and from without, has to a large extent prevailed against isolating class-feeling and sectarian pride.

In the Indian sacred books the duty of pitifulness and compassion to all is a constantly recurring theme. Mercy (*dayā*) and abstinence from injury to life (*ahimsā*) are primary obligations. Especially in the *Bhagavad-Gītā* (q.v.), and in the type of religious thought and experience which it represents, the enforcement of this duty occupies a prominent place. The true Brāhman may be known by his friendliness to all; and not only the Brāhman, but other castes also, are bound by the same rule. The best sacrifice is that which refrains from doing hurt to any creature; respect should be shown for the life and happiness of even the lowliest of creatures, and no animate being should ever be subjected to injury or wrong. In a similar manner the religious teaching of the schools that are in sympathy with the *Bhagavad-Gītā* repeats and enforces the same responsibility. Two comments upon these injunctions are perhaps natural and inevitable. They seem, in the first place, to show more regard for animal than for human life; it is probable that the original authors assumed the latter, or regarded it as inclusively stated in the larger precept. And, further, the interpretation placed upon the rule has been, at least to the Western mind, in practice so one-sided and exaggerated as to destroy in large part its operative worth. The general tendency, however, it can hardly be doubted, has been in the direction of the cultivation of the qualities of mercy and mutual consideration. These qualities naturally find little or no statement or emphasis in the books on law or ritual, or among the regulations for the detailed observance of the sacrifices. The Vedic hymns, while they extol the forbearance and mercy together with the justice of the gods, leave it a matter of inference rather than of command that men should follow in their steps. In general it may be said that the decisive influence upon Indian character and belief has been exercised not by the ritual precepts, but by the humanitarian teaching of the *Bhagavad-Gītā*, by the popular epic poetry, and by the tradition of the lives of the heroes of olden time.

The first organized protest against the sacrificial rule in the interests of a kindlier and more humane spirit was made by Buddhism. The character of Gautama Buddha, as depicted in the extant literature and stereotyped in painting and sculpture, is singularly gentle and attractive. In practice as well as by precept he would seem to have urged the duty of forbearance and brotherliness to all; to do no harm to any living thing was a rule enjoined upon all who desired to unite themselves to his company and be enrolled among his disciples; and the purpose of the law which forbade the Buddhist monk to move from place to place during *Vassa*, the season of the rains, was at least as much to avoid the otherwise inevitable destruction of animal and insect life which would ensue, at a time when the multiplicity and activity of all such life are most apparent, as in recognition of the difficulties of travel incident to the season. Hindu monks and ascetics appear also to have observed *Vassa*, although not so universally or to the same extent. The merciful spirit, of which the rule of *ahimsā* was the outcome and logical conclusion, pervaded Indian Buddhism as long as it remained in its native land, found expression in the acts and edicts of its

greatest emperor, Aśoka, and emphasized and extolled a generous tolerance towards the feelings and opinions of others, which, with rare exceptions, has characterized its attitude and life in all countries to which it has been carried. In India the influence which it exerted in this respect was strong, and remained as a permanent force in the life of the people after the Buddhist faith itself had become decadent and had perished from the land. In the wider aspect also, and as illustrating this spirit, Buddhism alone of the great religions of the world has never been guilty of persecution.

Jainism, the ancient sect contemporary with Buddhism and possessed of similar views and doctrines, inherited also from Hinduism the principles of mercifulness and regard for life in all its manifestations, but carried these principles to an extravagant and abnormal length. Even noxious creatures, however irritating or insignificant, may not be destroyed; and the literal interpretation of the injunction to do no hurt to living beings has led with them to practical inconveniences of a serious nature, which are not counterbalanced by an equivalent development of the qualities of a real compassion. Buddhism, moreover, in the days of its strength in India, made provision for sick, infirm, or worn-out animals in special hospitals; and similar institutions, established and maintained by adherents of the Hindu and Jain faiths, for many centuries past and even at the present time, bear witness to a compassionate spirit worthy of all commendation. To Western thought, however, these institutions appear not seldom to defeat their own object, and to be accompanied by contradictions in feeling and practice which it is difficult to reconcile with the spirit of the implied religious teaching. The form has been preserved and the letter of the law obeyed; but the meaning and motive of the whole have, in many instances at least, lost their force and been disregarded in the external fulfilment of an obligation which satisfied the conscience, but did little to effect a change in the character or disposition of the individual.

With the coming of the Muhammadans a new spirit invaded India, antagonistic to the old, the consequences of which were great and permanent. Born of religious fanaticism, and nurtured in the camp and on the field of battle, the warlike spirit of Islām bore down all religious opposition and refused to accept the symbol and confession of faith of the vanquished creed. From the minds of the conquerors religious fanaticism, in alliance with a temper naturally stern and self-contained, had banished all feelings of compassion towards aliens or foes. Thus a spirit of inhumanity, based ultimately upon religious precept and belief, not only inculcated indifference to life where the honour or extension of the faith was concerned, but urged the entire elimination of the infidel by force of arms. In a further respect also, and that wholly new to India, the example set has been followed with results calamitous for the whole peninsula, the untoward effects of which have only begun to be repaired within comparatively recent years. There is no evidence that before Islām led the way religious prejudice or rivalry ever found expression to any considerable extent in overt acts of persecution. The warfare between the sects was waged by word and argument in the schools and royal courts, but not by violence. The followers of Muhammad taught men to throw the sword into the scale; and the spirit of division and hatred has never since that time been other than latent on both sides, ready to spring to arms and perpetrate cruelties on any

violation of religious comity or outrage upon religious conviction.

Two further external influences deserve consideration, but are of very unequal weight and importance. Of non-Christian ethical systems that of the Parsis is unrivalled for its merciful spirit and regard for the poor and necessitous of its own religious community; and the large-hearted generosity of wealthy members of the Parsi faith has always been beyond praise. In general, however, the obligations of kindness and mutual helpfulness are valid towards those of their own faith alone; and, except by way of example, it cannot be said that their principles or practice have made any deep impression on the nation as a whole. Their numbers, moreover, are too few, and their social severance from Hindu and Muhammadan alike too complete, to enable them to exercise a wide-spread influence for good in this respect. They are and remain strangers in the land, whose character and life have been for the most part for themselves alone, neither shared in nor sought as a pattern by those among whom their lot was cast.

With Christianity it has been entirely otherwise. From the beginning it threw itself into the national and social life of the country, and, as far as the religious sentiment and pride of its opponents would permit, endeavoured to permeate society with its principles and to uplift the people as a whole to the level of its own ethical ideal. The influence of its temper and teaching has always been wider than the limits of its acknowledged churches or professed disciples. Its example has been pervasive and powerful, and mainly through its preaching and its schools it has exercised a far-reaching ethical influence on the doctrines and practice of the Indian peoples. Whether or how far early Buddhism was indebted to Christianity for moral precept and belief remains an open question, to which it is improbable that any definite or certain answer can ever be given. The later centuries, however, afford abundant evidence of the extent of Christian influence and the attractiveness of Christian ideals in modifying the hold of cruel rites upon the popular mind and in securing, although not always permanently, the acceptance of higher standards of right and mutual regard.

The influence described was never stronger than during the last and present centuries, and it was especially marked in the reform movements of the 19th cent., whose leaders never hesitated to acknowledge their indebtedness to Christian teaching and to the Christian Scriptures. Ram Mohan Roy, Keshab Chandra Sen, and others, to a large extent accepted the principles of the Christian faith, while repudiating its more distinctive doctrines (see art. BRĀHMA SAMĀJ). Moreover, it was on the ethical side that most would seem to have been learnt and adopted. The broad and kindly tolerance of all sects, which is a marked feature of the religious life of the Reformed churches, the gentle habit of mind and speech, and the regard for the rights and consideration for the needs and sufferings of others, if not altogether due to the leaders' knowledge and appreciation of Christian principles, were thereby greatly strengthened. With the exception of the Arya Samāj (*q.v.*), however, which exercises a growing ascendancy in many directions, the contribution of these sects to the spirit and thought of India has not been so effective or lasting as at one time was anticipated. The leaven of their influence has been restricted in its range, although within these limits a genuine effect has been produced.

At the basis of Indian religious and moral

thought, therefore, at least in its earlier stages and as regards the conception of the nature of the gods, lay a belief in the generally beneficent and merciful character of the divine powers. The Vedic deities are, for the most part, kindly disposed towards mankind. It is reasonable to suppose that in those remote ages also the quality of mercy found a place among the attributes of the gods because it was appreciated and practised by their worshippers. On the other hand, the awesome and threatening character which a nature-religion often and quite naturally assumes must not be overlooked. The two elementary characteristics or tendencies met, and, being incapable of complete reconciliation, existed side by side throughout the entire development of Indian spiritual and ethical history. Like most Orientals the Indian is by nature gentle and disposed to kindness and generosity; and this aspect of his disposition found expression in the *Bhagavad-Gītā* and kindred works, and was put into practice by those sects which more or less sincerely acknowledged its authority and were permeated by its spirit. Lower and darker forms of religious faith maintained a cruel and blood-stained ritual, the effect of which on those who followed it could not fail to promote hardness and insensibility to suffering or need. And the more influential systems of philosophy, if not actively hostile to considerations of humanity and brotherly love, at least stood aside, and found their interest and life in a region where the kindly mutual relations upon which mercy is dependent have no part.

It may be said, therefore, that the Indian faith that heaven is merciful has, on the whole, found expression in the Indian creed, and been translated into Indian practice. To generalize, however, with regard to races so diverse in origin, history, and character, on any but the broadest and most general basis, is impracticable. The cross-currents in the case of India are exceptionally numerous owing to the many elements that have entered into the life of the inhabitants of the country. An appreciation can take account of little more than the general characteristics of the majority, their habit of mind, and mode of action. These considerations, however, justify to the fullest extent the description of the native peoples of India as by nature indulgent and merciful.

LITERATURE.—The subject is discussed more or less incidentally in all works on the religions and philosophy of India. See artt. HINDUISM, JAINISM, PARSIS, BHAKTI-MĀRGA, BRĀHMA-SAMĀJ.

A. S. GEDEN.

MERCY (Muslim).—To despair of God's mercy is one of the great sins, for mercy is one of the attributes of God, and to doubt whether He will show it implies disbelief in this divine attribute.

'O my servants who have transgressed to your own hurt, despair not of God's mercy, for all sins doth God forgive, (Qur'an, xxxix. 54). 'Who despaireth of the mercy of his Lord, but they who err' (xv. 56).

The words 'In the name of God, the Merciful One,' form the heading of all chapters of the Qur'an except the ninth. *Al-Rahmān*, the Merciful One, is one of the names of God; it is used in some *sūras* for Allāh. The Qur'an refers in various ways to the mercy of God. The angels who celebrate His praises cry out: 'Our Lord! thou dost embrace all things in mercy and knowledge' (xl. 7). Satan is said to have claimed mercy on the ground that he was a thing and, therefore, part of the 'all things.' The reply is that the mercy refers only to the obedient and 'adds to the ruin of the wicked' (xvii. 84). The 'treasures of the mercies of the Lord' is a Qur'anic expression, and the word 'mercy' is used as a description of divine books. The book of Moses is spoken

of as a guide and a 'mercy' (xi. 20). The Qur'an is frequently called a 'mercy.'

'O men, now hath a warning come to you from your Lord, and a medicine for what is in your breasts, and a guidance and a mercy to believers' (x. 58). 'And we send down of the Qur'an that which is a healing and a mercy to the faithful, but it shall add to the ruin of the wicked' (xvii. 84).

It is said of those who follow Jesus that God put into their hearts 'mercy and compassion' (lvii. 27); but this is not consistent with the denunciation of them (ix. 29-35) and the prohibition of friendship with them (v. 56). The words probably apply to Christians who become Muslims, for the passage goes on to address those who believe:

'Fear God and believe in His apostle; two portions of His mercy will He give to you; He will bestow upon you a light to walk in' (lvii. 28).

The two portions are: one for believing in Muhammad, and one for belief in the former prophets (Baidāwī). The light is either the Qur'an to enable the convert to walk in the right path, or, if the walking refers to the bridge (*al-Ṣirāṭ*) finer than a hair, over which all must pass at the Last Day, then the 'light' is true faith which will preserve its possessor in his perilous walk over that bridge. One chapter of the Qur'an (lv.) is called *Sūrat-al-Rahmān*, the 'chapter of the Merciful One,' and begins: 'The Merciful One hath taught the Qur'an, hath created man, hath taught him articulate speech.' The phrase 'God is merciful' is in constant use, and in practical daily life has overshadowed the idea of His righteousness and justice. It too often leads to complacency and self-satisfaction. A man commits sin and says, 'God is merciful'; so, instead of leading to repentance and amendment of life, his idea of the mercy of God too often tends to make disobedience easy and safe.

LITERATURE.—There is no special literature on the subject; see literature under SALVATION (Muslim).

EDWARD SELL.

MERIT (Introductory and non-Christian).—In the earlier stages of religious development, as is attested by abundant examples in artt. BLEST, ABODE OF THE (Primitive and Savage), ESCHATOLOGY, and STATE AFTER DEATH, the moral character of life in this world is not a factor either for securing immortality at all or for determining rank and status in the future world, whether immortality be attained by an individual or be vouchsafed to all. In these early stages earthly position, notably chieftainship, or a particular manner of death—e.g., in battle—is a requisite qualification for life in the future world; character, whether good, bad, or indifferent, has no weight in deciding the question. When, however, religion advances, when immortality is not conferred automatically (if the religion in question believes it to be conferred at all), but is a boon which must be achieved by long and toilsome endeavour, then three conditions—sometimes separated, but usually combined in greater or less degree—are imposed: works, faith, and love.

The ideal combination of these three requisites is found in but one religion—Christianity; and within Christianity only Roman Catholicism gives full recognition in its official statements to all three. The doctrine of the merit of good works has fared poorly. Some religions practically ignore it, notably the Bhakti-mārga (*q.v.*) of India and the Sūfism (*q.v.*) of Persia. In both of these the attitude may be due to what they regard as undue stress on good works in Hinduism and Muhammadanism respectively; but, on the other hand, over-emphasis on faith and love to the exclusion of good works is dangerously apt to degenerate into an antinomianism which is a pitiful parody of religion at its best. Love alone is practically the sole condition of salvation to the Sūfi and to the follower of the Bhakti-mārga; faith is scarcely concerned except in so far as one naturally believes

with firmness what one loves with fervour. Faith and works are the essential bases of Mandæanism (W. Brandt, *Mandäische Religion*, Leipzig, 1889, pp. 171-174). Mere intellectual faith, without love or works, has never been held, so far as the writer knows, to avail for salvation, except possibly in extreme Lutheranism.

The stress laid by St. Paul on justification 'by faith apart from the deeds of the law' (Ro 3²⁸; cf. 5¹, Gal 2¹⁶) must not be wrested from its context in the Apostle's teaching, for he himself tells us that love is greater even than faith (1 Co 13), and that 'faith worketh by love' (Gal 5⁶; cf. 1 Th 1³, 1 Ti 1⁵ etc.). There was reason for him to speak disparagingly of works—it was necessary for him to combat the excessive nomism of Judaism. But St. Paul was a man of balanced judgment, and to say that he condemned all works because he deprecated reliance on them alone would be a misrepresentation of his true attitude. He recognized the value and the merit of good works (2 Co 8 f.), enjoining the church at Philippi to 'work out your own salvation with fear and trembling' (Ph 2¹²), and at Thessalonica to establish their hearts 'in every good work and word' (2 Th 2¹⁷). There is no doubt that he would have subscribed heartily to the famous passage of St. James (Ja 2¹⁷; cf. v. 20) that 'faith, if it have not works, is dead in itself.'

The doctrine of the merit accruing from good works may be viewed from two sides—from the side of man and from the side of the deity. From the human side, the more good a man does, or even tries to do, the greater is the merit which he deserves; from the divine side, it is recognized, practically by Christianity alone, that no man can be so rich in good works as to merit salvation; 'all have sinned, and fall short of the glory of God' (Ro 3²³); all human righteousness is, as Isaiah said (Is 64⁶), but as 'pannus menstruatus.'

Only a shallow thinker would stress the apparent antinomy here set forth; the two partial truths blend harmoniously in the perfect truth of the Christian faith. Indeed, the Christian is saved solely by merit, though not by his own. Our Lord Himself could say, as His earthly life drew to its close, that He had accomplished the work which His Father gave Him to do (Jn 17⁴), and He emphasized the necessity of work (5¹⁷ 9⁴). Only through the work consummated on Calvary did salvation come to man; only through the merit of the Sacrifice of the Atonement can we hope at last to attain to heaven (cf. Council of Trent, sess. v. ch. 3, sess. vi. chs. 3, 16, can. 10).

In the primitive stages of religion its essence may be regarded as works. Beliefs are fluid; ritual is stable; every rite must be performed with minute scrupulosity. If the proper rites are thus exactly observed, the result is certain (provided, of course, that no stronger counter-force opposes); and, if a happy hereafter is the object of such rites, that blessedness is thereby assured (cf. PC³ ii. 90 f.). Not all, however, are content with the discharge of minimum requirements and, consequently, with minimum results. If one wishes for more, he must do more; perhaps, also, it will be well for him to provide a store against unforeseen contingencies. In that case also he must be more energetic in the doing of such works as will effect such a result; it is even possible that merits may be deliberately amassed for the purpose of achieving results unattainable for those who are content with the requirements imposed on every one; and in some cases the merits thus stored up are available for others as well as for him who originally accumulates them. The doctrine of the merits of our Lord's Passion and, in Roman Catholic theology, of the merits of the saints at once come to mind in the latter connexion; and the Roman Catholic

dogma of the merit of works of supererogation also falls within this general category.

The doctrine of merit is, on the whole, a characteristic of the higher types of religion. We find it, it is true, among the lower races, as when the Brazilian Içanna 'say that the souls of the brave will become beautiful birds feeding on pleasant fruits, but cowards will be turned into reptiles' (PC³ ii. 7); and a similar belief is recorded of the African Maravi and of the Santal of India (ib. pp. 8, 10). Elsewhere, as among the Nicaraguans and the Negroes of Guinea, the good alone enjoy immortality, the wicked being annihilated (ib. p. 22 f.). Among the Greenlanders the condition of happy immortality is to have been a hard worker in this life (ib. p. 86; the manner of death—e.g., by drowning or in child-birth—is also a factor). In all these cases, which might be much multiplied—e.g., from African and American Indian tribes (ib. p. 94 f.)—the distinction between 'good' and 'bad' must invariably be interpreted by the standards of the particular peoples concerned. If this is done, there is undoubtedly a very real ethical basis and a true morality—even though quite rudimentary—as the foundation of the belief in the future destiny of the soul.

The doctrine of merit is much developed in the higher religions, as in Egyptian (cf. art. ETHICS AND MORALITY [Egyptian], § 7 f.) and Vedic (cf. Muir, v. [1872] 284 ff.), and reaches its non-Christian culmination in the Zoroastrian triad of 'good thoughts, good words, and good deeds' as antithetic to 'bad thoughts, bad words, and bad deeds.' The course of the evolution is well summarized by E. B. Tylor (PC³ ii. 84 f.):

'The idea of the next life being similar to this seems to have developed into the idea that what gives prosperity and renown here will give it there also, so that earthly conditions carry on their contrasts into the changed world after death. Thus a man's condition will be a result of, rather than a compensation or retribution for, his condition during life. . . . Through such an intermediate stage the doctrine of simple future existence was actually developed into the doctrine of future reward and punishment.'

Turning to the higher religions, we observe, first, that the teaching of Muhammadanism on the subject of merit is practically to the effect that good works are requisite, but that the true believer, being guided by Allāh to perform them, is, in reality, saved only by divine grace, while the wicked are punished eternally for the sins which they have committed, and for their refusal to submit to divine guidance. The problem is complicated here by the fatalism of Muhammadanism (see art. FATE [Muslim]).

At the Last Day 'every soul shall be recompensed as it hath deserved: no injustice on that day' (Qur'ān, xl. 17). It is equally true that whosoever of the 'People of the Book' 'believeth in God and the last day, and doeth that which is right, shall have their reward with their Lord' (ii. 59; cf. ii. 76, 106, 215, iii. 194, iv. 60, 121-123, 172, v. 73, vii. 40, xi. 14, xxv. 64-76; the idea is closely paralleled by Ac 10³⁶); and elsewhere faith is conjoined with observance of almsgiving and the appointed times of prayer (ii. 2-4), while throughout faith and works go together (e.g., iii. 190-199). The whole attitude of Islām on this matter may thus be summarized from the earliest *sūra* (xxxvii. 22-55) which deals extensively with it:

'Gather together those who have acted unjustly, . . . and guide them to the road for hell. . . .

But on this day they shall submit themselves to God. . . .

'Just, therefore, is the doom which our Lord hath passed upon us'. . . .

Ye shall surely taste the painful punishment, And ye shall not be rewarded but as ye have wrought, Save the sincere servants of God!

'But for the favour of my Lord, I had surely been of those who have been brought (unto damnation).'

In a word, the saved declare (vii. 41): 'Praise be to God who hath guided us hither! We had

not been guided had not God guided us !' (cf. also E. M. Wherry, *Comprehensive Commentary on the Qur'an*, London, 1882-86, ii. 12, note 31, and index, s.v. 'Salvation').

The most complete development of the theory of merit among the ethnic religions is undoubtedly found in India. The main aspects have already been considered at length in the art. KARMA, where it will be seen that the Indian concept of merit is closely connected—as it is in several other religious systems—with belief in transmigration (*q.v.*) and in asceticism (*q.v.*). One aspect, however, calls for mention here—the accumulation of merit for the attainment of supernatural results in this life.

On the theory of sacrifice as set forth by the *Brahmanas*—i.e., that it is a rite which *ipso facto* compels the result at which it aims—if follows that the accumulation of merit not only by sacrifice but also in other ways will constrain the gods themselves to bow before the might of the ascetic. This power may be used for good or for evil, according to the purpose of him who possesses the merit in question. The records of India are full of stories of sages who have won enormous powers by the accumulation of merit, almost wholly by asceticism.

Thus, Bali conquered Indra and all the other gods except Viṣṇu, and ruled the world until Viṣṇu outwitted him; Oṇvāna constrained Indra to do his will (*Mahābhārata*, iii. 122-125); the particularly ill-tempered Durvāsas by his curse brought the gods so completely under the power of the demons that only the famous churning of the Ocean of Milk, which produced the *amṛta* ('ambrosia'), restored the divine sway (*Viṣṇu Purāṇa*, i. 9); Hariśchandra's patience under trial deservedly raised him to heaven, though he unhappily boasted of his merit and fell, but, repenting in mid-air, still remains in his aerial city half-way between heaven and earth (*Mārkaṇḍeya Purāṇa*, i. 7 ff.); Kaṇḍu's austerities, like those of many other sages, were so perilous to the gods that Indra sent the Apsaras Pramlochā to seduce him (*Viṣṇu Purāṇa*, i. 15); Kārtavīrya thus obtained great boons, which he used wisely (*ib. iv. 11*); the demon Rāvāṇa, the evil figure of the *Rāmāyaṇa*, won supernatural power by the merit of his austerities; Viśvāmitra, whose conflicts with the almost equally merit-endowed Vasiṣṭha form an important theme in the earlier Sanskrit literature, rose to be a Brahman instead of being merely a Kṣatriya (Muir, i.2 [1872] 317 ff.). Indeed, the idea recurs constantly throughout Sanskrit literature, the implication being always that the sage owes his power solely to the merit which he has accumulated; and in modern folk-belief the same supernatural might is accredited to the Yogi and Faqir.

In later Zoroastrianism merit conditions very strictly one's position in the future world. Through full renunciation of sin and complete confession of it 'the duty and good works which were before performed' come back to a man (*Sāyast lā-Sāyast*, viii. 5-9). Those whose good and evil exactly balance go neither to heaven nor to hell, but to Hamēstagān, the 'Ever-stationary' (cf. L. H. Gray, *Muséon*, new ser., iii. [1902] 178), which in one text (*Dāristān-i-Dīnā*, xxiv. 6, xxxiii. 2) is divided into two parts, one for those whose goodness slightly preponderates, and the other for those whose evil minutely overbalances the scale. Not only is punishment in keeping with one's sin (cf. M. N. Dhalla, *Zoroastrian Theology*, New York, 1914, pp. 56 f., 273-275, 280 f.), but in the future world justice is so strictly observed that even the good deeds of a wicked man receive reward.

For instance, a man whose whole body was either cooked in the caldron or was undergoing some other torment had one of his legs stretched out unmolested, because he had either shoved a wisp of hay before a hungry animal that was tied and could not reach it or killed some noxious creatures with it. He had not done any other good deed his whole life long' (Dhalla, p. 281, with ref.; cf. also L. C. Casartelli, *Philosophy of the Mazdayasnan Religion under the Sassanids*, Bombay, 1889, p. 167 f.).

Merits avail, as the doctrine of the merits of the saints teaches, not only for one's self, but also for others. This has been recognized by other religions as well as by the older form of Christianity. In the Buddhist *Upasampaddā-kammavācchā*, or ritual

for admission to the Buddhist priesthood, the candidate prays: 'Let the merit that I have gained be shared by my lord. It is fitting to give me to share in the merit gained by my lord' (J. F. Dickson, *JRAS*, 1875, pp. 7, 9). Buddhism, however, stands almost alone in thus transferring merit during this life. The transfer of merit from the living to the dead is less common, although the Marcionite practice of 'baptizing for the dead' may possibly belong here (cf. J. Bingham, *Antiquities of the Chr. Church*, London, 1843-45, iii. 451-456). It is, however, taught by the Roman Catholic Church that, in virtue of the article of the Communion of Saints, the faithful living may transfer their merits for the benefit of souls in purgatory. More frequently the transfer is made in the future world, particularly at the examination of a recently arrived soul. Thus, in Muhammadanism, according to al-Ghazālī (*Perle précieuse*, ed. and tr. L. Gautier, Geneva, 1878, p. 79 f.), the man whose good and evil exactly counterbalance is bidden by Allāh to borrow some small merit from a more fortunate soul that the balance may be turned in his favour (for other solutions of this problem cf. the discussions connected with the al-A'raf of Qur'an, vii. 44-46, and see J. B. Rüling, *Beiträge zur Eschatologie des Islam*, Leipzig, 1895, p. 37 f.; M. Wolff, *Muh. Eschatologie*, do. 1872, p. 85). In late Zoroastrianism sacrificial merit (*kirfak*) of which the officiating priest is unaware goes to the treasury (*ganj*) of the angels, who give the ensuing enjoyment 'to the soul of that person who has at once become righteous in mind' (*Sāyast lā-Sāyast*, viii. 4).

LOUIS H. GRAY.

MERIT (Christian).—Merit is, properly speaking, an ethical idea. It implies the existence of at least three things: (1) a moral law under which man is placed, (2) a free will which enables him to obey it, and (3) a system of rewards and punishments by which obedience or disobedience to the law is sanctioned. Meritorious conduct is such as is agreeable to the law, and is at the same time voluntary; as meritorious, it claims honour or reward. Demerit, on the other hand, is the mark of such voluntary conduct as is not correspondent to the law; conduct to which this mark attaches demands punishment (for this general conception of merit see J. Martineau, *Types of Ethical Theory*, Oxford, 1889, ii. 80 ff.).

In Christian theology the idea of merit is closely connected with that of good works; and there is an important inter-confessional controversy between Roman Catholicism and Protestantism concerning the relation between the two. Both confessions recognize the ethical character of Christianity by declaring good works necessary to salvation, but, while Catholicism views good works, with certain limitations, as meritorious of eternal salvation, Protestantism denies that the standpoint of merit is at all valid in the Christian life.

1. The Jewish and Hellenistic doctrine of merit.—The conception of the merit of good works and the demerit of disobedience was inherited by Christianity and Judaism. It does not belong, strictly speaking, to the prophetic religion of Israel. While the prophetic religion is, above all things, ethical, and its demand is for righteousness, the point of view under which right conduct is regarded is, in the first place, rather that of loyalty to Jahweh than that of the accumulation of merit and demerit, and the consequent hope of reward and fear of punishment. Typical of the prophetic attitude to the subject is such a sentence as Mic 6^s 'He hath shewed thee, O man, what is good; and what doth the Lord require of thee, but

to do justly, and to love mercy, and to walk humbly with thy God?' Nevertheless, there is always the idea in reserve of a judgment by which evil-doers are to be cut off; and in such a passage as Is 1¹⁰, the alternative of reward for obedience and punishment for disobedience is very clearly propounded (cf. also 3¹⁰).

With the codification of the prophetic morality in the Law, however, the standpoint of merit became much more clearly defined. In Dt 27-29, e.g., the whole duty of religion is brought under the heads of the blessing which rewards obedience to the divine commandments and of the curse which follows disobedience. In Dt 6²⁵ 24¹³ also is found the important idea of a 'righteousness before God' established by the performance of the precepts. Prophecy after the establishment of the Law tends more and more to be conformed to the legal standpoint. The general idea of reward and punishment is applied in a very atomistic way to the individual by Ezekiel (cf. 3¹⁶⁻²¹ 18¹⁻³²; other notable passages of a similar general tendency in later prophecy are Is 65¹¹⁻¹⁵ 66¹⁴⁻¹⁸, Mal 3¹⁻⁴).

The practical way in which the motives of the hope of reward and fear of punishment operated in the post-Exilic legalism can be studied in Proverbs and Ecclesiasticus (cf. Pr 19¹⁷, Sir 12¹² 29¹⁴). It should be noted, however, that so far there is no idea of rewards or punishments in a future life. The life after death is conceived in all the earlier stages of the Jewish religion as without moral distinction. In the further development of religion during the Greek period, however, moral distinctions are extended into the next life, while in the Palestinian Judaism antagonistic to Greek influence the scribes further developed the preceding legalism into a complete formalism.

In this formalism the different moral duties are regarded in great detail and in separation from one another. The moral task is not viewed as a whole, but as the sum of single observances. The duties of fasting, prayer, and almsgiving are especially prominent. Reward varies precisely as performance:

'He who performs one precept has gotten to himself one advocate; and he who commits one transgression has gotten to himself one accuser' (*Pirqe Abhoth*, iv. 16, ed. C. Taylor, Cambridge, 1897, p. 89).

The reward is partly present, partly future; where this world fails fully to reward or punish, the next world redresses the balance.

The result of this atomistic conception of moral duties is to give great prominence to the external and ceremonial duties. It leads naturally to that idea of righteousness by works which was so prevalent in Pharisaic circles in NT times.

Life under the Law was certainly not wholly formalism and externalism. Examples of real heart religion were still to be found among the Jews of this time. C. G. Montefiore rightly insists that the tendency to formalism represents only one aspect of the later Judaism, and that it is not fair to judge it by this aspect alone (see *Origin and Growth of Religion as Illustrated by the Religion of the Ancient Hebrews* [HL], London, 1897, lect. ix.). The same truth is emphasized by G. Dalman in his *Worte Jesu* (Eng. tr., *The Words of Jesus*, Edinburgh, 1902).

Nevertheless, the formalistic aspect of the religion of the scribes must here be emphasized, for the following reasons: (1) it distinguishes it from the earlier prophetic stages of the prophetic religion of Israel; (2) it explains the protest of the NT against the religion of the scribes; (3) it still influences the Roman Catholic conception of merit.

*Just because the catechisms for the elementary schools adduce passages like Dn 4²⁴ [sic], To 12⁸ for the Roman Catholic doctrine of good works, we must go back to the religion of Judaism' (K. Thieme, in *PRE* xxi. 110).

A brief glance at Hellenistic Judaism of the same period will conclude this part of our survey. The morality of the book of Wisdom and of Philo combines with the Jewish idea of obedience to the Law Plato's philosophical doctrine of virtue. On the subject of moral retribution Wisdom remains practically one with the earlier Ecclesiasticus. Philo, however, further distinguishes himself both from the Wisdom literature and from the teaching of the scribes by avoiding the principle of 'atomism' and carrying back all virtues to one root, love or faith. The punishment of sin, moreover, he regards as a living death, the reward of virtue as communion with God (see J. Drummond, art. 'Philo,' in *HDB* v. 207).

As regards the views of educated paganism, when Christianity came into being, the doctrine of Plato was a formative influence.

Plato 'in several dialogues expresses the thought that a judgment upon all souls takes place at death, at which they receive, *κατὰ τὴν ἀξίαν* (*Phædo*, 113 E), both the reward for their good and the punishment for their evil deeds (*Rep.* x. 614 ff., *Gorg.* 523 ff., *Phædo*, 113 f.). Here, however, the mere conception of merit is overlaid by the other, that he who strives after righteousness and virtue seeks *ὁμοιωθῆναι θεῷ*, and therefore will not be overlooked by God (*Rep.* x. 613 A B)' (J. Kunze, in *PRE* xx. 501).

The last thoughts carry us beyond the sphere of the doctrine of merit. Nevertheless, there can be no doubt that in paganism, as well as in Judaism, the view that regards God above all things as a rewarder of good and evil, and tends to review His relation to men under legal analogies, was the dominant and most usual religious theory. The total position of things is well summed up by Schultz in *SK* lxvii. 9:

'When Christianity entered the world and found its first expression in the dominant Jewish circles, as well as among the spokesmen of the idealistic Hellenic popular culture, the thought of a divine repayment deciding according to legal standards, and therefore of a merit or demerit of men according to which their fate was to be settled, was a self-evident axiom. A different relation of man to God, now that the prophetic type of religion had ceased to be influential, was not in general imaginable. With faith in God as the representative of the moral order of the world, there appeared to be evidently given the faith that He rewards and punishes according to the rule of human law.'

2. The doctrine of the NT.—The teaching of Jesus links itself on to that of the OT prophets, and also to that better side of the later Judaism upon which Montefiore and Dalman insist. It is, in the first place, essentially ethico-religious; religion and morality are completely blended in it. Jesus demands of His disciples an absolute conformity with the will of God (Mt 5⁴⁸), a righteousness better than that of the scribes (5²⁰). Without this none can enter into the kingdom of heaven (7²⁰). This better righteousness is, however, not to be attained by a closer conformity to the Law. Jesus further teaches that the only true righteousness is heart righteousness; that, apart from a right motive, outward conformity to the Law is worthless. Again, the idea of God as the Father, so central in His teaching, is the very antithesis of and makes impossible a legal conception of the relation of man to God. The righteousness which Jesus demands is, therefore, in the end just the spirit of sonship, energizing in the imitation of the Father (5⁴⁸).

While thus rejecting the legalism of the scribes, Jesus employs in His ethical teaching the current ideas of reward and punishment. That righteousness shall be rewarded and wrong-doing punished He reiterates again and again (Mt 5¹² 6¹⁹ 19²¹ etc.). He speaks once (unless it be the Evangelist) of 'good works' (*ἔμμεν τὰ καλὰ ἔργα*, Mt 5¹⁶); he did not reprove the question: 'What shall I do that I may inherit eternal life?' (Mk 10¹⁷); in His answer, moreover, He points the asker to the keeping of the commandments. Cf., further, the teaching of the parables of the faithful and unfaithful servants

(Mt 24^{45ff.}), and of the talents (25^{14ff.}), and observe again the principle expressed in Mk 4²⁴.

The principle of merit, therefore, occupies a somewhat ambiguous position in the teaching of Jesus. On the one hand, there are fundamental doctrines which appear to leave no room for it; on the other, we find in places a general recognition of it. The position of things in the NT as a whole is much the same.

The rest of the NT corresponds exactly in its ethical demands with the teaching of Jesus Himself. The necessity of righteousness is absolute, alike for the Jewish Christianity of the Epistle of James and the anti-Jewish Christianity of Paul, as well as for the other NT writers (cf. Ja 1²¹, Gal 5¹⁹⁻²¹, Eph 5⁹, 1 Jn 3⁷⁻¹² esp. v. 9). Throughout the NT also the doctrine of the Fatherhood of God is fundamental, though not so dominant as it is in the teaching of Jesus. The idea of retribution according to works is also generally prevalent. Paul, indeed, in the most important cycle of his teaching—that upon justification—appears to exclude the principle of merit altogether. Justification is by faith alone: by the works of the Law no man can be justified (Ro 3²⁰ 4⁵, Gal 2¹⁶ 3¹¹; observe especially the direct exclusion, in so many words, of the principle of merit in Ro 4⁴). Yet the Apostle teaches also that reward and punishment are according to men's works; and he regards this doctrine as axiomatic, feeling himself here on common ground not only with the Jews, but also with the Græco-Roman world (Ro 2^{6ff.}; cf., further, 2 Co 5¹⁰ 9⁶, Gal 6⁸, 2 Th 1⁹, and also Col 3²⁴, Eph 6⁸, 1 Ti 4⁸, 2 Ti 4⁸).

Even more prominent is the doctrine of retribution according to works in the Apocalypse, and the Epistles of James, 1 Peter; and to the Hebrews (cf. Rev 2¹⁰⁻²⁰ 3⁵, 12, 21 etc., Ja 3¹⁸ 4¹⁰, 1 P 1⁵, 17 etc., He 10³⁵ 11²⁶, 35 12²). The current idea of retribution is therefore almost universal in the NT, though, as Schultz says (*op. cit.* p. 13), 'without systematic development.' Only in the Gospel and Epistles of John is it almost wanting. The reason for this is assigned by Schultz as follows:

'At bottom there is no room for it. The true life work, which the community elect of God performs, is belief in the Son of God, and in this belief eternal life is already given, as possession and as hope' (p. 18).

Here, then, enters a problem which the NT writers do not themselves seem to have felt much. What is the relation of the doctrine of retribution, which the NT has in common with the current thought of its age, to the specifically Christian ideas, such as those of the Divine Fatherhood, or of justification by faith? This is a problem whose full significance was later to be brought to light. We may, however, refer here to the passages in the NT which suggest the limitations with which the doctrine of retribution is to be taken.

To begin with Jesus Himself, when He describes, as He often does, the relation of God to men by comparing it to that of a master and his household servants (cf. Mt 24^{45ff.}, 25^{14ff.}, Lk 17⁹), He thereby does away with the idea of merit and reward in the strict sense.

'The servant in the sense of antiquity can acquire no merit. He is *δούλος ἀπαιτός*, even when he has done all he should (Lk 17⁹). His master can reward him, but that remains at bottom an act of good pleasure' (Schultz, p. 15).

In the one instance where Jesus actually does speak of paid labourers, and so leaves the way open for the strict idea of reward according to merit, He emphasizes by contrast the truth that God will not be bound by this rule, but reserves to Himself the right of graciously transcending it (Mt 20¹⁴).

Finally, Jesus opens out the view of a reward which belongs rather to the personality revealed in the work than to the performance as such.

'Only where the tree is good, can the fruit be good (Mt 12³³ 13⁸³). It is the conduct of life, the *ἡγάθη*, which is recognized and rewarded in the individual deeds' (Schultz, p. 14).

Paul, again, suggests a reconciliation between the idea of justification by faith and judgment according to works in the conception of good works as the fruit of the Spirit (Gal 5²²).

'Where justification is, there is also the gift of the Spirit, and therefore also good works. Thus the verdict of present justification and of the future judgment must coincide' (R. S. Franks, *Man, Sin, and Salvation*, London and Edinburgh, 1908, p. 128 f.).

Again, in Eph 2⁸⁻¹⁰ good works appear not as a condition, but as a result, of salvation. 'Sometimes, however, the ethical interest so predominates that Paul even comes to represent future salvation as conditional on perseverance in faith and obedience' (*ib.* p. 129). Cf. Ro 8¹⁷, 1 Co 9²⁴⁻²⁷, Ph 3⁸⁻¹⁴ with exposition given by Franks (*ib.*).

Finally, we may take into account the recession of the idea of retribution in the Johannine writings, which has already been noticed. The tendency in the NT, at any rate in the most important parts of it, is in general to limit the principle of merit and retribution in favour of the doctrines of grace. But it must be admitted that such limitation is by no means universal or absolute (it is least observable in the minor NT writers); and there remains, therefore, a fundamental antinomy in the Christian religion, as originally stated, which theology is called upon to solve. How difficult the task is, the history of doctrine reveals.

3. The doctrine of merit in the Christian Church.

—We begin with primitive Gentile Christianity, and note that the whole cycle of Christian ideas by no means passed over equally to the Gentile Christians — what they received was naturally conditioned by their previous preparation. As to the necessity of good works, we find an intense moral earnestness in primitive Gentile Christianity. But, further, the idea of the twofold retribution according to works (reward or punishment) was familiar to the whole Græco-Roman world; hence this element of NT doctrine was easily assimilated, and, indeed, emphasized in more than its proper proportion, so much so that we have to recognize in the early Christian Church a return to a great extent to the Jewish doctrine of works. The doctrines, on the other hand, which should have prevented this return, such as, above all, the Pauline doctrine of justification by faith, found but little receptivity awaiting them. Hence the doctrine of good works in the Apostolic Fathers is very similar to that of the Jewish Rabbis. Christianity appears as a new law, and eternal life as the reward of keeping it. Just as in later Judaism, stress is especially laid on the merit of fasting and almsgiving. Cf. 2 Clem. xvi. 4 (almsgiving becomes a mitigation of sin); Barn. xix. 2; 2 Clem. iii. 3 f., viii. 4-6, ix. 5; Hermas, Sim. ix. xxviii. 5, x. ii. 4. We actually find already the idea of a work of supererogation (Hermas, Sim. v. iii. 3: 'If thou doest a good work beyond the commandment of God, thou shalt win for thyself more abundant glory').

In the Greek Fathers this line of thought continues, side by side, indeed, with the idea of grace, with which, however, it is never properly correlated. A more important and characteristic development belongs to Western theology, and begins with Tertullian. Himself a jurist, he gave to the doctrine of good works an essentially juristic stamp, which it has never lost in Latin Catholicism. A typical sentence is:

'A good deed has God as its debtor, just as also an evil one, because a judge is a rewarder of every cause' (*de Pen.* 2).

Tertullian, in fact, looks upon the whole life of the Christian after baptism as strictly a life under the Law, its motives hope of reward and fear of punishment, and the result deter-

mined purely according to legal standards. All good works are in general meritorious; merit, however, in a peculiar sense attaches to such as go beyond the strict demands of God—e.g., fasting and the maintenance of virginity. Retribution is strictly according to merit (*Scorp.* vi., *de Pat.* x., *ad Scap.* iv.).

These ideas are continued by the later Latin Fathers. Ambrose, however, begins to correlate them with the idea of divine grace—a work completed by Augustine. The latter still maintains that eternal life must be won by merit, and that good works establish merit, but the divine grace alone can enable men to perform good works, so that all our merits are God's gifts, and, when God crowns our merits, He crowns in reality simply His own gifts (*Ench.* cvii., *Ep.* cxciv. 19).

The teaching of Augustine is systematized and modified by the mediæval schoolmen. The idea that eternal salvation must be merited by good works is common to them all. Baptismal grace simply puts men into a condition to win merit. Works are not properly meritorious unless done from an inner principle of love (*caritas*), which is infused in the heart by the Spirit of God. Alexander of Hales, however, modified this doctrine by distinguishing between two degrees of merit, 'meritum de congruo' and 'meritum de condigno,' and two degrees of grace, 'gratia gratis data,' general grace, and 'gratia gratum faciens,' saving grace. He further taught that, while 'meritum de condigno,' or merit to which God owes a reward in strict justice, is possible only by the help of saving grace, 'meritum de congruo,' which God rewards because His mercy goes beyond strict justice, is possible by the help of general grace. In this way even the first grace can be merited (F. Loofs, *Dogmengeschichte*⁴, Halle, 1906, p. 544 f.). Thomas Aquinas was more cautious. He denied the possibility of merit before baptism. All merit, however, so far as it proceeds from the free will is 'de congruo'; so far as it proceeds from grace, it is 'de condigno' (*ib.* p. 549 f.). Duns Scotus taught that 'meritum de congruo' was possible to a man 'in puris naturalibus,' according to God's 'potentia absoluta,' not, however, according to his 'potentia ordinata' (*ib.* p. 596 f.). Finally, the Nominalist, Gabriel Biel, the disciple of William of Occam, taught without hesitation that he who does what is in him can merit 'de congruo' the grace which enables him 'de condigno' to merit salvation (*ib.* p. 615). It is from this point that the Reformation antithesis to the Roman Catholic doctrine of good works takes its start. Luther, returning to Paul's principle of justification by faith, declares that the doctrine that salvation can be merited by good works, however modified by a reference to the co-operation of divine grace, is absolutely opposed to the pure gospel.

We ought to notice that Luther's point of view is not altogether without parallel in the Middle Ages. Above all others Bernard of Clairvaux presents similar thoughts.

'He is foolish and mad, whoever he be that trusts in any merits of his life, who trusts in any religion or wisdom but only humility' (*de Diversis*, sermo xxvi. 1; other passages are given in A. Ritschl, *Rechtfertigung und Versöhnung*, I., Eng. tr., p. 99).

Luther, however, elevated what was thus occasionally expressed in the Middle Ages as a devotional point of view into the central doctrine of the faith. This teaching, in its ultimate form—there were many stages of development—is that salvation is by faith alone. Works are not the condition of righteousness, but righteousness received as a divine gift by faith is the condition of good works. Faith works by love, and its natural fruits are good works.

In opposition to Luther's view the Roman Catho-

lic Church at the Council of Trent stamped with its approval the mediæval doctrines of good works (see sess. vi. can. 32). R. Bellarmine briefly sums up the Roman Catholic point of view when he says: 'The common opinion of all Catholics is that good works are truly and properly meritorious, and that not merely of some particular reward, but of eternal life itself' (*de Justificatione*, v. 1 [*Disputationes*, Ingolstadt, 1588-93, vol. iii.]).

Protestantism as a whole, both Lutheran and Reformed, completely agrees with the position of Luther, as expressed above. In the early Lutheran Church there was, however, a controversy as to the necessity of good works. If they were not to be regarded as the meritorious cause of salvation, the question was in what relation they stood to it. Melancthon used phrases which were thought to imply that good works, though not the ground of justification, were nevertheless a *causa sine qua* non of our acceptance with God. To this mode of expression Luther objected, as good works are the consequence, and in no sense the condition, of justification. Agricola, a pupil of his, went further, and taught that good works are not necessary to salvation, the believer being not under the Law but under grace, and accepted for Christ's sake apart from any works of his own. Luther denounced this view also, maintaining that the Law remained under the gospel, not indeed as a means of justification, but as a revelation of the will of God as to what men ought to do (C. Hodge, *Systematic Theology*, London and Edinburgh, 1872-73, iii. 238).

The controversy was renewed not long afterwards in consequence of the doctrine of George Major, professor at Wittenberg, who had also been a pupil of Luther and Melancthon. Major was accused of teaching that good works were necessary to justification, but denied this. He maintained that good works were not necessary as meritorious of salvation, but were necessary as fruits of faith. He admitted that the sinner was in a state of salvation as soon as he believed, but taught that, if his faith did not produce good works, it was not saving faith. N. von Amsdorf, his chief opponent, taught, on the other hand, that, though the statement that good works were necessary to salvation might be true in a general way, it was misleading. Good works are necessary to sanctification, but not to salvation in the proper sense, which is identical with justification. Amsdorf went so far as even to say that good works were harmful to salvation (*op. cit.* p. 239 f.).

These controversies were closed by the Formula of Concord (1580), which, on the one hand, condemns the statement that good works are necessary to salvation, but, on the other, equally rejects the doctrine that they are harmful to salvation. Men are to be shown how necessary it is to exercise themselves towards God in good works, but also how necessary it is to avoid all thought of good works in the matter of justification. Finally, the Formula condemns the idea that faith in Christ can consist with intentional or wilful sin (cf. *F. C. Epitome*, ed. Leipzig, 1857, ix., 'de Bonis Operibus').

The Formula of Concord closes the history of the doctrine of good works in orthodox dogmatics. It remains now only to notice that, since the Formula was composed, the whole question of the place of good works in Christianity has passed into a new phase. The essentially ethical character of modern Protestant theology, with its emphasis on the teaching of the OT prophets, and still more on that of Christ, makes the question whether good works are necessary to salvation seem almost absurd. At the same time, in the sense in which the Formula of Concord denies that good works are necessary to salvation, modern Protestant theology is absolutely at one with it. It repudiates the Roman Catholic

conception of salvation by merit, and views good works, in essential agreement with the prophets, with Christ, and with Luther, as the expression of the filial attitude towards God.

There is, however, a powerful tendency not simply to deny the applicability of the category of merit to the matter of justification, but to regard it as a complete intruder in the domain of Christian theology. Justification by faith is regarded by Ritschl not as an alternative to justification by works, coming in in view of the failure of the latter, but as from the first the only method of salvation. The consequence of this view is an attempt to remove from theology the conception of the reward of good works in any other sense than that of their immanent fruition. The Pauline doctrine of twofold retribution is regarded simply as a remnant of Pharisaism or as a dialectic concession to his Jewish opponents (cf. Ritschl, *Rechtfertigung und Versöhnung*, ii. 319; also W. Beyschlag, *NT Theol.*, Eng. tr., Edinburgh, 1895, ii. 179; H. J. Holtzmann, *Lehrbuch der neutestamentl. Theol.*, Freiburg i. B., 1896-97, ii. 129). Our Lord's use of the category of reward is regarded as merely popular and not fitted to be the basis of a theological statement (cf. Holtzmann, i. 192 f.).

The question is really that of the rights of 'natural theology' within the Christian religion. The doctrine of twofold retribution has always been regarded as one of the pillars of a natural theology. Ritschl, however, regards the whole of the traditional natural theology, and in particular the doctrine of a twofold retribution, as due to the Hellenization of Christianity, and as being no proper part of Christian theology (cf. *Rechtfertigung und Versöhnung*, iii. 24 f., Eng. tr., p. 260 f., also ii. 318 f.), maintaining that the doctrine of twofold retribution, in a word, is Jewish or Greek but not Christian. The Ritschlian doctrine on this point has been by no means generally accepted. Many would still agree with C. Gore when, commenting on Ro 2¹³, he speaks of natural religion as the necessary and essential basis of all evangelical teaching (*The Epistle to the Romans*, London, 1899, i. 108 f.). It must, however, be admitted that the co-existence in the NT of the doctrine of justification by faith and of reward according to works remains one of the antinomies of the Christian religion, of which, if the Ritschlian position be refused, no satisfactory synthesis has yet been attained. And, further, Ritschl is surely right when he says that 'the rubric of good works is unsuitable as a comprehensive designation of the ethical side of Christianity' (iii. 627, Eng. tr., p. 663). The phrase 'good works' suggests just that Pharisaic atomism which is the very opposite of the teaching of Christ, and, while employed in the NT like many other phrases derived from Jewish thought, it is not one in which the specific genius of Christianity comes out, but rather one in connexion with which there is a perpetual danger of a reversion to a lower stage of religion.

LITERATURE.—The usual Biblical Theologies and Histories of Dogma; also the great systematic theological works, among which A. Ritschl's *Rechtfertigung und Versöhnung*, Bonn, 1889, is especially important (Eng. tr., *Justification and Reconciliation*, vol. i., Edinburgh, 1872, vol. ii., do. 1902, vol. ii. still untranslated). The great monograph on merit is H. Schultz, 'Der stiftliche Begriff des Verdienstes und seine Aufwendung auf das Verständniss des Werkes Christi,' in *SK* lxxvii. [1894] 7-60, 245-318, 445-553. See also Jarlt. 'Verdienst' and 'Werke, gute,' in *PRE³*.

ROBERT S. FRANKS.

MERLIN.—The name Merlin is a modification, first found in its Latinized form Merlinus, of the Welsh Myrddin or Merddin. That the latter form in Welsh is not a mere orthographical variant of the former is shown by a line of the poet Dafydd ab Gwilym (middle 14th cent.), which attests the pronunciation with *e* in the first syllable. In

mediæval romance Merlin played a prominent part, in close conjunction with the Arthurian legend, as a prophet and as a magician. In the earliest references which we have to him in Welsh literature he appears as a bard, while, later, he is represented in Welsh and other prophetic literature as a seer, until finally, in the Merlin romances, his character as a magician predominates. The origin of the name Myrddin or Merddin is uncertain, and it is only by accident that it has become identical with the second element of Caer Fyrddin, the Welsh name for Carmarthen, since, in that name, Myrddin (in its mutated form Fyrddin) is the later phonetic equivalent of the Celtic Mori-dünon ('the fortress near the sea'). The reason for the substitution of *l* for *dd* (=soft *th*) in the Latin and other forms of the name is uncertain. Probably it was due to the absence of the soft sound of *th* from these languages, and the consequent necessity for substituting for it some other sound, but it is not clear why that sound should have been *l*. As for the derivation of the name, it may be stated that there is one obstacle, and that a doubtful one, to its derivation from the Latin Martinus. This should give Merthin (with hard *th*), but there is a bare possibility that this form might change to Merddin, in accordance with a Welsh sound-change of *th* to *dd* which operated in certain words, but which was arrested before it affected all instances of *rth*. There is probably an instance of this sound-change in the place-name Gogerddan, in Cardiganshire, which doubtless stands for 'Gogerthan,' another form of 'Gogarthan,' a diminutive of Gogarth ('an eminence'). This derivation of Merddin is only a possibility; but, if it is sound, it is just conceivable that some of the early legends of Merlin contain distorted accounts of St. Martin, to whom St. Ninian is said to have dedicated the church called *Candida Casa* or Whithorn. A magician called Melinus is mentioned in the *Vita Patricii* of Jocelyn (x. 79, ed. *AS*, 11 Mar. [1865] 556), written in the 12th cent., but whether or not the name stands for Merlinus is uncertain; in the *Vita Patricii* which is ascribed to Bede, though more probably by Mellanius Probus (ed. J. Colgan, *Acta Sanctorum . . . Hibernie*, Louvain, 1845-47, ii. 51-63), he is called Locrus. It is interesting to note that Adamnan in his *Life of St. Columba* makes no mention of Merlin.

1. Merlin in Welsh legend.—So far as the earliest allusions to Merlin in purely Welsh literature are concerned, it is clear that his name belonged to the same legendary zone as the majority of the heroes and saints commemorated in early Welsh literature and included in early Welsh genealogies, namely to that of the 'Men of the North,' who are represented as having come into Wales from Northern Britain, more especially from the region of the Clyde and the Forth. This is the zone, e.g., of Cunedda Wledig, Urien Rheged and his son Owain, of St. Kentigern (the patron saint of Glasgow and of St. Asaph), Caw, Rhydderch Hael, Gwenddolen, Cynon ab Clydno Eiddin, and of Arthur himself. The débris of the ancient British legendary cycle is to be found in Nennius, as well as in poems of the *Black Book of Carmarthen*, the *Book of Aneirin*, the *Book of Taliessin*, and the *Red Book of Hergest*, while fragments of the same cycle may be detected in the *Mabinogion*, the *Triads*, and the *Bruts*. It is in the *Book of Aneirin*, a MS of the 13th cent., but containing much older material, that the first reference to Merlin by name occurs in Welsh literature, in the phrase 'he defended the fair song of Mirdyn,' the form 'Mirdyn' in this passage being undoubtedly a variant for 'Myrdin,' the mediæval Welsh equivalent of the Myrddin of later Welsh.

Since it is clear that the legend of Myrddin (Merlin), in its earlier developments, must have arisen on British soil and have been circulated in the ancient British tongue, it will be of interest, before considering its later evolution in Latin and other non-Welsh sources, to review the forms in which we find it in the literature of Wales. Unfortunately, the Welsh materials of the Merlin legend do not go further back than the 12th cent., but they doubtless embody more primitive features, though it is no longer easy to determine these elements with certainty. The Myrddin legend owed its popularity in Wales, in the 12th cent. and later, to its convenience as a vehicle for the enunciation of prophecies as to the ultimate success of the Welsh in their struggle against the English. In this form of the legend Myrddin is represented as having, in the battle of Arderydd (often wrongly written Ardderyd), caused the death of the son of his sister Gwenddydd, who apparently was the wife of Rhydderch Hael, a prince of Strathelyde, who, in the battle in question, was the opponent of another Northern prince, Gwenddolen, with whose court Myrddin as a poet appears to have been connected. According to this Welsh legend, smitten with remorse, he flees in his frenzy, under the pursuit of Rhydderch Hael and his hounds, to the Forest of Caledonia (Coed Celyddon), to which, in Welsh mediæval legend, allusion was sometimes made as the home of sprites and departed spirits. In his flight the bard's sole companion is a little pig, and with his companion he reaches the shelter of an apple-tree in the heart of the forest. Under this apple-tree he is represented as uttering prophecies concerning future events in the history of Wales. It would appear from some of Myrddin's utterances that, in the course of his wanderings, communications were sometimes made to him by a female friend, who bears in Welsh the name Chwimbrian or Chwiplein, who is probably the original of the Viviane of the later Merlin romances. It is possible that, in earlier forms of the legend than those known to us from Welsh literature, this nymph or Egeria may have originally played a less shadowy part than that which comes to view in Welsh 12th cent. legend, when the chief use of the Myrddin story was as a vehicle for encouraging vaticinations. It is noteworthy that in no part of early Welsh literature, not even in the *Black Book of Carmarthen*, which was written in the Friory of Carmarthen in the latter half of the 12th cent., is there any attempt to connect Myrddin with Carmarthen (in Welsh, Caer Fyrdin), as was done by Geoffrey of Monmouth. Hence we may conclude that the story of the connexion of Merlin with the North and with the battle of Arderydd—fought, according to the *Annales Cambriæ* (ed. *Monumenta hist. Britannica*, i., London, 1848, pp. 830-840), in A.D. 573—was traditional and well-established. The Northern associations of the story are further confirmed by the fact that Nennius mentions a Riderch Hen (*Hist. Brit. ad ann. 597*, ed. *Mon. hist. Brit.* i. 75), who is probably to be identified with Rhydderch Hael, while the life of St. Kentigern (xlv., ed. and tr. A. P. Forbes, *Historians of Scotland*, v., Edinburgh, 1874) names a Rederech, who is doubtless also to be identified with the same person, and a Laloiken, or Laloicen, whose name is clearly the same as that of Llallogan, identified with Myrddin in a poem purporting to be a conversation between Myrddin and his sister Gwenddydd, found in the *Red Book of Hergest* and generally known as the *Kyvoessi Myrddin* ('The Conversation of Myrddin'). H. L. D. Ward (in *Romania*, xxii. [1893] 504 ff.) has published another version of the Laloiken story, from two fragments in the Brit. Mus., and has adduced conclusive evidence

to show that Llallogan (Laloiken) is a proper name, found, e.g., in a Breton document called the *Redon Cartulary* as Lalocant and Lalocan (see *Romania*, xxii. 504). The simpler form of Llallogan, Lllallawc (= Llallog), is probably a purely Welsh variant. It may be stated that the precise site of Arderydd (given in an older form in the *Annales Cambriæ* as Armterid) has not been fixed with certainty, the usual identification with Arthurel being based on a false pronunciation, but it is probable that the name Gwenddolen survives in the place-name Carwhinelow (Caer Wenddolen) near Carlisle. In the fragments given above, Laloiken is said to have been driven mad by the events of the great battle 'in campo inter Lidel et Carwanolow situato.'

The attribution of prophecies in Welsh literature to a bard Myrddin is not an isolated phenomenon, but is also found in the case of the Welsh poet Taliessin, in whose case, as in that of Myrddin, a legendary nucleus has survived, the chief feature of which is an account of his transformations. It is probable that the connexion of the name Taliessin with prophecy was earlier than that of Myrddin, as is suggested by a statement put into the mouth of the latter in the first poem of the *Black Book of Carmarthen*, in a dialogue between him and Taliessin about the battle of Arderydd, to the effect that Myrddin's prophecy would be widely known after that of Taliessin. The conception of a poet that is implied in the utterance of such vaticinations resembles the mediæval idea of Vergil, who was then viewed more as a prophet and magician than as a poet (see D. Comparetti, *Vergil in the Middle Ages*, Eng. tr., E. F. M. Benecke, London, 1895). As for the genesis of such prophecies as those of Myrddin, the original models were probably the so-called *Sibylline Oracles*, and such imitations of them as bridged over the time between the period of their composition and the Middle Ages. In the Middle Ages and even later there was a congenial mental atmosphere for the composition of prophecies and the practice of magic, nor was an interest in vaticinations confined to Wales, as may be seen, e.g., in the popularity of such writers of prophecies as Atterbury, Bannister, John of Bridlington, Thomas of Erceldoune, and others in England, not to speak of Merlin himself.

In the *Black Book of Carmarthen* (12th cent.) the two chief forms of prophecy that are associated with the Myrddin legend are those known as the *Afallenau* ('The Apple-trees') and the *Hoianau* ('The Hails'). Both poems contain prophetic allusions, mainly to events of the 12th cent. in Wales. The former poem mentions Coed Celyddon ('the forest of Caledonia'), which was represented as the scene of the Myrddin legend, as well as Prydyn (Pictland) in the North, Mon (Anglesey), Ardudwy (N.W. Merioneth), Dinwythwy (near Carnarvon) in N. Wales, Cors Fochno and Pumlumon (Plynlimmon) in Cardiganshire, and the rivers Tawe, Taf, Teifi, Towy, Machafwy, and Edrywy in S. Wales. The *Hoianau* poem refers to the disagreement between Henry II. and Henry III., and also to the Welsh prince, Llewelyn ab Iorwerth, lord of Gwynedd or N.W. Wales. There are allusions in this poem to Gwynedd (N. W. Wales), and to Tir Ethlin, the Land of the Heir-Apparent, which was the district situated in N. Wales between the rivers Conway and Clwyd. The student of the prophetic allusions of these poems would do well to consult the Introduction and notes of J. Gwenogvryn Evans's edition of the *Black Book of Carmarthen*. Here, again, most of the topographical allusions are to places in S. Wales, such as Dyfed (S.W. Wales), St. Davids, Milford Haven, Mynyw (Monmouth), y Sarffren

and Castell Collwyn in Radnorshire, together with the rivers Taradry, Mynwy (the Monnow), Machafwy, and Teifi, while there are also allusions to certain famous battles of early Welsh history, which are probably taken from some current bardic list of such battles.

In the *Book of Taliesin* (14th cent.) there is a similar prophetic poem (but without any account of the Myrddin legend itself), put into the mouth of Myrddin under the title *Arymes Prydein Fawr* ('The Prophecy of Great Britain'). The events which are foretold are similar in character to those of the *Afallenau* and *Hoianau*. There are other poems in the MS which, without expressly mentioning Myrddin, are clearly cognate with the Myrddin poems already mentioned.

In the *Red Book of Hergest* (14th cent.) there are two poems which have clear links of affinity with the *Afallenau* and *Hoianau*, but which may have been composed later. They undoubtedly belong, like the latter, to the Welsh Myrddin tradition. These two poems are (1) *Kyvoessi Myrddin a Gwenddyd y chwaer*, 'The Conversation of Myrddin with his sister Gwenddydd,' and (2) *Gwasgurgerd Vyrddin yn y bed*, 'The Diffused Song of Myrddin in the grave.' Though there are allusions which make it clear that their writers were familiar with the legend of the Northern Myrddin, Myrddin in these poems is little else than the instrument of prophecy. It may be of interest to note that a common feature of the Myrddin and other prophecies of the Middle Ages was an expectation of the return of the princes Cynan and Cadwaladr to life, in order to lead jointly the Welsh forces to victory over the English.

It is in the *Kyvoessi* poem that the term *Llallogan*, already mentioned, occurs. Though this word is doubtless in origin a proper name, yet W. O. Pughe (*Nat. Dict. of the Welsh Lang.*², Denbigh, 1832, s.v.) interpreted both it and *Uallawg* as meaning 'twin brother.' It is not improbable that the term was misunderstood in this sense, even by the author of the *Kyvoessi*, since he makes Gwenddydd speak of 'my *Uallogan* Myrddin,' while the term *Uallawg*, as a synonym for *Uallogan*, is doubtless invented from it by analogy. In the original narrative on which the *Kyvoessi* poem was based, *Llallogan* was doubtless a proper name, as it is in the Life of St. Kentigern, in the passage 'in curia eius (Rodarci) (erat) homo fatuus vocabulo Laloicen,' and it is this Laloicen that is identified in the *Scotichronicon* (iii. 31; ed. W. Goodall, Edinburgh, 1759), as in the *Kyvoessi* poem, with Merlin. Poems xix., xx., and xxi. of the *Red Book of Hergest* (in Skene, *Four Ancient Books of Wales*) clearly belong to the same cycle as the preceding.

Occasional references to Myrddin are found in the Welsh poets of the Gododin period (A.D. 1100-1300), as, e.g., in Cynddelw's *Elegy to Owain Gwynedd* (*Myvyrian Archæology of Wales*², Denbigh, 1870, p. 152^a), where the poet says that Owain was 'fairer than Myrddin.' Gwynfardd Brycheiniog, too (*ib.* p. 193^b), speaks of the Lord Rhys of Deheubarth (S. Wales) as having been prophesied by Myrddin. Eldr Sais (*ib.* pp. 243^a, 244^b) refers to Myrddin's brilliancy in song, and likewise Gwilym Ddu o Arfon (*ib.* p. 277^a) speaks of 'the excellent Myrddin of the stock of Meirchion.' The poet Sefny-n, also, in an elegy on Iorwerth Gyrriog, compares the dead bard to Myrddin (*ib.* p. 334^b). Further, a cynical and sarcastic poet, Madog Dwygraig, satirizes the *Afallenau* in one of his poems called *Dychan i Ferch* ('A Satire on a Woman'). In Dafydd ab Gwilym (poem xxviii.) there is an echo of the fame of Myrddin as a poetic lover, while in poem xlvii. he is said 'to have made with the craftsmanship of love a house of glass about a mistress.' The few other allusions

to Myrddin in Dafydd ab Gwilym are unimportant. Later legend (see MS 162 in the Peniarth Collection, now in the National Library of Wales, Aberystwyth, written about 1600) associated Myrddin with the Island of Bardsey, off the coast of Carnarvonshire, and located his grave there (cf. R. Higden, in *Polychronicon* [ed. T. Gale, Oxford, 1691, i. 187]), and Giraldus Cambrensis may have had this legend in view when he spoke of Merlinus Celidonius' grave (see below) as being shown near Nevyd in Carnarvonshire.

That Wales was not without an interest in the prophecies of the Sibyl, which are probably the prototypes of the Merlin and similar vaticinations, is shown by the fact that MS 5 of the Peniarth Collection, belonging to the second quarter of the 14th cent., contains a Welsh translation of the Sibylline prophecies, called *Llyma Prophwydoliaeth Sibyl doeth* ('Here is the prophecy of the wise Sibyl'), based on the *De Sibyllis* of Isidore of Seville. This translation is also found in the *Red Book of Hergest* (cols. 571^a-577), and in Peniarth MS 14, pp. 45-57. The latter bears the title 'The Sibyl's Dream,' and belongs to the middle of the 13th century. It differs both from the versions of Peniarth 5 and from the *Red Book* text. The popularity of prophecies in this and the subsequent century in Wales is further shown by the inclusion in Peniarth MS 3, written about 1300, of the *Kyvoessi* poem, together with the *Afallenau* and *Hoianau*, while MS 20 of the same collection (15th cent.), by its inclusion of the same poem and the addition to it of a further prophetic extension, shows that this popularity continued. This is further proved by the fact that we find in the *Cwta Cyfarwydd*, a MS written at varying dates from 1415 to 1456, copies of the *Afallenau* and *Hoianau* with the *Gwasgurgerd Vyrddin* poem together with English prophecies by Bridlington, Bannister, Thomas of Erceldoune, and others. We find the *Afallenau* and *Hoianau* in Peniarth MS 59, a MS of the first half of the 16th cent., while, in the latter half of that century and in the 17th, the Welsh Myrddin poems still continued to be copied, as we see from Llanstephan MS 41 (1610-30), now in the National Library of Wales.

In the foregoing account the fortune of the Arderydd or Northern legend of Merlin, with the associated prophecies, has been traced. The Merlin thus depicted is sometimes called in Latin 'Merlinus Silvestris,' and in Welsh 'Myrddin Wylt' ('Merlin the Wild'); while another Latin name by which he is known is that of 'Merlinus Celidonius' or 'Caledonius,' being so called in order to distinguish him from Merlinus Ambrosius, who is a creation of Geoffrey of Monmouth, through the substitution of Merlinus for the Ambrosius of a narrative which Geoffrey found in Nennius. A later MS of the *Annales Cambriae*, in its account of the battle of Arderydd, reflects the Merlinus Silvestris tradition, in its addition to the original entry of the words 'inter filios Elifer et Guendoleu filium Keidiau: in quo bello Guendoleu cecidit: Merlinus insanus effectus est.' In keeping with the Northern conception of Merlin already mentioned, but also influenced by Geoffrey's account in connexion with the name Laloicen, the Life of St. Kentigern (*Scotichronicon*, loc. cit.) refers to Merlin's suffering in the words that are put into his mouth: 'Ego sum Christianus, licet tanti nominis reus, olim Guortigirni vates, Merlinus vocitatus in hac solitudine dira patiens fata,' though the influence of Geoffrey is here unmistakable in the reference to Vortigern.

2. The Vita Merlini.—This is a Latin hexameter poem, giving, in verses of considerable ease and fluency, an account of Merlin's life and adventures. Nearly all writers upon it have taken it, owing to

its dedication, to be the work of Geoffrey of Monmouth, but the legend which it embodies is so entirely different from that given in Geoffrey's *Historia* that it is in the highest degree improbable that he is its author. The legend which it incorporates and expands is essentially that of the Welsh *Afallenau* and *Hoianau* and of the 'Laloicen' tradition that is contained in the Life of St. Kentigern. Ferdinand Lot has published an analysis of the *Vita Merlini* (*Annales de Bretagne*, xv.), and has shown it to be later than the Laloicen fragments already mentioned; but he too readily assumes that Geoffrey was its author, and goes too far in seeking to trace the influence of the *Vita Merlini* on the Welsh Myrddin poems of the *Black Book of Carmarthen* and of the *Red Book of Hergest*, with the exception of the first poem of the former, which purports to be a dialogue between Myrddin and Taliessin. The Latinized proper names of the *Vita Merlini* show quite clearly that they were formed by some one who was familiar with the Welsh names of the Myrddin legend, such as Ganiada for Gwenddydd, Telgesinus for Taliessin, and the like. At the same time, there are important departures from the Welsh form of the legend, as, for instance, the opposition of Guenolous to Merlin; but in the *Vita Merlini*, as in the *Afallenau*, there are prominent allusions to apples, and the whole setting of the Latin poem and of the Welsh poems, in spite of certain discrepancies, is for the most part the same. The *Vita Merlini*, however, contains one name, Mældinus, which, as Lot has pointed out, is probably derived from an Irish rather than from a Welsh source, being, in all likelihood, that of the hero of the voyage of Mælduin. Though the *Vita Merlini* appears to be the work of some one other than Geoffrey, it appeared during his lifetime, having been written about 1148, while he died in 1154. It was dedicated to Bishop Alexander's successor, Robert, who was a man of considerable influence at the court of Stephen. The poem is of great interest as showing the popularity of the Northern and Welsh type of the Merlin legend in cultured circles in Britain in the 12th cent., but familiarity with Geoffrey's history is already shown by the reference to Vortigern (l. 681).

3. Merlin in Geoffrey and in the Chronicles.—The introduction of the figure of Merlin into the mediæval Chronicles is due to Geoffrey of Monmouth, who deliberately transformed the Ambrosius of one of his sources, Nennius, into Merlinus. This is clear from the fact that, in the Prophecy and in the last part of the preceding book, Geoffrey calls Merlin Ambrosius Merlinus. The innovation in question was first made by Geoffrey, when he published 'The Prophecy of Merlin' as a separate work, before the appearance of his *Historia Regum Britanniae*. This Prophecy must have been published early enough for Ordericus Vitalis to quote from it, as he does in bk. xii. of his *History*, written about 1136 or 1137. Later it was incorporated in Geoffrey's *Historia*, and forms bk. vii. of that work. The Ambrosius with whom Geoffrey identified Merlin first comes to view in Gildas (*de Excidio Britanniae*, xxv., ed. *Mon. hist. Brit.* i. 15), as Ambrosius Aurelianus, but the first to make him into a legendary person was Nennius, who describes him (xlii.-xlv.) as a child without a father, for whom Vortigern searched, by the advice of his sorcerers, in order to render stable the foundations of a tower that he was building. He was found, according to Nennius, in the field or plain of Ellet, in the region of Gleguissing (= Glywysing in Monmouthshire), and in Nennius's narrative he is also associated with the ancient Carnarvonshire fort of Dinas Emrys (Emrys being the Welsh derivative of Ambrosius), near Beddgelert, and is represented as

a sorcerer (*magus*), who prophesies the final overthrow of the English by the Welsh. Ambrosius in Geoffrey appears as a separate character (*Hist. Brit.* viii. 1), but the rôle which he plays in that author was filled in Nennius by Guorthemir (Vortimer). It is Geoffrey, too, that first connects Merlin with Carmarthen (*Hist. Brit.* vi. 17).

Another new element which Geoffrey introduced into the story, and which became a notable feature of the Merlin romance, was the suggestion that the boy's father was a supernatural being of the type known by the name of *incubus*. The suggestion made by Nennius, that the boy was the son of a Roman consul, is omitted by Geoffrey. The idea of introducing an *incubus* into the story probably came from a reminiscence of the pseudo-Bede (*de Elem. Phil.*, bk. i. [PL xc. 1131]), who doubtless reflects a view put forward by St. Augustine. The germ of the conception of Merlin as a sorcerer was already in Nennius, and the idea of putting prophecies into his mouth was ready to Geoffrey's hand, and even then a practice of the times, as is seen by Geoffrey's own references (ii. 9, xii. 18) to the prophesying of the eagle at Shaftesbury. Giraldus Cambrensis, too, quotes prophecies of Merlin that are not found among those given by Geoffrey (see R. H. Fletcher, *Arthurian Material in the Chronicles*, Boston, 1909, p. 93, note 1). He makes a distinction between Merlinus Ambrosius and Merlinus Silvestris (or Celidonius), and attributes to the former only prophecies taken from Geoffrey, and he likewise states (*Itin. Camb.* ii. 6, 8) that he discovered, in an out-of-the-way locality, a copy of the prophecies of Merlinus Celidonius in the British tongue. Geoffrey gives prominence to Merlin's powers, not only as a prophet, but as a magician, and represents him as one whose magic power conveyed Stonehenge from Ireland to Salisbury Plain and changed the forms of Uther and his companions. In Geoffrey, however, Merlin is not mentioned later than Uther's reign, but subsequent legend and romance could not resist the temptation to associate him with Uther's son, Arthur. In romance, Merlin, as a magician, tended to come more and more into prominence, until at last he became a figure second only to that of Arthur himself.

In the case of subsequent chronicles the following points may be noted. The Welsh *Brut Tysilio*, an adaptation of Geoffrey's *History*, shows a development on the lines of the later Romances, and probably under their influence. For example, Merlin is represented as owing his birth to the machinations of Lucifer and other evil spirits, and the increased prominence of the magical conception of his character is seen by the statement that he, by his magic art alone, is able to draw the stones that are to be carried from Ireland to Salisbury Plain as far as the ships, after the complete failure of the warriors. The same tendencies may be noted in Wace, who omits Merlin's prophecies, with the exception of those about Vortigern, on the ground that they are unintelligible to him, while he invests Merlin throughout with superhuman powers, and does not even mention any mechanical assistance in the transmission of the blocks of Stonehenge. Traces of romantic influence come to view also in the Chronicle called *Draco Normannicus* (c. 1170; ed. R. Howlett, *Chron. of the Reigns of Stephen, etc.*, London, 1884-89, ii. 589-757), which, it may be stated, contains many allusions to the section of Merlin's prophecies that relate to the first half of the 12th century.

In Layamon's *Brut* there are a few additional touches to the story of Merlin, such as Merlin's explanation that the immediate cause of the fall of the tower which Vortigern was trying to build was the fighting of two dragons with one another at midnight. In this narrative, again, there is a

marked emphasis on the supernatural conception of Merlin, which shows itself on the side both of supernatural knowledge and of supernatural power. There are some points of contact in the narrative with the *Vita Merlini*, as in the account of the discovery of Merlin in a forest, at Uther's instance, when he wished for his aid to obtain Igerne as his mistress.

In the Latin hexameter poem called *Gesta Regum Britanniae* (ed. F. Michel, London, 1862), Merlin is entirely supernatural, as, e.g., where he transmits the stones to Stonehenge by means of magical songs, or where he magically changes Uther's form. Merlin, too, gives Arthur new strength in his contest with Frolo. Here, again, there is a link with the *Vita Merlini*, where it is said that Arthur was conveyed to an ever-to-be-remembered island, on which a royal maiden dwelt. In the case of other chronicles, some omit the prophecies or certain of them, as, for instance, Alfred of Beverley (c. 1150; ed. T. Hearne, Oxford, 1716), who omits most of them, and Richardus Cluniacensis (in 1162), who omitted the prophecies in the first edition of his *Universal Chronicle* (ed. L. A. Muratori, *Antiquitates Italicae medii aevi*, Milan, 1738-42, iv. 1079-1104), but who found it advisable to include them in his second and third editions. Again, it is clear that all chronicles did not share equally in the tendency to exaggerate the powers of Merlin; e.g., Ralph Niger in his *Chronicon* (ed. R. Anstruther, London, 1851) has a mere allusion to Merlin's transportation of the stones of Stonehenge.

There are, as already stated, traces in Giraldus Cambrensis of an attempt at the fusion and reconciliation of the Caledonian tradition and that of Geoffrey, in his theory of the existence of two Merlins. He follows Geoffrey in his connexion of Merlinus Ambrosius with Carmarthen, while he knows of the madness of Merlinus Caledonius, but attributes it not to remorse at having killed his sister's son, but to fright at the sight of an apparition in the air. Giraldus, like many of the chroniclers who succeeded Geoffrey, succumbed to the temptation of bringing Merlin down to the time of King Arthur. One story, which Giraldus records (*Itin. Camb.* ii. 6), to the effect that Merlinus Caledonius had been found near Nevyn in Carnarvonshire, is probably connected with the legend that associated him with the island of Bardsey. Merlin's burial appears to have been located in some traditions at Carmarthen, where a 'Merlin's Grave' was pointed out, while in Scotland it was located at Drummelzier, anciently Dunmeller, in Tweed-dale.

The wide-spread popularity of the prophecies of Merlin may be gauged by the fact that two Latin poems appear to be extant embodying a number of them from the pen of a Scandinavian monk called Gunlangus Leif of Thingeyra, while a similar MS in the Copenhagen Library was translated into English, with the *History of Hulfdan Einar*, and published in London in 1718 (see San-Marte, *Die Sagen von Merlin*, Halle, 1853, p. 18).

In 1185-89 there appeared a commentary on the prophecies of Merlin by Alanus de Insulis, and in 1603 it was published at Frankfurt. In this commentary Alanus testifies to the existence, in the Brittany of his day, of a strong belief in the prophecies in question. Further, John of Cornwall, a disciple of Peter Lombard, commented on these prophecies publicly in the University of Paris (see *Prophetia Merlini cum expositione Johannis Cornubiensis*, ap. K. J. Greith, *Spicileg. Vatican.*, Frauenfeld, 1838, p. 98). The credence given to the Merlin prophecies continued, in Britain and in France, well into the 17th cent., if not later, and the Council of Trent sought to counteract the considerable effects of this popularity by putting the

prophecies on the Index. A similar attitude of mind to that of the Council of Trent is reflected in the work called *Vincentii Bellovacensis Speculum Historiale* (xx. 20). For English editions of the *Life and Prophecies of Merlin*, see Literature.

4. *Merlin in romance.*—Merlin first comes to view as a character of romance proper in a poem of which only a fragment has come down to us, probably dating from the 12th cent., and usually attributed to Robert de Borron (ed. Paris and Ulrich, in their ed. of the *Huth Merlin*; see Lit.). This poem was the basis of a French prose work which forms the *Romance of Merlin*, and this, again, is thought to be partly the work of the same author. It has come down to us in two forms, the first being generally called the 'ordinary' or 'vulgate' Merlin, while the second is known as the *Suite de Merlin*. Of the latter work Malory's first four books are an abridgment, and from it is derived one of the minor Arthurian stories, namely that of Balin and Balan. In the Merlin romances, as in the later developments of the Arthurian story (see ARTHUR, ARTHURIAN CYCLE), there is an ecclesiastical or theological development, the leading motive which led to the birth of Merlin being the conspiracy of the world of demons to produce an Antichrist, who would be the means of rendering the work of the Incarnation ineffective. Thus the birth of Merlin is represented as a kind of counter-incarnation, and, through the machinations of the demons, he is brought into the world as the child of a woman whose family has been ruined by the evil spirits, and who is herself seduced by a demon. Providentially, however, Blaise, the confessor of Merlin's mother, baptizes the child as soon as it is born, and thereby brings it into the Christian fold. The child, nevertheless, retains, though a Christian, the demonic gifts of magic and prophecy, and these powers he puts to beneficial use even in his infancy, by saving his mother's life and startling her accusers by revealing their family secrets. The narrative then proceeds on the lines of Geoffrey's *History* in the account of his relations with Vortigern, Ambrosius, and Uther. After this, Arthur is represented as having been committed as an infant to Merlin's care, and Merlin hands him over to Antor, who brings him up as his own son. It is Merlin who reveals to Arthur the fact that he is the son of Uther Pendragon and Igerne, and it is to Merlin that Arthur looks for guidance and counsel during the earlier period of his rule. At the termination of this period Merlin vanishes from Arthur's court. The stories accounting for his disappearance vary in different forms of the romance. One story states that he was betrayed by a maiden called Niniane or Viviane, probably the Chwimbrian of Welsh legend; but in some versions of this narrative she is represented as a water-fairy, in others as a king's daughter. With this lady Merlin is in love, and she, in the spirit of Delilah, obtains from him the secret of his magic power, and uses this knowledge to cast him into a profound sleep and to imprison him alive in a rocky grave. According to this account, Merlin uttered a loud cry, called the 'Brait,' before he died. Apparently this form of the story was the most popular. In another version his prison is not of stone but of air; and, though Merlin in this prison can see and hear everything, he can be seen by none. He can also hold converse with wayfarers who pass his prison, and one of these happens to be Gawain. The prose *Perceval* contains another form of the story, according to which Merlin is not imprisoned by his mistress, but retires of his own accord to an edifice called an 'Esplumeor,' which he himself builds, after which retirement he is never more seen. The *Romance of Merlin* eventually became a long

introduction to the prose Lancelot and to the Arthurian cycle generally.

The Romance of Merlin, as already indicated, is to be found first in the fragmentary poem, attributed to Robert de Borron, giving, however, only the introductory part of the story, in a single MS of the Bibliothèque Nationale, and, secondly, in the prose version based on this poem in combination with the early history of the Grail, which bears the name *Joseph of Arimathea*. In two cases the Merlin story forms a small Arthurian cycle through the addition of a *Perceval* and a *Mort Artus*. Of the 'ordinary' or 'vulgate' Merlin, which is a long and elaborate romance, several copies are extant. This story is continued in two forms, each of which has survived in a single MS. One of these is called the *Huth Merlin*, after the distinguished patron of learning, Alfred Huth, who bore the expense of its publication. It is a version of which Malory made use in his rendering of the story, and the Spanish and Portuguese translators also based their versions upon it. The other sequel is MS 337, also in the Bibliothèque Nationale, and is called by Paulin Paris the *Livre Artus*.

In English the earliest form of the Merlin Romance is a metrical translation called *Arthur and Merlin*, which was made from French at the beginning of the 14th cent.; and a later translation, generally known as the great prose Merlin, was made about the middle of the 15th century. Spenser (*Faery Queen*, canto iii.) alludes to Merlin, and there is reference to his deception by the Lady of the Lake in Ariosto (*Orlando furioso*, canto iii. st. 10). The romantic development of the Merlin story is doubtless mainly due to the desire of the French *trouvères* to bring the legend of Merlin, like those of Arthur and Tristan, into harmony with the general civilization and culture of their time. In the 19th cent. Tennyson utilized the Merlin legend in his *Idylls of the King*, and gave a version of his own of the character of Viviane.

5. Merlin in satire.—Like the other mediæval romances, that of Merlin tended, in the eyes of a more critical age, to provoke satire, and so it is not strange that Cervantes ridicules and parodies it in his *Don Quixote*, while Rabelais also parodies the prophecies in his *Pantagrueline prognostication certaine, véritable et infallible*, composed about 1533, while in his *Gargantua* he exposes the life and prophecies of Merlin to further ridicule. The contrast between the spirit of Cervantes or Rabelais and that which delighted in the prophecies and romance of Merlin illustrates the change from the characteristic mental attitude of the Middle Ages to that of later times.

MESMERISM.—See HYPNOTISM.

MESSALIANS.—See EUCHITES.

MESSIAH.—I. SCOPE OF THE ARTICLE.—Much confusion is caused by the fact that the term 'Messianic' is used in a much wider range of meaning than 'Messiah.' It has come to be applied by Christian writers to everything in the OT which is thought to refer, however vaguely, to the coming and work of Christ or to the Church, while, even where this implication is wanting, it is given very generally to all passages which speak of the hope of a better and glorious future. 'Messiah,' on the other hand, refers definitely to a person, and it would seem, therefore, that the term 'Messianic' should be confined to passages which imply the coming of an extraordinary person, normally regarded as a king, who is to be in a special sense sent and endowed by God, and whose advent is to mark the end of a world-age. It would, indeed, be an advantage if the looser use of 'Messianic' could be dropped; it suggests that, in the hope of a Golden Age, the principal and original element was the expectation of a Saviour-King, which might here and there be ignored, or which might be assumed to be implied even where it was not actually mentioned. In fact, however, the reverse is the case; the oldest and the most general expectation is that of the era of happiness, and with this the hope of the Messiah was sometimes combined in later times. For it is quite clear that a majority of the OT passages which deal with the hopes of a glorious future do not speak of the King of the future at all; Jahweh Himself is the agent of deliverance and of judgment; He alone is Saviour and Redeemer in the OT; the nation as a whole, or the dynasty of its kings, is the object of His favour. In such cases the Christian interpreter may have good ground for maintaining that, from the religious point of view, such hopes were realized in the coming of Christ, but historically they are not the same as the expectation of a Messiah, and can be called Messianic only in the lax sense. All this wider expectation belongs to the subject of eschatology (*q.v.*), and this article will, therefore, be confined to the consideration of the Messiah in the strict sense, and the term 'Messianic' will be used only in connexion with him. It may be added that, while eschatology does not always imply a Messiah, neither does the

Messiah himself always appear in a strictly eschatological setting.

II. *MEANING OF THE WORD.*—The term 'Messiah' represents the Heb. *Māshiah*, the Aram. *M'shihā*, 'anointed one.' It is used quite generally in the OT as an epithet, both of priests (Lv 4⁵ 6²³ etc., and perhaps Dn 9²⁵) and of kings, esp. of Saul (1 S 12⁸ etc.), while in Is 45¹ it is applied to Cyrus. Nowhere in the OT does it occur in its later technical sense, which is first found in *Enoch* and *Psalms of Solomon* (see below, IV. 1). In the OT language any Jewish king is 'the Lord's anointed,' and the phrase is in no way confined to a single pre-eminent king. In Ps 105¹⁵ and 1 Ch 16²² 'anointed ones' occurs in the plural, of the patriarchs. Dalman¹ suggests that Messiah in its later sense is a shortened form of 'Jhvh's Anointed,' and that no single passage of the OT was responsible for its adoption.

'Christ' is, of course, *Χριστός*, the Gr. equivalent, which translates the Heb. *Māshiah* in the Septuagint. In view of discussions connected with its use in the NT, it is well to note that it is sometimes used without the article even when it is an epithet standing in apposition to a proper name—e.g., 1 S 26^{9, 11}.

The general significance of anointing is discussed in the art. under that heading. In view of the fact that 'Messiah' did not become a technical term till late, the primitive meaning of anointing is quite irrelevant in considering the ideas associated with the figure; e.g., even if it be true that anointing was originally transferred from the image of the god to the king, we cannot argue that the Messiah was regarded as a divine being. Anointing had come to denote the two ideas of consecration and endowment.

III. *TEACHING OF THE OT.*—In order to discover the general trend of the OT teaching it is essential first to discuss, however briefly, the exegesis of the separate passages which speak, or may be reasonably thought to speak, of the coming of a Messiah; in no other way is it possible to realize the precise extent and nature of the hope. The examination is complicated not merely by difficulties of interpretation, but also by questions as to authenticity and date. Here it should be noted that, if critics reject as late certain passages which refer to the Messiah, it is by no means always from any *a priori* unwillingness to allow the Messianic hope to be of early date or to find it in a particular prophet, but because on external evidence such passages seem to be inconsistent with the context. In many cases they presuppose the Exile in a way which seems to be impossible in a pre-Exilic writer; in others the note of hope and promise seems to nullify the message of judgment and punishment which occupies the central place. Here the criterion to be applied is a very delicate one. How far did threats and promises actually exist side by side in the message of the same prophet? At what point do the promises become so contradictory of the threats that they can be regarded only as later insertions? However these questions may be answered in any particular case, it may not be superfluous to point out that, when a passage is regarded as 'unauthentic' and late, it does not lose its value, either historical or religious; and it still remains evidence of the Messianic hope, only in a different age and circle from that to which it is commonly assigned. The principle being admitted that the prophetic books are composite works, comprising elements of various periods, each case must be judged solely on its merits.

1. *The data.*—It will be well to begin with 2 S 7

¹ *The Words of Jesus*, p. 291; see p. 292 for later Jewish use of the term.

as the passage which is most clearly typical of the OT belief, at any rate on one side. It seems to be Deuteronic in tone, and can hardly be earlier than the reign of Josiah. Its main purport is to insist on the permanence of the Davidic dynasty (vv. 11, 16). In its context this is contrasted with the fall of Saul's house (v. 16), but we may also assume an implied contrast with the various short-lived dynasties of the Northern Kingdom (cf. Hos 8⁴). The passage itself does not speak of any single pre-eminent or final successor of David and is in no way eschatological, but precisely in proportion as the actual occupants of the throne proved themselves unworthy would it be natural to look for some one king who could realize the ideal. And, if at the same time there were other expectations of a wonderful Saviour, the two lines of hope would easily coalesce. At any rate, the personal Messiah in the OT is nearly always associated with the Davidic dynasty, and the references in the early prophets which have any claim to be regarded as Messianic are all connected with it. They may, indeed, be older than 2 S 7, and in any case this passage will hardly be the origin of the hope; it rather embodies and gives literary form to something which already existed.

In Am 9¹¹⁻¹⁵ there is a promise of the restoration of the Davidic dynasty, with no reference to a personal Messiah, but the passage is almost certainly an Exilic addition (so J. Wellhausen, K. Marti, G. A. Smith, etc., though S. R. Driver^{*} defends it with some hesitation).

In Hosea it may not be necessary, with Marti and Volz, to reject all passages which speak of future happiness, but the only verse which is in any way Messianic in the strict sense is 3⁵, 'Afterward shall the children of Israel return, and seek the Lord their God, and David their king.' Here, again, the stress is laid on the Davidic dynasty; but either the whole verse or at least the words 'David their king' are of doubtful authenticity.

The crux of the question with regard to early Messianic prophecy is reached when we come to Isaiah.

(a) Is 7^{14ff.}—Until a new factor was introduced by considerations derived from comparative religion, it was becoming generally agreed that the passage had no reference to the birth, miraculous or otherwise, of a Saviour-child or king at all. As Gray points out, the promised sign is not necessarily a marvel or miracle (cf. Ex 3¹², 1 S 27^{2ff.}), but is to be found 'in the chain of events predicted.' By the time a child shortly to be born reaches a certain age the promised deliverance will have come. His name Immanuel does not imply the divinity of the child, or even that he will play a rôle as God's agent in the deliverance (as a matter of fact, there is not the least hint that he does anything of the sort), but, after the common Hebrew usage, expresses the point of view of the parents; it is the reverse of *Ichabod* (1 S 4²¹). H. Gressmann,[†] however, and others argue that the passage is intelligible only if we suppose an already existing belief in the advent of a divine Saviour-child, who is to be born mysteriously. On this view the virgin is 'the virgin of prophecy,' the mother spoken of in the tradition; 'butter and honey' are the food of the gods, as in Iranian and Greek myth; and the whole passage

^{*} *Cambridge Bible*, 'Joel and Amos,' Cambridge, 1897, p. 119 ff.

[†] Reference should be made to the very full and excellent discussion of this and the other Isaianic passages in G. E. Gray, *ICC*, 'Isaiah,' Edinburgh, 1912.

[‡] *Der Ursprung der israelitisch-jüdischen Eschatologie*, Göttingen, 1906, p. 272 ff.; A. Jeremias, *Babylonisches im Neuen Testament*, Leipzig, 1906, p. 64 ff.; C. F. Burney, *JThSt* x. [1908-09] 580 ff. For criticism see C. Clemon, *Primitive Christianity and its Non-Jewish Sources*, Eng. tr., Edinburgh, 1912, p. 143.

has a mythological background. The theory has an undeniable fascination, but its main hypothesis cannot yet be regarded as proved (see below, 2 (d)). In this case it rests on the probably false assumption that the sign must be of a miraculous nature. Further, neither the article nor the noun in *hā'almāh* requires the meaning put upon it. If we reject the reference to the wife of Isaiah or Ahaz or to some other particular mother, the definite article may be generic as in Am 3¹², while it is now generally agreed that *'almāh* does not necessarily denote virginity, and is certainly not the word which would have been chosen if the supernatural character of the birth without a human father had been the point to be emphasized. 'Butter and honey' may be merely a symbol of plenty, a variant of the common 'milk and honey.'¹ But perhaps the chief objection to the mythological view is to be found in the fact, to which attention has already been called, that Immanuel does not play any part in the deliverance, nor does he afterwards appear as a factor in this or any other prophet's hopes for the future. The apparent reference to Immanuel in 8⁸ is quite meaningless; there has been nothing to suggest that the child is the king to whom the land belongs, and we should probably read with LXX 'for God is with us' (cf. v. 10).²

(b) Is 9^{6ff.} is a passage of a very different character. We have here a true Davidic Messiah, but it is important to note that the restoration is the work of Jahweh Himself; the child is not himself a conqueror, but is born to be Prince of Peace. The fourfold name is remarkable, and, as Gray points out, 'mighty God' must not be toned down to 'mighty hero'; it is unique in the OT. Clemens³ admits that all four titles are 'perhaps mythological,' and the passage suggests the influence of the *Hofstül* (see below). The child apparently ascends the throne at once—a suggestion that it is empty at the time of his birth; this may perhaps imply an Exilic date, though there is nothing else in the passage itself which necessitates its being placed later than Isaiah.⁴ It is, in fact, the clearest and best passage to establish an early expectation of a Messiah. It is, however, very remarkable that the passage seems to have had no influence on later literature, being never referred to either in the OT or in the Apocalypses or the NT.⁵

(c) Is 11^{1ff.} had, on the contrary, a great influence on later thought, and lies behind the picture of the Messiah as drawn in many apocalyptic passages; in particular, the term 'Branch' became technical. Here, again, the Messiah is Davidic, with a special endowment of the Spirit. We note, too, the stress laid on the return of the Golden Age—a feature which may be derived from foreign mythology. At any rate, we have the Davidic Messiah in a clearly eschatological setting; v. 1 seems to imply a date after 586 B.C.;⁶ the metaphor is that of a tree cut down to the stump and sending

¹ It is not necessary for our present purpose to enter on the vexed question whether the passage is a threat or a promise; in either case we must suppose a certain amount of later insertions or of combination of passages written at different periods. Those who regard the passage as a threat take 'butter and honey' as a symbol of scarcity and nomadic fare—a view which Gray criticizes severely.

² The fact that the LXX has this rendering here suggests that its rendering *ναβέρος* in 7¹⁴ does not, as is often argued, imply that it interpreted the passage Messianically. For, if it had done so, it would surely not have dropped the only other possible reference to the divine child.

³ P. 145.

⁴ See Gray, *ad loc.* (p. 168), for a criticism of B. H. Kennett's argument (*The Composition of the Book of Isaiah*, London, 1910, p. 71) that the word used for 'boot' means a military boot worn by Syro-Greek soldiers, thus implying a Maccabean date. Gray himself leaves the date open.

⁵ Dalman, p. 317, n. 1.

⁶ So Gray, etc.; Driver, B. Duhamel, and G. A. Smith, however, keep the Isaianic date; see *HDB* n. 488, for Smith's arguments.

out fresh shoots, which would describe exactly the revival of the kingdom after its ruin at the fall of Jerusalem.

Mic 5^{2ff.} is peculiarly difficult.* Omitting minor questions of reading and exegesis, the main points are as follows. (a) The passage follows, though it may not be originally connected with, an eschatological passage in ch. 4 (cf. Is 2) where there is no mention of a Messiah. (b) It speaks of a Messianic king born at Bethlehem Ephrathah, and, therefore, Davidic; in spite of his humble origin (so G. A. Smith, *The Twelve Prophets*, London, 1896, i. 413 ff.), he is to be a great and apparently a peaceful ruler. Is more than this hinted at? In particular, does v. 2^b imply pre-existence or merely the antiquity of the family from which he springs? And what is the meaning of 'she which travaileth'? Gressmann and others explain it of the divine mother, and J. M. P. Smith admits this, but regards the verse as a late gloss, implying a Messianic interpretation of Is 7¹⁴; the change of person from both v. 2^b and v. 4 is very awkward, and so is the contradiction between Jahweh's abandonment of His people and the previous verse. But, even if a mysterious birth is hinted at, there is no suggestion that the mother is a virgin or that the child is in any way connected with Immanuel. Whatever the date of the verse, it is far better to follow some of the older commentators (Calvin, Orelli, etc.) and see in the phrase a reference to the birth-pangs of Zion in 4⁸, where exactly the same word is used for 'travaileth,' while in both passages the return of the remnant is referred to (cf. Hos 13¹⁸, Is 26¹⁷, where the same figure of travail is used). 'She which travaileth' is, therefore, Zion personified. (c) Verse 2^c certainly implies that there is no reigning king and, therefore, suggests an Exilic date. (d) Verse 5^{ff.} seem to belong to a different prophecy (tr. 'This'—not 'This man'—'shall be our protection'). The Messiah drops out, and the confidence of the passage rests on a different basis.[†]

In Jeremiah the main stress is laid on the continuance of the Davidic line, and this figures prominently in the book as we have it—a feature which is significant in view of the Deuteronomic origin of the fundamental passage 1 S 7. In 23^{5ff.} we have the righteous Branch or Shoot (*šemaḥ*, not *nēšer*, as in Is 11), with the name Jahweh Šidqēni, 'The Lord our Righteousness,' perhaps with an ironic reference to Zedekiah, the reigning king. But the application of the same term to Jerusalem in the parallel passage (33⁶) shows that the main stress is on the dynasty rather than on any single or final representative, and this feature appears clearly in 17²⁵ 22⁴ ('kings sitting upon the throne of David'), § while in 33^{14ff.} a very special emphasis is laid on the covenant with David, interpreted as meaning that he should never want a successor. In 30⁹ ('they shall serve the Lord their God, and David their king, whom I will raise up unto them') the reference seems to be to each successive representative rather than to any single descendant, or to a belief in the actual return of David himself. Finally, we note that Jahweh Himself is consistently the agent of deliverance, the Davidic king appearing only after the salvation is completed.

The general presentation in Ezekiel agrees with that of Jeremiah. We have references to 'David my servant,' as the ruler of the future (34²³ 37²⁴), with pictures of the Golden Age and a strong

* See J. M. P. Smith, *ICC*, 'Micah,' Zephaniah and Nahum, Edinburgh, 1912, *ad loc.*; Gressmann, pp. 278, 284.

† P. Haupt, in *Trans. of the Congress for the History of Religions*, Oxford, 1908, i. 288, argues for a Maccabean date; so Marti.

‡ C. H. Cornill and Marti accept the passage as genuine.

§ So in 81² 28⁴ the rulers in the happy future are shepherds, in the plural (cf. the 'saviours on mount Zion,' Ob 21).

stress on the presence of Jahweh Himself. In 17^{22ff.} the cedar twig planted on the mountain of the height of Israel may be a reference to the prophecies of Isaiah (?) and Jeremiah, while 'until he come whose right it is' (21²⁷) suggests the Shiloh prophecy of Gn 49¹⁰.* On the other hand, in the ideal State of chs. 40 ff. the 'Prince' is only one of a series of kings, and plays a very subordinate part in the reformed Jerusalem. The general impression given by Ezekiel is that he was acquainted with popular hopes of an individual Messiah and, in particular, with the promises attached to the Davidic dynasty; these were too strong to be entirely ignored, but the priest-prophet himself had little real interest in them.

In Hag 2²³ Zerubbabel is to be the ruler in the Messianic Age. So in Zec 3⁸ 6¹²† he is the 'Branch' and the servant of Jahweh. The importance of the passages is twofold: (a) we have the first undoubted example of the identification of a historical person with the Messiah; (b) the reference to the Branch shows, even more decisively than in Ezekiel, that earlier prophecies were being studied and interpreted in accordance with contemporary conditions.

Zec 9⁹ belongs to another and a later prophecy. Though the ass may originally have been the symbol of royalty (cf. Gn 49¹¹), it here stands for humility. The king is victorious over his enemies ('saved' rather than 'having salvation'), but the stress is on the peaceful character of his rule. He is not explicitly Davidic.

In the Psalms we are concerned with a group of royal Psalms, especially 2, 45, 72, 89, 110, 132. Here we are met with almost insoluble problems as to date, since there is not even the *a priori* presumption which we have in the case of passages which stand in the writings of a particular prophet. Further, we must allow for the possibility of glosses in the course of the many editings through which the various Psalters passed; such glosses may have emphasized a supposed Messianic reference—e.g., Ps 72⁸⁻¹²‡. In all these Psalms we find startling language used of kings, the extent of their dominion, and their power, usually with stress on the Davidic covenant. It is common ground that such language was never strictly true of any Israelite king in either kingdom. Are these Psalms, then, addressed to the expected Deliverer of the future, i.e. to the Messiah? The objection to this view is the strong impression made in most cases that a definite living king is addressed; e.g., Ps 45 is clearly an actual marriage song and is accepted as such, e.g., by Kirkpatrick and Briggs. And, if some of these Psalms are to be understood historically, the general similarity of language suggests that the same principle is to be applied to all. A. F. Kirkpatrick,§ in fact, argues that all have a primary historical reference, of course without prejudice to their spiritual application. In interpreting the language we are helped by the existence of the *Hofstil*, or 'Court style,' to which Gressmann|| and others call attention. Exaggerated language of this kind was a regular feature of the court addresses and poems in honour of Oriental monarchs; cf. the language of Ps 21⁴⁻⁸, which is

* As showing that earlier prophecies were by this time definitely studied, see 88¹⁷, where there is a re-editing of Jer 3-8, Zeph 1⁷.

† The text is in disorder; Zerubbabel must have been originally mentioned in 6¹¹; cf. 'crowns' in the plural and 'them both' in v. 13. Possibly when the power was centred in the high priest the text was deliberately altered, giving us perhaps the first example of the Levitical Messiah (see Driver, *Cambridge Bible*, ad loc.).

‡ See O. A. and E. G. Briggs, *ICC*, 'Psalms,' Edinburgh, 1906-07, ad loc.

§ See *Cambridge Bible*, 'Psalms,' Cambridge, 1892-1912, vol. I. p. lxxvii ff.

|| P. 260 ff.; E. Sellin, *Der alttestamentliche Prophetismus*, Leipzig, 1912, p. 169 ff.

certainly addressed to an actual king. It is possible that this *Hofstil* in Israel, and perhaps elsewhere (see below, 2 (d)), included elements derived from the Messianic expectation. If it was believed that some one member of the Davidic dynasty should be the greatest of all, it was natural for the admirers of any king to suggest on his accession that he and no other was the long-desired. In this case the Psalms may be called quasi-Messianic, and at least illustrate the nature of the Messianic hope.

A warning against too strict an interpretation of this *Hofstil* is to be found in the phenomena presented by the Babylonian hymns. We find Nannar addressed as 'begetter of gods and men,' 'King of kings who has no judge superior to him'; but then precisely the same flattery is offered to Asshur, Ishtar, or Nebo.

As H. F. Hamilton points out (*The People of God*, London, 1912, p. 8), 'the ascription of universal dominion to so many of them [sc. the gods] was merely a piece of inexpensive flattery which no one mistook for serious truth. . . . It was a sound policy to avoid too much partiality.'

In the same way we must beware of laying too much stress on the uniqueness, majesty, or finality ascribed to the king addressed in any particular Psalm. Its language, taken literally, may seem to be applicable only to a unique Messiah, but in the mouth of an Oriental its application is less strict or exclusive.

The following points are further to be noted. (i.) As in the Prophets, the stress is on the Davidic covenant; 2 S 7 seems to be continually before the poets' eyes. This is especially marked in Ps 89, which refers to the nation and the dynasty, the nation itself being personified in v. 40^{ff.} (cf. Is 5, Ps 80¹²). So 'firstborn' in v. 27 seems to refer to the description of Israel in Ex 4²², while 'servant' in v. 29 suggests a parallel with 2 Isaiah. The Psalm as a whole is a prayer for the restoration of the dynasty and the nation, rather than for the coming of any particular king who is to mark a new epoch. The same applies to Ps 132, though 'horn of David to bud' (v. 17) may refer to 'the Branch.' Ps 45, however, is not Davidic (Briggs and Sellin ascribe it to N. Israel), nor is Ps 110 except in the title.

(ii.) The language of the Psalter had great influence on later Messianic ideas, terms being used which afterwards became titles of the Messiah. As they occur in the Psalter they are, however, hardly technical; they are not used of one definite figure or king to the exclusion of all others. We have 'anointed' (Ps 2² 89²⁸. 132¹⁰. 17) used in its general sense (see above, § II.), 'son' (27, probably not in 24¹), 'firstborn' (89²⁷), while 'thy throne, O God' (45⁶), may imply deification.*

(iii.) Ps 110 stands alone in speaking of a priest-king, who is not, however, Levitical; it is very generally regarded as Maccabean, referring to Simon (see, however, Briggs, *ad loc.*).

There remain a few other OT passages, mainly fragments of poetry embedded in the historical books, which require brief notice.

Gn 49¹⁰.†—It may be taken for granted that Shiloh is not a personal title of the Messiah. The first hint of such a view is found in the Talmud (*Sanh.* 98b), and it was not so used till the versions of the 16th century (Driver). The reading and interpretation are both doubtful, but it is possible that the passage is Messianic—'until he come whose right it is' (Ezk 21²⁷; see above) may be a reference.‡ The question then arises whether this

* So Gressmann, p. 256. This interpretation, however, which is that of LXX and He 1⁸, is open to grave objections; note esp. that in v. 7 we have 'Jahweh thy God.' Briggs supposes an interpolated address to God; Kirkpatrick favours, out of the many suggestions, 'thy throne is the throne of God,' or else 'thy Throne shall be for ever and ever,' *Elohim* having been substituted for an original *šhjh* or *šhsh*, misread as Jahweh.

† See Commentaries by Driver and Skinner, *ICC*, ad loc.

‡ O. C. Whitehouse, however (*DG II.* 173), thinks that the Genesis passage is moulded on Ezekiel.

verse is a late addition on the basis of the Isaianic prophecies (Driver), or whether, with Gunkel, Gressmann, and Sellin, we are to regard it as a fragment of pre-prophetic eschatology, not specifically Davidic. But it is a strange eulogy to say that Judah shall rule only till the great one from elsewhere comes. Skinner holds that the reference is simply to the Davidic dynasty; Judah is to be independent till it is merged in the kingdom of its hero.

Of Gn 3¹⁵ the most that can be urged in the way of Messianic interpretation is that the passage is a prediction of the ultimate victory of man, the seed of the woman, in the conflict with evil, typified by the serpent. The 'seed' cannot be understood as referring to any definite descendant of Adam in the singular. The same applies to the other predictions in Genesis with regard to the seed of Abraham, where the thought is of the nation; the exegesis of St. Paul in Gal 3¹⁶ is admittedly untenable.

Nu 24¹⁷ is usually understood as referring to David's conquest of Moab. But, on the ground that 'star' suggests a semi-mythological figure, Sellin* and others find in the passage a trace of a primitive Messianic hope; others regard it as Messianic but late. Note that the passage is certainly corrupt at the close.

Dt 33¹⁷ may refer only to the dominion of Ephraim (the Song belongs to the N. Kingdom), but Sellin† again urges that the hyperbole is too strong and that we have an echo of an early Messianic hope, transferred to Ephraim. In later times the passage influenced the idea of the Messiah ben Joseph.‡

Dt 18¹⁸ (applied Messianically in Ac 3²² 7³⁷) is clearly a promise of a succession of prophets, not of a single and final prophet.

A word must be said with regard to the Servant passages of 2 Isaiah. Very few critics now consider these to be Messianic in the strict sense, the reference being either to the actual nation or to the ideal Israel. This is so clear in the early songs that it must also hold good of Is 53; this is best understood of the sufferings of the Exile, which are seen to have a redemptive value not only for the nation, but for the world as a whole.§ Gressmann,|| however, on the ground of the obscure and oracular character of the language, argues that the writer is using already existing material which would be understood by his readers. Is 53 is a mystery hymn, addressed to a dying and rising God; He is treated as an eschatological figure, parallel to that of the Messiah, who is here neither Davidic nor specifically a king. It cannot be said that there is any real evidence for this view (for a criticism see Clemen, p. 149). Nor, again, is it possible to find a suffering God or Messiah in Zec 12¹⁰, which clearly refers to some historical martyr.

In Dn 7^{13ff}. ¶ there can be little doubt that the figure of 'a son of [a] man' appearing 'on' or 'with the clouds of heaven' ** is, in the context, a symbol of Israel itself, a human being in contrast to the 'beasts,' the hostile world empires. But it is equally clear that the expression came to be understood of a personal Messiah (see below, IV. 2 (d) (2)), and it is urged with some reason that it did not originate with Daniel, but had a history behind it. The figure is introduced as familiar, and no explanation is given in the ch. of the coming with clouds, which may, therefore, be assumed to be a recognized element in the concep-

tion. Gressmann¹ believes that we have a figure of foreign origin, parallel with the Messiah and afterwards identified with him. To Sellin² he is the Messiah transformed, the *Urmensch*, or 'primal man,' of Paradise, who is to return once more; Clemen³ is inclined to agree with this explanation of the origin.

In 9^{25f}. the references in the AV to the Messiah are certainly misleading.⁴ In v. 25 'the anointed one, the prince,' is either Cyrus or Jeshua; in v. 28 he is Onias the high priest.

2. Survey of OT teaching.—(a) From our review of the OT passages it becomes clear that the expectation of the Messiah in the strict sense occupied a comparatively subordinate place.⁵ The fact that in a large number of books and passages which deal with the future he is not mentioned at all is of the greatest significance as showing that his coming was not an essential or invariable element in the national hopes; e.g., he is never mentioned in Zephaniah, which is entirely eschatological, nor in Joel. It cannot be assumed, as the Christian interpreter often unconsciously assumes, that the Messiah is in such cases taken for granted. There is, in fact, no hint of him, and often no room for him. Further, even in books or groups of writing where we have found possible references to him, there are many passages where he is completely ignored (e.g., in Isaiah). The idea is introduced suddenly and sporadically and as suddenly dropped. Jahweh Himself is always the Redeemer and Saviour, and this is the essential and unvarying element in the OT teaching; the stress is on His coming and manifestation and not on that of any representative.⁶

(b) There are constant references to hopes connected with the dynasty of David, and these sometimes take the form of the expectation of another David, a specially endowed ruler. During the degradation and after the fall of the monarchy the earlier period was naturally idealized and became to the nation its Golden Age, while it became more and more necessary that he who was to revive its glories should be regarded as no ordinary man, but as the special representative of Jahweh.

(c) The way in which the references to the Messiah are introduced and the fact that they are so frequently enigmatic in form suggest that the Messianic belief was, above all, an element in the popular religion. It is wanting in the Priestly writings, and, as we saw, Ezekiel seems to have been somewhat suspicious of it; the prophets do not use it consistently, and it appears and disappears in an extraordinary way. Its connexion with the kingdom would commend it to the mind of the people, while religious teachers could avail themselves of it only with caution and reserve, though it could not always be entirely ignored. It is obvious that these were, in fact, the features which determined Christ's attitude to the hope in later times.

(d) In recent years the whole subject has been reconsidered in the light of comparative religion.⁷ Gunkel and, especially for our present subject, Gressmann have urged that Jewish eschatology, including the Messianic hope, is not a new development in the prophetic or Exilic periods, but that it goes back to a far earlier age and is really not specifically Jewish at all. They argue that the hope of a semi-divine Deliverer, or *Heilbringer*,

Cheyne, *Bible Problems*, London and New York, 1904; W. O. E. Oesterley, *Evolution of the Messianic Idea*, London, 1908; criticisms in Gray, 'Isaiah,' and Clemen.

was a common possession of the ancient world, especially in Egypt and Babylonia, and that the OT language is intelligible only when understood as one expression of that hope. Sellin essentially agrees as to the antiquity of the belief, which he regards as not merely pre-prophetic but as pre-Davidic, while he rejects the hypothesis of its foreign origin, being ready to admit foreign influence only in colouring and details.¹

We have already had examples of the principles of this school as applied to such passages as Is 7, Mic 5, etc. It is further suggested² that the Messiah is the *Urmensch*, or primal man, the hero-king of Paradise, who is to return with the Golden Age at the end. Gressmann rightly points out that the Messiah is the prince of peace rather than a conqueror; i.e., he is the king of the Golden Age restored by Jahweh. Sellin³ develops this idea. Job 15⁷ suggests a tradition of the first man as pre-existent with God and sharing His wisdom; he finds a trace of this in Gn 3⁸, 'to make one wise,'⁴ while the same word is used in Jer 23⁵, Is 52¹³; cf. the stress on wisdom in Is 11². He is, further, the 'son of man' of Ps 8 and of Daniel, while his pre-existence is hinted at in Is 49¹ 51¹⁶. Gressmann further argues that the idea of world dominion cannot be Hebrew in origin; cf. Ps 72⁸, where the river Euphrates is the centre of empire (it cannot be a boundary parallel to the 'ends of the earth'). Again, it is suggested that the descriptions of Jahweh ascending the throne and becoming king must have originally referred to a divine Messiah; the latter, Gunkel and Zimmern believe, is Babylonian in origin, while the same may be the case with the *Hofstil* in general.

The point of view is fascinating and has been argued with great ingenuity, but it has been generally felt that it lacks definite proof when we come to the details, whether of the OT passages or of the supposed parallels. As we have seen, the interpretation of the crucial passages is very doubtful. The Immanuel passage does not seem to refer to the Messiah hope at all, while, if 'she which travaileth' in Micah is understood of Zion, the idea of a mysterious origin disappears; the Shiloh passage is open to so many interpretations that it is very unsafe to build on it. It is quite true that with regard to eschatology in general (and it must be remembered that the view which we are considering starts from eschatology and not from the Messianic hope in particular) the prophets from Amos onwards give the impression of dealing with ideas already to some extent familiar, and it is equally true that the same is sometimes the case with the Messianic passages, but this does not justify us in finding the solution of every obscure passage in hypothetical popular traditions. We have already argued that the way in which the allusions to the Messiah are introduced does suggest that the idea was general and popular, used only occasionally and with some reserve by the prophets, so that it cannot be regarded as the discovery of any one of them. But of its great antiquity there is no real evidence. The passages in which it occurs are in many cases placed late on quite definite grounds, and we could hardly prove that it existed before the Exile except in the form of expectations connected with the permanence and glory of the house of David. We must, in fact, admit that data are wanting whereby we might fix with any certainty the period in which the hope arose. We can only say that the way in which the allusions are introduced does militate against its origin being placed in the Exilic period, in spite of the lack of definite evidence to the contrary, though

they do not in any way carry it back to a dim antiquity.

A similar verdict of 'not proven' must be passed on the hypothesis of a foreign origin (with regard to foreign influence on details, such as in the *Hofstil* and partial parallels, especially at a later period, the case is somewhat different). The preceding discussions have already dealt with many of the points. Sellin¹ discusses the supposed parallels in some detail, and concludes that there is no real parallel to the expectation of a divine deliverer to come at the end of history or to usher in a new era. The most that we find is a yearning for the return of the Golden Age of Paradise, together with the courtier's flattery applied to some particular king that he will be the one to bring this about—e.g., the famous Letter to Assurbanipal. A. H. Gardiner² has shown that the Leyden Papyrus has been misinterpreted and contains no reference to a 'Messiah,' while the Golenischeff Papyrus refers to a contemporary king Amen-em-het I. In all these cases we have examples of *Hofstil*, with the natural hope that each new king will bring in an era of peace and happiness, but no real evidence of a genuine expectation of a Messiah, which, Sellin concludes, is peculiar to Israel: 'The ancient East knows no eschatological king.'³

To return to the OT, the hypothesis of the wide-spread expectation of a Redeemer-King is not necessary to explain its language. We have in the earliest Messianic passages expectations connected with the revival and increased glory of the dynasty of David. There are also the eschatological hopes of the return of the Golden Age, which probably go back to a comparatively early period; this is to be brought about by Jahweh Himself; but, since all critical periods of progress are in actual experience connected with the appearance of some specially great individual (Israel was familiar with the work of an Abraham, a Moses, a David, or an Elijah), it was natural to believe that this salvation of Jahweh might be mediated by His earthly representative, who would then be looked for among the descendants of David; in this way the national and the eschatological hopes would easily be combined as we find them combined in the late passage Is 11. So far from the Davidic Messiah being the precipitation of widely diffused ideas of a world Saviour, the latter seems to have developed later as the offspring of the union of national and eschatological hopes.

IV. DEVELOPMENT SUBSEQUENT TO THE OT.

—I. The data.—In passing to the period covered by the Apocrypha and the apocalyptic literature, it will be well again to begin by some examination of the actual data.⁴

(a) *Books where the Messianic hope is ignored.*—In the eschatology of the Apocrypha, with the exception of 2 Esdras, the Messianic hope is practically ignored. It is just possible that there may be a hint of it in the reference to the coming of the 'faithful prophet' in 1 Mac 14⁴ (cf. 4⁴⁶), but, if so, the hope appears in a very attenuated form. In 2²⁷ the permanence, or, in the context, the restoration, of the Davidic kingdom is mentioned with no reference to the Messiah. In the rest of the books, though there may be hints of the Messianic kingdom in the wider sense (e.g., 2 Mac 2¹³, Bar 4³¹, Sir 44–50), nothing is said about a personal Messiah. Wis 2 ff. deals with the sufferings of the righteous in a way that recalls Is 53, and with the future life, but is clearly not Messianic.

¹ P. 231 ff.; see also Clemen.

² *Admonitions of an Egyptian Sage*, Leipzig, 1909.

³ P. 177.

⁴ The references are generally to the *Apocrypha and Pseudepigrapha of the Old Testament*, ed. R. H. Charles, Oxford, 1913, as well as to Charles's editions of the separate books; the dates given are generally those adopted by him; see also his *Eschatology*².

¹ Pp. 176, 191, 228 ff.

² Gressmann, p. 286 ff.

³ P. 179 ff.

⁴ Skinner and *Oxford Heb. Lexicon*, however, translate לִּיטוֹן, 'to look at.'

A similar silence is found in some of the apocalyptic literature, and here this silence is all the more significant since the writers are dealing directly with the hopes for the future. The Messiah does not figure in *Enoch* i.-xxxvi., lxxii.-lxxxii., xcii.-cviii., except in cv., where 'my Son' is suddenly introduced; Charles regards the chapter as an independent fragment. In the pictures of the Golden Age in *Jub.* i. 29, xxiii. 26 there is no Messiah; in xxxi. 18 he figures, though not prominently, as the descendant of Judah and as ruler in the temporary Messianic kingdom; Charles, however, considers the clause to be an interpolation. In the *Assumption of Moses*, which comes from a 'Pharisaic Quietist,' there is again no reference; Taxo (ix. 1) cannot be the Messiah;¹ Jahweh Himself is the avenger, and Moses the only mediator. The Messiah is in the same way ignored in 3 and 4 Mac., the *Secrets of Enoch*, the *Letter of Aristeas*, and the later parts of the *Apocalypse of Baruch*.

(b) *Books where the Messiah is mentioned.*—In *Enoch* lxxxiii.-xc. (166-161 B.C.) the Messiah appears after the judgment as the 'white bull,' a human figure, with no very active or definite rôle. In the 'parables,' however (xxxvii.-lxxi.; 94-64 B.C.), we have rich material. Especially in xlv.-lvii. he is the central figure, the pre-existent Son of man, judge, ruler, champion, and revealer. Besides Son of man, he is called 'the Elect One' and 'the Righteous,' titles which appear in the NT. 'Messiah' or 'His Anointed' also occurs in xlviii. 10, lii. 4, and Charles regards these as the first example of the use of the word as a technical title, though Dalman² strikes out the passages as interpolations.

In the *Testaments of the Twelve Patriarchs* the salient point is that the Messiah is descended from Levi, and is a priest (cf. Ps 110); see *Test. Reub.* vi. 7-12, *Test. Levi*, viii. 14, xviii., *Test. Jud.* xxiv. 1 ff., etc. In *Test. Jud.* xxiv. 5 f., however, we find the usual Messiah ben Judah; so perhaps *Test. Naph.* iv. 5. According to Charles, the former conception is the original, and the book dates from 109-106 B.C., the palmy days of Hyrcanus, the Maccabean dynasty, which came of a priestly family, being then regarded as Messianic. But, after the breach between it and the Pharisees, and the infamies of Hyrcanus' successors, additions were made to the book, reverting to the ordinary view. The conception of the Messiah is that he is a priest and a warrior, sinless, with power over evil spirits, and bringing sin to an end; the ethical note is strongly marked.

In the *Psalms of Solomon* (70-40 B.C.) there is no reference to the Messiah in i.-xvi., though the future deliverance is dealt with. In xvii. and xviii., however, there is a very important description. He is Davidic in contrast to the non-Davidic dynasty of the Hasmonæans; though himself human, he comes with the power and special endowments of God; he is to conquer the nations and purge Jerusalem of sin. The whole picture is full of enthusiastic and vigorous touches, but there are no transcendent traits in the conception. The end and the duration of the Messiah's kingdom are not clear, but 'throughout his days' in xvii. 42 suggests that he is regarded as mortal. He is called 'His' or 'the Lord's anointed,' the title being here certainly a technical one, its first occurrence, if the passages in *Enoch* are rejected.³

In the *Sibylline Oracles*, iii. 49 (168-51 B.C.), we read of 'a holy prince' who is to reign over the

whole earth for all ages, though, somewhat inconsistently, judgment follows; iii. 652 (c. 140 B.C.) speaks of a king from the sunrise sent by God who is to bring peace to every land. In the later fifth book (before A.D. 130) we have (in 108) again a king sent from God who apparently destroys Nero *redivivus* (Antichrist), while 414 ff. speak of a 'blessed man' from the plains of heaven, who destroys evil-doers and sets up the new temple.

The *Fragment of a Zadokite Work*,⁴ first published by S. Schechter in 1910, is placed by Charles in 18-8 B.C. and by most scholars before A.D. 70, and seems to have come from a reforming party among the priests. 'A Teacher of righteousness' has already appeared (i. 7, etc.), and a Messiah is expected (ii. 10, viii. 2 [?], ix. 10, 29, xv. 4, xviii. 8) who is to arise 'from Aaron and Israel.' Charles interprets this phrase as pointing to the sons of Mariamme and Herod. This is not quite certain, but the Messiah is clearly Levitic, as in the *Testaments*, the book being marked by hostility towards Judah. The 'Teacher of righteousness' or the 'Lawgiver' (viii. 5) is a forerunner of the Messiah, though at a considerable interval, and is identified with the 'star' of Nu 24¹⁷, the 'sceptre' of the same passage being applied to the Messiah.

In the composite (*Syriac*) *Apoc. of Baruch* the Messiah appears in the three earlier Fragments, A¹, A², A³, written before A.D. 70. In xxix. f. (A¹) he is revealed mysteriously, apparently from heaven, whither he returns in glory; his rôle is a passive one, and the whole conception is materialistic. In xxxix. f. (A²) and lxxii. ff. (A³) he is the warrior slaying enemies and ruling over the Gentiles; the influence of Is 11 is marked. In lxx. 9 the phrase 'my servant Messiah' occurs, but the whole verse is regarded as an interpolation. In the three later Fragments, B¹, B², B³, there is the so-called Messianic Kingdom without a Messiah.

4 (2) Esdras is again composite. In 7th (*Ezra Apocalypse*) we have the remarkable conception of 'My Son the Messiah' revealed with his companions and dying after a reign of 400 years (cf. 14th). In 12th (the 'Eagle Vision') he is the Lion of the seed of David who destroys sinners; the text has been interpolated to represent him as pre-existent and dying at the end, in order to agree with 7th. Of chief importance is the 'Son of man' vision (ch. 13), where the Messiah is 'the man,' as in Daniel, 'My Son,' pre-existent, destroying the ungodly by the fire of his mouth and the breath of his lips, and restoring the ten tribes to the heavenly Zion.

Philo makes only very slight references to the Messiah, who is really foreign to his system. That he is mentioned at all must be regarded as a concession to the popular standpoint. *De Excerptat.* 8 f. speaks of the restoration of Israel on one day; the dispersed are to return led 'by a divine superhuman appearance, which, though unseen by all others, is visible only to the delivered.' So in *de Prom. et Pœn.* 15-20 the Messiah is a man of war, reference being made to Nu 24⁷.

In the same way the Messiah is recognized by Josephus only very occasionally, and that in a way which shows that he did not take the subject very seriously. In *BJ* vi. v. 4 he practically treats Vespasian as the Messiah in the sense that he is to be the destined 'governor of the habitable earth'; cf. the account of his interview with the same emperor in III. viii. 9, and see Suet. *Vesp.* ch. 4, and Tac. *Hist.* v. 13,² passages which are good evidence that the existence of the Messianic hope was a

¹ See Charles, *ad loc.*; F. C. Burkitt, *Jewish and Christian Apocalypses*, London, 1914, p. 39.

² P. 269.

³ In xvii. 36 'Anointed Lord' (Χριστὸς Κύριος) is generally recognized as a mistranslation or misreading of 'the Lord's Anointed.'

⁴ Besides the works already quoted see also a survey of recent literature on the book by J. W. Lightley, in the *London Quarterly Review*, Jan. 1915, p. 15.

² See *J.E.*, s.v. 'Messiah,' for similar ideas connected with Alexander, on the basis of the interview recorded in Jos. *Ant.* xi. viii. 5.

recognized feature of Judaism. In *Ant.* x. x. 4 he refuses to explain the 'stone' of Dn 2⁴⁰ on the ground that his history is not concerned with the future.

As evidence of popular views, though not of the belief of Josephus himself, we have the various quasi-Messianic risings which he records: Theudas (*Ant.* xx. v. 1), the Egyptian (*Ant.* xx. viii. 6, *BJ* ii. xiii. 5), and the unnamed impostor (*Ant.* xx. viii. 10).

A Samaritan Hymn for the Day of Atonement,¹ dated A.D. 1376, but certainly embodying earlier material, speaks of the Messiah under the title *Taeb*, which probably means 'the Restorer,' though A. Merx explains it as *reddens*, i.e. probably Moses, whose return was expected. This *Taeb* is not supernatural, but restores the lost dominion of the people, and is a prophet, the conception being based on the figure of Moses in opposition to the beliefs of the Jerusalem Jews. He dies after 110 years, and his death is followed by the Judgment and the end. Jn 4²⁵ shows the antiquity of some Messianic belief among the Samaritans (cf. Jos. *Ant.* XVIII. iv. 1).

2. Survey of the teaching.—(a) We note the sporadic character of the Messianic hope, as in the OT. Certainly the Messiah is mentioned somewhat more frequently, and when he appears we have in some cases a few more details, but it is still true that until the fall of Jerusalem he is not an essential element in Jewish religious thought or even in its eschatology.² If it were not for the NT, we should never have imagined that there was a period when the expectation of his coming could be taken for granted as accepted in almost all circles and as the centre of the hope for the future. This aspect is sometimes discussed (e.g., W. Baldensperger, *Die messianisch-apokalyptischen Hoffnungen des Judentums*, Strassburg, 1903, p. 92 ff.) as though the problem were the disappearance of the Messianic hope during the Maccabean period. If our interpretation of the evidence is correct, this misrepresents the facts, since there is nothing to show that the hope was at any previous period either universal or essential. It may be true³ that the figure of the Davidic king came to seem too small for the larger stage on which Israel now found itself, and that the rule of the Maccabees left the pious Jew for a time well content, but it is best to recognize that the data are insufficient for anything like a chart of the rise and fall of the Messianic hope. The one thing we can say is that in the 1st cent. A.D. the Messianic hope had become more universal than ever before. We recognize that even then it is absent in the *Ass. of Moses*, and is not taken very seriously by Philo or Josephus; but the NT evidence is indisputable, and is confirmed by the fact that the Messiah is an integral part of the creed of later Judaism. The explanation is probably to be sought in the political circumstances of the day and in the dislike of the rule of the Herods and the Romans.

(b) There is some evidence which suggests that, as before, the hope was mainly an element in the popular religion. The Apocalypses in which it figures were largely popular products, and the NT proves that its chief strength lay among the people;⁴

the popular risings recorded in Josephus show the same thing.

(c) We may see two influences at work which tended to throw into higher relief the person and function of the Messiah. From the religious side there was the growing tendency to remove God from active interference with the affairs of the world and to fill His place with a series of intermediate beings.⁵ Hence the rôle of the Messiah becomes more important, and functions which in the OT are ascribed to Jahweh Himself are now transferred to him. He becomes the Deliverer and Saviour, as in the *Sib. Or.*, Baruch, and Esdras, and the new conception thus meets a real religious need. Again, as outward conditions became more hopeless, it was inevitable that he who was to restore the nation should be increasingly conceived of as endowed with supernatural powers, or as himself more than man. His coming is to affect the whole world, though it is still always regarded from a strictly Jewish and national standpoint. As a keener interest is taken in the fate of the individual, so the conception is linked with beliefs in judgment and resurrection, and receives altogether a more decided and more varied eschatological colouring, though we remind ourselves once more that it is not an essential element in the eschatology of the time.⁶

(d) Attempts to distinguish varying types of the hope at different periods and in different classes of writings are not always very convincing. We can, however, trace a double development,⁷ though the two lines overlap, and each includes contradictory elements derived from the other—e.g., in the combination of the conceptions of a Warrior-Conqueror and of a supernatural Avenger and Judge, or of earthly and heavenly bliss.⁸ (1) We have the conception, which is essentially that of the OT, of the Messiah as a human figure, however miraculously endowed, a warrior and a conqueror, and the Son of David. This is seen best in the *Psalms of Solomon* (where the title 'Son of David' occurs for the first time), and is implied in many passages of the Gospels dealing with the popular hope, especially in the attempts to make Christ king, and in the charges brought at His trial, as well as in the Messianic movements mentioned by Josephus. This Messiah is to conquer the nations (*Sib. Or.* iii. 653, v. 108 f., 416 ff.; Bar 39⁷ 70⁹) and sometimes to convert them (*Test. Jud.* xxiv. 6; *En.* xlviii. 5), though their conversion is also often disconnected from the Messiah (To 13¹¹ 14⁵, *En.* xc. 30, etc.).

Parallel to this conception is that of the Messiah ben Levi,⁹ found in the *Testaments* and the *Zadokite Fragment* (cf. Ps 110), and represented in the NT by the heavenly priesthood of Christ in Hebrews.¹⁰

(2) We find a belief in a transcendent Messiah, connected chiefly with the title 'Son of man,' in the parables of *Enoch* and 4 *Esdras* (cf. also *Sib. Or.* v. 414). The phrase is derived from Daniel, and, whatever its meaning and origin there, there can be no doubt that in *Enoch* and *Esdras* it has a definite Messianic significance;¹¹ it is possibly even a recognized technical title.¹² The fact is, as Baldensperger¹³ points out, that Daniel, though not

¹ See Baldensperger, ch. II.

² This eschatological colouring, the signs of the coming of the Messiah ('the Messianic woes,' etc.), the duration and nature of the Messianic kingdom, and its relation to the Judgment and Resurrection, together with the varying ideas as to the fate of the Gentiles therein, are dealt with in art. ESCHATOLOGY, to which reference should be made. See also Schurer, *HJP* ii. II. 137 ff.; W. V. Hague, *JThSt* xii. [1910] 67.

⁸ So Charles, *Eschatology*², p. 261.

⁹ P. 97 ff.

¹ See A. Cowley, 'Samaritan Doctrine of the Messiah,' in *Exp.* 5th ser., i. [1895] 161 ff.; Bousset, pp. 258, 265.

² It is possible that the place of the Messiah was sometimes taken by Michael, as a parallel figure; in Dn 12¹ he, and not the Messiah, is the champion of Israel; so in *Ass. Moses*, x. he is the angel who avenges Israel; note his prominence in Rev 12. Bousset (*Die Offenbarung Johannes*, Göttingen, 1896, ad loc.) suggests that the Christology of Hermas can be understood only by seeing that Christ takes the place formerly filled in Jewish thought by Michael; cf. also Rev 14¹⁴, where the Son of man on the cloud seems to be an angel; note the language of v. 15.

³ Bousset, *Rel. des Judentums*, p. 255 ff.

⁴ *Ib.* p. 257.

in itself directly Messianic, revived hopes for the future and prepared the way for the apocalyptic Messiah.¹ This transcendent Messiah plays an active rôle as champion of the righteous in *Enoch* lxii. 2, and still more decidedly in 4 Es 13^{sup.} 37^{sup.}. The most significant feature, however, is his appearance as judge, not only of men and the nations, but of evil spirits (*Enoch* lv. 4, etc.); this function is not ascribed to the human king. Except in 4 Es 12³², a Christian interpolation, the transcendent Messiah is never represented as a descendant of David—a fact which may throw light on our Lord's question (Mk 12³⁵); He may have been following a recognized line of thought which found the Davidic descent too narrow for the great conception. As is well known, He never speaks of Himself as 'Son of David.' We may note that, though the Apocalypses apparently reject the Davidic descent, they yet use Davidic passages, such as Is 11, Ps 72, 89, in their picture of the Messiah.²

(e) *Pre-existence and mysterious origin.*—The Son of man is clearly in some sense pre-existent in *Enoch* (e.g., xlviii. 3, 6, xli. 1) and in 4 Es 13 and perhaps in 7³⁷ 12³², though the former passage is doubtful, and G. H. Box regards the latter as interpolated.³ The question arises how far a personal pre-existence is really implied. In Jewish thought everything of supreme value was regarded as pre-existing in the mind of God, perhaps to some extent under the influence of the Platonic doctrine of ideas. This applied to such things as the Law and the Temple, while even Moses is pre-existent in *Ass. Moses*, i. 14, iii. 12; it is this sort of pre-existence that is ascribed to the Messiah or his 'Name' in the Targums.⁴ But it must be allowed that in *Enoch* and *Esdras* the Messiah seems to be regarded as pre-existent in a personal sense and revealed from heaven, and this was certainly the view of St. Paul. It should, however, be noted that in 4 Es 7²⁸ 'my Son, the Messiah' who is thus revealed dies after 400 years; i.e., he is not a divine being.

This point of view should be distinguished from the hints which we have of the mysterious origin and birth of the human Messiah, since the Son of man of *Enoch* and *Esdras* is, of course, not born as a man at all. We have doubted the existence of such ideas in Isaiah and Micah, but they are clearly found at a later period—e.g., in the mysterious star of *Test. Levi*, xviii. and in the king ἀπ' ἡλίου of *Sib. Or.* iii. 652 (cf. Bar 29³). We have definite evidence of the belief in Jn 7³⁷, Justin Martyr (*Dial.* 8, 110), and the Talmud, the general idea being that the Messiah was to be born in secret (at Bethlehem) and hidden on earth, or even in Paradise, until the time of his revelation.⁵ Some such tradition seems to underlie Rev 12; on the question of foreign influence see below, (g).

At the same time the passages cited as evidence of a belief in his birth of a virgin or divine mother are unreliable.⁶ *Test. Jos.* xix., which seems to speak of a virgin-birth, is with good reason regarded by Charles as corrupt; so in *Enoch* lxii. 5, lxix. 29 he reads for 'son of a woman' 'Son of man,' while the *Midrash Ekhah* on La 5³ is obscure and of very doubtful date. Nor, again, can 'the travail pangs of the Messiah' imply anything of the kind; the expression is figurative, and applies to the Messiah, not to his mother. According to

Justin, *Dial.* 49, the Jewish belief is that the Messiah is to be born ἀνθρώπος ἐκ ἀνθρώπου.

To the circle of ideas connected with pre-existence belongs the identification of the Messiah with the first or the spiritual man.¹ Something has been said of the theory that this underlies the figure of the Son of man (see above, III. 2 (d)). Philo (*Leg. Alleg.* i. 31, p. 49, *de Op. Mundi*, 134, p. 32) knows of an earthly and a spiritual man, the latter, whose creation is recorded in Gn 1, coming first, while the former is the man of Gn 2. St. Paul (1 Co 15⁴⁵) represents the spiritual man as coming after the psychic or earthly, evidently opposing the other view, and identifies him with the Messiah. So in *Test. Levi* the Messiah brings back Paradise, while the Samaritan title *Taeb* seems to mean 'Restorer' (cf. *χρηνοὶ ἀποκαταστάσεως* in Ac 3²¹). The general idea in St. Paul, however, is the identification of Christ with the ideal archetypal man,² as opposed to the historical Adam, and not with any first king of Paradise.

(f) *Forerunners of the Messiah.*—The starting-point is Mal 3 f., where Elijah is to return before the Day of Jahweh (cf. Sir 48¹⁰); the Messiah is not mentioned, and possibly Elijah is a kind of substitute for him.³ In the Gospels, however, he has become a forerunner of the Messiah (Mk 1² 6¹⁵ 8²⁸ 9¹, Jn 1²¹). There are again traces of a belief in the return of Moses, based on Dt 18¹⁵, and the two are combined in the Transfiguration; these are probably the 'two witnesses' of Rev 11³. In the later Antichrist legend the two witnesses are Enoch and Elijah,⁴ who were translated without death. There are also hints of other 'companions' of the Messiah in 4 Es 6³⁸ 7²⁸ 13⁶²; Ezra appears as such in 14⁹, Baruch in Bar 76², Jeremiah in 2 Mac 2¹ 15¹³; cf. Mt 16¹³. We may compare the two predecessors of Saoshyant (see below, (g)).

(g) *Foreign influence.*—We were doubtful of theories which traced the origin of the Messianic idea to foreign sources, but this does not exclude the possibility of foreign influences at a later time on the details of the conception. Such influence is undoubtedly found in the development of Jewish Apocalyptic. We cannot discuss the wider question of the syncretistic character of its eschatology in general, but must confine ourselves to points which directly affect the conception of the Messiah. Naturally it is in the transcendent Messiah that foreign and mythological traits appear most clearly. Hague,⁵ following Gressmann,⁶ argues that such ideas lie behind 4 Es 13, and even goes further in holding that a star myth is implied in the appearance of the man 'from the sea.' He also traces⁷ the whole idea of a mysterious revelation of the Messiah to Is 45¹⁵, 'Verily thou art a God that hidest thyself, O God of Israel, the Saviour,' which, he agrees with Gressmann,⁷ cannot be of Jewish origin. He traces it to language such as that used by Assurbanipal: 'I was born in the midst of mountains which no man knoweth . . . thou (Ishtar) . . . hast brought me forth from the mountains, hast called me to shepherd thy people.' Many critics⁸ argue in the same way with regard to the conception of a miraculous birth, comparing the language used by Sargon I. ('My mother was poor, my father I knew not'), the beliefs connected with Saoshyant, and the legends of the birth of Cyrus, Alexander, and others; there is, in fact, a general tendency to regard extraordinary men as

¹ Dn 7¹³ is interpreted Messianically by Aquila (c. A.D. 120), and gave rise to the later name for the Messiah, *Ἀνάτ*, 'Cloud Man' (Dalman, p. 245).

² Dalman, p. 318.

³ The LXX of Ps 109 [110]³, ἐκ γαστρὸς πρὸ ἰωσήφου ἐγένετο, suggests some kind of pre-existence.

⁴ In *J.E.*, s.v. 'Messiah,' it is, however, argued that there are traces in Rabbinic literature of a real pre-existence of the Messiah.

⁵ Dalman, p. 301; Hague, p. 83.

⁶ Jeremias, p. 30; see Clemen, p. 292.

¹ See H. Lietzmann, *Handbuch zum NT*, Tübingen, 1910, on 1 Co 15⁴⁵; Clemen, p. 152 ff.

² This conception seems to occur in *Barnabas* v. 5, vi. 12. For later developments see Bousset, *Hauptprobleme der Gnosis*, Göttingen, 1911, p. 172 ff., *Kyrios Christos*, do. 1913, p. 25 f.

⁷ P. 311.

⁸ Jeremias, pp. 28 ff., 38, 46 ff.; Cheyne, *passim*.

wonderfully born, and this was particularly marked with regard to Egyptian and Babylonian kings. Without pronouncing on the question of direct influence, we may admit that we find the same general tendency at work with regard to beliefs as to the origin of the Messiah, but always with the important proviso that we have found no real evidence, except in Christian circles, of the idea of his birth from a virgin or divine mother, nor have we yet found any complete parallel to the expectation of a final eschatological king.¹

Something must be said of the possible influence of Zoroastrianism.² Here, again, we would at once admit a general influence in the sphere of eschatology. Moulton allows this, though to a less extent even than Clemen. He draws attention to Bousset's³ admission that Parsi influence must have come to Israel by way of Babylon 'when strongly tainted with Babylonian elements,' and argues, further, that Zarathushtra himself had very little influence in the West. Hence, all that the Jews can have known was Parsiism in a comparatively debased form, as represented by the Magi (*q.v.*), and this compels us to regard most of the parallels between the higher doctrines of the two religions as pure coincidences. We are concerned here mainly with two points.

(1) A great deal has been said of the connexion between Yima, the first man, and the Messiah. It is held⁴ that this lies behind the idea of the 'Son of man' (see above, III. 1 and 2 (*d*)), which, Clemen agrees, 'comes ultimately from Parsiism.' There is, no doubt, some connexion between Yima and the fall story, though Moulton⁵ holds that Parsiism is the borrower. Further, as Bousset allows, there is the important difference that, while Yima is king of Paradise, *der Urzeit*, the Messiah is king *der Endzeit*, and there is no trace of this transformation in Iranian legend. We may add that there is also no trace in Hebrew legend of the Messiah as originally king of the first Paradise (see above, (c)).

(2) There is undoubtedly a remarkable similarity between the Messiah and Saoshyant, which is originally an epithet rather than a title. The renovation of the world 'is accomplished by the present labours of "those that will deliver," the *saoshyantō*. In the Gathas these are simply Zarathushtra himself and his fellow-workers, whom the Prophet's faith pictures as assuredly leading on an immediate regeneration.'⁶ The hope failed, and Zarathushtra himself was to return as Saoshyant. This is certainly the one real parallel with the Messiah proper, but it seems impossible to suppose any direct influence. Moulton⁷ dismisses it among 'the certainly fortuitous coincidences,' while Bousset⁸ holds that the connexion is between Saoshyant and the forerunner Elijah, rather than with the Messiah himself. At the same time there may have been some reaction between the two, affecting details of the conceptions, especially in the idea of the Messiah coming from the sunrise; cf. the *ἀν' ἡλίου* of *Sib. Or.* iii. 852, and the *LXX ἀνατολῆς* for 'branch' in Jer 33¹⁵, Zec 6¹² (cf. Lk 1^{7b}).⁹

We must also allow for the influence of Græco-

¹ For foreign influences in Rev 12 see Bousset, *Offenbarung*, ad loc., and Cheyne, p. 77 ff., with criticism in Clemen, p. 208 ff.

² See art. *ESCHATOLOGY*, vol. v. p. 381, with literature there cited, and add J. H. Moulton, *Early Zoroastrianism*, London, 1913, esp. Lect. ix., 'Zarathushtra and Israel,' with discussions in Clemen (summary on p. 268). W. Fairweather (*HDB* v. 297, 307) accepts influence in details without supposing direct borrowing.

Roman ideas¹ affecting at any rate the periphery of the Messianic hope and its development under Christianity. After Alexander the title *σωτήρ* ('Saviour') became common, with deification of kings and emperors, accompanied by hints of their wonderful origin. We may instance the well-known Priene inscription, with the legends connected with Augustus. But here, again, it is doubtful whether we really have proof of the existence of a belief in a final world-Saviour who is to usher in a new era, or only the inevitable court flattery which regards each king as greater than any of his predecessors. The single exception is Vergil's famous Messianic *Eclogue*.² Here, whether the child who is to be born be the son of Octavian and Scribonia or not, we have a remarkable and almost unique agreement with OT conceptions—the era of Paradise and its king, the Golden Age following on his conquests, plenty without toil, animals sharing in the regeneration, together with the ethical note. Whether through the Sibylline Books or directly through the LXX, Jewish teaching may have penetrated to Roman literary circles, or we may have an echo of Zoroastrianism.³ On the other hand, the parallel may point to an independent spread of something like a Messianic hope in pagan circles.

(h) *Interpretation of prophecies*.—A feature of this period is the habit of working on earlier prophecies—a tendency which we have found as early as Ezekiel and Zechariah; for a later example see To 14⁴.⁴ In the apocalyptic books there are certain prophetic passages and ideas which became part of the stock-in-trade and are constantly referred to in dealing with the Messianic hope. The chief are Dn 7, Is 11,⁵ used continually (*e.g.*, *Ps. Sol.*, Bar.), Ps 2⁶ (*e.g.*, *Ps. Sol.*), Ps 45 (*e.g.*, *Test. Jud.* xxiv. 1), Nu 24¹⁷, the star of which is applied Messianically in *Test. Levi* xviii. 3, *Jud.* xxiv. 1, but understood of the Teacher of Righteousness in *Zad. Frag.* ix. 8.

We have in this use of prophecy many examples of the scribal methods⁷ working mechanically on the data and fusing the old and new into a single picture, of course not without contradictions. The application of a passage does not decide its historical meaning, but only the interpretation which had come to be put upon it. The vagaries of later Rabbinism had already begun—*e.g.*, the interpretation of Am 5^{26c} in *Zad. Frag.* ix. 5 ff. We have an interesting example of independence in 4 Es 12²⁴, where the interpretation of the fourth kingdom as given in Dn 7²⁸ is definitely rejected.

It is important to ask in this connexion whether by the first cent. A.D. the OT was in any circles interpreted as pointing to a Suffering Messiah. It is almost certain that it was not. The conception in 4 Es 7 is the quite different one of a human Messiah who is to die after a reign of 400 years (cf. the Samaritan *Taeb*). There is no evidence that Is 53 was interpreted Messianically until a later period, and, when it is, the verses which speak of suffering are applied not to him but to the nation.⁸

¹ Bousset, *Rel. des Judentums*, p. 258; Jeremias, p. 58 ff.; A. Deissmann, *Light from the Ancient East*, Eng. tr., London, 1911, p. 368 ff.

² See J. B. Mayor, W. W. Fowler, and R. S. Conway, *Virgil's Messianic Eclogue*, London, 1907.

³ So Moulton, p. 91, interpreting the simile of the closing lines as a reference to the story that Zoroaster laughed when he was born.

⁴ It may be remarked that there are hardly any traces in the LXX of an attempt on the part of the translators to introduce a Messianic meaning; *χριστός* is never introduced where the Heb. has not Messiah. Is 7 is no exception (see above, III. 1), but the title of Ps 45, 'Song of the Beloved,' for 'Song of Loves,' may be intended to suggest a Messianic interpretation. For *ἀνατολῆς* for 'Branch' see above, (g).

⁵ But not Is 9 (see above, III. 1) or 7.

⁶ This, however, is comparatively rare (Dalman, p. 268 ff.).

⁷ Baldensperger, p. 104.

⁸ V. H. Stanton, *HDB*, art. 'Messiah'; see, further, Driver and A. D. Neubauer, *Jewish Interpreters of Is. Hil.*, London, 1877;

The most decisive proof of this position comes from the NT. It is clear that the death of the Messiah was not expected in any quarter, and that the crucifixion of Jesus was the great stumbling-block, while it was not easy to find proof of its necessity from the OT. The story of the Ethiopian eunuch (Ac 8^{27ff.}) seems to be intended to call attention to an interpretation of Is 53 which is evidently not that generally accepted. The admissions of Trypho (Justin, *Dial.* 68, 89f.) do not express the Jewish belief, but are put into his mouth under the stress of the argument, while the 'pangs of the Messiah' do not refer to his personal sufferings, but to the woes which are to precede his coming.

The Messiah ben Joseph, who does, in fact, die, in contrast to the Messiah ben Judah, appears clearly only after A.D. 135. According to Bousset,¹ he is the Messiah of the ten tribes, slain in the battle by Gog and Magog; the conception seems to be derived from Dt 33¹⁷, Zec 12¹⁰, and certainly has no connexion with Is 53. It is possible that this figure is connected with the failure and death of Bar Kokhba, explaining them on the lines of the expectation of a preliminary Messiah who was to fall in battle against the enemies of Israel (Rome).

V. DEVELOPMENT UNDER CHRISTIANITY.—The starting-point of the evidence of the NT, and especially of the Gospels, is the way in which the Messianic hope is represented as universal. As we have seen, it is taken for granted in the Apocalypses where it occurs, but it is still sporadic in its appearances, and the future can be painted without reference to it. But in the Gospels the expectation of the Messiah is common to all. It appears, indeed, to be taken more seriously by the common people than by their leaders; but Pharisees, priests, and Sadducees all accept the hope without questioning its validity. The point at issue is only whether Jesus is really the Messiah. As regards the nature of the hope, it would appear, as against A. Schweitzer, that it was at least as much political and national as transcendent, corresponding closely to what we find in *Ps. Sol.* The Messiah is to be a king descended from David, and his rule will be opposed to that of the Romans.

A full discussion of our Lord's own attitude to His Messianic claims will be found in art. *JESUS CHRIST*. We may here emphasize the salient points. (a) As against W. Wrede, it is certain that He did regard Himself as in some sense the Messiah. He did not, indeed, proclaim Himself as such in His public teaching; it was His 'secret,' discovered by St. Peter at Caesarea Philippi, and first avowed to the world at His trial. (b) His favourite designation of Himself in this connexion was 'Son of man,' the title being chosen as containing in it elements of transcendence and mystery, and as free from the political implications of Messiah, and still more of Son of David, a title which He avoids. The difficulty is to reconcile His use of this phrase with the absence of any public proclamation of His claim, since from its use in *Enoch* we should infer that it would at once be recognized as a synonym for 'Messiah' itself. The difficulty is eased by eliminating, on literary grounds, a certain number of the passages in which it occurs (cf., e.g., Mt 5¹⁰ with Lk 6², or Mt 16³ with Mk 8²⁷), while in others its use is ambiguous, since it might be supposed to refer to some other unnamed person (Mk 8³⁸). It is not, however, possible, except by somewhat drastic criticism, to eliminate all passages where

it is used publicly of Himself or privately to the disciples before St. Peter's confession.¹ We must, therefore, suppose, in spite of *Enoch*, that it was regarded as Messianic only in certain circles, and that it could still be used, as in Ps 8 and Ezekiel, in a wider sense.

(c) He did not regard Himself as the Messiah merely in the strict sense in which we have used the term, but as gathering up in Himself the various lines of OT hopes and promises. It does not, however, appear that direct argument on the basis of the OT played any considerable part in His teaching, except as recorded in the Fourth Gospel. The proofs from the OT in the NT seem rather to reflect a later stage of controversy between Jew and Christian, in which each adopted the same scribal methods of interpretation.

(d) Christ added considerably to the content of the Messianic hope, especially in His teaching as to the necessity of the death of the Messiah. It is not possible to decide with any certainty as to the lines by which He was led to this conviction, though it was, no doubt, helped by a growing recognition of the hostility of the ruling powers to His claims and of the inevitable results of their attitude. Further, He must have meditated on the deeper teaching of the OT as implying, especially in Ps 22 and Is 53, that the means of redemption and the condition of glorification were to be found only in suffering, and this quite independently of whether such passages technically applied to the Messiah or not. Though in Acts and 1 Peter the Servant passages are directly quoted, they are used but little in the Gospels, and hardly at all in Christ's own teaching (see Lk 22²⁷, Mk 10⁴⁵ 12³¹). It would seem, then, that as the ultimate source of His conviction we are forced to fall back on an intuition which the Christian will regard as a revelation from the Father.

In the light of the expectation of the Parousia, the idea of a twofold advent of the Messiah was introduced, assuming that Jesus was not merely 'the Messiah of the future' during His lifetime. There is no trace in earlier literature of any belief in two comings of the Messiah.

(e) It follows, finally, that the title 'Messiah' or 'Christ,'² as used in the NT and in Christian literature generally, has a far richer meaning and content than any that we have felt justified in ascribing to it in earlier periods. It gathered into itself the ideas associated with the Wisdom and Logos,³ and came to include the whole work of redemption from sin and spiritual regeneration accomplished by Jesus. He has become the centre of history and the inaugurator of a new age in a way which both differs from and transcends anything that we find in the OT or Apocalypses as associated with the future Deliverer. He is the mediator of a new covenant and the bearer of a new revelation to a world of which the outward conditions remain unaltered, while with the passing of the Jewish State the nationalist element dropped away once for all. At the same time, the title 'Christ,' with its historical associations, is a reminder, even to those to whom the promises of the OT may mean little in themselves, that the coming of Jesus of Nazareth was not something new and unexpected, but was the true climax of the long preparation of the chosen people. In particular, the fact that functions which in the OT are reserved for Jahweh and not for the Messiah

Dalman, *Der leidende und der sterbende Messias*, Berlin, 1888; Schurer, II, ii. 184. Bousset, *Kyrios Christos*, p. 27 ff., agrees, though he leaves open the bare possibility that the wide-spread myths of the dying and rising god may have influenced Jewish Messianic ideas.

¹ *Rel. des Judéens*, p. 264. *Antichrist Legend*, p. 108. But in *J.E.*, s.v. 'Messiah,' the connexion with the ten tribes is denied.

² But see Dalman, *Words of Jesus*, p. 260 ff.

³ It must be remembered that 'Christ' tends to become a proper name and to lose its technical Messianic implications; the distinctive title of Jesus in Hellenistic Christianity is *κύριος* ('Lord'). See Bousset, *Kyrios Christos*, esp. p. 94 ff.

⁴ Note that in Philo the Logos largely takes the place of Messiah; in *de Conf.* 14, p. 414, the 'branch' of Zec 6¹² is applied to the Logos. Cf. also art. *Logos*.

are in the NT transferred to Christ is of the deepest significance. The real desire of the highest spirits of Israel was not so much for a representative of Jahweh, however exalted, as for a revelation of God Himself. Christian belief finds this satisfied in the Incarnation, and we shall not be disturbed when we find that the OT says comparatively little about the Messiah. The vital question is whether the hopes which it entertained with regard to the coming of God did find their fulfilment in the Christ.

VI. *THE MESSIAH IN LATER JUDAISM*.¹—From the end of the 1st cent. A.D. a belief in the Messiah was an integral part of the Jewish creed—a proof that the representation of the universality of the hope which we find in the NT is substantially correct. The Messiah is indeed strangely absent from the Mishna, possibly owing to fear of Rome, but he figures both in the Palestinian and in the Babylonian recensions of the *Shemoneh 'Esrēh*—a fact which indicates that his presence therein must date from the 1st cent. A.D.—and appears constantly in the Talmud. The failure of the Bar Kokhba rising in A.D. 135 marks an important stage. Attempts to anticipate the Messiah's coming were then abandoned, the principle being 'a plague on those who calculate the end,' and the political side was almost dropped. What remained of it was transferred to a temporary Messianic Kingdom, in which Israel was to be restored to Palestine, this national kingdom being, generally speaking, only preparatory to the *Olām hab-bā*, the world to come, where universalistic features are found. The Messiah is Son of David² and an earthly deliverer, though in some sense pre-existent and appearing mysteriously (see above, IV. 2(e))—features which need not imply divinity. With the fall of Jerusalem apocalyptic fell into disfavour,³ and with it the belief in a transcendent Messiah. Polemic with Christians also worked in the same direction, and to this we may attribute the disuse of the title 'Son of man'; the form of the Beatitude in Lk 6²² may be a hint of such controversies.⁴ The spiritual side is strongly emphasized in the Rabbinic teaching by its insistence on the need for repentance as the condition of the coming of the Messiah, while we also find considerable detail as to the features of the Messianic era, the Messianic woes, etc.

The twelfth article of the present Jewish creed, as drawn up by Maimonides, is as follows: 'I believe with perfect faith in the coming of the Messiah, and though he tarry I will wait daily for his coming.' Liberal Judaism, however, would seem to have abandoned the hope of a personal Messiah, though it still retains the Messianic hope in a wider and spiritualized sense⁵—a sense in which it may fairly claim to have the general trend of the OT on its side.

LITERATURE.—The literature bearing on special points has been indicated in the course of the article. The following may be mentioned in relation to the whole subject: J. Drummond, *The Jewish Messiah*, London, 1877; V. H. Stanton, *The Jewish and the Christian Messiah*, Edinburgh, 1886; E. C. A. Riehm, *Die messian. Weissagung*, Gotha, 1886, Eng. tr., *Messianic Prophecy*, Edinburgh, 1900; C. A. Briggs, *Messianic Prophecy*, Edinburgh, 1886, and *The Messiah of the Gospels*, do. 1894; P. Volz, *Die vorzeitliche Jahvesprophetie und der Messias*, Göttingen, 1897; E. Schürer, *GVF*, Leipzig, 1898, Eng. tr., Edinburgh, 1899; W. Bousset, *Die Religion des Judentums im neutestamentlichen Zeitalter*, Berlin, 1906;

C. W. EMMET.

MESSIAHS (PSEUDO-).—From the final loss of the independence of the Jewish State until within a few generations ago, Jewish history has known the frequent advent and passing of self-styled Messiahs, prophets of hope in the darkest periods of the Diaspora, self-appointed leaders of the Jewish race in the Return to the land from which their ancestors were exiled. The appearance of a Messiah was often, especially in the case of the earlier ones, accompanied by revolts and uprisings, and these almost invariably occurred at times when, and in localities where, anti-Jewish persecution was prevalent. Moreover, these Messianic movements were frequently, especially in the latter cases, of a political nature. The religious aspect of the rising was, however, seldom absent, and in many instances the new teacher, anxious to signalize his activity and to secure his influence by religious innovations, endeavoured to subvert the basic teachings of Judaism, to which, in consequence, considerable harm sometimes occurred. New sects were created on some occasions; on others wholesale adoption of Muhammadanism or Christianity took place.

Although it is to some extent customary to include a number of Jewish reformers and revolutionists in the category of pseudo-Messiahs, only a proportion of these agitators in reality attributed to themselves the Messianic semi-divinity. Others, often against their own wish, were hailed by their enraptured followers as the divine leader, promised in Jewish tradition to bring the scattered and troubled people back to their inheritance. Just as there existed a belief in an Ephraimitic Messiah who was to be the forerunner of the Davidic Messiah, so, among the pseudo-Messiahs, many pretended to be not the Messiah Himself but His forerunner. The opening of the Christian era saw in the Holy Land a number of these local minor Messiahs. Thus we learn from Josephus (*Ant.* xx. v. 1; also *Ac* 5³⁶) that about A.D. 44 one Theudas, claiming to be a prophet, told his followers that he would divide the Jordan and enable them to cross dry-shod. They collected on the bank of the river for the miracle to be performed, but before the prophet could take steps to carry out his prophecy the whole party was massacred by a detachment of Roman soldiery. A similar fate overtook the followers of another Messiah, an Egyptian. They collected, it is said to the number of 30,000, on the Mount of Olives to watch the fall of the walls of Jerusalem at the command of their leader, but the proceedings were interrupted by Felix and his soldiery (*Jos. Ant.* xx. viii. 6, *BJ* ii. xiii. 5; and *Ac* 21³⁸). A third pretender preparing to lead the people into the wilderness was destroyed together with his followers by Festus the Procurator (*Jos. Ant.* xx. viii. 10).

A Messiah of a different description was Menahem, the son of Judah the Galileean and the grandson of Hezekiah the leader of the Zealots. He seized the city of Masada together with a large store of arms, with which he supplied his followers, and then attacked Jerusalem. In battle with the soldiers of Agrippa II. Menahem was successful, and as a result captured Antonia, one of the defences of the capital. Emboldened by his success, Menahem claimed the leadership of all, and thus aroused the jealousy of his colleagues and was assassinated. Menahem was the last Judean Messiah before the destruction of the Temple. Contemporary with these Messiahs of the 1st cent., similar personages arose among the Samaritans,

all of whom, after an existence more or less brief, passed away. Prominent among them were Simon Magus, who endeavoured to induce the early Christians to join his movement, but who is said ultimately to have become converted to Christianity, together with many of his followers, and Dositheus, who, instead of restoring the Hebrew State, founded a Samaritan sect that survived until the 6th century.

The destruction of the Temple led for a time to a cessation of pseudo-Messianic activity. For sixty years no new Messiah arose until at length, on the accession of Hadrian, the milder government of Trajan gave way to sterner rule. The repressive policy of the Romans aroused once more the spirit of the Jewish people still unsubdued. A rebellion broke out and a leader was immediately to hand in the person of Bar Kokhba or Bar Kozibah (probably from the name of his birthplace). Of the personality of this leader little is known. His original name is even doubtful. It is conjectured that he was one Simeon of Cozeba (1 Ch 4²²) or Chezib (Gn 38⁵). The name Bar Kokhba, or 'son of a star,' was given to him by the famous R. Akiba, who believed that in him was fulfilled the prophecy: 'There shall come forth a star out of Jacob . . . and shall smite through the corners of Moab, and break down all the sons of Sheth' (Nu 24¹⁷). Bar Kokhba does not appear to have adopted the designation of Messiah himself. This dignity was attributed to him by R. Akiba and other sages. On the outbreak of the rebellion, the whole province, composed of Judæa, Samaria, and Galilee, was evacuated by the Romans. The army of the Jews at this time has been estimated at as many as from 400,000 to 580,000 fighting men. Unfortunately, little is known of the campaign, but it is certain that the Roman garrison and the generals in command at the time of the outbreak proved respectively inadequate and incapable. The services of Julius Severus, the greatest soldier of the age, were requisitioned from Britain, where he had been waging an arduous war with the martial natives, to recover the prestige of the Roman arms. But even he, with unlimited resources, was at first compelled to remain on the defensive, and trusted to his tactics of cutting off detached parties and supplies to wear out his formidable enemy. In the course of the operations 50 general engagements were fought, and with every victory the numbers of Bar Kokhba's followers increased. From the most remote of the Jewish colonies men came to fight under his banner. Recruits were not drawn solely from Israel; Bar Kokhba's army included non-Jews in its ranks. Those who could not fight helped to fill the rebel coffers. At first the campaign proved a series of successes for the pretender. Jerusalem was soon captured, and served as a capital for Bar Kokhba, who was proclaimed king, and duly carried out the duties of sovereignty. For three years the Holy City remained in his possession, and during that time his armies succeeded in taking 50 walled towns and 985 villages. At length the tide turned. After a desperate struggle, Jerusalem was captured by the Romans, and no two stones of its buildings were left standing on one another. Other towns fell into the same hands until, of all the territories of Bar Kokhba, the town of Bither alone remained. Here the hero made his last stand, but not with the undivided support of the inmates of the fortress. Dissensions broke out among the garrison, and on the 9th of Ab, already the blackest anniversary in the Jewish calendar, Bither was stormed, Bar Kokhba killed, and his body brought in triumph to the Roman camp.

During the pacification that followed the males were slain by the thousand, and the women and

children sold into slavery. Unheard of and unspeakable tragedies were enacted. In Bither alone more are said to have been slain than those who took part in the Exodus from Egypt. The number of dead was counted by hundreds of thousands. All those who were able escaped from a country which offered them the only alternatives of slavery and death with torture. Many fled to Arabia, and the considerable Jewish population of that country, even to this day, may be reckoned one of the results of Bar Kokhba's abortive insurrection. R. Akiba, who had been thrown into prison at the outbreak of the rebellion, died under torture at its conclusion. The war led to the final breach between the Jews and Judæo-Christians. The latter suffered severities at the hands of Bar Kokhba and his followers, in consequence of their refusal to join in the national uprising.

The fatal results of the Bar Kokhba movement discouraged for some centuries personation of the Messiah. In fact, an attractive opportunity did not occur again until the 5th cent., when, in accordance with a Talmudic computation, the day of the Messiah was supposed to be at hand. It was at this juncture that such a one, self-styled Moses, appeared in the island of Crete. Of his origin or his subsequent fate nothing is known. He induced the Jewish population of the island to support his pretensions, and on a specified date promised to lead them dry-shod to the mainland. On the appointed day the Jews gathered round him on a promontory and at his direction some threw themselves into the sea, expecting a path to be opened for them through the waters. The miracle did not occur. Many of the enthusiasts were drowned; others were rescued. The Messiah himself disappeared.

The pretender next to come under notice was Isaac ben Ya'qub Obadiah Abū 'Isā al-Isfahāni, who flourished at Isfahān at the end of the 7th century. There are two estimates of his claims. The one was that he was merely the forerunner of the Messiah, the other that he was the Messiah Himself. His call came to him through a sudden and miraculous cure from leprosy, and in support of his divinity his disciples pointed out that, although an illiterate before his call, he was able after that event not only to read and write, but even to compose books. The affairs of the khilafate were at that period in a chaotic condition, and a military movement, such as Isaac's soon became, had good chances of success. The pretender and his followers met the army of the khalif in battle at Rai (Rhagæ), but Abū 'Isā was defeated and slain, and with his death the rising came to an end. The movement, however, did not die with its founder. It survived among the 'Isāvites, the earliest of the Jewish sects of the Diaspora, who did not disappear until a couple of centuries later. Abū 'Isā's influence on 'Anān, the founder of the Karaites (*q.v.*), and on his ritual was, however, more enduring.

Abū 'Isā left at least one disciple of influence. Yudghān of Hamadān, called al-Rā'i ('the shepherd'), did not himself claim to be more than a prophet, although his admirers, in accordance with precedent, insisted on his Messiahship. His teachings showed undoubted traces of Sūfism, then at the opening of its career; they were opposed to anthropomorphism, and to a great extent resembled those of his master Abū 'Isā. After Yudghān's death his disciples adopted an additional doctrine—that of the immortality of their master, who, they contended, was not dead, but would appear again.

Contemporary with Yudghān al-Rā'i was Serenus, a Syrian, who was both a political and a religious reformer. He promised to restore the Jews

to the Holy Land, and, perhaps in consequence, his influence spread as far as Spain. His career commenced in A.D. 720, but was very short-lived. He was speedily captured and brought before the khalif Yazid II., to whom he excused himself by stating that he had never been serious in his claims; he had merely been amusing himself at the expense of his co-religionists. Serenus was accordingly handed over to the latter for punishment, while his followers, repenting of their heresies, were re-admitted to the fold.

For the next three centuries and a half no Messiah arose in Israel. Then there was in the West a small group of unimportant pretenders: in France (c. 1087), at Cordoba (c. 1117), and at Fez (c. 1127). Of these there are practically no records beyond the mere mention by Maimonides. About 1160, however, one of far greater importance arose in Kurdistan. **David Alroy** (or **Alroi**) came from the north of Persia, probably Adharbaijan, being a member of one of the free Jewish tribes which claimed descent from the Ten Tribes, and to which the Afghans, the Afridis, and Pathans of to-day trace their ancestry. The period was again one of political disorganization. One great element of disturbance was the efforts of the Crusaders to recover and to keep possession of the Holy Land. Moreover, intertribal warfare was incessant, and the weakness of the Sultan led almost to a paralysis of the Government. It was in these circumstances that Alroy visited Baghdad, and on his return to his own people he raised the standard of revolt. A large following immediately collected, and Alroy, who had meanwhile proclaimed himself the Messiah, determined to break the yoke of the Muhammadans and to lead the Jews back to Palestine. From this point truth and legend have so intermingled in the story of Alroy that it is impossible to disentangle them. His command of the magic arts led to the acceptance of his mission far and wide. Only the Jews of Baghdad were sceptical, but his hold on the others was so strong that those in Baghdad were quite incapable of suppressing the movement. Alroy is said to have been summoned by the Sultan, to have appeared in answer to the summons and proclaimed his divine mission, to have been cast into prison, and to have miraculously escaped. Despite his magic powers, Alroy's movement was undoubtedly a failure. In all probability he was killed in an unsuccessful attack on the stronghold of Amadia. According to a less reliable version, the governing powers, unable to overthrow the Messiah by fair means, bribed his father or father-in-law to put him to death. On the death of Alroy his followers, in order to appease the Sultan, had to pay a considerable fine. In Alroy's instance also the pretender's death did not mean the end of his cult. The sect of Menahemites, named after Menahem, the traditional designation of the Messiah, adopted by Alroy, continued for many years.

A century passed before the next prominent pseudo-Messiah appeared upon the scene, but before that period, in 1172, a minor prophet arose in Yemen. His course lasted but a year, at the end of which term he was beheaded, it is said at his own request, in order to show by his return to life that he was indeed the Messiah.

Abraham ben Samuel Abulafia was born at Saragossa in 1240. While still a youth he was attracted to kabbalistic studies, and it was as a kabbalist rather than as a pseudo-Messiah that his career was of most influence. His life was spent in wandering from town to town and from country to country. In 1281 he was in Rome attempting to convert the pope to Judaism—of course without success. His boldness involved him in imprisonment, from which he is said to have escaped

miraculously. Four years later, when in Sicily, Abulafia proclaimed himself the Messiah, and announced the millennium for the year 1290. The year denoted came and went, but the millennium still tarried. Abulafia continued his picturesque career for one more year and then disappeared from history. He also, however, left his spiritual descendants, for his teachings were continued by two of his disciples, **Joseph Jikatilla** and **Samuel**, both of Medinaceli. Where Abulafia had failed, they were little likely to succeed, and it was but for a moment that these two meteors flashed in the firmament.

Immediately following them came **Nissim ben Abraham** of Avila, who pointed to 1295 as the year of the millennium. There were sufficient believers to fill the Synagogue on the appointed day, there eagerly to await the divine manifestation; but again disappointment was the prevailing emotion, and, when the watchers found mystic little crosses on their garments, many, accepting them as heavenly manifestations, embraced Christianity. The fate of the prophet, as of many of his predecessors, is unknown.

A century later **Moses Botarel** of Cisneros appeared. As a prophet he was of little consequence. In 1502 **Asher Lämmlein** suddenly arose in Istria and announced that, if the people would prepare themselves, the Messiah would appear that very year. At his suggestion fasting, prayer, and almsgiving became general throughout the empire. Jews and Christians alike accepted his teachings and prepared for the advent of the Messiah and the return to the Holy Land. Here again the precedent was followed: no Messiah appeared; the prophet disappeared.

At the close of the 14th cent. **Jacob Carson** (or **Carcasoni**), a minor prophet, appeared in the north of Spain, and **David Reubeni**, the picturesque emissary of his brother the mysterious king of Khaibar, or the East, also came upon the scene. Khaibar, according to the generally accepted locality of the kingdom, was a district in S. Arabia inhabited by nomad tribes of Israelites, although the view has been put forward that Reubeni came from India (see E. N. Adler, in *Aspects of the Hebrew Genius*, p. xxii, and *Auto de Fé and Jew*, p. xxx).

Reubeni arrived at Venice in 1524 after having visited Palestine and Egypt. He immediately proceeded to Rome, where he procured an audience of the pope, **Clement VII.**, to whom he announced that he had been sent by his brother to obtain allies and assistance in his war with the Sultan. In support of his claims Reubeni brought letters of introduction from Portuguese officers in the East. The Jews of Italy found the means for him to proceed to Lisbon, and he arrived in Portugal in 1525, with the view of inducing the king, **John III.**, to ally himself with the king of Khaibar. For a time the Portuguese policy seemed to favour such an alliance, and King John definitely promised a fleet of 8 ships and 4000 cannon for the assistance of his new ally. At the same time the pressure that was being put upon the Marranos of Portugal was relaxed, doubtless out of deference to the susceptibilities of Reubeni.

The embassy, the ambassador, and the circumstances that surrounded them, as well as the accompanying legends that immediately began to be woven, endowed Reubeni with almost superhuman powers in the eyes of the Jews, for whom the only hope lay in the future to which all their faculties were ever strained. The interest and excitement aroused by his advent were no less intense among the Marranos than among the Jews themselves. Miraculous powers, a semi-divinity, were attributed to him. If any proof of these

claims were needed, his existence as a Jew unmolested at the court of one of the most relentless of the persecutors of Jews and Judaizers was considered sufficient. The people looked eagerly towards him and expected, not a momentary palliation of their tortures, but a final release.

By no means the least of those who were dazzled by the appearance and favour of Reubeni was Solomon Molkho (previously Diogo Pires) (c. 1501-32), an official of the Government, of Jewish descent. Pires, who was a young man of great promise, aroused by the stir caused by Reubeni's mission, abandoned Christianity, adopting his ancestral Judaism in place of it, and endeavoured to attach himself as a disciple to the newcomer. The latter, however, severely discouraged all conversions to Judaism, fearing probably lest in consequence of them trouble might react on him and his mission, and Molkho found little or no favour with him. Molkho's conversion to Judaism had placed his life in great jeopardy; and, deprived of the protection of Reubeni for which he had hoped, he left Portugal for Turkey. In the East Molkho, although hitherto supposed to be quite unlearned in Jewish lore, is said to have displayed a remarkable acquaintance with that subject, and by his eloquence and learning, and the mysterious manner in which he had acquired the latter, he soon collected around him a school of disciples who considered him almost divine. His teachings went without disguise far into the domain of mysticism. By him the advent of the Messiah was foretold for 1540, and the sack of Rome in 1527, an oft-foretold precursor of the millennium, seemed to confirm Molkho's prophecies. The one ambition of the prophet was to earn a martyr's crown, and in pursuance of this aim after a brief sojourn in Turkey he returned to Christendom.

As was expected by Reubeni, the conversion and flight of Molkho, added to other incidents, shook the position which Reubeni had acquired at the Portuguese court. The royal promises, although made apparently in good faith, lacked fulfilment, and the undoubted excitement of which he was the cause among the Neo-Christians of the kingdom rendered his continued presence among them most undesirable; and, after having spent a year at the Portuguese court, Reubeni was asked to withdraw. The ship in which he sailed was wrecked on the coast of Spain, and for a time he was in the hands of the Inquisition. His release was, however, ordered by the emperor, Charles V., and he settled at Avignon, then under the sovereignty of the pope. From Avignon Reubeni removed to Italy, preceded everywhere by the mysterious reputation which he had acquired, and followed by a host of believers, who hailed him as the precursor of the Messiah and even as the Messiah Himself.

Meanwhile Molkho had also come to Italy with the reputation which he had acquired in Turkey, enhanced, if possible, and a following that grew in numbers from day to day. In Rome Molkho, imbued with Messianic tendencies, had visions and foretold floods and earthquakes, which, it must be added, subsequently occurred. More valuable to him, however, were the favour and protection which he had obtained from the pope, Clement VII., and from some of the cardinals. With their assistance he was able to defy his enemies, who were drawn not only from among the emissaries of the Inquisition, but also from the Jews, some of whom shrewdly considered his influence and pseudo-Messianism harmful rather than beneficial to Jewry. His critics among his own community were, however, numerically insignificant, and his influence among the Jews increased until he became indeed their accepted

prophet. By Graetz Molkho has been described at this period of his career as 'the Jewish Savonarola' (*Hist.* ix. 274). In order to avoid the flood which he had foretold would overtake Rome, Molkho repaired to Venice, and here he met once again the first inspirer of his enthusiasm, David Reubeni. His position in regard to Reubeni had, however, undergone a change since their previous meeting; his fellow-prophet, Molkho, met him now, not as a disciple, but as an equal.

Reubeni was still endeavouring to obtain assistance for his brother, the king of Khaibar, and from the authorities in Venice he received some encouragement in his mission. After the flood Molkho returned to Rome, where he was received with enthusiasm as a successful prophet. The pope, the cardinals, and the ambassadors of the Powers vied with one another in their flattering attentions to him. His influence was so great at this period that he was able to secure the indefinite postponement of the introduction of the Inquisition into Portugal; but his Jewish enemies, especially Jacob Mantin of Venice, were untiring, and they ultimately succeeded in securing his arrest by the Inquisition as a renegade Christian, and Molkho was condemned to be burned. All the preparations for the *auto da fé* were made and the victim was in due course consumed by the flames. It was then discovered, however, that the pope, in order to protect his favourite, had gone to the length of substituting another victim, and that Molkho himself was safely hidden within the papal apartments. In the circumstances it is not surprising that Molkho was smuggled out of Rome at the first opportunity.

Molkho thereupon rejoined Reubeni, and the two decided to journey to Ratisbon to plead with the Emperor the cause of the Jews of Khaibar. There is a tradition that advantage was taken of the interview with Charles to endeavour to convert him to Judaism, and it was possibly this attempt that led to the arrest of both the ambassadors. They were put into chains and carried to Mantua, where at the Emperor's request Molkho was again tried by the Inquisition and sentenced to be burned. At the last moment pardon was offered him on condition that he returned to the Christian fold, but he rejected the offer with scorn. He had only one cause for repentance, was his reply, and that was that he had been a Christian in his youth. Molkho's ambition was thereupon gratified and he earned a martyr's crown. Some of his addresses were published by him in 1529 under the title of *The Book of Wonder*. Reubeni was taken to Spain and there handed over to the Inquisition. His ultimate fate is surrounded by mystery, but he appears to have died while in the hands of the Holy Office. The evidence that he was burned is insufficient. A copy of Reubeni's diary is in MS at the Bodleian. Graetz published a portion in his *History*³, ix., and Neubauer published the whole of it in *Mediæval Jewish Chronicles*, ii.

Concerning the existence of Reubeni there can be no legitimate doubt. His mission, however, is not so well authenticated, and there are those, no mean authorities, who consider him to have been merely a charlatan and impostor. Graetz (ix. ch. 8), for instance, judging from the language of Reubeni's *Journal*, expressed the belief that it had been written by a German Jew, and Neubauer held the same view, only more positively. Rieger and Vogelstein (*Gesch. der Juden in Rom*, ii. 41-46, 53-58) are also very sceptical about his *bona fides*, but they express the opinion that he did come from Arabia. Adler (*Auto de Fé and Jew*, p. 30 ff.) seems to have more confidence in Reubeni's credentials, but locates the source of his embassy at Cranganore in India.

Strictly speaking, neither Molkho nor Reubeni should perhaps be included in the list of pseudo-Messiahs, for neither ever claimed divinity. They were Messiahs for the most part against their own inclinations. The same may be said of Isaac ben Solomon Ashkenazi Luria (Ari) (1534-72), the founder of the modern kabbala. An ascetic and a mystic, he never pretended to be more than the forerunner of the Messiah, not the Messiah Himself. His principal disciple, Hayyim Vital Calabrese (1543-1620), was acclaimed by his master as possessing a soul unsoiled by sin. Around him also a group of mystical legends have collected. On Luria's death Vital succeeded to his position and also claimed to be Messiah ben Joseph, the precursor of Messiah ben David. Both Luria and Vital made Safed the scene of their principal activities. In the time of Vital a rival Messiah arose in the person of Abraham Shalom, who in 1574 sent a message to Vital pointing out that the latter was only Messiah ben Joseph, but he, Shalom, was Messiah ben David. He offered, moreover, to shield Vital from the death that would otherwise have been his fate.

The most remarkable and influential of all the pseudo-Messiahs was Shabbathai Sebi, born, the son of a Sephardi agent of an English mercantile firm, at Smyrna, on the 9th of Ab (the anniversary of the destruction of Jerusalem and a fast day in the Jewish calendar), 1621 or 1626. He is generally believed to have died on the Day of Atonement in 1676. Even as a boy Shabbathai was noteworthy for his physical beauty and his strange introspective habits. For the ordinary learning of the Jew, that of the Talmud, he had no liking, and the time spent by him at the school of R. Joseph Escapa was for the most part wasted. On the other hand, the kabbalistic mysteries of the *Zohār* had a great attraction for his mind. He threw himself ardently into the study of them, and endeavoured, by carefully following out the ordinances laid down therein, and especially by the practice of asceticism, himself to solve the mysteries that the *Zohār* professes to offer its students. On attaining manhood, Shabbathai had already acquired a considerable reputation as a kabbalist, which was enhanced by his mode of life, his obvious belief in his magical powers, and his determined aversion to marriage, probably without precedent in the society in which he lived. Meanwhile Shabbathai's father had learnt, through his correspondents in England, something of the hopes and beliefs of the English millenarian sects, then prominent in English thought, and had in particular been apprised of the identification of the year 1666 with the opening of the millennium. By a coincidence, according to the computations of the *Zohār*, the year 1648 was to mark the appearance of the Jewish Messiah. Shabbathai, encouraged by these signs and by the almost worshipful attitude of his father, who attributed the whole of his material good fortune to his son's saintliness, by nature and education already prepared for the rôle that he was about to adopt, revealed himself in the latter year to a select circle of his followers as the Messiah. In support of his claim he uttered the Tetragrammaton—an act permitted only to the high priest in the Temple on the Day of Atonement. Shabbathai remained at Smyrna for some years after this event, surrounded by a circle of fervent believers, but with little if any influence outside of the district in which he lived. He and his teachings were closely watched by the Rabbinical authorities, who ultimately, considering that he had overstepped the permissible limits, excommunicated him and his disciples on account of their heresy, and banished him from Smyrna. This occurred about 1654 (according to Graetz, 1651).

From Smyrna Shabbathai is believed to have gone to Constantinople, supported in every sense by his disciples and strengthened in particular by two of them—Moses Pinheiro, a man of some scientific knowledge and of mature years, and Abraham Yachini, a distinguished preacher, who, by means of an alleged ancient MS of very doubtful authenticity, rendered Shabbathai still more steadfast in the belief in his own divine mission. It is doubtful whether Shabbathai, if he ever intended to visit Constantinople, did so on this occasion, but it is certain that he arrived at Salonica, where mysticism was likely to find a sympathetic atmosphere, shortly after his banishment from Smyrna. In Salonica Shabbathai showed himself even more intoxicated with the consciousness of his new rôle than he had been at Smyrna, and his acts led here also to his practical expulsion by the Rabbis. After leaving Salonica the new Messiah spent some time wandering about the Orient, promulgating his views and his claims in every city that he visited and gaining adherents in all parts. In 1660 he was in Cairo, where he remained for about two years. There he gained a valuable supporter in the person of Raphael Joseph Chalebi of Aleppo, a mystic who had long awaited almost with impatience the coming of the Messiah, and whose wealth and influence were both extensive.

The approach of the apocalyptic year, 1666, attracted Shabbathai to Jerusalem, where, suppressing temporarily his extravagances, he built up an influence over the people on less theatrical bases. As the representative of the people of the city, he was sent abroad to obtain funds for their relief from an impending calamity, and the success of his mission rendered him all the more popular among the grateful people in whose midst he was sojourning. While in Cairo, Shabbathai succeeded in yet another mission. A Polish Jewess, who at the age of six had been left an orphan and whose subsequent career was almost as romantic as that of Shabbathai, was at the time in Leghorn, where she was reputed to be living an immoral life. Of great beauty and, moreover, of an eccentric disposition, she was already famous beyond the limits of the town, and her announcement that she was intended as the bride of the Messiah made her known to even a wider circle. In fact, her renown spread as far as Cairo, where it came to the ears of Shabbathai; he sent for and married her, declaring that she was his divinely appointed spouse.

Shabbathai thereupon returned to Palestine. Passing through Gaza, he met there Nathan Benjamin Levi, otherwise known as Nathan Gazati, who immediately became the leading advocate of the new Messiah and took unto himself the rôle of Elijah, the forerunner of the Anointed. One of his first steps was to announce the opening of the Messianic Age for the following year, 1666. This prophecy, together with many subsidiary ones, was promulgated far and wide, spreading even to the shores of the North Sea. These claims were, however, not by any means encouraged by the authorities at Jerusalem, and Shabbathai thought it well to find a more congenial centre for his activities. He returned to Smyrna, his journey thither taking the form of a triumphal progress which culminated in a reception at his destination, remarkable for its enthusiasm. At Smyrna, overwhelmed by his reception, he put the final touch to all the rumours that were current regarding his divinity, and formally announced his Messiahship. He was forthwith entrusted with absolute power as the sole ruler of the local Jewish community. Wherever Jews were to be found, the rise of the new Messiah attracted attention. The business of the exchanges of Europe was neglected in order

that the latest of miracles might be discussed. The merchants of the North Sea ports wrote to their agents in the Levant for information. Tribute poured in upon the 'King of Kings.' Embassies were sent to him from the four corners of the earth. In the synagogues he was publicly hailed as the Messiah, and those who doubted went in danger of their lives. Even among the Christians believers in his mission were to be found. In Hamburg Protestants went to their pastor and said: 'We have almost certain accounts not only from Jews, but also from our Christian correspondents at Smyrna, Aleppo, Constantinople, and elsewhere in the East that the new Messiah of the Jews does many miracles, and the Jews of the whole world flock to him. What will then become of the Christian doctrine and the belief in our Messiah?' Prophets, male and female, in accordance with Joel's prediction (Jl 2²⁸), arose and exclaimed in Hebrew, a language with which they were supposed to have no acquaintance: 'Shabbathai Šebi is the true Messiah of the Race of David; to him the crown and the kingdom are given!' The daughters of R. Pehina, Shabbathai's bitterest enemy, blessed the name of the pretender, as had been foretold. In Persia the Jewish agriculturists refrained from work on account of the advent of their deliverer who would lead them back to the Promised Land.

At the beginning of the year 1666 Shabbathai left Smyrna for Constantinople, but before doing so he distributed the kingdoms of the earth among his principal followers. As soon as he had landed on European soil, he was arrested by an officer of the Sultan, who placed him in chains, and it was in this condition that Shabbathai approached the capital. Despite his undignified landing, Shabbathai's popularity in no wise languished, and he was received by hosts of believers in his divinity, who, by the gifts which they brought, enabled the 'Messiah' to secure a considerable alleviation of the lot that would otherwise have fallen to him. Shabbathai's courage did not, however, equal his popularity; and, when questioned by the authorities regarding his claims and intentions, he replied that he was merely a Rabbi sent from Jerusalem to collect funds for charitable purposes. Despite this falling away, the influence of the pretender, instead of waning, grew stronger, and in his prison in Constantinople Shabbathai held a court which was attended by Muhammadans and Jews who alike proclaimed his divinity. After two months the prisoner was removed to Abydos, and there his court was continued with, if possible, even greater success than in the capital. His renown and exaggerated reports of the royal manner in which he was treated spread throughout the civilized world. The castle of Abydos became a place of pilgrimage to Jewries far and near. In parts of Europe the Jews made preparations for the return to Palestine under Messianic guidance. In innumerable synagogues prayers for the pretender's welfare were regularly offered; and with every day the excitement both within Abydos and throughout the world increased. Meanwhile Shabbathai, in order apparently to justify his existence, abrogated certain of the Jewish fast days.

Shabbathai's fall was due to the appearance of a rival, one Nehemiah Ha-Kohen, who posed as a forerunner of the Messiah. Shabbathai, learning of Nehemiah's prophecies, summoned him to Abydos. After a long journey Nehemiah arrived. An interview with Shabbathai was followed by dissatisfaction on both sides. Nehemiah, fearful of assassination by the Shabbathaians, fled to Constantinople, where he embraced Muhammadanism and denounced to the authorities the treasonable intentions of his rival. Removed to Adrianople,

Shabbathai at length realized the critical position in which he was placed. Hoping thereby to save his life, he also embraced Muhammadanism, and was followed in this course by his wife and some of his adherents. The Sultan was much pleased at this act and appointed the pretender one of his doorkeepers. Shabbathai, in order to retain his hold upon the Jews, announced: 'God has made me an Ishmaelite; He commanded, and it was done. The ninth day of my regeneration.' His apostasy, despite the loyalty to him of many of his adherents, shattered his influence in Jewry, and hosts of Jews, their eyes at length opened by the last act of their prophet, repented bitterly of their support of the movement. For a time, in consequence of the schism caused by Shabbathai's apostasy, Turkish Jewry was in great danger of extermination, the fear of wholesale conversions to Muhammadanism being accompanied by that of the massacre of those who refused to follow Shabbathai's example. Powerful influences, however, warded off the latter danger.

Shabbathai seems never to have abandoned his Messianic claims. He managed to found a Judæo-Muhammadan sect of believers, the Dönmeh, who have survived, especially in Salonica, to the present day. After a time he fell into disgrace, was deprived of his office, and banished to Dulcigno, where he died, it is believed in 1676, leaving behind him a controversy which long continued in Israel. The Dönmeh are in a sense crypto-Jews, inasmuch as, while outwardly conforming to Muhammadanism, they practise certain Jewish or debased Jewish rites in secret. There is, however, in practice little secrecy concerning their difference from the Muhammadans, from whom, although they mix in commerce, socially they keep carefully aloof.

Shabbathai was succeeded by quite a shoal of petty Messiahs. The first of the line was Jacob Querido, or Jacob Šebi, who was the real founder of the sect of Dönmeh. He was in reality the brother of Shabbathai's fourth wife, who for her own purposes pretended that he was her son by the Messiah. Querido's principal doctrine was that the redemption could not come about until the world was either entirely good or entirely wicked, and, as the latter state was by far the easier of attainment, he preached and practised licentiousness in order that the day of the millennium might dawn. Querido died at the end of the 17th cent., and was succeeded in due course by his son Berehiah (c. 1695-1740). Other Shabbathaians Messiahs who flourished at this period were Miguel (Abraham) Cardoso (1630-1706), a Marrano, Mordecai Mokiah (c. 1650-1729) of Eisenstadt, Löbele Prossnitz († c. 1750), and Judah Ḥasid. These were all, more or less, prophets of Shabbathai so long as he survived, and they endeavoured to step into his place when he died. Mokiah flourished and preached in Italy and Poland. Prossnitz was of the class of clumsy conjurers; nevertheless he attracted many adherents in Austria and Germany. Ḥasid, who was a leader of the sect of Ḥäsidhīm, 'the Ultra-holy,' traversed Europe at the head of a considerable following whom he led to Jerusalem. He died, however, immediately after his arrival in that city, and with his disappearance his followers were left leaderless and destitute.

The last of the most prominent of the successors of Shabbathai was Jacob Frank (1726-91). He was born in Podolia, where his first occupation was that of distiller. His original name was Jankiev Lejbovicz, but he obtained the new surname of Frank from the subjects of the Sultan in whose midst he sojourned for a long time. An

undisguised charlatan and an apostate from more than one faith, he pursued a career of unceasing warfare against Rabbinical Judaism, and in the peculiar views to which he gave expression he described himself as the re-incarnation of all the prophets and Messiahs who had preceded him. In Turkey he obtained considerable renown on account of his kabbalistic learning, and on the return to his birth-place the remnants of the Shabbathaian party, who were known as Zoharites, appointed him their prophet. The Talmudists, however, disapproved most vehemently and forcibly of his teachings, which were leading directly to the destruction of Judaism and of morality in Poland. Frank and the Frankists were excommunicated, but they found a powerful friend in the bishop of Kamenetz, whom they ingratiated by pretended points of strong resemblance between their faith—which was bitterly opposed to Rabbinic Judaism—and Christianity. With his assistance the tables were turned, and for a time the upper hand was gained over the orthodox element in Jewry. With the death of the bishop, however, another change came over the fortunes of the parties. The position of the Frankists became precarious, and in order to secure the safety of his followers Frank instructed them to accept baptism, he himself setting the example. Conversions to Christianity followed on a considerable scale; but, when the converts were discovered to be leading double lives, and, while outwardly Christians, to be following Jewish practices in secret, the attention of the ecclesiastical authorities was directed towards them. Frank was himself arrested in 1760 on a charge of heresy and imprisoned in the castle of Czentschow, where he remained for thirteen years. This imprisonment did not by any means put an end to his movement or his teachings, and his prison became a centre for the promulgation of his doctrines. The invasion of the Russians in 1772 led to his liberation, and he was then free to make a triumphal progress through Poland, Bohemia, and Moravia. He lived in state until his death in 1791, latterly as the Baron of Offenbach, in various continental capitals, always with an immense retinue and a vast treasure, derived from his infatuated adherents, at his command. His later history, however, hardly belongs to the annals of Jewry, for his influence on Judaism had ceased long before his death. His followers, the Frankists, although for a time they kept themselves apart as pseudo-Jews of a peculiar description, were ultimately absorbed into the population in whose midst they lived.

Frank was the last of the series of pseudo-Messiahs to be accepted seriously by any considerable section of Jewry, but there is one other who deserves mention, before the catalogue of these actors on the world's stage is brought to a close. Moses Hayyim Luzzatto (1707-47) differed considerably from most of his predecessors in the rôle in which he also essayed to live. With most, if not all, of them there was a spirit of charlatanism manifest. Not even Luzzatto's most determined enemy could sincerely suggest any such charge against him. One might almost say that he was merely a victim of his own delusions; his predecessors for the most part found the victims of their delusions outside of themselves. Luzzatto, the cultured son of wealthy Italian Jewish parents, was a poet by nature as well as by profession. Early in life, however, he fell under the influence of the kabbalists and the *Zohâr*, and soon the mysteries of this literature took complete possession of him and he firmly believed himself to be divinely inspired. He even went so far as to create unaided a second *Zohâr*, and by the work of his own hands and mind he was convinced of his

divine mission. A circle of young devotees soon settled round him, and his fame began to spread to the confines of Jewry. The leaders of orthodox Judaism in Germany were scandalized and, after some difficulty, brought pressure to bear upon the newly arisen prophet to undertake to refrain from teaching, by means of either the spoken or the written word, the new doctrines. Luzzatto gave the desired promise, but was unable to observe it for very long, and, when he once more reverted to the forbidden studies, he was excommunicated by the board of Rabbis of Venice. Ultimately Luzzatto wandered to Palestine, where he died of plague shortly after his arrival.

LITERATURE.—On the general subject of pseudo-Messiahs relatively little has been written. The principal references to the subject are to be found scattered in works on post-Biblical Jewish history. *JEx.* contains a general résumé of the subject with supplementary articles in other volumes dealing with individual pretenders to the Messiahship. Pseudo-Messiahs in general are also dealt with by Joannes à Lent, in *Schediasma historico-philologicum de Judaeorum Pseudo-Messias*, Herborn, 1697; M. Gaster, in *Jewish Chronicle*, Feb. 11 and March 11, 1898; and A. M. Hyamson, *Gentleman's Magazine*, cxcx. [1901] 79-89. For the individual pseudo-Messiahs, H. Graetz, *Geschichte der Juden*, Leipzig, 1898-78, Eng. tr., London, 1891-92, should be consulted. In addition, for Theudas see Josephus, *Ant.* xx. v. 1; Eusebius, *HE* ii. 2, and E. Schürer, *HJP* i. ii. 168. For Dositheus see S. Krauss, in *REJ* xlii. [1901] 27-42; A. Buchler, *ib.* 220-231, and xliii. [1901] 60-71; D. ALBERT M. HYAMSON.

METALS AND MINERALS.—I. Metals.—

Fire and metallurgy may be regarded as the two main bases of material culture. The results of the modern applications of steam and electricity have been described as 'puny and insignificant when compared with those which followed the discovery of metals by the men of the stone age';¹ and with the finding of the art of extracting metal from ore 'human culture was revolutionised.'² Possibly the first attempts at utilizing metals were made by applying a modification of hammer-work on stone to fragments of surface-ore. Copper and its alloys, especially a native bronze, would naturally be observed first; but the usual order of discovery—copper, bronze, iron—is not absolute; the order varied in different regions. For instance, it is unlikely that the West and Central Africans found any metal earlier than iron, which is so abundant in their country.

Observing the importance to humanity of the discovery of metals and the invention of metallurgy, philosophers have inclined to attribute them to some remarkable cause. Lucretius, *e.g.*, imagined a mighty conflagration; this, in consuming forests covering metalliferous ground, would reduce the outcropping ore to a metallic state.³ But, with the discovery of fire-making, there are many possibilities, and various lines of discovery may have converged. Gowland suggests that the origin of metallurgy is to be found in the camp-fires of the Neolithic age.⁴ When these were made on metalliferous soil, the lumps of metal melted out would at once attract the attention of a stone-working people, and the blows of the stone hammer on the hot and malleable mass would indicate its possibilities. The camp-fire may thus be regarded as the prototype of the most elaborate modern furnaces.⁵

Naturally, a feeling of the importance of metals, and a primitive appreciation of the 'marvels of science' in connexion with the working of them and of their mechanical capability, reacted upon early man with the results usually found when superstition meditates on critical things. The body of beliefs about metals and, in a less degree, minerals is enormous, but reducible to a few simple types which are found everywhere and survive in peasant psychology to this day. Special properties of this or that metal or mineral are taken into account, and cultural reactions of all kinds modify the various beliefs and usages. These may be typically exemplified without unnecessary multiplication.

In common with all skilled crafts in early culture, the miner and the worker in metal are regarded with wonder, and often with its entailed superstitious feelings.

Among the Bangala of the Upper Congo no one is allowed to step over a smith's fire or blow it with his mouth; such acts would pollute the fire and cause bad workmanship. The smith is supposed to use witchcraft in order to perform his smithing well. Neighbouring peoples simply regard the smith with respect.⁶ Some African smiths form sacred guilds; the mythical Wayland Smith of Scandinavian lore is a natural deification, as is part at least of the figure of the Greek Hephaistos.

⁵ J. H. Weeks, in *JAI* xxxix. [1909] 456.

The usual tabus and animistic beliefs are attached to the working of metals, to mining, and to the ore and metal themselves.

The tin-miners of Malaysia have a remarkable code of tabus and body of superstitious ideas, but they are outnumbered by the Chinese workers, who, however, as will be seen, have a similar faith. The ore is supposed not only to be alive but to grow, to be able to move from place to place, to reproduce itself, and to have special likes or affinities for certain people and things, and *vice versa*. Hence it is advisable to treat tin-ore with a certain amount of respect, to consult its convenience, and what is, perhaps, more curious, to conduct the business of mining in such a way that the tin-ore may, as it were, be obtained without its own knowledge.¹ Of the tabus acts observed by the miners, the chief are that no living creature may be killed in the mine; that the *sarong* may not be put on; that shoes may not be worn, or an umbrella used. Numerous charms are employed by the 'mining wizards' for the purpose of clearing away evil spirits and to induce the ore to show itself.² The Malay *pawang*s ('medicine-men') or mining wizards, used to enjoy 'an extraordinary reputation, some of them being credited with the power of bringing ore to a place where it was known that no ore existed. . . . to possess the power of sterilising such ore as existed, and of turning it into mere grains of sand.' No one but him was allowed to wear a black coat at the mine. He used a special language (*bahāsa pantang*, 'tabu language') for his professional duties, and he had 'a wonderful "nose" for tin.'³ Sometimes each separate grain of ore was credited with personality.⁴ It was believed that tin could 'announce its presence by a peculiar noise heard in the stillness of night.'⁵ Sometimes the personality of the tin is described as a buffalo, in which shape it makes its way underground,⁶ this being perhaps a sophistication of the lode.

In Sumatra the spirits of the gold mines are treated with as much deference as the spirits of the tin-mines in the Malay Peninsula. Tin, ivory, and the like, may not be brought by the miners to the scene of their operations, for at the scent of such things the spirits of the mine would cause the gold to vanish. . . . In some cases, for example in removing the grains of the gold, a deep silence must be observed; no commands may be given or questions asked, probably because the removal of the precious metal is regarded as a theft which the spirits would punish if they caught the thieves in the act. Certainly the Dyaks believe that gold has a soul which seeks to avenge itself on men who dig the precious metal.⁷

In Manipur the iron-ore deposits are under the protection of an *umang lai* ('forest god'), who is propitiated before the iron is worked.⁸ He capriciously moves the iron about. His symbol is a piece of iron a few inches square. The *lai-harariba* ('pleasing the god') is an annual festival. 'The first thing to be done is to bring the lai into a state of activity. Ordinarily speaking he is supposed to remain inert, unless offended in any way.' He 'particularly affects two plants called Leisang Leirrel and Langthel, and when he is about to be pleased the Leirangba, a specially selected official, has to fetch them.' The plants are placed in the house of the *lai*, and then taken in a brass vessel by an old lady to the river. She wades about, suddenly stumbles, and then emerges with a vessel full of water. The god has now come.⁹ A procession with music is made to the *lai-pham* ('god's place'), where his images (the pieces of iron) are set out. By them is placed the vessel, and a service of prayer and praise is celebrated, after the lighting of a sacred fire for the sacrifice. The god's servants or priestesses are two old women, termed *maibis*, who are often inspired by him and babble incoherently. If a man is similarly possessed by the god, he is known as *maiba* and during the ceremonies wears the dress of a *maibi*. Dramatic performances end the list of events.¹⁰ The last example is a perfect one for showing the development of an organized cult around a metal and the processes of its acquisition. There is some vagueness, which is worth noting, as to whether the metal itself is personified. As for its being deified, this is hardly to be inferred here or elsewhere.

The god appears to be rather the owner of the site, resembling the Hebrew Baals.

The Malays regarded gold in a similar way. The gold 'spirit' is 'believed to be under the care and in the gift of a *dewa*, or god.' It has the form of a golden roe-deer.¹¹ The theriomorphism is analogous to that of tin.

The same ideas are found at the other side of the world.

Gold was regarded by the Central Americans as possessed of 'divine qualities,' and it was gathered in fasting and penance.¹²

An interesting detail with regard to the personality of metals is supplied by Malay superstition. The Malays believe that so long as gold is in the earth it has a soul. When the gold is taken by man, the soul flies away.¹ The idea is parallel to those found in agricultural lore; presumably the corn-spirit leaves John Barleycorn when he is ground, if not when he is reaped. The idea is elaborated in Celebes, on the principle that the soul may be retained and will assist the usefulness of the implements when made.

Among the Alfors of Celebes iron-working is a prominent industry. Iron is credited with a soul, which is apt to desert the metal under the hammer. Every smithy, therefore, includes a bundle of *lamoa* ('gods'), consisting of wooden imitations of iron implements, and in this the soul of the iron resides. "If we did not hang the *lamoa* over the anvil, the iron would flow away and be unworkable" on account of the absence of the soul.²

This is an interesting application of the principle of the external soul.

The Chinese in their elaborate animism have not neglected metals. They consider metals and ores when in the ground to possess a *shen* ('soul') of animal or human shape, and this figure is either the mineral or a spirit guarding it. 'Gold, jade, and pearls . . . are the *ting* of Heaven and Earth.'³

A particular development is towards the Scandinavian idea of gnomes. The Chinese have tales of silver men and of 'women in white'; when they were attacked and knocked down, they disappeared, and silver mines were found on the spot.⁴

The same kind of analogy connects various metals with various things, according to colour or other properties. The Greeks of to-day call jaundice 'the golden disease,' and heal it on the homeopathic principle with a decoction from an English sovereign, English gold being the best.⁵

One or two examples of the miscellaneous wonder-lore which has gathered round metals may be cited.

Fern-seed, itself a mythical vegetable gold-dust, guides to hidden treasures.⁶ A Malay recipe for turning brass into gold is to kill a wild pig, and sew up in it a quantity of 'scrap' brass; then pile timber over it, and burn it; when grass has grown over the remains, 'dig up the gold.'⁷ Paracelsus made a magic ring of a mixture of all metals joined under certain constellations,⁸ and Van Helmont concocted a ring of magic metal which cured disease.⁹ An obvious connexion is practically universal between gold and the sun, silver and the moon. Silver is the lunar metal; hence peasants like to have silver in their pockets when they see the new moon, and to turn it for luck, i.e. doubling.¹⁰ Throughout the world magnetic iron and ore have excited wonder.

The relative value of the familiar metals is the same in superstition and ordinary usage. It is interesting to note that the Hindus regarded alloys as impure, and never used them for religious purposes.¹¹ Here may be detected the notion of mixture, adulteration, as a component of the idea of impurity. Another popular division of metals is into 'precious' and 'base.' The Chinese consider gold 'the most genuine matter.'¹² In all the analogous estimates found in every age it would seem that æsthetic ideas supersede economic. Clearly the æsthetic value of gold and silver rather than their importance as currency is to the fore, and either view preponderates over the mechanical importance of iron.

A similar predilection is shown in the genealogies of the metals.

Manu said that gold and silver arose from the union of water and fire.¹³ In Chinese philosophy tin 'is produced by the influence of the feminine principle in nature, being classed

between silver and lead. The metal arsenic generates itself in two hundred years and after another two hundred years is converted into tin. Tin, being a product of the feminine principle, has tender qualities. When it is submitted to the influence of the masculine principle, it is converted into silver. It is sometimes found that wine kept in tin vessels has a poisonous action on man, which proves that the arsenic had not been completely transformed into tin.'¹⁴

This notion of transmutation of metals is a curious parallel to modern discoveries of the degeneration of radium into a series of filial metals. The search of the alchemists for the philosopher's stone included a similar hypothesis.

According to the Pahlavi *Bundahishn*, gold, silver, iron, brass, tin, lead, quicksilver, and adamant arose from the various members of the dead Gayōmar; and 'on account of the perfection of gold it is produced from the life and seed.'¹⁵ The Pahlavi *Sāyast īr-Sāyast* speaks (xv. 15) of the duty of 'propitiating' melted metal, i.e. practising 'habits of the heart so unsullied and pure that, when they shall drop melted metal upon it, it does not burn.' But the ordeal slays a sinner. Metal, especially gold and silver, is a 'counterpart of Shat-vairō himself in the world.'¹⁶ From the divided body of Indra, according to the *Satapatha Brāhmaṇa*, metals arose, as well as all kinds of substances and living creatures; e.g. from his navel came lead.¹⁷ The five elements in Chinese natural philosophy are water, fire, wood, metal, and earth. Wood produces fire, fire earth, earth metals, metals water, and water wood.¹⁸ The idea of animal souls for metals already referred to has probably no cosmological intention.

In the multitudinous superstitions relative to the protective, curative, or dangerous properties of metals or metallic implements, the analogy of their relative value and efficiency—e.g., between gold and steel—seems to predominate. The *Satapatha Brāhmaṇa* lays down that the slaughtering-knife for the horse should be of gold, that for the *paryāgyas* of copper, and that for the other sacrifices to Prajāpati of iron. Gold is a symbol of the nobility, copper of heralds, messengers, and the like, iron of the peasantry.¹⁹ The intrinsic value of gold, its brilliance, analogous to fire and the sun, connect it with vitality. Hence its extraordinary popularity as a panacea to this day among the Chinese, in the form of leaf, dust, decoction, or grease. It is placed in the mouth of the dead to assist revivification and to delay decomposition.²⁰ The Chinese also put mercury in coffins in order to preserve the body.²¹ With no knowledge of embalming they endeavour to insulate, as it were, the coffin against decay. The use of quicksilver may be referred to the analogy between a moving and apparently living metal of worth and organic life. British folklore advises rubbing ringworm with silver.²²

Metals, in virtue of their various properties, are used both as medicines and as amulets, in either case dependent on magical notions. The Burmese believe that the wearing of silver and gold is itself protective, and base metals may be used in default of precious.²³ Lumps of gold are worn under the skin to secure invulnerability. There is a common practice of covering amulets with gold-leaf to add to their efficacy.²⁴ For a person to wear something, as if a part of himself, which has a value of its own, adds to his own value and resisting power. On the same line of reasoning, metals of worth are the more useful in warding off ghostly enemies. In European as in Semitic folklore, the most efficacious bullet against a witch is one of silver, or a crooked spence; ²⁵ but all metals have efficacy in this direction.

The property of resistance is common to most metals; the precious metals possess the further properties of beauty and value. The strength and hardness of iron make it a favourite charm.

To keep off evil spirits, mourners in India carry a piece of iron—a key or a knife or any iron object. In Scotland after a death a piece of iron was placed in all the provisions in the house 'to prevent death from entering them,' and similar customs obtain in Ceylon and Morocco.¹ 'When Scotch fishermen were at sea, and one of them happened to take the name of God in vain, the first man who heard him called out "Cauid airm," at which every man of the crew grasped the nearest bit of iron and held it between his hands.'² To this day in parts of Scotland there survives a queer superstition about 'pigs' and 'iron.' It is unlucky to utter the words 'sow,' 'swine,' or 'pig' when fishing;³ if you hear a man do so, you must shout 'Cold iron.'

It is a mere coincidence that in modern medicine iron is used as a tonic and that in early culture its 'strength' was absorbed by men.

The people of Nias wear iron arm-rings to keep off evil spirits or witchcraft; and they place iron by the side of sleeping infants for the same purpose. In Sarawak biting a piece of iron is a similar protection. The Torajans believe that iron strengthens one's soul, and hold ceremonies at smithies for this purpose. The people of Halmahera drink water in which iron has been dipped.⁴ In Surinam iron arm-rings are supposed to strengthen the wearer.⁵

Several Malay sultans have in their regalia a sacred lump of iron, 'a piece of old scrap-iron with supernatural powers.'⁶ Long iron nails are used by the Malays to protect new-born infants, betel-nut scissors to drive away evil spirits from the dead, and a sword is put in a strange river before a man will drink of it. When eating alone in the forest a man will sit on his sword, not only to drive away evil but to 'confirm' himself. Such iron implements are called 'representatives of iron.'⁷ Scraps of iron are used in ointments for curing the sick.⁸

The supernatural power of a sharp instrument is, of course, to be added in many cases to the intrinsic power of iron and steel as such.

Lead appears but rarely in superstition. The Atharvaveda speaks⁹ of a charm against demons and sorcerers by means of lead. Here, as in mediæval Europe and classical antiquity, the softness and malleability of the metal, and perhaps its weight, were possibly connected with ideas of image-making, for which it is as convenient as wax. The practice of injuring a person by damaging his image or effigy is world-wide. Curses inscribed on leaden tablets were common objects of Greek and Roman superstition; a leaden arrow, in classical belief, destroyed love.¹⁰

The virtues of metal may be enhanced, as is seen in the last-cited cases, by the form and purpose of the manufactured article. The ring has the additional advantage of enclosing and keeping safe; the coin has the further values of currency and of the personality whose head is stamped on the obverse. British folklore adapted the royal 'touch' for King's Evil by using crown-pieces bearing the head of King Charles I. Sufferers from paralysis or rheumatism collected coppers from the charitable at the church-door, and these were commuted into silver rings which were worn to cure the infirmity.¹¹

The acoustic properties of metals have also been important in popular religion.

'The idea that the sound of brass or iron has power to put spirits to flight prevailed also in classical antiquity, from which it may have been inherited by mediæval Christianity.'¹²

In the Far East the virtues of the gong as a repeller of evil are well known. Brass is considered by the Chinese the most effective metal for repelling demons;¹³ the sound of a brass instrument is the most terrifying.

A remarkable set of beliefs and practices has a strong tabu against the use of iron and the substitution of other metals or substances, previously

used or not. These rules usually apply to critical circumstances and persons.

Iron was not allowed to touch the body of the king of Korea. The Archon of Plataea was forbidden to touch iron. Tools of iron might not be introduced into Greek temples, and the Arval Brothers offered an expiatory sacrifice when an iron graving-tool was used. Roman priests were not allowed iron razors. The hair of the Flamen might be cut only with a bronze knife. It appears that the Greeks ascribed purificatory powers to bronze. The Pawnees, Hopis, Hottentots, and Gold Coast Negroes retain stone implements for sacred purposes. Circumcision is performed with a quartz knife by the Hottentots and the Ovambo.¹ Among the Damaras blood was ceremonially drawn from the slayer of a man or a lion, but with a flint knife.² The druids cut the sacred mistletoe with a golden sickle. When making need-fire, the Scots removed all iron from their persons. In making the Yule-tide fire-wheel (*clavie*), the hammering must be done with a stone. Similar tabus were observed in ancient Palestine and Italy. No iron tool was employed in making Hebrew altars or in the building of the Temple at Jerusalem. The Roman Pons Sublicius, a sacred bridge, was made and repaired without any use of iron or even bronze. Hindus have believed the use of iron for buildings to be productive of epidemics.³

Frazer considers that the tabu against iron in ceremonial 'perhaps dates from that early time in the history of society when iron was still a novelty, and as such was viewed by many with suspicion and dislike.'⁴ Thus, when iron ploughs were introduced in Poland, some bad harvests followed, and the farmers reverted to the wooden implements.⁵ The hypothesis is inconclusive. Iron and steel are used in virtue of their death-dealing qualities to ward off supernatural (no less than physical) evil, and weapons made from them are essentially dangerous weapons. Now, ceremonies practised at critical seasons or with reference to persons or things in a critical and sensitive condition call for special treatment with special apparatus, or at least for peculiar delicacy and care. This attitude is quite a sufficient reason for the employment of less dangerous tools, such as flint, quartz, or the human hand in critical operations, and it also sufficiently explains the ceremonial use of flint or bronze instead of iron, and particularly the use of gold or silver in connexion with very sacred persons or things. In Morocco the last sheaf of harvest is regarded as an incarnation of the *baraka* of the crop. It may not be cut with a sickle of steel or iron, but is plucked with the hand. Compare with this the Moroccan custom of placing steel and salt underneath the stack of wheat in order to keep off the attacks of *zinn*.⁶ In the first case, steel is evidently too dangerous a substance for dealing with the delicate sanctity of the Bride of the Fields; in the second, its very dangerousness makes it an ideal defence. It is quite possible that in certain sacred operations—e.g., circumcision and cutting the mistletoe—the phenomenon of rust, indicating decay, may also have been a deterrent from the use of iron. This, or the general notion of the dangerousness of hard metals, may have inspired the Chinese rule that metal buttons may not be used on grave-clothes. They would 'give trouble to the dead by injuring his body while it is decaying in the grave.'⁷ On the other hand, the Chinese use gold, jade, and mercury to retard the decay and facilitate the future revival of the dead.

2. Minerals. — The religious associations of minerals in general are fewer and less marked than those of metals, except in the case of salt. The use, however, of stones of various sorts and shapes as fetiches and vehicles of magic is very widely spread; but, as it demands a special study (see art. STONES), it is touched upon here only to illustrate the general attitude towards the mineral world.

Australian medicine-men possess sacred stones full of strength, more or less regarded as 'living spirits.' They swallow them or rub their heads with them to acquire their virtue.¹ In Melanesia magic and worship are closely connected with sacred stones. The stone is not the *vat* (the spirit) nor is the *vat* in the stone, but there is a 'connexion.' The stone is, as it were, the 'outward part' or 'organ' of the *vat*, and the owner of such a stone is its priest.² These stones are kept in houses in order to bring *mana* to the inmates. There are special stones for promoting the growth of the crops and for bringing rain or sunshine. The stone is rubbed with food—e.g., coco-nut—to induce it to act. Food placed on a stone and then eaten gives *mana* to the eater.³

Both shape and material are concerned in the prestige of sacred stones.

The Australians are partial to a small round black stone, which is easily manipulated; the medicine-man cures a disease by pretending to extract such a stone from the patient's body.⁴ In some tribes every man carried a round black pebble of magic power, *bulik*; placing this in contact with anything coming from an enemy sent the magic force into his body, procuring his death or sickness.⁵ Rock-crystal, or quartz, is a favourite material for these purposes.⁶ Australian medicine-men used bits of rock-crystal for making rain, curing or causing disease, and poisoning water. To cure disease they would extract a piece of rock-crystal, alleging that a hostile sorcerer had placed it in the patient's body.⁷ To make rain the sorcerer breaks off a piece of rock-crystal and spits it towards the sky.⁸ White quartz is used for this purpose in Queensland. The stones are fixed to a stick and placed at the bottom of a pool, while in some parts a quartz crystal is ground to powder, which is scattered over the women, who pretend that it is rain,⁹ the liquid appearance of the crystal possibly suggesting its connexion with rain. The Wa-wambs of Central Africa anoint a rain-stone and place it in water; Mongolians use a bezoar stone.¹⁰ In the Banks Islands a round stone, called 'sunstone' (*vat loa*), is decorated with radiating feathers and hung in a tree to produce sunshine.¹¹ In New Guinea a 'wind-stone' is tapped with a stick to produce wind. If it were struck heavily, a hurricane would result. The people of Vancouver have a number of stones, each representing a particular wind, and the required wind is obtained by slightly moving the corresponding stone.¹² Pebbles, being obviously suitable for counting (cf. *calculus*), are naturally used as representatives of persons; in Scottish folk-ritual at Hallowe'en each member of a family is represented by a stone.¹³ In Greece a black stone is placed on the head to produce strength, and people carry stones on their heads while jumping over the bonfire.¹⁴

The use of crystals of quartz or other mineral for 'seeing' is world-wide, and needs no special illustration here (see art. CRYSTAL-GAZING). Again there is to be noted the analogy between the crystal and the liquid stage.

In the Middle Ages the term 'bezoar' covered mineral as well as animal concretions.¹⁵ One variety was the 'madstone,' curative of madness and poisoning.¹⁶ The adder-stone was worn to cure whooping-cough, amber to ward off croup, the snake-stone to remove serpent's poison, the load-stone to cure rheumatism, in recent Scottish custom.¹⁷ Precious stones particularly have in all ages commanded interest by their unique beauty of colour, sparkle, or phosphorescence. The Greeks wore 'amethysts' to prevent intoxication;

agate was a panacea of disease; the bloodstone checked bleeding.¹

The lore of jewels is a subject in itself, but mainly built up of fanciful analogy rather than of genuine superstition. But the Dayaks, among others, suggest the same elements of animism as have prevailed in the case of metals, when they regard a special form of diamond as 'the soul of diamonds.'² At the other end of the scale there is the modern English burglar who carries a lump of coal in his pocket as a charm, possibly a charm for invisibility.³

The ceremonial use of flint implements for extraordinary purposes, while steel is used for ordinary, has been alluded to above.

The fine jade of China has attracted to itself almost a special cult; it is identified with the heavens, since all precious substances are from the sky. Like gold, it possesses intense vital force, or *yang*. Some jade is of a beautiful azure colour—a fact with which its heavenly origin may be connected. Chinese folklore has stories of jade-wine flowing from mythical rocks of jade. Jade prolongs life, and even produces immortality.⁴ In folk-medicine it was used as a sovereign panacea, and administered as a decoction or ointment. Jade-water was procurable from streams flowing by jade rocks, or was made with powdered jade.⁵ In accordance with the idea that death is a protracted sleep, the Chinese place in the mouth of the dead objects possessing vital energy (*yang*) to facilitate revival and retard decomposition, such being jade, jasper, nephrite, and agate. Jade, the most precious mineral, being identified with the heavens, intensifies the souls, or *shen*, of those in contact with it; and the same was the case with gold, sometimes identified with jade.⁶

¹ When the Sovereign fasts, the jade which he swallows is procured by the Manager of the Jade Stores.⁷

This would accelerate his intercourse with disembodied *shen*, the object of his fast.⁸ There were many stories of a luminous variety of jade.⁹

The discovery of salt⁹ and its employment in food-preparation constitute an epoch as socially important as the discovery of metals. Neither has been achieved by the Australian natives; and many metal-using savages are still ignorant of salt. But its discovery generally comes early in culture, though long subsequent, in most cases, to the discovery of metal. Owing, perhaps, to its quasi-medicinal properties, as much as to its effect on food stuffs, salt has attracted an extraordinary amount of superstitious and religious attention. The bond, e.g., created in Arabic and other customs by eating salt together is in the highest degree sacred, and may deserve the name of 'salt-communion.' Very holy obligations were 'covenants of salt.'¹⁰ Salt has analogies with blood and all 'strong foods'; on another side it has analogies with 'strong' metals like iron. Primitive peoples ignorant of salt are supposed to correct its absence from their food by drinking fresh blood.

Harmless superstitions about salt have lasted into modern civilization, owing to its having been a sort of symbol of food-communion and of the common meal.

In medievalism the salt separated the family from the retainers in hall.¹¹ In Leonardo's fresco of the Last Supper, Judas was to be recognized by the salt-cellar which he had overturned; the detail is visible in the copy by his pupil, Marco d' Oggiono, in the Brera Gallery.

Salt has been much used in sacrifice, indicating the analogy between sacred and ordinary meals. *Mola salsa* was offered by the Latins to the *lares*, and salt was sprinkled by Greeks and Latins on the head of the sacrificial animal. On the other hand, the Rabbi Chna, in the 3rd cent., stated that in all salt there is some portion of the salt and sulphur of Sodom, which blinds the person whose eyes it touches.¹ We thus get the two poles usually found belonging to sacred substances, positive and negative, *optimum* and *pessimum*.

Salt has been widely used in protective and curative magic, and the association of ideas may be the same as is seen in the word 'preserve.'

Lao and Siamese women after childbirth washed themselves daily with salt and water, salt being a protection against witchcraft.² Moors carry salt in the dark to keep off ghosts,³ and in Teutonic countries it is placed near infants to protect them.⁴ In Morocco it is put in the wheat stack to guard it from *znün*, and is sprinkled on the hand-mill before grinding the corn.⁵ British folk-custom has the charm of carrying salt witherskins round a baby before taking it to be baptized.

Salt is a cure for many sicknesses, and procures disenchantment.⁶ Like blood and iron, it is a favourite medium for the oath; in early Teutonic custom the swearer dipped his finger in salt, and then took the oath.⁷

As with other trades, sacredness has attached to salt-mining.

In Laos salt-miners observe continence and other tabus.⁸ In ancient Germany salt-working was a sacred business.⁹ The peoples of Central America worshipped a 'goddess,' Huixtocihuatl, of salt, who was believed to have invented the pan-process.¹⁰

Prohibitions against the use of salt are instructive for the theory of tabu. Certain professions, and persons in certain states, are forbidden to use salt, as they are forbidden other critical substances.

Mourners may eat no salt among Hindus, Africans, and other peoples. Priests and medicine-men (as among the Egyptians, the Dards, and Central and S. Americans) may eat no salt throughout their lives.¹¹ The salt-tabu of the Egyptian priesthood is especially emphasized.¹² When travelling, the Central African might not use salt. If he did, and his wives were not behaving well, the salt would act as 'a corrosive poison.'¹³ During the ceremonies of firstfruits among the Yuchi Indians of California continence and abstinence from salt are ordered,¹⁴ as is also the case after a solemn communion with a god by the Huichol Indians.¹⁵ No salt may be used in cooking the flesh of the beast or any food at the Gilyak Bear Festival.¹⁶ Some Dayaks after taking heads may not eat salt, or touch iron, or have intercourse with women. Baganda fishermen have the same combined tabu.¹⁷ In Indian ritual the young student, after being brought to his teacher, and the newly-married pair must abstain from salted food for three days.¹⁸

The following is a luminous instance of the ætiology of the associations of salt.

Among the Nyanja-speaking tribes of British Central Africa the girl at puberty is secluded and may eat no salt. After the seclusion she is married. On the wedding-night she puts salt in the relish which she cooks, and this is set out next morning for relatives to rub on themselves, though not if the husband is impotent.¹⁹

On this and similar customs, viz. that women at their periods may not put salt in food, lest husband and children contract a disease, Frazer says:

Abstinence from salt is somehow associated with the idea of chastity. 'Primitive man connects salt with the intercourse of the sexes and therefore forbids the use of that condiment in a variety of circumstances.'¹

A psychological analysis is assisted by the Rabbinical theory of *kilayim*, the mixture of things differing in species or substance, and by the principle underlying the contrast between Apollo and Dionysus in Greek thought. Persons in a crisis must be chaste; the keynote of chastity is avoidance of alien influence, of mixture. The Apolline ideal is static, that of Dionysus dynamic. The votaries of the latter god celebrated orgies with consumption of flesh, wine, and blood. The principle of the orgy, whether alcoholic, cannibal, flesh-eating, or sexual, is distinctly dynamic—a stimulation of human energy to the utmost degree. Movement and change are among its characteristics; and, in a humble way, salt, as producing chemical change, is in the list of dynamic vehicles. In connexion with sexual intercourse it is analogous to leaven; there is some idea of the process of fermentation, so to say, about the sexual act, as well as the expenditure of vital energy in an ultra-dynamic process.

Alum and sulphur² are used, but in a far less degree, as magical substances. Alum is an Egyptian charm against the evil eye,³ and both are employed in Morocco to protect ploughing oxen from the evil eye.⁴ Cinnabar was used in Greek charms for producing invisibility.⁵

The use of coloured ochres, chalk, pipeclay, gypsum, kaolin, and other earths for decorating the body on ceremonial occasions is very widely spread in the lower culture. Magical ideas naturally attach to bituminous deposits and such sources of rock-oil as are found in Western Asia. Chinese folklore includes magical use of oil.⁶

3. In metaphor.—The metallic and mineral world has naturally developed a large literature of metaphor. Gold is in the OT a symbol of purity, of nobility, and of value, and 'brass' (= bronze or copper) is used in the OT as a symbol of hardness.⁷ Iron connotes strength and severity—'a rod of iron,' 'a yoke of iron,' 'walls of iron,' 'an iron sinew.'⁸ A teacher of the law, said the Rabbis, must be as hard as iron. Being also breakable into pieces, it is a symbol of the Tōrah with its numerous parts.⁹

The symbolism of Dn 2 and 7 comparing the kingdoms of the world to metals was popular in mediæval literature.

'Gold is Babylon; silver is Media; copper is Greece; iron is not mentioned either at the time of the First or of the Second Temple, since it symbolises Edom (Rome), which had destroyed the Temple.'¹⁰ The Iranians had a longer series of ages—gold, silver, brass, copper, tin, steel, iron.¹¹

Philo elaborated a metallic symbolism: gold is wisdom; copper perception.¹² The Sabians associated each planet with a metal, of which the statues of the planetary god were made; and in Mithraism the soul passed through seven gates, each of a different metal—lead, tin, bronze, iron, alloy, silver, and gold—and each corresponding to a planet as well as to a psychic quality.¹³ Hesiod's famous metallic series of the ages of the world inspired a considerable literature. The first age, which was the best, was golden; that in which

we live is iron.¹ The principle behind this is æsthetic.

In Italy Saturn and in Greece Cronus 'was believed to have been a king who reigned in heaven or on earth during the blissful Golden Age, when men passed their days like gods without toil or sorrow, when life was a long round of festivity, and death came like sleep, sudden but gentle, announced by none of his sad forerunners, the ailments and infirmities of age.'²

METAMORPHOSIS.—1. Evidence for the belief.—Metamorphosis, transformation, or shape-shifting is a power universally believed in at low levels of culture. It survives at higher levels, especially among the masses, though it is also found in myths which are current among the educated or where popular belief tends to take the form of dogma, as when 17th cent. theologians accepted the werewolf superstition as a fact. The evidence for this universal belief is copious, and is found in myths, legends, and sagas, as well as in poetry from all lands; in folk-tales, of which it is one of the commonest themes or the most important incident, as, e.g., in the 'Transformation Combat' or the 'True Bride' cycle;⁵ in existing folk-belief, whether among savages or the peasantry; in the writings of modern travellers, explorers, and missionaries, as well as in older literature—Egyptian, Babylonian, Hindu, Greek, and Celtic.

2. Varieties of metamorphosis.—Metamorphosis is asserted of every order of beings and even of inanimate things. (a) As far as men are concerned, where the belief is current all men do not necessarily claim the power of transformation, but any man will readily admit that others have this power. Hence we have beliefs in the existence of distant tribes or groups possessing the power of transformation. Generally those who are credited with this power are medicine-men, shamans, sorcerers, wizards, and witches. To multiply instances is unnecessary; suffice it to say that, wherever such a class of people is found, shape-shifting is always one of their magical powers. No European peasant believes that he can change his form, though his savage ancestors did so; with him the belief survives in his firmly-rooted opinion that every witch can do so (see LYCANTHROPY). Among certain peoples, however, every one is believed to have some connexion with an animal form. Thus among the nations of W. Africa the bush-soul, one of the souls which each man possesses, exists in an animal; in Indo-China one of the souls of a man has the power of appearing as a man or as a wer-animal. This aspect of the subject is fully discussed under LYCANTHROPY.

While metamorphosis into animal form is more general, that into tree, plant, or flower is also found here and there. Besides this, numerous myths and tales from all parts of the world explain the origin of some tree or plant by saying that it sprang from the body—the arm, leg, head, or blood of some human being. Similarly, men are sometimes held to have sprung from plants. Where a tree springs from a dead human being the identity of the two is obvious, and here the stories may be based on the fact that trees often do grow from the barrows of the dead. They are supposed to be tenanted by the dead man's spirit or are identified with the man himself.⁶

The medicine-man or wizard has also the power of transforming others. He may supply them with

magical means to change their form, but more usually he himself casts a spell upon them and transforms them. This is usually done through malice—and no incident is commoner in folk-tales than this—but it is sometimes meted out as a punishment, though transformation for this reason is generally the act of the gods. In such cases the transformation may be for a longer or shorter period, but it is often of a permanent character.

Instances are found at all levels of culture. Classical mythology knew many such punishments for impiety. The incident enters also into Christian tradition, though it is derived from earlier sources. Thus Christ is represented as a tired traveller who is refused food or on whom a trick is played by a peasant or a Jew, and the result for them is the punishment of transformation to animal form. In many cases groups of megaliths are said to be human beings changed to stone for some act of impiety—the idea perhaps originating in the belief that the stones embody ghosts of the dead buried beneath them.¹ Other instances of petrification, in some cases also for a punishment, are found in all mythologies—Australian, American Indian, Greek, Hebrew, etc. The idea of petrification may be connected with the fact that many rocks bear some resemblance to human form.² In folk-tales the power of petrifying is usually in the hands of witch or wizard, and a touch with a wand, binding the victim with the witch's hair, or the repeating of a spell suffices. Cf. Medusa's head.

(b) The power of transformation on the part of men was reflected back upon the gods in all mythologies, from the lowest to the highest—Bushman, Australian, Polynesian, Peruvian, Celtic, Greek, Hindu, Egyptian, etc. There was no limit to the forms which they could take, animal or human, in order to serve their purposes—to escape danger, to benefit men, to carry on amours, and the like. As in Egypt, men looked forward to being able to assume any form in a future life, like the gods.³ The gods, too, as has been seen, had the power of causing metamorphosis as a punishment to men.

(c) Demons and supernatural beings of all kinds were also believed to have similar powers. The *jinn* of Arabia, the *bhūts* of India, the devils of early and mediæval Christianity,⁴ the water-horses and other monstrous beings of popular belief, can assume any shape to carry out their ends. Often the form is that of an attractive girl or youth who lures away a human victim to destruction. Ghosts of the dead may appear as animals, or project themselves into animals temporarily, but there is a wide-spread belief in their more permanent assumption of animal forms (see ANIMALS, vol. i. p. 493^b).

(d) Animals themselves are sometimes believed to be capable of self-transformation. This is true of the fox in Japan and China and of the tiger in Malaysia (see LYCANTHROPY), and the seal and similar animals are well known in folk-belief to have the power of changing into human shape.

(e) Inanimate objects may also be changed into other forms by magical power. The best instance of this occurs in the Transformation Flight group of *Märchen*, in which, e.g., a girl escaping with her lover throws down small objects which become a forest, a mountain, or a lake, and impede the progress of the pursuer (see MacCulloch, *CF*, p. 171 ff.). Examples of this are found not only in European and Asiatic folk-tales, but in Samoan, American Indian, and Basuto stories.

3. Origin of the belief in metamorphosis.—An examination of the enormous mass of evidence for the belief in metamorphosis suggests that man's idea of personality, or perhaps rather of the forms in which personality may lurk, is an exceedingly fluid one. There has everywhere been a stage of human thought when no clear distinction was drawn between man and the rest of the universe, between human and animal, between animate and

⁴ L. F. A. Maury, *La Magie*, Paris, 1860, p. 103; cf. 2 Co 11⁴ and the Apocryphal Acts, *passim*.

inanimate. In this stage of thought animate and inanimate are equally believed to be alive; men, animals, and things have the same feelings and passions, or act and speak in the same manner. Or, when the idea of soul or spirit is attained, all are equally alive by virtue of the possession of such a soul or spirit. Such beliefs in the underlying similarity of all things hindered men from having a clear notion of personality. It was not fixed and unalterable; it might assume various forms. There was thus obtained a practical, working belief that men, animals, and spirits or gods, as well as inanimate things, might assume some other form than their own from time to time. Hence it is not surprising to the savage if what he now sees as a man he sees immediately after as an animal or a bush. Where the idea of spirit or soul exists, and where it is thought that the spirit can leave its containing body, nothing is easier than to believe further that it can enter for a time into an animal or a tree. Other lines of thought also served to support the belief in the solidarity of men, animals, and things, and in metamorphosis. Totemism, with its assertion of the kinship of a human clan and an animal or plant species, has given rise to various myths which are rooted in this primitive stratum of thought, and in turn have served to deepen it. Thus it is sometimes thought that at first 'all animals were as men,' as the Algonquins say,¹ and only later took animal form. As the Hareskin Indians think, in the beginning men were animals and animals were men, but afterwards changed their rôles; or, according to the Zuñis, all things were originally animals, but now men, trees, etc., are degenerate animals with souls which can leave their bodies.² Again, men were once animals who became men—a common Polynesian belief.³ Where a clan of one totem dislike the animal which is the totem of another distant clan, they may come to regard the men of that clan as possessed of its nature and liable to assume its form. In all such cases, whether totemistic in origin or not, it is easy to see that men and animals might be supposed to revert temporarily to the other forms which once were theirs.

It is also possible that an analogy between the habits of certain animals and those of human beings, in life or after death, may have aided the belief in metamorphosis. Thus, where ghosts of men are believed to return to the house in which they lived and which is also the haunt of such animals as snakes or rats, it is easy to imagine that these are forms of the dead man. This is the case in Zululand with the snake. Night-roaming animals like the cat, tiger, or wolf might be identified, as they were, with witches, who also roamed in darkness.

Hallucination might be a potent factor in aiding the belief. Savages have often declared that they have witnessed such a change of shape. The pre-conceived idea suggested the hallucination, and it in turn gave support to the belief. Or persons to whom drugs had been administered might have hallucinations of themselves as animals, as in classical and mediæval instances (see LYCANTHROPY, § 2). Madness, again, has also had its part to play. Its victims, especially where the belief in metamorphosis prevails, often imitate the cries, motions, and actions of animals, and this could only serve to establish the belief more securely. The wer-wolf superstition was largely moulded out of such cases of mania (see LYCANTHROPY, § 3).

³ G. Turner, *Samoa a Hundred Years Ago*, London, 1884, pp. 296, 330.

The custom of dressing in an animal skin at sacred dances, or before a bear-hunt, or of wearing animal-masks in war, would also aid the belief in metamorphosis. The frenzy of the dance would suggest self-transformation to the dancer, while the on-lookers or the enemy would imagine that they saw human animals. There is no doubt also that medicine-men have often strengthened the belief by exploiting it—e.g., dressing as an animal, imitating its howls and its actions.¹

In practice the belief in the power of metamorphosis of men is generally limited to the medicine-man, sorcerer, etc., who transforms his victims usually by a spell, talisman, or potion. Self-transformation is caused in many ways, most of them magical. Sometimes, however, it is the result of a divine, supernatural, or demoniac gift.

J. A. MACCULLOCH.

METAPHYSICS.—It is not easy to give a quite satisfactory definition of metaphysics. The name throws no real light upon its nature, having referred originally merely to the order of some Aristotelian treatises; but it suggests that the subject is concerned with topics that can be properly dealt with only after the more special sciences (which may be taken to include the vital sciences as well as the more purely physical ones) have been discussed. For the purpose of this sketch, it may suffice to state that the subject of metaphysics is the most fundamental problems of knowledge and reality. It will be convenient to divide the treatment of it into three parts: (1) the general nature of knowledge, (2) the conception of reality and its chief applications, and (3) the bearings of metaphysics on other subjects, especially ethics and religion.

1. Knowledge.—The first thing that has to be noticed about knowledge is the ambiguity of the term. It is here employed in a very wide sense; but it is very commonly understood in a narrower one. Thus, knowledge is frequently distinguished from those modes of apprehension which are called sensation, perception, and imagination. It is thus confined to those modes of apprehension which involve definite thought or conception. Again, it is common, especially since the time of Kant, to contrast knowledge with belief. It is now customary to use the term 'cognition' to include all these modes of apprehension; and it is in this extended sense that the term is here employed. But even cognition is generally distinguished by recent psychologists from other modes of consciousness, which are called feeling, or affection, and willing, or conation. There are valid grounds for these distinctions, but it is important to remember that, so far as we are directly aware of these distinguishable aspects of our consciousness, they are, in the widest sense of the word, known or cognized. We apprehend pleasantness and unpleasantness and the fact of striving just as truly as we apprehend sounds or colours, trees or stars, triangles or systems of philosophy. There are, however, some differences in our ways of knowing which it is very necessary to bear in mind. The most fundamental are those that have been expressed by the terms 'simple apprehension and judgment,' 'immediacy and mediacy,' 'acquaintance and description,' 'enjoyment and contemplation,' 'experiencing and experienced.'² It may be well to take the last of these first. Whenever there is knowledge of any kind, there is some one who knows

¹ See M. Dobrzhoffer, *Account of the Abipones*, London, 1822, II. 77; R. M. Dorman, *The Origin of Primitive Superstitions*, Philadelphia, 1881, p. 248; cf. LYCANTHROPY, § 3.

² These are the antitheses that are specially emphasized by G. F. Stout, W. Hamilton, E. Russell, S. Alexander, and O. Lloyd Morgan respectively.

and something that is known. Knowledge does not exist *in vacuo*, but at some particular centre; and that centre is not primarily aware of itself, but of some particular object. Whenever any one reflects upon his knowledge, however, he at once becomes aware of this double aspect: he realizes not only that something is apprehended, but that he apprehends it. What exactly *he* is, and what the *something* is that he apprehends, are matters for further consideration; but the general fact can hardly be disputed. Now, when any one reflects further upon his knowledge, and especially when by intercourse with his fellowmen he is able to compare his own knowledge with that of others, he very soon comes to realize that some of the things that he apprehends are more closely connected with his particular way of apprehending them than others are. He finds that some things are cognized by others in substantially the same way in which they are cognized by him. To this class belong especially facts relating to number, to spatial and temporal order, to the forms of objects in space and time, and to the general conditions under which such objects occur. Such things come to be regarded as being in a special sense objective, *i.e.* as being independent of the particular nature of the being by whom they are apprehended. Some other things are more open to doubt in this respect. There is not the same amount of agreement about colours as there is about forms; and there is still more difference of opinion with regard to the extent to which beauty and ugliness, agreeableness and disagreeableness, are to be ascribed to particular objects that we apprehend. Thus we are led to distinguish some of the things that we know as not specially belonging to ourselves, but being simply objects that we contemplate; and others as being more peculiarly our own, things that we have or enjoy, things that are not merely experienced, but that are bound up with our attitude as experiencing. The things that appear to be most emphatically in the latter class are such characteristics as pleasantness and unpleasantness, beauty and ugliness, emotional experiences, values; but the division between these and such experiences as those of taste, smell, colour, etc., is not a very sharp one. Hence, instead of placing objects in one or other of these divisions, we may be led rather to recognize a subjective and an objective aspect in *all* modes of apprehension.¹

Once this important distinction has been duly recognized, the next that claims our attention is that between immediate and mediate apprehension. Some things are known to us in a quite direct way, and cannot be doubted. When any one has an experience of pain, he may be very uncertain with regard to its source and even with regard to the part of his organism to which it is to be referred; and he may even have some difficulty in distinguishing clearly between the pain that he is experiencing and some other fact that he is experiencing or that he has experienced; but he cannot really doubt that he is having this experience, whatever he may be, and however the object of his experience is to be described or interpreted. Every man is in some degree 'a man of sorrows

¹ The lack of words to distinguish properly between the subjective and the objective aspects of cognition has been a great source of confusion. Sensation, *e.g.*, has had to do duty both for sensing and for what is sensed; and it is only very recently that it has been common to distinguish between perception and percept, conception and concept. Even now we do not readily grasp what Goethe meant when he said that all the thinking in the world (subjective activity) may not bring us to thought (the apprehension of an objective concept). It is largely the failure to realize this distinction that makes it so difficult for most people to understand such an 'Idealism' as that of Plato or Hegel, in which 'ideas,' or 'thoughts,' mean certain objective forms, orders, or universals. The 'New Realism' has greatly helped to make this distinction clearer.

and acquainted with grief,' and he cannot have any doubt about the grief with which he is acquainted, though he may be quite unable to analyze or describe it, or to explain how it has arisen. As soon as we begin to analyze, to describe, or to explain, we enter into the region within which doubt is possible. Even the naming of an experience may involve some error;¹ for to name it implies that we class it along with some other experiences, and we may be wrong in supposing that it is essentially the same or similar. It may be that what I call my grief should be more properly characterized as simple unpleasantness or as resentment or remorse; and, when I think that I am grieving over my neighbour's misfortunes, I may in reality be considering rather the way in which they affect myself. Knowledge ceases to be immediate as soon as it ceases to be the simple apprehension of something and becomes, implicitly or explicitly, a judgment about something. Here also, however, we have to recognize differences of degree. Though we may conceivably be in error in thinking that grief is the right name for what we are experiencing, yet, if we are really 'acquainted with grief,' we can hardly be mistaken in thinking that what we are experiencing is of the same general kind as what we have experienced before. But we may easily pass to something that we cannot so immediately know. When Lady Constance says, 'Grief fills the place up of my absent child,' we are not likely to be ignorant of what she means by grief, and we can partly apprehend what the rest of her statement means; but, if we have never had any similar experience, our apprehension has very little immediacy. We may even be inclined to doubt whether it has any real meaning at all. It is a description of something that might be apprehended, but with which we do not happen to be acquainted.

Now, the various theories of knowledge turn largely on the distinction between what is immediate and what is mediate, and between what is subjective and what is objective. One theory of knowledge which, in different forms, has played a very conspicuous part in the history of philosophy is to the effect that we have no immediate knowledge of anything but what is essentially subjective. One of the most extreme forms of this theory is found in the doctrine of Descartes, that the only thing of which we are immediately certain is the existence of the self as a conscious or thinking being. What he really brings out, however, is rather that everything of which we are immediately conscious certainly exists as something apprehended. What thus certainly exists is a complex, including certain objects that are apprehended and the fact of their apprehension. But Descartes considered that the objects thus apprehended might be properly described as being 'in the mind,' and that the individual mind should be regarded as a persistent thing within which such objects are contained; and he called the objects 'ideas.' He was thus led to think that the individual mind exists both as something known, *i.e.* as an 'idea,' and as something that persists in a way that is independent of its being immediately known, whereas the other objects that are known are known only as having what he calls 'objective reality,' *i.e.* the kind of reality which consists simply in their being immediately known. But he recognized that *some* of these other objects carry with them the suggestion of a more complete reality than that which belongs to them in the simple fact of their immediate apprehension; and he sought, by various arguments, to give grounds

¹ The difficult subject of error, its nature and conditions, cannot be here discussed. But see the references given at the end of this article.

to justify the belief in this more complete kind of reality. In doing this, he founded the doctrine which has been referred to as that of 'representative ideas,' which had a great influence on subsequent speculation. According to this doctrine, the individual mind may be compared to a picture-gallery, the pictures being 'ideas.' One of the pictures is the picture of itself, and that must be supposed to have been always in it. Some others, such as that of God, must also be supposed to have been always there. Some may be supposed to have been painted by itself. Some are daubs of no particular significance. But there are some that appear to be portraits; and these may be supposed to be the portraits of other beings outside the mind, and to have been, as it were, handed in by them. This is, no doubt, a somewhat crude way of stating it; but it appears to be substantially what Descartes sought to maintain; and, with some modifications, it reappears in the writings of several other philosophers. Berkeley dealt it a severe blow by contending that, if we see pictures only in a gallery, we have no ground for supposing that they ever exist in any other way than in a gallery; and Hume improved on this by arguing that, if we see only the pictures, the gallery is an unwarranted supposition. The metaphor that he uses is that of actors on a stage. We see the actors only, and have no reason to suppose that there is a stage. This reduced the whole doctrine almost to an absurdity; and the conception of 'representative ideas' was denounced with considerable force by Thomas Reid. What he had to put in its place, however, was not very clear. Kant took a more fruitful line by urging that we cannot without absurdity regard our knowledge as being confined to what is immediately apprehended by us at any time. We have to recognize certain fundamental orders, such as those of space, time, and causation, which carry us beyond our immediate data and inevitably suggest a coherent system of connexions. In his 'Refutation of Idealism' he urges, against Descartes and Berkeley, that the recognition of such a coherent order is more directly involved in the apprehension of objects distinct from the self than in the apprehension of the subject; and that our knowledge of the persistent reality of the self must, consequently, be regarded as derivative. He contends, however, that the order that we are bound to recognize in the objects which we apprehend is an order that can never be completely systematized, and must, consequently, be treated as 'phenomenal' and distinguished from the real order, which may be supposed to belong to 'things in themselves,' and which we are led to postulate chiefly on moral grounds. But Kant's doctrine carried conviction at least with regard to the necessity of recognizing that some kind of reality belongs to the more mediate forms of apprehension as well as to those that are more immediate. When the significance of this is fully realized, it leads to the doctrine that may be characterized as that of 'epistemological realism,' i.e. the doctrine that everything that we in any way cognize has a kind of reality which is not simply to be identified with the fact that it is immediately apprehended at a particular moment.

The acceptance of a doctrine of this kind gives a new interest to the study of the objects of cognition. So long as these objects are regarded merely as a flow of presentations, the interest in them tends to be almost purely psychological—i.e. it is directed simply to the way in which they come to be apprehended by the individual consciousness. When they are regarded as things possessing permanent characteristics and permanent orders of their own, they become the subject-matter of

an independent study, and may almost be said to have given rise to a new science. This is the science that has been called by Meinong *Gegenstandstheorie*. It is the attempt to distinguish and arrange the different kinds of objects that we apprehend. It is obvious that there is a very great variety of such objects, when this term is understood in its most comprehensive sense. We apprehend, e.g., a great variety of sense-data—sounds, colours, pains, strains, and so forth; we apprehend a great variety of percepts—stones, plants, animals, etc.; we apprehend orders, such as those of time and space, intensive and qualitative differences, causal dependence, etc.; we apprehend hypotheses, valuations, distinctions of beauty and ugliness, good and evil, etc. The study of these corresponds to some extent to the doctrine of categories; but, when it is approached from this point of view, it becomes very much more comprehensive than any of the lists of categories that are commonly set forth; and, in fact, it has a rather different aim from that implied in any of these lists. The problems raised by any such attempt to distinguish and arrange the various types of objects are evidently of a fundamental character, and seem, therefore, to belong properly to the subject-matter of metaphysics. It is possible, however, to discuss some of them to a considerable extent without any definite attempt at a systematic metaphysical construction. This brief indication of the general nature of these problems must suffice here.

2. Reality.—The study of the theory of knowledge and *Gegenstandstheorie* leads to the recognition that, in one sense at least, there is no meaning in the antithesis between the real and the unreal. As Parmenides and Plato urged, pure non-being is not to be thought or spoken of. But there is still a sense in which the things that we apprehend may be said to be more or less real. Sometimes our apprehension of things is very incomplete; and, when we gain a fuller apprehension of them, we may be said to know them more truly. Again, the things that we know are in many cases parts of larger wholes; and, so long as we do not apprehend the wholes of which they are parts, we cannot be said to have a full apprehension even of the parts. This is at least the case when they are parts of an organic unity. We could not be said to know much about the brain if we did not understand the function which it fulfils in the life of the organism. Our apprehension of the part, in such a case, is not the apprehension of what is unreal; but it may be said to be less real when it is thus apprehended than it is when its relations to the whole are understood. And, if the universe is an organic whole, this distinction will apply to the apprehension of all the objects in it. Hence there may still be a sense in which it is legitimate to speak of an antithesis between appearance and reality, or of different degrees of reality, though both these expressions are open to some objection. Now, in apprehending and arranging the various objects of our cognition, we are at least trying to regard them as forming a complete cosmos, such that every object has a definite place in the total order; and constructive metaphysics, as distinguished from *Gegenstandstheorie*, tries to find the way in which the objects of our experience can be so regarded. Here we are met at the outset by various forms of scepticism. Such a scepticism as that of Hume, no doubt, is effectively removed by a more thorough doctrine of knowledge, such as that of Kant. But even Kant ends with the view that our knowledge is only of appearance, and that we can never hope to apprehend things as they are in themselves; and such an agnosticism is defended, in different ways, by a considerable number of

philosophical writers. If it is strictly pressed, it means that we have to be content with the theory of knowledge, supplemented by *Gegenstandstheorie*. The doctrine of the newer Realists, of whom Meinong is one of the ablest representatives, tends in this direction, though the supporters of it vary considerably in their applications. In the case of Kant himself, the attitude is modified by the two circumstances that, on the one hand, he had not fully reached the point of view of *Gegenstandstheorie*, not having completely freed himself from the subjectivism of Hume, while, on the other hand, he recognized that, though we cannot know anything about things as forming a real cosmos, we are justified in entertaining certain beliefs with regard to such reality, chiefly on moral grounds. This view of belief, as contrasted with knowledge, has been developed by the Pragmatists, who maintain that the ultimate ground of belief is not knowledge, but rather practical need. In general, the Pragmatists hold, further, that there is no real need to think of the world as a complete cosmos; but this is not an essential part of the Pragmatists' point of view. Bergson, again, while agreeing with the Pragmatists that our purely intellectual beliefs are based on practical needs, thinks that it is possible to reach a more perfect knowledge by means of intuition—a view which to some extent connects him with such earlier philosophers as Plotinus and Schelling. All these ways of thinking, and perhaps some others as well, tend to discredit the attempt to form a constructive doctrine of the objects of knowledge as constituting a cosmos. Yet the attempt continues to be made; and Kant at least recognized that, however futile it may be,¹ it is hardly possible for the human intelligence to refrain from trying it, when the scientific interest has been fully developed in it. All that can be done here, however, is to indicate some of the chief ways in which this attempt has been made.

The earliest attempt at a constructive theory of the cosmos, and certainly one of the most interesting and remarkable, is that which is set forth in the *Upanishads*. The difficulties of the subject, especially at so early a stage of human thought, prevent it from being dealt with in a perfectly lucid way; and it relies, in consequence, partly on poetic metaphor and partly on vague paradox; but the doctrine that the cosmos is to be conceived as an unchanging spiritual unity, manifesting itself, especially in human life, in a process of slow development, appears to be definitely indicated; and this view, showing itself most clearly in the conception of a long series of successive embodiments,² gained a firm hold on Eastern thought. It is a view to which Western thought also has recurred from time to time; but in general Western thought starts rather from the multiplicity of existing things, and makes only very tentative efforts to apprehend the central unity. Among the Greeks the earliest attempts to frame a theory of the unity of the cosmos took the form of a somewhat crude hylozoism, such as that of Thales. Pythagoras is supposed to have introduced conceptions more akin to those of the East; but, if so, they became gradually modified among his followers through the influence of the more materialistic

¹ Kant's view of its futility is mainly based on the difficulties which he brings out in his 'antinomies.' The solution of these is one of the main problems of constructive metaphysics; but this subject is too large and difficult to be discussed here. Hegel's dialectic is the most elaborate attempt to deal with such difficulties. Attempts have also been made by H. Bergson, B. Russell, and others.

² The philosophical conception of the continuity of spiritual life ought, no doubt, to be distinguished from the cruder forms of the doctrine of reincarnation; but this is a subject that can only be hinted at here. The bearings of modern philosophy on this subject are best brought out by J. M. E. McTaggart, *Some Dogmas of Religion*, London, 1906, and B. Bosanquet, *The Value and Destiny of the Individual*

ways of thinking that were current around them, and eventually through the growing interest in mathematical conceptions. In the end their speculative doctrines seem to have been largely lost in a barren formalism and a rather fantastic play with numerical analogies. The early representatives of the Eleatic school were perhaps more faithful to the conception of the unity of the cosmos; but in the poem of Parmenides it is difficult to distinguish what is to be taken literally from what is only metaphor. He sometimes seems to deny altogether the reality of multiplicity and change; but perhaps he meant only that the cosmos as a whole has to be thought of as one and unchanging, though change and multiplicity are contained within it. In any case, a view of this kind would have been very difficult to set forth clearly with such technical language as he had at his disposal; and it is probable that his views were not well understood by his followers. Anaxagoras recognized very definitely the essential unity of the cosmos and connected it with mind or reason; but he does not draw any clear distinction between mind and matter, and, in attempting to contrast the order that is brought about by mind with a pre-existing disorder, he makes use of an antithesis which is as difficult to justify as that between the real and the unreal.¹ It is with the philosophy of Plato that we first come upon a really coherent attempt to set forth a conception of the cosmos; and, in many respects, it may be doubted whether that attempt has ever been surpassed. His main conception is that of the Good as the principle of order; and he combines this with the recognition of a number of subordinate principles, all regarded as universal types in accordance with which the particular objects of our experience are formed. This view was made in some respects clearer by the Aristotelian conception of a hierarchy of forms leading up to the perfect intelligence; but, on the whole, Aristotle's main interest lay rather in the establishment of special sciences on the basis of this conception of fundamental forms. Plotinus, at a considerably later time, working largely under the influence of Oriental sources, but helped by the Platonic doctrines, succeeded more fully than any one else in ancient times in arriving at a conception of a cosmic system unfolding itself by a process from unity to multiplicity and returning into unity again; but his views are difficult to disentangle, and he tends at times to appeal to a mystical intuition rather than to a clearly reasoned doctrine.

In more modern times the system of Spinoza is the first attempt at a thorough constructive theory of the cosmos. In his emphasis on the unity of the whole he recalls Parmenides. The fact that Parmenides described it as finite, while Spinoza insisted on its infinity, is perhaps a somewhat superficial difference; for they probably understood the term 'infinity' in different senses. More significant is Spinoza's antithesis, derived from the Cartesian philosophy, between the unity of the spatial world and that of the world of thought, and his attempt to represent these two forms of unity as essentially identical. This results in a quasi-mathematical conception of the universe, and makes it appear as what James describes as a 'block universe.' Leibniz endeavoured to remove this defect by his conception of monads, which has served as the basis for subsequent theories of spiritualistic Pluralism. Yet he combines the conception of the complete independence of the monads with the recognition that they are parts of a world-order, the nature of which is definitely

¹ The meaninglessness of any conception of pure chaos or disorder, such as that with which Anaxagoras appears to start, is well brought out in Bergson's *Creative Evolution*, Eng. tr., London, 1911.

determined, and which is selected as the best from an infinite number of possible world-orders. How possibility is to be distinguished from actuality is one of the most difficult problems that are raised by his philosophy;¹ but, on the whole, it must be confessed that his philosophy in general, notwithstanding its great ingenuity, is much more remarkable for the number of problems that it suggests than for the convincing character of the solutions that are proposed. His attempt was followed by a great deal of critical work, especially that done by Hume and Kant; and the constructions that followed upon this critical work are deserving of more careful attention.

The most important is that of Hegel, and it is also one of the most difficult to interpret. What can be said with confidence is that, by means of a more definite interpretation of the Platonic dialectic, he made a very thoroughgoing attempt to arrange all the fundamental concepts involved in thinking about the world in a definite order from the simplest to the most complex. By this means he sought to show that a certain conception of spiritual unity is the most comprehensive of all conceptions, and the only one by means of which a coherent view of the universe can be obtained. He then proceeds to interpret the non-human world ('nature') and the world of human life ('spirit') as an order of growth through which the spiritual significance of the whole is gradually unfolded. It is generally recognized that a considerable part of the working out of his dialectic carries conviction, but that there are several places in which the movement is difficult to follow. The treatment of human life is generally recognized as being highly instructive, while the interpretation of 'nature' is much more open to criticism. No subsequent writer, however, has succeeded in making substantial improvement on the general view of the cosmos that Hegel has presented. Most of those who have made attempts at definitely constructive work are chiefly distinguished from Hegel by the more tentative character of their doctrine. They seem to provide, at most, only the *disjecta membra* of a more complete system. Some of them may also be criticized on the ground that they rest on a subjective conception of knowledge, in a few cases approximating even to the point of view of Berkeley. But into the details of their work we cannot here enter.

It may seem disappointing, after so many centuries of more or less continuous philosophic endeavour, that it should not be possible to refer more definitely to results that are generally accepted as conclusive. But it is hardly surprising that the interpretation of the whole should present more difficulty than that of some special parts. It is probably necessary that we should have a fairly thorough appreciation of the kinds of order that are contained in the parts before we can have any definite conception of the order that is involved in the whole. By the help of mathematics we are getting a more and more thorough insight into the relations that are involved in the orders of number and space. The Platonic conception of Good has been made more definite by modern discussions of orders of valuation. Physical science is helping us to interpret the causal order with more and more definiteness. Such dialectical discussions as those of Bradley, and such attempts to determine the various kinds of objects as those that are made by

¹ No sharp distinction can be drawn between the possible and the actual. To say that anything is possible is to say that it would be if—; and what would be depends entirely on the structure of the actual. In general, things are said to be possible in philosophy when they are not inconsistent with the structure of some special order (e.g., time or space), though they may be inconsistent with the structure of the cosmos. An action, e.g., is possible when it would happen if some one chose to do it. This is well brought out in G. E. Moore's *Ethics*.

Meinong, may be expected to throw fresh light on the most fundamental concepts, and thus supply new instruments for the reinterpretation of the whole. But probably our interpretation must always remain, to some extent, tentative.

3. Bearings of metaphysics on other subjects.—It would be a great mistake to suppose that the value of metaphysical speculation is to be measured exclusively by its success in providing us with a coherent doctrine of the cosmos. Any one who thinks seriously about the ultimate problems of knowledge and reality is almost bound to make some attempt to think about the universe as a whole; but the discussion of the special problems may be treated as an end in itself, and the value of such discussion is to be found largely in the light that it throws on other subjects that are commonly and conveniently regarded as distinct. The debt of the special sciences to metaphysical discussion could not easily be over-estimated. Almost all the special sciences, especially those that are concerned with human affairs, were first established on a firm foundation by Aristotle, who used in their establishment his fundamental conceptions of form and matter, potentiality and actuality, together with his general doctrine of categories and causes. The atomic theory was mainly due to Leucippus and Democritus, working on the foundations that had been laid by the Eleatics. Mathematics, physics, and astronomy owed much to the Pythagoreans and, in later times, to the metaphysical analyses of Descartes, Leibniz, and Kant. Some of the most important ideas of modern biology were anticipated by the early hylozoists; and, in many other ways, the foundations of almost every department of knowledge and action can be traced to metaphysical analysis. This tends to be forgotten owing to the fact that, once the results of such analysis have been well established, they are incorporated in the body of the special sciences and arts and habits of life, and the work of clearing up the fundamental principles is largely ignored; just as, in our more ordinary life, we are sometimes apt to forget the labours of those by whom the means of living are provided. Hence it may be worth while to make some reference here to the fundamental conceptions that seem to be involved in several of the most important subjects.

(a) *Psychology*.—The fundamental aim of psychology appears to be that of studying the growth of cognition in the individual mind. It may seem strange to say this in view of some recent attempts to produce a 'psychology without cognition,' which does not appear to differ very markedly from other forms of psychology. But in general the roots of any subject, like those of a plant, may often with advantage be kept out of view. We may have 'psychology without a soul,' because we can take the soul for granted; and it is certainly not the business of psychology to consider the soul except as cognizing or cognized. We may even have 'psychology without cognition,' just because it is entirely concerned with that, and consequently need not single it out as one of the special things with which it has to deal. So we may study wealth without welfare, though apart from welfare wealth would have no meaning. Naturally, in studying psychology, it is the modes of apprehension, rather than the fact of apprehension, that chiefly call for attention. But, whether we are considering sense-data or objects of perception or feeling or desire or emotion or attention or thought or will, the primary question for psychology is, What is it that we apprehend? That there are very many modes of apprehension seems clear, but they are all forms of cognition. The recognition of this ought to guard us against any attempt to divide

up our conscious life into separate faculties, though it leaves us free to recognize many distinctions and many stages of growth. Hence psychology is best studied genetically;¹ but it is important to guard against the misconception that, in studying the order of growth in our cognition, we are either explaining cognition itself or accounting for its special modes² or giving an account of the genesis of the objects that are cognized. The order of the growth of cognition is one thing; other things have orders of their own. These are perhaps the chief ways in which the consideration of the fundamental problem of psychology may help to guard us against misconceptions in its study.

(b) *Logic*.—The fundamental conception of logic appears to be that of implication. It sets itself to consider the conditions under which one bit of knowledge may be taken to imply another. In order to discover this, it is necessary to determine the precise significance of the knowledge from which we start. Hence the importance of definition and of what are called the 'laws of thought,' the aim of which is to ensure fixity of meaning. Obviously, if A fluctuates in meaning, its implications could not be determined. Formal logic is concerned simply with the attempt to tie down meanings and to discover what they imply. In more concrete forms of logic the doctrine of causation is the chief instrument for the discovery of implications. Hume did much to clear up the general signification of causation by doing away with the obscure conception of efficiency and substituting that of a definite order of sequence. Kant urged that the sequence is essentially logical rather than temporal, and that the general principle of implication—if A, then B—has to be accepted as expressing a necessary order among phenomena. More recent discussions have given still more definiteness to the conception.³ The dialectic of Hegel is another way in which implications can be brought out. According to this, every conception implies its opposite. The value of these methods cannot be discussed here; but it seems clear that the general significance of implication is one of those ultimate problems that concern metaphysics.

(c) *Mathematics*.—The mathematical sciences are closely connected with formal logic. As soon as the general characters of the orders of number and space have been made apparent, the working out of their implications requires no extrinsic considerations. The relations contained in these orders are, however, more complex than the relation of a predicate to a subject or of an individual to a class. But there are many orders from which implications can be directly drawn—e.g., the order of time and that of value. Hence it seems possible to regard mathematics as one of several ways in which the general principle of direct or formal implication can be developed.

It may be well to notice one caution that is suggested by metaphysical reflexion with regard to the application of mathematics. The conclusions reached by the study of the two orders of number and space are so precise and convincing, and some of them can be so readily applied to spatial and temporal objects, that there is a considerable temptation to regard all of them as being directly applicable to such objects. Such an assumption does not appear to be legitimate. It may be doubted, e.g., whether some of the speculations with regard to possible dimensions of

¹ This method was, to all intents, inaugurated by Aristotle, who showed in this, as in many other respects, a sounder grasp of the essentials of the subject than many of its later exponents have had.

² It is here that the 'associationist' psychology and such a genetic psychology as that of H. Spencer are at fault.

³ See esp. B. A. W. Russell, 'On the Notion of Cause,' in *Aristotelian Society's Proceedings*, xiii. [1912-13].

space, in excess of three, have any direct application to existing objects. A similar caution is necessary with regard to the conception of infinity. On this point reference may be made to the art. INFINITY.

(d) *The natural sciences*.—The natural sciences have nearly always presented a stumbling-block in the way of metaphysical construction. This is due chiefly to the apparent lack of definite order in what are sometimes called the 'brute facts' of the natural world. Hegel compared nature to a bacchantic dance. For Plato also, and for many others,¹ it has tended to appear as a falling off from the unity and intelligibility that are postulated by the conception of a complete cosmos. The objects of nature seem to differ in kind, and no continuity in the ordering of kinds is readily discoverable. This applies to the objects of sense as well as to the objects of perception. There seems to be a gulf fixed between colours, sounds, smells, pains, etc., as well as between mechanical systems, chemical combinations, and organic bodies. Hence it has been sought to bridge these gulfs by teleological conceptions—i.e. by the view that differences of kind are to be interpreted by reference to the conception of value, as in some way required for the constitution of the 'best possible world.' But this is at most a postulate; and it is generally recognized that we are not entitled to apply this interpretation in any direct way in the scientific study of natural objects. Apart from this, the chief forms of order that are available are those of time and space, extensive and intensive magnitude, causation, and the general law of continuity in the quantity of what is called energy (a conception that is perhaps still in need of more precise determination). No doubt the doctrine of evolution supplies, to some extent, another principle of order; but it is erroneous to suppose that the earlier stages in this order can be regarded as, in any direct way, implying the later. Epigenesis, or, as Bergson has called it, 'creative evolution,' has to be, in some form, recognized—i.e. the doctrine that what comes later is distinct in kind from what comes earlier. It does not follow from this, however, that there is not a definite and intelligible order. But there are still fundamental problems in the study of nature for which metaphysics can as yet offer no very satisfying solution. Still, there is at least the suggestion that a solution might be found in the conception of value. Evolution, in particular, is very naturally thought of as a progress, though a somewhat discontinuous one, towards what is intrinsically better.

(e) *Æsthetics*.—In æsthetics at least the conception of value becomes prominent; and its legitimacy within this sphere, where it is applied very largely to objects that can be perceived or imagined, is hardly open to dispute. It is true that sometimes what is described as beautiful may have little claim to be regarded as more than pleasant, and even pleasant only to certain individuals. In this case the valuation is highly subjective, and may hardly deserve to be described as a definite valuation at all. But in the higher forms of art at least an effort is being made to produce something that has intrinsic value; and in some cases it is difficult to resist the conviction that something that is intrinsically valuable—something that may properly be described as 'a joy for ever'—has actually been secured. But the science of æsthetics is still largely in the making.

¹ Cf., e.g., what is said by Aristotle in *Met.* xii. 10, where the lack of order in nature is likened to the life of a slave to whom, on account of his low estate, a certain licence is permitted. The religious conception of a 'Fall' appears to be closely connected with this. See H. S. Chamberlain, *The Foundations of the Nineteenth Century*, London, 1908, ii. 84.

(f) *Ethics*.—It is in ethics rather than in æsthetics that the conception of intrinsic value comes definitely into prominence. Ethical writers may differ in their views of what is intrinsically valuable—whether it is the good will or pleasure or some form of perfection or completeness of self-conscious life—but almost all recognize that in the moral life men are engaged in the effort to realize something that is intrinsically good, and in the end what is intrinsically best. Yet it is difficult to make the conception of such an ultimate good perfectly clear; and some are inclined to doubt its validity. It must be confessed that we seem to begin with valuations that have little conscious ground. Our primitive likings appear to be based on organic needs; and it is only gradually that we are led to regard them as means to ends that have a truer and more lasting value. We begin with organic impulses, and advance through the pleasant to the beautiful and good. Hence the moral life is still, on the whole, as it was in the time of Socrates, a struggle towards a good that is very imperfectly apprehended, and sometimes even not very consciously pursued. It tends to be guided by custom, convention, positive laws, and generally recognized opinions rather than by any clear apprehension of a good that can be either defined or attained. But in ethical science some attempt is made to define it; and this involves a discussion that may properly be called metaphysical. The discussion of its attainability seems even to involve a general theory of the cosmos.

Apart from the fundamental conception of intrinsic value, the most important problem that concerns ethics is that of freedom. This is closely connected with the conception of value and also with that of causation. It is doubtful whether any definite meaning can be given to moral freedom except that which may be expressed by saying that choice has a real place in the chain of causes; and choice can be interpreted only as a mode of valuation. It is essentially preference, i.e. the regarding of one thing as essentially more valuable than another. Thus the problems of value and causation are those that chiefly connect ethics with metaphysics.

Ethical valuations have important bearings on economics and politics; but these cannot be considered here. Nor can we attempt to appraise the significance of what is described by Nietzsche as the 'transvaluation of all values' (*Umwertung aller Werte*).

(g) *Religion*.—A chief element in the higher forms of religion consists in a certain intensification of the moral consciousness by its more definite concentration on the conception of intrinsic value—as in such sayings as 'What shall it profit a man, if he shall gain the whole world, and lose his own soul? Or what shall a man give in exchange for his soul?' (Mk 8³⁶). This intensification is generally combined with the conviction that the object of ultimate valuation is real and attainable. A conviction of this kind is sometimes based on a definite metaphysical doctrine. At other times it is based rather on some form of intuition or of revelation, or on the authority of some great teacher, or simply on the intrinsic force of the moral principle itself. The founders of religions and their most influential prophets have generally connected their teaching with some doctrines of a more or less explicitly metaphysical character. Buddhism, which is perhaps the most purely ethical form of religion that has ever had an extensive influence, seems to be rather intimately connected with those Indian forms of metaphysical construction that had their origin in the *Upanisads*. It conceives of what has ultimate value as the realization of the higher self, to be achieved by the control of the lower, and especi-

ally by the suppression of the lower forms of desire—a process which is supposed to be, in general, attainable only through a cycle of reincarnations. The doctrine of the Pythagoreans, which was largely religious, had a somewhat similar character; and the influence of Plato, so far as it can be described as religious, tends, on the whole, in the same direction; as that of Plotinus even more definitely does. Christianity was perhaps in its origin less definitely metaphysical; but it has been to a large extent interpreted, in the course of its historical development, by means of Platonic and more or less kindred conceptions, and in some of its more recent phases is hardly distinguishable from the more esoteric forms of Buddhism. The relations have been thus expressed by Holmes:

'Plato reasoned about God. Buddha kept silence about him. Christ made him the theme of his poetry. . . . As a speculative thinker he does not compete with Plato. As a systematic teacher he does not compete with Buddha. But as a source of spiritual inspiration he has no rival' (*Creed of Buddha, ad fin.*).

The gospel of love is the most inspiring, because it implies, when its meaning is fully developed, that everything has value—a more thorough optimism than anything that is involved in the Platonic Good or the Buddhist Nirvāṇa (whatever the exact interpretation of that may be).¹ It is sometimes urged that metaphysical and religious views of the cosmos, by representing the attainment of the moral ideal as involved in the nature of things, have a certain tendency to weaken the moral motive, by making it appear that individual effort is unnecessary. No doubt some metaphysical systems have claimed to advance 'beyond good and evil'; and the same may be said of some forms of religion. But, on the whole, none of the deeper forms either of metaphysical construction or of religious insight has represented the ideal as attainable in any other way than through the individual choice of what is best.

LITERATURE.—The literature of the subject is so vast that only a selection can be made. A. E. Taylor, *Elements of Metaphysics*, London, 1903, gives a good general survey. F. H. Bradley, *Appearance and Reality*, do. 1903, supplies the most remarkable of recent attempts at metaphysical construction. L. J. Walker, *Theories of Knowledge*, do. 1910, should be consulted. On the special subject of error, the essay by G. F. Stout, in *Personal Idealism*, do. 1902, is very valuable; and it should be supplemented by reference to B. A. W. Russell, *Philosophical Essays*, do. 1910, and F. H. Bradley, *Essays on Truth and Reality*, Oxford, 1914. A. Meinong's views about *Gegenstandstheorie* will be found in his *Untersuchungen zur Gegenstandstheorie und Psychologie*, Leipzig, 1904, and his *Gesammelte Abhandlungen*, do. 1913. His important book *Ueber Annahmen*, do. 1902, 1910, throws much light upon the subject. On the various attempts at metaphysical construction the Histories of Philosophy must be referred to; E. Caird, *The Evolution of Theology in the Greek Philosophers*, Glasgow, 1904, and R. Adamson, *The Development of Modern Philosophy*, Edinburgh, 1903, may be specially commended. On some of the earlier phases of speculation E. Schüré, *Les grands Initiés*, Paris, 1899, Eng. tr., London, 1912, is extremely interesting, though perhaps some of his statements are too conjectural and lack evidence. A. Drews, *Plotin*, Jena, 1907, is instructive on a philosopher who is too little known. G. F. Stout, *Analytical Psychology*, London, 1909, indicates the most fundamental problems in that subject. On formal logic J. N. Keynes, *Studies and Exercises in Formal Logic*, do. 1908, and F. C. S. Schiller, *Formal Logic*, do. 1912, may be consulted—the former is constructive, the latter critical. On the foundations of the more concrete type of logic A. Ruge and W. Windelband, *Encyclopædia of the Philosophical Sciences*, do. 1913, furnish all that is needed. J. M. E. McTaggart, *Studies in Hegelian Dialectic*, Cambridge, 1896, and *A Commentary on Hegel's Logic*, do. 1910, supplies interesting material, both for interpretation and for criticism. E. Croce, *What is living and what is dead in the Philosophy of Hegel*, Eng. tr., London, 1915, gives perhaps the most searching examination of the Hegelian method. On mathematics, B. A. W. Russell, *Principles of Mathematics*, Cambridge, 1903, should certainly be consulted. The *Principia Mathematica*, London, 1910-13, by the same writer, in conjunction with A. N. Whitehead, may be referred to as showing the way in which the logical foundations of the subject can be worked out. J. Ward, *Naturalism and Agnosticism*, do. 1903, discusses the foundations of the natural sciences. W. Ostwald, *Vorlesungen über Naturphilosophie*, Leipzig, 1902,

¹ The contrast, in this respect, is well, though perhaps too emphatically, brought out by H. S. Chamberlain, i. 187-200.

may also be specially referred to. B. Croce, *Aesthetic as Science of Expression and General Linguistic*, Eng. tr., do. 1909, is probably the most instructive of recent works on the basis of that subject. On ethics reference should be made to the art. ETHICS (by J. H. Muirhead). The conceptions of value and freedom are well discussed by G. E. Moore, in his *Ethics*, do. 1912. The philosophical significance of the conception of value is brought out with great wealth of illustration by B. Bosanquet in *The Principle of Individuality and Value*, do. 1912, and *The Value and Destiny of the Individual* (*Gifford Lectures*, 1912), do. 1913. A. Meinong, *Psychologisch-ethische Untersuchungen zur Werth-Theorie*, Graz, 1894, and C. Ehrenfels, *System der Werththeorie*, Leipzig, 1897-98, are also important on this subject. The *Gifford Lectures* have done much to show the metaphysical foundations of religion. Perhaps E. Caird, *The Evolution of Religion*, Glasgow, 1898, J. Royce, *The World and the Individual*, New York and London, 1900-01, and J. Ward, *The Realm of Ends*, Cambridge, 1911, are the most noteworthy, in addition to those already mentioned. *The Creed of Christ*, London, 1906, and *The Creed of Buddha*, New York, 1908, by E. G. A. Holmes, are interesting as bringing out the relations between the two highest forms of religion, and emphasizing the metaphysical conceptions that underlie them. H. Hoffding's emphasis on 'the conservation of values' as the fundamental aspect of religion in his *Philosophy of Religion*, London, 1906, has also a very special interest; and so has the characterization of 'the free man's worship' in B. Russell's *Philosophical Essays*. The general views expressed in this art are further developed in the art. ETERNITY and INFINITY, in the writer's articles in *Mind*, new ser., xxii. [1913], 'A Sketch of a Philosophy of Order,' and xxiii. [1914], 'The Meaning of Reality,' and *A Manual of Ethics*, London, 1915, esp. bk. II. ch. vi. Reference may also be made to art. EPISTEMOLOGY and ERROR and TRUTH.

METHOD (Logical).—Besides the ideals proper to the concept, the judgment, and inference, there are certain secondary ideals for thought in general. These supplement the primary ideals in a way comparable with that in which, according to the ethics of Butler, the 'adaptations of human nature to virtue' supplement the 'eternal fitnesses of behaviour' which had been described by Clarke. The secondary ideals should be stated with definite reference to the order and process of thinking, whereas the primary ideals are descriptions of truth when thought.

A wide licence has been taken by logical writers in articulating method, methodology, and applied logic; and it is here proposed tentatively to name as secondary ideals systematization, reform, and development. The course of thought must be such as to approach reality in the subtlety of its constituents and the complexity of their interconnexion; to reconstitute concepts, judgments, and inferences, in correspondence with it; and to realize the mutual support that these give to each other, as dealing with the same cosmos.

Method emerged from an outworn analytic and dialectic of Aristotelian origin, and won a place in modern logical theory, chiefly through the use of the topic made by Descartes in introducing his reformation of philosophy, and through the canonic of empirical science introduced by Bacon; and Kant's subsequent definition of it was in fair accordance with the Cartesian tradition:

'Just as the doctrine of elements in logic has for its aim the conditions of perfectness in a knowledge related to an object . . . so, general methodology, as the second part of logic, ought to treat, in contrast with it, the form of science in general, or the way to evolve science from a diversity of knowledge' (*Logic*, § 96).

An even more explicit reference to the course of our thinking is desirable, because only in some relation to ordered sequence can the ideals of concept, judgment, and inference become a personal discipline, and give not a mere consciousness of 'validity' or of 'fallacy,' but a development of our natural 'sense of method' (cf. J. Brough, *The Study of Mental Science*, London, 1903, p. 5 ff.). The sense of method is an estimate of the extent

to which the several faculties proper to a conviction have actually played their part in it.

1. **Systematization**.—The most general impulse of thinking is to make a double approach to reality, by analysis and by synthesis. The impulse has been recognized in various logical contexts; in Aristotle's distinction between problems of reason or of essence and problems of fact or of existence; in Descartes's rule of method to divide the difficulties of an investigation, and his rule to conduct our thoughts in the order of simple to complex; in Newton's requirement that natural philosophy should proceed from compounds to ingredients, from motions to forces, and, in general, from effects to causes, before explaining phenomena by causes as principles. The impulse follows, as it were, an indefinitely receding horizon. There is neither simplicity nor complexity that is final, whether in the world of possible perceptions or in the extensions which scientific imagination may make into the imperceptible.

'Scientists have tried to find it [the 'simple fact'] in the two extremes, in the infinitely great and in the infinitely small'—the astronomer in distances so great as to reduce a star to a point, the physicist in the atom, the biologist in the cell (H. Poincaré, *Science and Method*, Eng. tr., London, 1914, p. 19).

Even simplicities so laboured as these are provisional, if only because the structure of systematic science based on them is provisional.

'In the . . . advance of science an uninterrupted, but progressive series of mental constructions . . . gives us an approximate (but only approximate) idea of the inter-connected system of Reality' (F. Enriques, in *Encyclopedia of Phil. Sciences*, i. 234).

Under this impulse the course of thinking will lead to the actualization of the primary ideals of concept, judgment, and inference, but does not in itself commit our whole nature, as they do, to expectation, submission, and reaction. Its more immediate end is reform within the ideational content.

2. **Reform**.—Analysis and synthesis provide for continuous revision and reconstitution of such ideational contents as have previously been available for actualizing the primary ideals.

'Only inasmuch as we are set free from the accidental associations of ideas formed through single perceptions, by a happy variety of observations and a steady attention to their distinctions and resemblances do we gradually become cognizant of the more general and essential connections, and our conception of things ever more and more adequately' shows the necessary presuppositions of the understanding 'to hold good in the heterogeneous materials of the actual world' (H. Lotze, *Microcosmus*, Eng. tr., London, 1885, bk. II. ch. IV. § 4 (n. 236)).

The 'perceptions' here spoken of are 'already permeated with the results of sifting critical energy of mind,' but the spirit of reform, more expressly than that of systematization, claims to pass by any warnings from ancient realism as to the sanctity of universals, and equally by those of our modern pure logic as to identities, necessities, and systematic coherencies. Its claim is among the inevitable paradoxes of permanence and change.

(a) **Individuation**.—Even the unity of the individual, of 'that which is neither said of any subject nor contained in any subject' (Aristotle), 'the "It" without anything added' (Occam), 'the point in the tissue of reality where it accepts the predicate' (Bosanquet), may be newly isolated and identified. This unity is more directly imposed in perception and is more firmly sustained by social reference and consent than the conceptual, yet there still continues scientific controversy on the more optional identities, such as independent organs or organisms in botanical or zoological growth, concrete standards of measurement in calculation; and even as to whether units are possible at all within the flow of psychical life, or whether a distinction of persons should be made when consciousness has become pathologically discontinuous.

(b) **Classification**.—The special store of concepts embodied in the language of a people or in technical

terminology may be seen in course of reform, as needs and circumstances without methodical analysis modify the meanings of words. A more methodical initiative in reform proceeds through classification by 'natural kinds,' persistent 'species,' 'types,' or evolutionary 'series'—e.g., metals, grasses, temperament, organisms. But classification can follow only where individuation leads; and also our ultimate interests lie in actual events, open to our influence, rather than in the stereotyped possibilities in a thing, a class, a group, or a series.

(c) *Tabulation*.—With the purpose of practical control of nature, Bacon urged the tabulation of instances of event.

'Natural and experimental history is so various and diffuse, that it confounds and distracts the understanding, unless it be ranged and presented to view in a suitable order. We must therefore form Tables and Arrangements of Instances, in such a method and order that the understanding may be able to deal with them' (*Novum Organum*, ii. 10).

If our dealing with them is not by way of further analysis into the elements of natural 'form' as Bacon intended, but is numerical, the tables become 'statistics'; and statistics may be summarized through 'graphs'; and the duplication of tables into affirmative and negative may be avoided by 'averages'; and inevitable lapses from accuracy may be regularized as 'probable error.'

(d) *Hypothesis*.—Method can pursue the synthesis of simple elements required in judgment, while still suspending the assent or final submission of our nature to its necessity. The course of thought freely varies its subjects and predicates, expands each tentative 'form,' 'causal connexion,' or 'law' into exemplifications, or each imagined 'fact' into natural consequences, and verifies these as independently true or real, or as not so. Many recent writers, including Jevons, Sigwart, and Bosanquet, teach that such a development and trial of ideas is essential for all inductive inference. Thus, if a pencil of light is a composite of varicoloured rays, and is passed through a prism, we shall see the spectrum band; if the process is reversed, we shall reconstitute the untinted whiteness. If eoliths are of human origin, they should serve some purpose, and our ingenuity may discover one.

(e) *Colligation*.—A hypothesis may command an indefinite number of such exemplifications or consequences, both already known and waiting for verification. Thus the theory of elliptical orbits for planetary motion covered many planetary positions already registered, and the possibilities of further registrations. This is the 'colligation of facts by means of appropriate conceptions' (Whewell, *Novum Organum Renovatum*, bk. ii. iv.), or the discovery of 'types of order' (Royce, in *Encyc. of Phil. Sciences*, i. 90)—an achievement of intelligence which Whewell considers to be all that is serious in scientific investigation, but which Mill considers as an operation 'subsidiary to induction,' that is to say, to induction as inference (*Logic*, bk. iii. ch. ix. § 3, bk. iv. ch. ii.).

Lotze in his 'pure logic,' and independently of 'methods of investigation,' undertook to exhibit a serial order of schemata for judgment and inference, in which was shown an increasing complexity of conceptual distinctness.

'The various forms of thought will be arranged in an ascending series, in which each higher member attempts to make good a defect in the preceding one, due to its failure to satisfy, in regard to its own particular problem, the general impulse of thought to reduce coincidence to coherence' (*Logic*, Intro. § 11).

Thus the categorical form 'S is P,' is followed by the hypothetical, 'if S is X, it is P.' The syllogism, if not a mere *petitio principii*, involves the further conceptions which constitute the induction and analogy supporting its premisses, and these, again, send their roots into larger systems of classification and explanation. Thus the reform

of a single concept—e.g., the atom in chemistry, the cell in biology, the vibration in acoustics—may call for readjustments throughout increasing complexities of science.

3. *Development*.—But in method, as in organic life, the whole may decide the part. Nature is more than a 'tissue of uniformities,' as Mill described it. It is a unity. And the ideal of development means that the system of our thinking reacts upon its diversity of content. In perceptual observation, historical narrative, and explanatory conceptions of fact objects and instances are made possible by the growth of knowledge as a whole.

(a) *Perceptual extensions*.—Fields of perception beyond those of the natural senses may be opened through science—e.g., in space by the telescope and microscope, in time by the chronoscope and bioscope, in composition of substances by the spectroscope and radioscope. And extensions of sensitivity may be supplemented by artificial mechanisms of record, the chronograph, logograph, and automatograph.

(b) *Historical interpretation*.—Records of past events may be given new values by cumulative means of interpretation. Even mere relics may, through a convergence of interpretative hypotheses, as with the relics of pre-historic man, newly disclose remoter ages for methodical retrospect. That our foresight of events yet to come is not similarly from time to time newly lengthened is connected with the fact that here the way of hypothesis cannot be confirmed by verification. Methodical procedure can only assume a number of alternatively possible events, and assign to each a probability.

(c) *Explanatory theory*.—A given fact newly known, or more fully observed, may present many varied facets for hypothetical explanation. A chipped flint may be conceived as a geological product, an elastic molecular substance, a surface chemically stained, a contrivance of manufacture, a tool of purpose. And on each facet may centre a separate stress of hypothesis. We may collect contributory explanations of fact in a science predominantly concrete, such as archaeology, geology, geography. On the other hand, in sciences comparatively or purely abstract, we may systematize hypotheses among themselves, as empirical, derivative, or ultimate, making exemplification or consequence incidental only—e.g., in physiology, chemistry, mathematics, ethics. But the deepest difference within the 'form of science' is that between a *priori* science, where exemplification or consequence flashes into inference under the magic of intuitive construction, described by Descartes, and empirical science, where the ordered sequence aims and waits to fulfil the primary ideals of inference in 'a posteriori synthetic judgments' (see artt. INFERENCE and LOGIC).

LITERATURE.—See works mentioned under art. LOGIC. The historical progress may be followed in the works of Aristotle (*Posterior Analytics and Topics*), Descartes (*Regulae, and Method*), Arnauld, Bacon, and Whewell (*Philosophy of Discovery*, London, 1860) as mentioned; and in J. Herschel, *Preliminary Discourse on the Study of Natural Philosophy*, London, 1851; W. Whewell, *History of Scientific Ideas*, do. 1858, and *Novum Organum Renovatum*, do. 1855. Of recent logical systems, those of J. S. Mill, R. H. Lotze, C. W. von Sigwart, W. Wundt, and J. Venn (*Empirical Logic*, London, 1907) give prominence to method. Besides the definitely methodological books of Davidson, Venn, Jevons, Pearson, and Poincaré, also mentioned, the following may be referred to on special topics: G. C. Lewis, *Methods of Observation and Reasoning in Politics*, London, 1852; G. Gore, *Art of Scientific Discovery*, do. 1878; E. Naville, *La Logique de l'hypothèse*, Paris, 1880; H. Hughes, *Theory of Inference*, London, 1894; T. B. Strong, and others, *Lectures on the Method of Science*, Oxford, 1906; H. Poincaré, *Science and Hypothesis*, Eng. tr., London, 1914; F. Enriques, *Problems of Science*, Eng. tr., do. 1914; J. Royce, 'The Principles of Logic,' in *Encyclopaedia of Philosophical Sciences*, vol. I., Eng. tr., do. 1918.

J. BROUGH.

METHODISM.—I. HISTORY AND POLITY.—In this article we shall confine ourselves to a description of the origin, growth, and leading features of the Methodism which is connected with the name of John Wesley. The Methodism within the Church of England which resulted in the rise of the Evangelical party is not within our province (see *EVANGELICALISM*).

1. **The rise of Methodism.**—According to Wesley, the 'first rise' of Methodism was in Oxford, in November 1729; the second, in Savannah, Georgia, in April 1736; and the third, in London, on 1st May 1738. We pass over the Methodism that found expression in the 'Holy Club' at Oxford, and in the 'Society' formed by Wesley in Savannah, and strike the path which leads to the origin of Methodism as an existing organization. The date, 1st May 1738, is significant. Wesley had returned to England, having learned many bitter lessons in Georgia. By his contact with the Moravians he had been enlightened and disheartened concerning his religious experience. He had learned that, although he had 'followed after the law of righteousness,' he had not attained to it. His disappointment at discovering that he had been pursuing a wrong path was intense. The Moravians explained his failure by showing him that he had not sought righteousness 'by faith, but as it were by works.' His conversations with them left in his mind the unanswered question, What is the faith that leads to salvation? Waiting in London for a solution of the problem that baffled him, he assisted in forming one of the Religious Societies so numerous at the time. His instinct for 'fellowship' was one of the dominant forces of his life, and explains much that happened in his career. The Religious Society which he joined met in the house of James Hutton. It owed much of its character to the advice of Peter Böhler, a Moravian to whom Wesley was unspeakably indebted for spiritual guidance. The Society was founded on 1st May 1738. Rules were drawn up for its management, and, as was the case in Savannah, the members of the Society who were intent on cultivating a deeper religious life were divided into little companies called 'bands.' The Society grew, and its meeting-place was changed to a room in Fetter Lane. At first the Society, like the other Religious Societies, was in connexion with the Church of England; subsequently it was dominated by Moravian influences, and this connexion was broken.

2. **Wesley's spiritual crisis.**—Methodism, as it now exists, can be understood only by realizing the facts concerning the progress of Wesley's religious experience. By much conversation, by close study of the NT, by prayer 'without ceasing,' he advanced from an intellectual understanding of the meaning of 'saving faith' to the understanding that comes through experience. While he was in the stage of an ever-brightening intellectual apprehension, he preached the doctrine of 'salvation by faith' in many of the London churches. He taught it as it stands in the *Homilies*; but it was resented by clergymen and their congregations, and the churches were closed against him. In this way a policy of exclusion from the churches was commenced, which, after a time, profoundly affected Wesley's relation to the Church of England.

During this preliminary stage, Wesley was oppressed with a 'burden' which was to him 'intolerable'—the burden of unpardoned sin. That load was lifted on 24th May 1738, in a 'room' in Aldersgate Street, the meeting-place of one of the Religious Societies.

'I felt I did trust in Christ, Christ alone for salvation; and an assurance was given me that He had taken away my sins, even mine, and saved me from the law of sin and death' (*Journal*, i. 476).

In that decisive hour he entered into an experience, new so far as he was concerned, but an old experience not only among Moravians but also among many Churchmen and Dissenters. It is an extraordinary fact, however, that it had become unintelligible to the mass of English Christians. Wesley's 'conversion' filled him with the spirit of the evangelist. He would gladly have borne his testimony in the churches, but he was compelled to wait until a wider sphere opened before him.

3. **Beginning of field-preaching.**—In April 1739 Wesley found his opportunity, and began his evangelistic work. George Whitefield, a member of the Oxford 'Holy Club,' had entered into the experience of 'conscious salvation' before Wesley, and had made a deep impression in Bristol by the preaching of the 'new doctrines.' Being excluded from the churches, he went into the open air, and addressed great crowds of people in Bristol and at Kingswood. Having to leave England for America, he wrote to Wesley asking him to take his place; Wesley consented, and on 2nd April 1739 he commenced his famous campaign of 'field-preaching.' In addition to preaching in Bristol and to the Kingswood colliers, he got into close touch with the Religious Societies in the city. His genius for administrative reform found scope in them. He divided them into 'bands.' The Societies in Baldwin Street and Nicholas Street so increased that it became necessary to build a 'Room' for their accommodation. A site was secured near the Horsefair, and the 'Room' was opened on 3rd June 1739. Afterwards Wesley went to London to assist in composing disputes which had arisen in the Fetter Lane Society. He again met Whitefield, who, being detained in England, had spent his time in preaching to multitudes in Moorfields, on Kennington Common, and elsewhere. Wesley joined him in his field-preaching. On 11th November 1739 he held a service amid the ruins of 'the King's Foundry of cannon,' a building near Moorfields, which had been shattered by an explosion. Wesley acquired the site and built a 'Room' upon it, which became famous in Methodist history. Some who indulge in regrets concerning the separation of the Methodists from the Church of England point to the building of these 'Rooms' as 'the parting of the ways'; Methodists maintain that it was the closing of the churches that led to the opening of the 'Rooms.'

4. **First Wesleyan Societies.**—While he was still a member of the Fetter Lane Religious Society, Wesley formed a Society of a different type at the Foundry. It was started, probably, in the latter end of the year 1739, and is looked upon as the Mother Society of Methodism. In July 1740 Wesley was practically excluded from the Fetter Lane Society. Those who left with him joined the Society at the Foundry. By that time Societies, under the special direction of John and Charles Wesley, existed in London, Bristol, and Kingswood. In 1742 Newcastle-upon-Tyne was visited by Charles Wesley, who formed a Society there on the new pattern. These Societies are called by John Wesley, in the 'Rules' which he drew up for them and published in 1743, 'The United Societies,' and they were the nucleus of the Methodist Church. In the 'Rules' a Society is described as 'a company of men, having the form and seeking the power of godliness; united in order to pray together, to receive the word of exhortation, and to watch over one another in love, that they may help each other to work out their salvation.' In these new organizations the 'band' system was a prominent feature; but, in addition, the Societies were divided into 'classes,' each containing about 12 persons who were placed under the care of a 'leader,' not only for their

own spiritual edification, but also that Wesley might be assisted in his pastoral supervision. At first the leaders visited the members at their houses; but, that method proving inconvenient, the members were expected to meet their leader at some fixed place, week by week. The 'Rules' mentioned above are still, with slight alterations, the 'general rules' for Methodists, the 'particular rules,' passed in after years, being contained in the disciplinary 'codes' of the different Methodist churches. In the classes contributions, usually a penny a week, were made for the poor. At a later date these contributions were given for the support of the ministry, a special poor-fund being raised from other sources. Stewards were appointed to manage matters of finance, and the leaders met the ministers and stewards of each Society once a week to pay in the moneys that they had received, and to give information concerning any member who was sick or might need special pastoral attention. Out of these arrangements the Leaders' Meeting arose, which became an integral part of the Methodist organization. The oversight of his Societies weighed heavily on Wesley's mind. He never worshipped numerical success; he was not content to gather together a miscellaneous crowd of people of whom he knew nothing. He supplemented the work of the leaders by visiting the members himself in their homes, and met them once a quarter in the classes for personal conversation on their religious experience. If satisfied, he gave them tickets in recognition of the fact that they were members of the Methodist Society.

5. *Attitude of the clergy.*—Those who have studied the constitution of the Religious Societies will note the affinities and divergences between them and the United Societies. One line of divergence was caused by circumstances which Wesley deeply regretted. The Religious Societies were in close connexion with the Church of England, and many of their members were frequent communicants at the churches. Wesley would have gladly preserved this connexion and practice; but such a course was made impracticable by the conduct of the clergy. In some places they arranged among themselves to repel the Methodists from the Lord's Table. In Bristol, on 27th July 1740, Charles Wesley and a company of Kingswood Methodists were sent away from the sacrament in Temple Church. Charles Wesley, therefore, administered the Lord's Supper to the Methodists in the school at Kingswood which had been built for the training of the colliers' children. In Newcastle-upon-Tyne a similar crisis arose. It is significant that in Newcastle the difficulty was aggravated by the fact that three of the dissenting ministers of the town agreed to exclude from the communion all who would not refrain from hearing the Wesleys. The effect of these exclusions, and of Charles Wesley's action, was speedily seen. The Methodists were diverted into a path which gradually but decisively diverged from the Church of England.

6. *Enlisting of lay-preachers.*—Another line of divergence from the practices of the Religious Societies must also be noted. John Wesley's conversion made him an evangelist. He longed to proclaim the gospel not only to select companies but to the world. His heart responded to the counsel of Lady Huntingdon: 'Attempt nothing less than all mankind' (*Journal*, iii, 48, note 1). But how could that advice be followed by a man in his circumstances? His work taxed all his strength. Charles Wesley helped him, especially in the opening years of his mission, and a few friendly clergymen gave him occasional assistance; but such help was inadequate. The double task of the pastoral care of his Societies

and the evangelization of the country was too great for a single man. But the way opened. He had great skill in discovering and using the working-powers of laymen, and he soon found himself at the head of an order of lay-preachers who shared with him the hardships and the successes of his work. In 1738 and 1739 laymen had preached with his consent, but the order of lay-preachers is usually considered to date from 1740. The importance of this step cannot be exaggerated. The lay-preachers were divided into 'itinerants,' 'half-itinerants,' and 'local preachers.' They first abandoned their business and gave themselves entirely to the wandering life of the evangelist, under Wesley's personal supervision. For that work, at the beginning, they got no pay; later on a small sum was given them; but many years elapsed before they were rescued from the pinch of poverty. Assisted by them, Wesley went out 'to reform the nation, particularly the Church, and to spread Scriptural holiness over the land' (*Minutes of Conference*, i, 446). Wesley's work as an evangelist, an educationalist, a philanthropist, a social reformer, and a pioneer in enterprises that have deeply affected the condition of the nation must be passed over here. Some idea of the toils of himself, his preachers, and those who were associated with them in his Societies may be gathered from the fact that, when he died in 1791, there were 136,622 members in the Methodist Societies in Great Britain and Ireland, in other parts of the British Dominions, and in the United States of America.

7. *Institution of the Conference.*—It is now necessary to indicate certain facts which have determined the character of modern Methodism. While Wesley was 'the head of his order,' and spoke the last word in matters of administration, he thoroughly believed that there is safety in 'a multitude of counsellors.' He consulted the bands, the leaders, and persons of experience in his Societies, but the chief evidence of his reliance on the counsel of others is to be seen in the conferences which he held with the clergy who helped him, and with his lay-preachers. He also assembled the stewards at intervals in different parts of the country and conversed with them on financial and spiritual subjects. Out of his annual conferences with the clergy and lay-preachers, with whom lay-officers of the Society were sometimes associated, arose 'the Yearly Conference of the People called Methodists.' Towards the end of his life the vagueness of this description of the Conference was seen to be a danger. The power to appoint preachers to the numerous chapels that had been built would revert after Wesley's death to the Conference so inadequately described. To meet this contingency, on 28th Feb. 1784 Wesley signed a Deed Poll explaining the words 'the Yearly Conference of the People called Methodists,' and declaring 'what persons are members of the said Conference, and how the succession and identity thereof is to be continued.' One hundred 'preachers and expounders of God's Holy Word' then 'under the care of and in connexion with' Wesley were declared to be the Conference, and they and their successors, to be chosen in the manner laid down in the Deed, were 'for ever' to be 'the Conference of the People called Methodists.' This Deed Poll received decisive confirmation in 1835, when the Lord High Chancellor, Lord Lyndhurst, and the Vice-Chancellor, Sir Lancelot Shadwell, upheld its validity in trials which took place in their courts. In his judgment the Vice-Chancellor affirmed that the Conference had been 'the supreme legislative and executive body' in Methodism since the death of Wesley. The Conference in Wesley's day was more than

a consultative assembly. It took complete oversight of preachers and people. It kept an eye on the moral character and doctrinal beliefs of the preachers, and stationed them in their Circuits. We shall accentuate only one part of its functions. In the form of 'Model Deed' for the settlement of chapels then called 'Preaching Houses,' published first in 1763, a clause appears which constitutes Wesley's *Notes upon the New Testament* and his four volumes of *Sermons* as the standard by which trustees were to judge the orthodoxy of the preachers appointed by the Conference. We may also add that the rights of trustees were strengthened by the clause in Wesley's Deed Poll which provided that, with the exception of clergy of the Church of England, the Conference might not appoint a preacher to the same chapel for more than three years successively.

8. Provision for the sacraments.—One other point remains to be considered at this stage. The question of the administration of the sacraments to the Societies had to be settled. The bulk of the Methodist people would not go to the parish churches for the sacrament of the Lord's Supper, and provision for its administration in their own chapels was urgently desired. In November 1778 Wesley opened his new chapel in City Road, London. In that chapel the sacraments were administered as they had been in some of the other Methodist chapels in London and the country. Wesley was pressed to extend similar privileges to the rest of his Societies. He saw, however, that, if he yielded, he would have to qualify and appoint some of his lay-preachers to administer the sacraments; and, in his opinion, such appointment necessitated ordination. Time and circumstances led him to a solution of the problem. In 1769 he had sent two of his lay-preachers to New York to direct the work which had been begun there by certain Methodist local preachers. The work in America proved very successful, but the War of Independence gave it a new complexion. The Anglican clergy were scattered, and many of the Methodists had been without the sacraments for years. The Americans would have solved the difficulty by ordaining a sufficient number of their lay-preachers, but Francis Asbury, who had been sent out as a preacher from England by Wesley, checked this movement and advised that Wesley should be consulted. Wesley had satisfied himself that he, as a presbyter, had the power to ordain other presbyters; but he hesitated to do so. In 1784 the American crisis became acute; so, after much thought, he appointed Dr. Thomas Coke, a clergyman who acted with him, and Francis Asbury as 'superintendents' in N. America, and two other preachers as 'elders.' With the exception of Asbury, who was in America, these preachers were set apart by Wesley, assisted by other presbyters of the Church of England, by the imposition of hands. In this way the American difficulty was met, and the Methodist Episcopal Churches, which now number their membership by millions, entered on their remarkable career. Wesley afterwards ordained preachers for Scotland and for Foreign Mission stations. At last he took a still more decisive step in this direction. In 1788 he ordained Alexander Mather 'deacon,' 'elder,' and 'superintendent,' and in 1789 he ordained Henry Moore and Thomas Rankin 'presbyters,' empowering them to administer the sacraments in England. He exhorted them to maintain as close an association as possible with the Established Church; but, when that association was no longer practicable, they were to proceed to confer on other preachers the 'orders' which they had received (see *Proc. Wesleyan Hist. Society*, ix. 145-154).

9. Influence of Charles Wesley.—John Wesley is justly considered as the founder of the Methodist Church, and we have, in the main, dwelt on his actions in describing the origin and development of the United Societies. It would be unpardonable, however, if we failed to emphasize the services of his brother, Charles Wesley. During the early days of the 'Revival' he was a daring and successful evangelist, facing the violence of mobs and rivalling his brother in the activities of the wandering preacher's life. Later he settled down in Bristol, and then in London, and his itinerant work was restricted. But his influence as a hymn-writer was strong, and it is still felt not only in Methodism but throughout the Protestant Churches. He died on 29th March 1788.

10. Events following Wesley's death.—John Wesley died on 2nd March 1791. His death produced a dangerous crisis. Many thought that the time had come when the Methodist Societies would fall in pieces. Their stability had been secured, in great part, by his firm and reasonable autocracy. Was that autocracy to be exercised by a successor? The answer was in the negative. Then how was the supervision to be maintained which he had exercised over preachers and people during the intervals between the annual meetings of the Conference? The Conference gave the answer by dividing the kingdom into Districts, each containing a small number of Circuits, the preachers in which, being formed into committees, were answerable to the Conference for the maintenance of Methodist discipline. The functions of these Committees were enlarged from time to time, and chairmen, appointed by the Conference, were placed over them. This arrangement has been greatly developed in more modern times. The Committees have grown into District Synods, which exercise great influence in the administration of Methodism.

After Wesley's death the demand for the sacraments became urgent. The party most favourable to the Church of England was first in the field and issued manifestos against administration by the preachers. These provoked replies, and a controversy on the subject was continued until 1795, when an arrangement was made between the Conference and the representatives of the trustees of chapels. This arrangement, contained in the 'Plan of Pacification,' led to the administration of the sacraments in all Methodist chapels. As to ordination, it was decided that the reception of a preacher into 'full connexion with the Conference' should carry with it the right of administration without ordination by imposition of hands. In the case of Foreign Missionaries an exception was made, and they were ordained as in the time of Wesley. In 1836 the Conference determined that all its ministers should be ordained by the imposition of hands.

11. 'Plan of Pacification.'—Another subject of cardinal importance pressed for settlement. The question had to be answered, Who shall possess the predominant ruling power of Methodism? The country, at the time of Wesley's death, was agitated by the discussions which had accompanied the American War of Independence and the French Revolution. The doctrine of 'the sovereignty of the people' fascinated many minds, and led to a strong wish on the part of some to introduce into Methodism a democratic form of government. But the most serious contest was between the claims of the Conference and of the trustees of chapels. That contest was settled, for the time being, by the 'Plan of Pacification' and by certain regulations that were passed at the Leeds Conference of 1797. In these documents we find the fundamental principles which still govern the Mother Church of

Methodism. The pastoral power of the preachers was safeguarded; but its exercise was limited by giving to the Leaders' Meeting additional rights, as representing the Societies, while matters of finance were placed more completely under the control of the Circuit Quarterly Meetings in which laymen predominated. Thus, in 1795 and 1797, was instituted that remarkable 'balance of power' which is a peculiarity of the system of Methodism. The settlement was almost universally approved. Out of a membership of nearly 100,000, about 5000 persons who were desirous of a democratic form of government united themselves into a Society under the leadership of William Thom and Alexander Kilham, and became the Methodist New Connexion.

12. Connexional system of Wesleyan Methodism.—Speaking of Methodism in the present time, we may say that the Wesleyan Methodist Church, the mother church of the Methodists, has pursued its course along the lines laid down by John Wesley. The Connexional system is intact. The Circuits consist of the several Societies within their boundaries, the Districts are composed of the Circuits in their areas, and 'the Connexion' is the aggregate of all the Societies, Circuits, and Districts in those countries in which Methodism is established in association with the Conference. This great organization is kept together by the unifying power of the Conference. Every attempt to introduce the principle of 'Circuit independency' has been successfully resisted. It is impossible here to describe minutely the organization of Wesleyan Methodism. It is the result not only of the work of Wesley, but of the continuance of his work, done in his spirit, for more than a hundred years since his death. We may briefly note some of the changes which have taken place in the Conference since the Deed Poll was signed in 1784. The specific naming of the 100 preachers who composed the Conference produced excitement and ill-feeling, especially among preachers who were not nominated in the Deed. In 1791 the Conference, in accordance with Wesley's request conveyed in a letter, resolved that all preachers who were 'in full connexion' should enjoy every privilege that the members of the Conference enjoyed. That resolution almost completely allayed the ill-feeling that had been excited.

13. Lay-representation and the constitution of Conference.—The action of the Conference in 1876, however, is of still greater interest. Although no alteration can be made in the composition of the Conference created by Wesley's Deed Poll, save by process of civil law, it has been found possible to associate laymen, as well as ministers, with 'the Hundred.' The Conference, which assembles annually towards the end of July, now meets in two Sessions. Its representative Session is held first, and consists of 300 ministers and 300 laymen. The resolutions they pass are made valid by the confirming vote of the 'Legal Conference.' Some of the lay-representatives are chosen by the ministers and laymen present at the preceding Conference; but the greater number are elected by the separate vote of the laymen assembled in the representative Sessions of the District Synods held in May. Those Sessions have been much enlarged, not only by the inclusion of many laymen who are members of District sub-Committees, but also by the addition of the representatives of the Circuit Quarterly Meetings, which, in their turn, have been greatly enlarged through alterations made in the composition of the Leaders' Meetings. The most striking of the alterations in the Leaders' Meetings is the addition to them of persons elected by the Society Meeting in each place to represent the members of the Society. The votes for the laymen and the duly qualified women chosen to

attend the Conference represent a wide constituency. As there is a permanent ministerial element in the Representative Session of the Conference consisting, for instance, of members of 'the Hundred,' there is also a permanent lay element. It is composed of the lay-treasurers of certain funds, along with 48 laymen elected by the votes of ministers and laymen present at the Conference. One-third of this number retire annually, and are not eligible for immediate re-election. In the Representative Session it is estimated that nearly 60 members of the Hundred will be present, a quorum of 40 being necessary for the transaction of business, according to the Deed Poll. To these are added several ministerial officials, such as chairmen of Districts who are not members of the Hundred, 8 representatives of foreign missionaries, and others. The rest of the 300 ministers are chosen by the votes of the ministers in the Pastoral Session of each Synod in Great Britain, the number of ministerial and lay-representatives being governed by the principle of proportion of members of Society in the several Districts. The Representative Session of the Conference deals with all questions in which the expenditure of money is involved, and reviews the work done by the committees of ministers and laymen that have managed the affairs of the several Church 'Departments' during the year. New legislation may also be proposed on subjects within the province of the Session, but such new legislation is not confirmed until it has been submitted to the Representative Sessions of the Districts for consideration and report.

At the close of the Representative Session the Pastoral Session is held. This consists of the 'Legal Hundred,' the ministers who have been members of the Representative Session that year, and other ministers who have received the permission of their Synods to attend. When the scheme of lay-representation was adopted, it was agreed that all questions of doctrine, discipline, and the stationing of ministers should be reserved to the Pastoral Session, as also the management of the Book Room, the great publishing department of Methodism. The Pastoral Session exercises strict discipline over the ministers of the Connexion, and also considers all appeals in cases of discipline affecting members. The Circuit Quarterly Meetings have a right to memorialize the Conference, in both its sessions, on Connexional subjects, and to propose alterations in Methodist rules and regulations. When 'provisional legislation' is passed by the Conference in its Pastoral Session, that legislation has to be submitted for the consideration of the ministers of the Districts when assembled in the Pastoral Session of the Synods.

14. Home and Foreign Missions.—The work of Methodism has always been deemed of greater importance than its machinery. The wide-spread character of that work may be judged from the *Minutes of Conference* annually published. The work of the Home and the Foreign Missionary departments is worthy of special consideration. In recent years the evangelistic campaign has been quickened by the erection of large Mission Halls in some of the principal towns of England. The example of renewed evangelistic enterprise in Wesleyan Methodism has made a deep impression on the Churches of Great Britain and other countries. The Foreign Missionary work of Methodism dates from 1769. The work gradually increased. In 1785 appointments in the United States, Nova Scotia, Newfoundland, and Antigua appear in the *Minutes of Conference*. Working in connexion with the Conference, Coke was the leading spirit of Methodist Foreign Missionary enterprise until his death in 1813. In that year the work became

more completely organized, and the present Wesleyan Methodist Missionary Society was formed. In estimating the importance of the work done by that Society, it must be remembered that its present operations are carried on in a field that is only a fragment of the area once occupied. Independent and affiliated Conferences formed in the United States, Canada, France, S. Africa, and Australia have taken over almost all the work which was begun by the British Conference in the several countries mentioned.

the Eastern Section, 6,794,471, and, in the Western Section, 25,934,076, making a total of 32,728,547.

The statistical tables show that there are many separate Methodist Churches in the world. It must, however, be understood that the divisions that have occurred have not been caused by doctrinal differences; in almost all cases they have arisen from varying opinions concerning ecclesiastical constitution and administration. In the Western Section the 'colour question' has had an influence on the number of churches.

15. Statistics of world Methodism.—It is only at the decennial meetings of the Ecumenical Conference, when representatives of the Methodist Churches in both hemispheres meet, that an idea of the wide-spread influence of Methodism can be gained. Those Conferences were instituted in 1881, the latest being held in Toronto in 1911. The carefully compiled statistics presented to that Conference speak for themselves.

It was estimated that the members and adherents of the Methodist Churches, in 1910, numbered, in

There is one Church, bearing the Methodist name, which is not represented in the Ecumenical Conference—the Welsh Calvinistic Methodist Church. Its history and organization should be studied in Williams's valuable book (*Welsh Calvinistic Methodism*). The Church is closely connected in origin with Whitefield's work in Wales. The doctrinal difference, indicated in its title, suggests a reason for its unique position among Methodist Churches.

16. Methodist Episcopal Churches.—The success

of Methodism in the United States of America has been remarkable. We have mentioned some facts concerning its origin in 1769, and the action of Wesley in ordaining Coke as a Superintendent, and two other preachers as presbyters, in 1784. When Coke arrived in America, he ordained Francis Asbury as a Superintendent. Asbury's work and influence have left a deep mark on Methodism in the United States. Like Wesley, he was a man of high spiritual tone. He rivalled Wesley in evangelistic enterprise, and gathered around him men who possessed the courage and devotion of the pioneer preacher. The War of Independence had made the whole country the sphere of the most enterprising Evangelism. In settled towns, in clusters of huts, in lonely backwoods, the Methodist preacher became a familiar figure, as he preached and formed and visited his little Societies. The growth of the churches in the immense areas in which the pioneers worked necessitated the helpful supervision not only of the Superintendents but also of 'Presiding Elders,' who rode hither and thither, constantly giving inspiration and guidance to the scattered evangelists and churches. For a considerable time the work was carried on in close connexion with the British Conference, and on lines similar to those followed in England. A Conference was held in the States in 1773, at which time there were 6 Circuits, 10 preachers, and 160 members. From these small beginnings American Methodism has advanced to its present position.

The Methodist Episcopal Church and the Methodist Episcopal Church (South) occupy the chief positions among the Methodist Churches of the United States. They separated in 1844, in consequence of discussions which involved the question of slavery. We may refer to some of the constitutional arrangements of the Methodist Episcopal Church. The members of the Church are divided into local Societies, one or more of which constitute a 'pastoral charge.' A quarterly conference is organized in each 'pastoral charge.' The 'travelling preachers' throughout the States are members of their several Annual Conferences, the sessions of which they are obliged to attend. In addition to the ministerial Annual Conferences, a General Conference is held every four years composed of delegates from all the Annual Conferences in the States. It consists of pastors and lay-delegates, the admission of the latter into the General Conference dating from 1872. The ministerial delegates are elected by the Annual Conferences, each of which is entitled to one delegate at least. The General Conference fixes the ratio of representation and the manner of election. Every four years a Lay Electoral Conference is constituted within the bounds of each Annual Conference for the purpose of voting on constitutional changes to be submitted to the General Conference, which is the supreme legislative assembly. The Lay Electoral Conference is composed of lay-members, one from each pastoral charge, chosen by the lay-members of each charge over twenty-one years of age, in such manner as the General Conference has determined. Each Lay Electoral Conference is entitled to elect as many lay-delegates to the General Conference as there are ministerial delegates from the Annual Conference. In the General Conference the 'General Superintendents,' as the bishops are called in the *Discipline of the Methodist Episcopal Church*, preside in such order as they determine; but, if no General Superintendent is present, the Conference elects one of its other members to preside *pro tempore*. The presence of two-thirds of the whole number of delegates constitutes a quorum for the transaction of business. The General Conference elects by

ballot as many General Superintendents as it may deem necessary from among the 'Travelling Elders,' as the former Presiding Elders are now called. The Conference has full power to make rules and regulations for the Church, under the limitations and restrictions laid down in the *Discipline*. The principal restrictions are that it cannot revoke, alter, or change the *Articles of Religion*, which were prepared by John Wesley, and which first appeared in *The Sunday Service of the Methodists in the United States of America*, published in 1784. Nor can the General Conference establish any new standards, or rules of doctrine, contrary to the present existing and established standards. In addition, it cannot change or alter any part or rule of government so as to do away with episcopacy or destroy the plan of General Superintendency. It is also unable to revoke or change the 'General Rules' of the Church. Those 'Rules' are, with slight variations, the 'Rules of the Society of the People called Methodists,' as drawn up by John Wesley in 1743. As to the procedure of the General Conference, the *Discipline* shows that, in voting, the ministers and laymen vote together; but it is provided that a separate vote 'by orders' may be taken on any question when it is requested by one-third of either order of delegates present and voting. In all cases of separate voting the concurrence of the two orders is required for the adoption of the proposed measure. If the proposal concerns a change of the constitution, a vote of two-thirds of the General Conference is required. Such, in bare outline, is a sketch of some of the outstanding features of the organization of the Methodist Episcopal Church, but it should be supplemented by a study of the book of *Doctrines and Discipline* (1912). In J. H. Rigg's *Comparative View of Church Organisations* there is a chapter on American Episcopal Methodism which contains important information enabling the student to compare the constitution of the Mother Church of Great Britain with that of the Methodist Churches in the United States. For many years the visits of fraternal delegates, representing the Conferences of Great Britain and Ireland and America, have served to strengthen the bond of union between the Methodists of the two countries. The American Methodists hold a conspicuous position among the Churches devoted to the work of Foreign Missions.

17. *Early secessions.*—We have mentioned the first important Methodist secession in England, taking place in 1797. As the Methodist New Connexion is now part of the United Methodist Church, it is not necessary to describe its original constitution. In 1810 a small Society, numbering 10 members, was formed by Hugh Bourne in Staffordshire, and became the germ of the Primitive Methodist Church. In 1815 a Society, consisting of 22 persons, was formed by William O'Bryan in Devonshire out of which arose the Bible Christian Church. The reasons for the institution of these two Societies were similar. In the former case Hugh Bourne and William Clowes, two earnest evangelists, were indisposed to submit to the restrictions of Methodist discipline and manner of work. They sought and found a sphere in which they could have a larger freedom. They made no attempt to agitate the Church from which they were separated. They gathered their members out of the neglected classes, and displayed in their work much of the spirit of ancient Methodism. The same may be said of William O'Bryan, the founder of the Bible Christian Church.

18. *Primitive Methodist Church.*—Next to the Wesleyan Methodists, the Primitive Methodists hold the strongest position in Great Britain. The constitution bears, in several points, a strong re-

semblance to that of the Wesleyan Methodist Church, but there is a marked difference in the composition of the Conference. H. B. Kendall, in his *Handbook of Primitive Methodist Church Principles and Polity* (London, 1913), says:

'The Deed Poll provides that members shall be formed into Classes, Societies, Circuits, and Districts, and that Societies shall have their Leaders' Meetings, and Circuits their Committees and Quarterly Meetings' (p. 61).

Dealing with the functions of the Annual Conference, he sets forth the provisions of the Primitive Methodist Deed Poll. First of all, the Conference is to be composed of 12 Permanent Members, irremovable from office except for incompetency or incapacity. Next, it is to be composed of other persons not exceeding 4, whose appointment is to be made by a by-law of the Conference. These may be ministers or laymen, official or unofficial members. Lastly, the Conference is also composed of delegates, who have been elected thereto by their District Meetings, one-third of whom must be travelling preachers and two-thirds laymen, and no layman is to be appointed who is not a local preacher, or a class leader, or a Circuit steward. After long consideration and much discussion it was decided by the Conference of 1876 that the number of delegates to be sent by each to the highest court should be determined by the number of members in the District, 3000 being made the unit for one minister and two laymen (p. 61 f.). Kendall is of opinion that the Primitive Methodist polity is a 'modified Presbyterianism,' one evidence of the fact being that the Churches are jointly governed by ministers and lay-officials, and that all ministers are in theory equal, the Superintendent differing from his colleagues only in function and responsibility (p. 62). Up to the present the Primitive Methodists have not shown any strong desire for corporate union with other Methodist Churches. Their Foreign Missionary work is confined to Africa.

19. United Methodist Church.—In 1827, 1835, and 1849 there were secessions from the Wesleyan Methodist Church resulting from serious controversies concerning questions of government and administration. The first was occasioned by the introduction of an organ into one of the chapels in Leeds. In its course constitutional questions were raised touching the power of the Conference, which re-emerged at a later stage. In 1835 the creation of the Theological Institution for the training of candidates for the ministry roused strong opposition. The first occasion of the disturbance was soon nearly forgotten, and the controversy turned into an attack on the constitution of the Wesleyan Methodist Church. The agitation was elaborately organized and vigorously conducted in all parts of the country, and brought about the secession of several thousands of members, who formed themselves into the Wesleyan Association. The Association held its first Annual Assembly in Manchester in 1836. The Leeds reformers of 1827 joined the new Church.

The largest of all the secessions from the Wesleyan Methodist Church took place in 1849. Its immediate cause was the action taken by the Conference in dealing with certain anonymous publications in which the personal character of ministers holding high official responsibility was attacked. But, as before, the controversy soon involved the question of the constitution and, especially, of the power of the Conference. It is difficult to state the number of persons lost to the Wesleyan Methodist Church through this agitation. The aggressive work of Methodism was paralyzed for several years. When the strife subsided, it was found that the number of members in the Wesleyan Methodist Church was nearly 100,000 less than when the agitation began. The

'Reformers' of 1849-52 formed themselves into a distinct community, which, by union with the Methodist Association, became 'the United Methodist Free Churches.'

In 1907 an Act was passed by Parliament authorizing the union of the Methodist New Connexion, the Bible Christians, and the United Methodist Free Churches, under the name of 'The United Methodist Church.' The constitution of the new Church shows the usual indications of compromise; but it retains the strong marks of original Methodism. The Conference, which is composed of ministers and laymen in equal numbers, meets once a year. It includes the President and Secretary, the President-designate, 12 ministers and 12 laymen, who form, in a sense, a permanent nucleus, the Connexional officers, the representatives of District Meetings, and such representatives of Connexional Funds and Institutions as the last preceding Conference has determined. The whole number of the Conference, exclusive of the Guardian Representatives and Connexional officers, is about 300. The Conference appoints a General Connexional Committee which exercises a 'general oversight over the affairs of the United Methodist Church during the intervals between the Conferences.' The authority of the Church Meeting, the Leaders' Meeting, and the Circuit Quarterly Meeting is great. These meetings are, to a considerable extent, independent of the Conference, but the Conference has certain rights which it can exercise in cases calling for its interference. The constitution of the United Methodist Church may be studied in the *General Rules*, approved by the Conference in September 1907, a new edition of which was published in 1911. Foreign Missionary work is being done by this Church in China, Africa, Central America, and the W. Indies.

20. Smaller Methodist Churches.—The Wesleyan Reform Union consists of those Churches and Circuits which held aloof from the amalgamation producing the United Methodist Free Churches. In 1859 a constitution was formed which is fully described in a pamphlet published by the Wesleyan Reform Union Conference, the latest edition being issued in 1896.

In 1805 several small Churches formed a union which held its first Annual Meeting in Manchester. The distinctive characteristics of the churches so united are an unpaid ministry, conjoined with the free church-life of the Quakers and the doctrines and methods of Wesleyan Methodism (J. Vickers, *Independent Methodism* [Wigan], 1910, p. 3). In 1898 this union assumed the name of the Independent Methodist Church. Its churches are situated chiefly in Lancashire, Yorkshire, and the northern counties, with some outlying churches in Nottinghamshire and Leicestershire, and a few besides in Bristol and the south-west. The Independent Methodists excel in Sunday School work.

Although sharply divided by constitutional distinctions, the Methodists of England have so much in common, especially in their practical work, that they are being drawn nearer together. The Ecumenical and other Conferences have done much to promote the spirit of fraternity among them. In Canada and other countries the Methodist Churches have united, and Methodist reunion in England is often sympathetically discussed.

JOHN S. SIMON.

II. DOCTRINE.—Let us look into the soul animating the body which has been described. Methodism was the offspring of the Evangelical Revival that took place in England during the 18th cent.; its doctrine was moulded under the religious conditions of that age.

1. Methodism and deism.—A rationalistic deism then largely prevailed amongst educated men—a system of thought which fenced God off from mankind behind the laws of nature and bounded human knowledge by the limits of sense-perception and logical reason. The Deity was treated as an absentee from His world; and men consequently became godless in practice as in thought. The Revival swept down these artificial barriers. God was realized in living contact with His children. The sense of the divine was recovered; the transcendent became again immanent to consciousness. Accordingly, 'the life of God in the souls of men' was Wesley's definition of religion; 'the work of God' was the habitual Methodist designation for the Revival, because in its phenomena God's immediate action upon human nature was discerned. Hence the emphasis laid in the teaching of the Wesleys on 'the witness of the Spirit' (Ro 8). The doctrine of assurance—the personal certainty of the forgiveness of sins and of restored sonship toward God—was the outstanding feature of original Methodism. To most Churchmen of the time professions of this kind appeared a strange 'enthusiasm' (see G. Lavington, *The Enthusiasm of Methodists and Papists considered*, London, 1833); that a man might know his sins forgiven was deemed a dangerous presumption. Along with the Fatherhood of God, the Deity of the atoning Saviour and of the witnessing and sanctifying Spirit came to be freshly recognized; an arrest was made of the Socinianism which by the middle of the 18th cent. was rife among both Anglicans and Dissenters.

2. Methodism and Calvinism.—The Methodist forces were soon divided on the question of predestination. Predestinarianism, like deism, magnifies the transcendence of God at the expense of His immanence, reducing finite will to an illusion and making man, even in his acceptance of divine grace, the passive creature instead of the consenting child of God. The Puritan theology, in its prevailing strain, was intensely Calvinistic; and to it Whitefield, with the Welsh Methodist leaders and the Evangelical clergy generally, adhered, while the Wesleys espoused Arminian views upon election and grace, in this respect inheriting the High Anglican tradition. But the spring of their universalism lay in the sense of God's mercy to mankind revealed within their own breast and interpreted in the broad light of the NT; they sang:

'The boundless grace that found out me
For every soul of man is free!'

They could not preach that God 'willeth all men to be saved' under the reservation that He has doomed some, of His mere pleasure, to perdition; as Christ's ambassadors, they cried, without any misgiving, 'Ye all may come, *whoever will!*' The

Wesleyan teaching lifted a cloud from the character of God; it brought salvation to thousands who had deemed themselves predestined reprobates. Wesley vehemently contended against another tenet of Calvinism, maintained by contemporary Evangelicals—that of the necessary inherence of sin in the redeemed. The current orthodoxy limited the salvation of Christ in the degree of its attainability as well as in the persons by whom it is attainable. John Wesley arrived at the conviction that the man who is 'in Christ' may become even on earth a thoroughly 'new creature,' that it is possible to be actually 'cleansed from all sin' through 'the blood of Jesus' (1 Jn 1st)—'freed' (as he would say) 'from the last remains of sin'; on the strength of God's promises and the warrant of experience, he taught his people to seek and expect the power to keep continually the Two Commandments of Jesus and so to become altogether holy and happy. To this effect he used to quote the Communion Prayer, 'that we may perfectly love thee, and worthily magnify thy holy Name,' insisting that this is to ask from God no boon beyond His giving. From the moment of conversion the Methodist was set at war with 'inbred sin,' inspired by the prospect of its extirpation. The Class Meeting, with this ideal before it, became a school of holiness. The 'glorious hope of perfect love' proved an abiding spring of spiritual ardour and a powerful spur to moral endeavour. Sometimes the extravagances and self-delusions of unbalanced minds discredited the doctrine of Perfect Love; to such abuse all earnest religious teaching is liable. But the sight of the goal of faith given to Methodism quickened and sustained the race for multitudes. The endurance of the Wesleyan Revival is due to the spiritual breadth and sanity of its programme. In this sense Wesley defined the object of Methodism as being 'to spread Scriptural Holiness throughout the land.' The hymns of Charles Wesley are the best exposition of Methodism in the fundamental respects which we have stated; they served as its keenest weapon in the arduous conflict which it waged with Calvinism. Along with the hymns, the doctrine which inspired them has leavened the whole Methodist Church.

3. Methodism and Moravianism.—Methodism owes a peculiar debt to the Moravian Brethren; their hand led the two Wesleys out of 'the legal wilderness' into the liberty of the sons of God. From this simple people, as well as from William Law and the mystics, John Wesley learned deep lessons respecting faith and inward religion. But there came here also a parting of the ways. Leading members of the *Unitas Fratrum* in England, and others of Wesley's early associates, were infected with the mystical tendency to despise the external duties of religion. Regarding the inner light and the Holy Spirit's witness as the sum of Christianity, men of this persuasion treated fellowship and Church order as superfluities; some of them verged in theory, if not in practice, upon Antinomianism. Among the latter the maxim was current, which Wesley denounces as an 'enthusiastic doctrine of devils,' that 'we are not to do good unless our hearts are free to it'—in other words, that we should leave disagreeable duties undone (this was a temporary, but widely operative, aberration in Moravianism). In this outbreak Wesley saw the peril of the Revival; he raised a barrier against it in the 'Rules of Society' (dated 1st May 1743), which bear strongly upon private and social duty, and by the mutual oversight secured through the Class Meeting. Thus the experimental in religion was balanced by the practical; inward holiness found in outward holiness its complement and safeguard. Methodism recognized that, while salvation is 'through faith'

alone, a true faith 'works by love'; it enforced the teaching of St. James side by side with that of St. Paul, and found the two entirely consistent. Their home-training and Anglican schooling stood the Wesleys in good stead at this crisis.

4. Methodism and the Church of England.—John and Charles Wesley were sons and ministers of the Church of England, and taught (as they supposed) her true doctrine. John Wesley quoted the *Articles* and *Homilies* in vindication of his most oppugned tenets. For the guidance of his people he revised the Thirty-nine Articles, reducing their number by omission and abbreviation to 25 (so printed in the Wesleyan Methodist Service Book); the changes are in many instances significant. There disappear, with others, artt. viii. ('Of the Three Creeds'), xiii. ('Of Works before Justification'), xv. ('Of Christ alone without Sin'), xvii. ('Of Predestination and Election'), xx. and xxi. ('Of the Authority of the Church' and 'Of the Authority of General Councils'), xxiii. ('Of Ministering in the Congregation'), and xxxiii. ('Of Excommunicate Persons'). The title of art. xvi. becomes 'Sin after Justification' instead of 'Sin after Baptism,' and 'Ministers' is substituted for 'Priests' in xxxii.; 'Traditions' is paraphrased by 'Rites and Ceremonies' in xxxiv., the substance of the art. being preserved with notable alterations in detail. 'The Civil Magistrates' (xxxvii.) Wesley turns into 'the Rulers of the British Dominions,' adding 'his Parliament' to 'the King's Majesty,' merging 'Ecclesiastical and Civil' in 'all Estates,' and concluding with the first paragraph of the art.; he ignores the Royal Supremacy over the Church. The artt. on 'the Sacraments' and 'the Lord's Supper' are reproduced almost *verbatim*; but that 'Of Baptism' is curtailed, the definition ending with the words 'sign of . . . new Birth'; the statement that by baptism persons are 'grafted into the Church' is avoided, while the clause commending 'the Baptism of young Children' is retained. Art. ix., 'Of Original or Birth-Sin,' is also cut down materially: the Wesleyan teaching on Sanctification appeared to conflict with the assertion that 'this infection of nature doth remain, yea in them that are regenerated.' The reference to 'flesh' and 'bones' is dropped from the art. 'Of the Resurrection of Christ.' The general effect of the recasting is to emphasize the Protestant and Evangelical character of the formulary, to set aside the principle of State-establishment, and to eliminate Calvinism.

5. Doctrinal standards.—Neither the Articles of Religion nor any other Anglican document or dogmatic creed was laid down by Wesley as the ground of Christian fellowship. The revised Articles of Religion were, however, from the first incorporated, with certain necessary local adaptations, in the constitution of the Methodist Episcopal Church of America (see *Doctrine and Discipline*, etc., of this Church, pp. 21-26). 'There is only one condition previously required,' the Rules state, 'in those who desire to enter these [the Methodist] Societies, viz. a desire to flee from the wrath to come, to be saved from their sins.' This 'narrow gate' leads into the true way; the earnest seeker of salvation approves Christ and the gospel as the sick man his remedy; a deep repentance affords the best guarantee for orthodoxy. To his preachers, however, Wesley prescribed his *Notes on the NT* and the first four volumes of *Sermons* (ed. 1787-88, containing 44 Discourses) for the basis of a common understanding. These standards are introduced into the Model Deed regulating the trusts upon which Wesleyan Methodist church-fabrics are secured, and into the ordination vows of the ministers. Every Local Preacher also declares his assent to 'the general doctrine' contained in the above writings as being

'in accordance with the holy Scriptures.' While they present no formal confession or dogmatic scheme, the *Notes* and *Sermons* contain the full evangelical creed in solution; they are a working standard framed for a preaching ministry, and have proved a sufficient regulative canon for a Church that retains its Evangelical consciousness and is concerned above all things to preserve the life-conveying spirit of these authoritative documents. A Conference Resolution of 1807 forbade the tenure of office in the Societies to any person 'holding opinions contrary to the total depravity of human nature, the Divinity and Atonement of Christ, the influence and witness of the Holy Spirit, and Christian Holiness, as believed by the Methodists.'

6. Four salient points. — The characteristic features of Methodist teaching may be summed up as follows.

(1) *Universal redemption.* — Wesley and his preachers proffered in the name of Jesus Christ 'a free, full, and present salvation' to every sinner — a salvation based on the Sacrifice of the Cross, bestowed on condition of 'repentance toward God and faith toward our Lord Jesus Christ,' and certified inwardly by the witness of the Spirit of God bringing peace of heart and the sense of God's fatherly love, and outwardly by a life of holy obedience.

(2) *Entire sanctification.* — Methodism holds the gospel to be as large in its intension as in its extension, to be designed for the 'rooting out' from human nature of 'every plant which the Heavenly Father planted not'; it encourages the Christian man to look for the perfect cure, in himself and in his race, of sin's disease. The Rules of Society, illustrated by Wesley's social work, virtually include the community with the individual man in the scope of Christ's redemption.

(3) *The fellowship of believers.* — Methodism stands for Christian brotherhood. It honours the ministry and cherishes the two sacraments; but, in its view, the proof of Church-membership lies essentially not in observance of sacraments, nor in obedience to priests, nor in subscription to creeds, but in the fulfilling on the part of Christ's brethren of His law of love by their seeking one another's company and bearing one another's burdens.

(4) *Ordered Christian service.* — 'This is the love of God, that we keep His commandments': the Wesleyan Rules of Society were conceived as an application of the commandments of Christ to the situation of the Methodist people in early days. Interpreted with good sense and according to the spirit in which they were framed, those rules are found applicable to later times and to the circumstances of Methodists all over the world. They signify that the Christian man is Christ's in body as in spirit, and is called in concert with his fellows to bend everything in life to the furtherance of God's kingdom upon earth.

The above sketch is a narrative, not a criticism — a narrative of the genesis of Methodism as a product of and a factor in the life of Christendom. The changes which the system has undergone in thought and spiritual character, due to its wide expansion and the reaction upon it of later religious movements, cannot here be traced. Suffice it to say that through its manifold divisions and diversities of government a striking identity of doctrine prevails. Ecumenical Methodism retains the stamp of its origin.

LITERATURE. — John Wesley, *Works*, 14 vols., London, 1829-81 (chiefly important for doctrine are *Sermons*, *Doctrine of Original Sin*, *Appeals to Men of Reason and Religion*, *Plain*

Account of Christian Perfection, and *Plain Account of the People called Methodists*); *The Methodist Hymn Book*, do, 1904, *A Collection of Hymns for the Use of the People called Methodists*, do, 1792; *Poetical Works of John and Charles Wesley*, ed. GEORGE G. FINDLAY.

MEXICANS (Ancient). — The territory of what is now the Republic of Mexico was inhabited in ancient times — as in part it still is — by a great diversity of nations and tribes. The plains of Northern Mexico were the domain of tribes of a low culture stage, living mostly without fixed abode, relying chiefly on the produce of the chase, and to some extent on agriculture. These tribes, of whom we know very little, received from the Mexicans the general name of Chichimecs. The more cultivated nations were concentrated in the central highlands, and in the ravines, valleys, and coast-plains of Southern Mexico. Though belonging to different linguistic stocks, and differentiated as to their advancement in culture, art, science, and political power, they were, nevertheless, identical in the special traits of their civilization, forming, so to speak, one great geographical culture province.

The name Mexicans belongs properly to the inhabitants of the city of Mexico or Tenochtitlan, who were otherwise called Aztecs, but the designation was extended to all tribes and tribal fractions who spoke the same idiom, and were known to the citizens of Mexico by the name Nahu or Nahuatlaca, i.e., 'speaking intelligibly.' Their abodes in historical times were the central highlands, the Federal District, the States of Mexico, Puebla, and Morelos, and the territory of Tlaxcala, where they lived intermingled with fractions of the Otomi nation, with Mazauas, Matlatzincas, Popolocas, and other primitive nations. From that central home parts of the Mexican nation emigrated, in pre-historic times, to the Atlantic coast, reaching as far as Guatemala, San Salvador, and the coasts and islands of the great lake of Nicaragua. Those were the tribes particularly connected with the mythical name of Toltecs. To the Maya-speaking people of Guatemala these emigrants were known

¹ The letters A.M. attached to the name of authors signify American Methodist; G.M., German Methodist; M.N.C., Methodist of the New Connexion; P.M., Primitive Methodist; U.M., of the United Methodist Church; the undistinguished names are Wesleyan Methodist.

by the name of Yaqui, which seems to be but another name of the Toltecs, who were commonly designated by the Mexicans as the Tonatiuh iixco Yaque, 'those who went to the rising sun.' For all these tribes, undoubtedly, a long succession of ages of cultural development must be taken into account, since their civilization, at the time of the Conquest, might have equalled, at least in many respects, that of the ancient nations of the other side of the globe. Their religion had reached a correspondingly advanced stage of development, and was very elaborate, while their pantheon was unusually rich.

1. Religious ideas.—As with all the other nations of the world, the religious faith and the metaphysical ideas of the Mexicans had in part developed from attempts to grasp the connexion between the things of this world according to the principle of causality; in part they were the outcome of religious practice, and the crystallization of magic ceremonies, intended to produce certain effects by way of imitation. The great problems that presented themselves to the human mind because of the movement of the sun, the changes in the shape of the moon, and the varying location of the 'great star'—the morning star—have been treated by the Mexicans in a great number of mythical tales and mythical personifications.

The most prominent and the most widely worshipped Mexican god, of whom the largest number of tales and myths were reported, Quetzalcoatl, the 'feathered snake,' the creator of men, the wind-god of the later priestly school, was, in fact, nothing else than a mythical personification of the moon, who in her decrease travels to the east, i.e., draws every day nearer to the sun, and finally dies away in the rays of the rising sun. It was believed that, when dying, this god, or his heart, was transformed into the morning star. The counterpart of this deity, Tezcatlipoca, the young warrior, who was regarded as the watching eye, the god who sees and punishes all kinds of sin, and the sorcerer who roams about in the night, is, in reality, the new, waxing moon who makes her appearance in the evening sky, and will travel on in the night, as the eye of the night. On the other hand, deities like Centeotl, the 'maize-god,' have developed from certain religious practices—e.g., the placing of maize-stalks or young maize-ears in the houses, in order to get rich crops. Xipe Totec, the 'flayed,' the god who wears a human skin, the hide of a sacrificed man, has probably originated from well-known ceremonies celebrated in the beginning of the year in the time of sowing, in order to bring about the re-birth of vegetation. The two classes of deified beings met in the one great idea that the celestial powers, the sun, the moon, and the god of thunder and lightning, were at the same time the promoters of the growth and ripening of the fruit, and in the conviction that the new-born god (the rising sun) and the increasing agency (the waxing moon) were the causes of all birth and growth and of all that maintains and keeps up human life, and that they were the source of human life itself.

The spirits of the dead are to be added to these two classes—the ancestors, the founders of the tribe who had died in ancient times, and who had lived when the sun had not yet made its appearance in the sky. These deified ancestors were believed to awaken and to live in the night and, consequently, were identified with the stars. Xiuhtecutli, the god of fire, who had likewise existed in the 'time of darkness and night,' before the birth of the sun, and was, accordingly, named Ueneteotl, the 'old god,' became in some way the prototype of these ancestral gods.

2. Origin of the world.—The Mexicans believed

that heaven, earth, and the sun had not been created at once, but that four ages of a somewhat imperfect creation had preceded the formation of the present world. The first of these pre-cosmic creations was named Occlotonatiuh, 'jaguar-sun.' This was the sun of darkness, or sun of the earth, for the jaguar was considered to be the animal that swallowed the sun in time of eclipse, and, as the earth was the realm of darkness, the jaguar was identified with the earth. This first period came to an end by darkness, when the jaguars were eating men. The second period was called Ecatonatiuh, 'wind-sun.' This period came to an end by great revolving storms, and men were transformed into apes. The third period had the name Quiauh-tonatiuh, 'rain-sun,' meaning 'fire-rain.' In this period fire rained from the sky, volcanic ashes and lapilli were strewn over the earth, and reddish lava-cliffs arose. Men were transformed into birds. The fourth period was called Atonatiuh, 'water-sun.' In this period a great deluge took place, men were transformed into fishes, and the sky fell down upon the earth. The fallen sky was raised by the joint action of the gods Quetzalcoatl and Tezcatlipoca, and the earth was revived. It was only then, in the year called *ce tochtli*, 'one rabbit,' that the present world was created. Its name is Olintonatiuh, or 'earthquake-sun,' because this present world is to be destroyed by earthquakes. One year after this creation, in the year *ome acatl*, 'two reed,' the god Mixcoatl, 'cloud-snake,' the god of the North—or Tezcatlipoca in the form of Mixcoatl—'drew fire out of the wooden sticks,' kindled fire by means of the fire-drill. Then men were created, and war was begun, in order that there might be human hearts at hand for nourishing the sun. The first who was killed in war, i.e., was captured in war and offered on the sacrificial stone, was Xochiquetzal, the goddess of the moon, for it is the moon who dies every month in conjunction with the sun, and by her death gives life and strength to the rising sun.

Men being created, and war being commenced, there was opportunity for the creation of the sun. At the end of the first half of the first Mexican cycle of 52 years, in the year 'thirteen reed,' the sun was created.

The gods assembled in Teotihuacan, the ancient city of the sun, and took counsel, asking each other who should take charge of lighting the world. The first who offered himself was Teciztecatl, the moon-god. Again the gods asked which other deity would take charge of lighting the world. As no one replied, the gods requested Nanauatzin, the 'bubonic,' the luctio god, to undertake it, and he consented. The gods kindled a great fire in the *teotzacalli*, the 'divine stove,' and Teciztecatl tried first to throw himself into the fire, but he was afraid and drew back. Then Nanauatzin shut his eyes and threw himself at once into the fire, and after him Teciztecatl did the same. This took place at midnight. Then the gods conjectured in what direction the sun was to rise. It was in the east, where the sun rose at day-break, followed by the moon. The chroniclers relate that originally the moon possessed the same splendour as the sun, but the gods struck her in the face with a rabbit, so that her splendour darkened, and now the figure of the rabbit is seen on the face of the moon. After having risen, the sun and the moon stood still for four days and four nights, whereupon the gods resolved to sacrifice themselves in order to give life to the sun. After the gods had killed themselves, the sun commenced to move, and ever since has made his regular courses, alternating with the moon.

3. Origin of men.—When heaven and earth were created, the gods took counsel and asked where to get beings to dwell on the earth. Then Xolotl, the dog who jumps down from the sky—the god who carries the setting sun to the under world—went to the kingdom of the dead to fetch a bone of the dead. When he had given his message to Miclantecutli, the king of the dead, the latter asked him to move four times round the sepulchre in the stone-circle, blowing the conch. The god called upon the worms to make a hole in the shell, and thus he blew the conch. The king of the dead gave the bone to him, but ordered his vassals to follow him and to dig a pit in his way. There the god stumbled and fell, the bone slipped out of his hand, fell to the ground, and was broken in pieces. The god was much grieved, but he arose, picked up the fragments, and brought them to Tamoanchan, a region situated far in the west.

There the goddess Cuacoatl or Quilaztl ground down the fragments on the grinding-stone, and put the pulverized material into the *chalchihualpaztl*, the bowl hollowed out of a precious stone, and set with gems. On this pulverized material Quetzalcoatl sprinkled blood drawn by piercing his penis with a knife. In this way men were generated, and food was found for them in the same region of the west. It was the maize, whose place the black ant and the red ant showed to the god.

4. Heaven, earth and under world, and the abode of the dead.—The Mexicans were of opinion that from the earth (*tlalticpac*) upwards there were thirteen regions or heavenly spheres (*ilhuicatl*), and from the earth downwards there were nine regions or under worlds (*micltlan*). The second, third, and fourth of the heavenly spheres were the regions where the moon and the clouds, the stars and the sun moved, while the uppermost or thirteenth region was the abode of Ometecutli, Omeciuatl, or Tonacatecutli, Tonacaciuatl, the gods of generation. The second of the under-world regions was the Chicomauhapan, the 'nine streams,' the water that encircled the realm of the dead and was in a way identified with the ocean of the western region. The third under-world region was the *tepetl imonamiquian*, the gateway by which the sun entered the under-world region. The undermost region was the abode of Mictlantecutli and Mictēcaciuatl, the lords of the dead. To this under-world region there went, however, only the men and the women who had died in their homes from sickness, injury, or the infirmities of age. Men who were drowned, struck by lightning, or carried away by malignant fever or contagious disease were believed to be taken by Tlaloc, the rain-god. Their corpses were not burned, but buried, blue colour—the colour of water and rain—having been put on their foreheads. They went to Tlalocan, the home of the rain-god, situated on a great mountain in the east, a paradise of vegetation, in order to serve him there. Men killed in war or sacrificed on the sacrificial stone and women who had died in childbirth belonged to a third order, and went to heaven, to the house of the sun. The warriors went to the east, to receive the rising sun and to accompany him up to the zenith. The women had their dwelling in the west, in the region of the setting sun. In the morning they climbed up to the zenith, where, at noon, they received the sun from the hands of the warriors, and accompanied him on his downward course. At sunset they delivered the sun to the dwellers in the under-world region, for at night the sun illumines the under world, and the dead awaken and live.

5. Principal deities.—A detailed study of Mexican mythology and the character of the Mexican gods leads to the conclusion that the forefathers of the Mexicans worshipped the sun, the moon, the morning star, the hearth-fire, the maize-god, and the other deities of vegetation, the god who pours down the beneficial rain, and a host of *numina* and spirits who were believed to dwell in particular places, as mountains, caves, water-holes, etc. In the course of time those cosmic potencies assumed very different shapes in the mythopoetic imagination of the people, coalescing in part with a deified ancestor, or being merged in certain regional festivals, thus giving rise to certain well-defined divine personages, who in the different tribes, towns, and villages were acknowledged as the *altepeyollotli*, the 'heart (or living principle) of the town.'

Thus Uitzilopochtli, the war-god, the particular protector of the citizens of Mexico (Tenochtitlan), must originally have been the rising sun, or the morning star. His mother conceived him from a feather-ball coming down from the sky. Her other children, the Centzon Uitzmaua, the 'four hundred Southernns' (the stars), and their elder

sister Coyolxauhqui (the moon), seeing their mother pregnant, wished to kill her, but just at this moment Uitzilopochtli was born. Armed with shield and spear, he came forth from his mother, decapitated his elder sister Coyolxauhqui, and drove the 'four hundred Southernns' from the 'Snake-mountain' (the sky). The other war-god Camaxtli, or Mixcoatl, the god of the Tlaxcaltecs, the 'shooting god,' was probably a mythic conception of the morning star. Tlaloc was the rain- and thunder-god and the god of the mountains. He had his residence on the top of a mountain in the east, where he owned four chambers and four barrels, from which his servants, dwarf-gods, bailed out the water and poured it down on the earth. Stone images of this deity are to be found all over the country. Tezcatlipoca was the god of the Tezocans and of the tribes dwelling on the slopes of the volcano. He was the sorcerer who roams about in the night, the god who sees and punishes sin, and the patron of the *telpochcalli*, the club-house of the young warriors; and certainly developed from the conception of the new, waxing moon. Xiuhtecutli, the 'lord of the turquoise,' or Ixcocauhqui, the 'god with the yellow face,' the god of fire, was the tutelary deity of the citizens of Tlatelolco and their brethren on the western mountain slope, the Tepanecs of Tacuba and Coyouacan. Tonatiuh, the sun, and Metztli, or Teciztecatl, the moon, had in ancient times been worshipped at Teotihuacan, north of the valley of Mexico, and two great pyramids dedicated to them are still to be seen in that place. The moon alone was the principal deity of the inhabitants of Xaltocan and of the province of Mezquitlan, on the borders of the Huasteca. Quetzalcoatl, the 'feathered snake,' the creator of human life, the wind-god, was another conception of the waning and resuscitating moon. He was the great god of the merchants of Cholula and all the Mexican commercial colonists, down to the provinces of Guatemala and San Salvador. Xipe Totec, 'our lord, the flayed,' the god of the sowing time, the god of vegetation, was generally worshipped in the whole country; but it seems that the Nautl tribes on the borders of the State of Oaxaca, the inhabitants of Tehuacan, Cozcatlan, and Teotitlan del Camino were particularly addicted to his cult. He is also called god of the goldsmiths, because the goldsmiths, located in the town-quarter, or clan Yopico, regarded him as their tutelary deity. Xochipilli, the 'flower-prince,' the lord of the green maize, the god of food, had his worshippers all along the Atlantic slope. He was believed to be incorporated in the Quetzalcoatl, the wild fowl that chants in the morning. He had a brother called Macuilxochitl, 'Five flowers,' or Aniateotl, 'the god of voluptuousness,' who was the deity of pleasure, of music, dancing, gaming, and debauchery. Ome tochtli, 'two rabbits,' the pulque-god, the Mexican Bacchus, was the town-god of Tepoztlan, in the State of Morelos.

Female deities were Coatlicue, the mother of Uitzilopochtli, worshipped in Mexico City; Cuacoatl, the female warrior, the goddess of Colhuacan; Itzpapalotl and Quilaztl, the earth-goddess and the fire-goddess of the towns of Quauhtitlan and Xochimilco; Teteo innan, the 'mother of the gods,' or Toci, 'our grandmother,' also called Tlazolteotl, the 'goddess of ordure,' or Tlaelquani, 'mire-eater' (i.e. sinner); she was generally worshipped as a harvest-goddess; Xochiquetzal, the goddess of flowers and of love, had her worshippers throughout the country, and a magnificent pyramid dedicated to her is still to be seen in Xochicalco, south of Cuernavaca. All these goddesses, without any doubt, were originally moon-goddesses, but developed into goddesses of

fertility and generation, into earth-goddesses and patronesses of women's art. Chalchiuhtlicue, the 'goddess whose garments are precious stones,' was the impersonation of running water, brooks, and lakes; Uixtociuatl that of the salt water, and accordingly the patroness of the salt-makers. Centeotl, the maize-god, was represented either as a female or as a male deity, and was particularly related to the gods of generation, the authors of life.

6. Religious practices.—The Mexicans were penetrated by a feeling of absolute dependence on their gods. They regarded them as the givers of all things and as those who inflicted punishments upon them, and they were convinced that most of these punishments were brought down on them by their own sins. In order to obtain the favour of their gods or to appease their wrath, they used to address them with prayers, to present offerings to them, to humiliate themselves in their presence, and to torture themselves in their honour. In the work compiled by Bernardino de Sahagun, the original of which was written in Aztec, he has preserved many prayers directed to several gods, distinguished by a high and noble feeling, and by a wonderfully refined and poetic language, while another chapter of the same work contains twenty ancient and very curious songs, which they used to sing in honour of their gods at the different anniversary festivals (text, Germ. tr., and commentary in E. Seler, *Gesammelte Abhandlungen zur amerikanischen Sprach- und Altertumskunde*, Berlin, 1902-08, ii. 959-1107).

The offerings which the Mexicans were accustomed to bring to their gods consisted of food and garments, flowers and green twigs (*acxoyatl*) to adorn their altars, copal, rubber, and different kinds of aromatic herbs to burn, and piles of wood to heap up and kindle on the top of their temple-pyramids. They humiliated themselves in the presence of their gods by eating earth (*tlalqualiztli*), i.e., by touching the earth with the finger and putting it to the mouth. When they requested something from their gods, and before every festival dedicated to them, they fasted, eating only once in the day, avoided red pepper sauce and every kind of spices, abstained from sexual intercourse, and did not wash their heads. When the request which they had to make was a very earnest one, they tortured themselves by piercing their tongues, or the margin of their ears, sometimes drawing stalks or threads through the hole made in the tongue, and offering the blood issuing from their wounds, collecting it on agave leaves. If they had committed a sin such as intercourse with the wife of another man, and wished to atone for it, they went to the priests of the goddess Tlacolteotl and made confession, and the priests, after having heard the confession, imposed some penance—e.g., to go naked in the night to some shrines of the 'women-goddesses' (*ciuateteō*), there to deposit garments made of the common bark-paper. By performing this penance they were believed not only to have got rid of the sin committed, but also of the punishment for it enjoined by the law. A Mexican religious practice that excited the curiosity and even the amazement of the Christian priests was the so-called 'eating of the god' (*teoqualiztli*). At a certain festival a number of devotees assembled, and, after having made an image of the god from the paste obtained by grinding certain seeds, the high priest sacrificed the image and cut it into pieces. The assembled persons ate the pieces, and those who had partaken were obliged to pay for a year all expenses for the cult of the god in question.

Finally, the Mexicans felt compelled to bring living beings as an offering to their gods. They

sacrificed to the fire-god by casting into the fire all kinds of animals that could be found in the fields, and they also offered human prisoners in the same way. The warriors who had captured them brought them, their limbs tied together, and hanging on a pole, like captured game, for the fire-god was the god of war and of the chase. The Mexicans killed quails by decapitating them, as an offering to the sun and other deities such as Uitzilopochtli, for the quail was the spotted bird, the image of the starry sky.

They fastened prisoners with extended arms and legs to a wooden frame, and shot them with arrows. This was a sacrifice for the earth-goddess, and was intended to fertilize the earth. There is no doubt that it was originally meant as an imitation of the sexual act. They decapitated a woman as an image of the 'mother of the gods'—the moon-goddess, the harvest-god—and flayed her, for the old moon, the waning moon, is cut into pieces, and her splendour is stripped off. Yet she would revive, and therefore the flayed skin of the victim was donned by a man who, in the following ceremonies of the feast, represented the goddess.

The Mexicans practised to a terrible extent the offering of human hearts, torn out of the bodies of living men. They used for that purpose a sacrificial stone of a rounded pyramidal shape. The victim was thrown backwards on the top of it, his extended arms and legs were held by four men, and the sacrificer, armed with a big stone knife, made a broad cut across the breast, under the ribs, and, putting in his hand, tore out the heart. The heart itself was presented to the sun, and with the blood they moistened the mouth of the idols, while the heads of the sacrificed were put in rows on poles. The body was delivered to the man who had captured the prisoner and had presented it as a sacrifice. He cooked the flesh with maize, and made a feast of it with his relatives and friends. With the thigh-bone of the dead man he made a bundle that was hung up on a high pole in the middle of the house-courtyard. This was a token of the valour of the owner, and probably, at the same time, a fetish for luck and protection.

7. Annual festivities.—The Mexicans divided the year into eighteen sections of twenty days each and five remaining days. On each of these twentieths they had a feast with many elaborate ceremonies, dedicated successively to various special deities, all these feasts being intimately connected with the exigencies of the different sections of the year with regard to the culture of the soil, sowing, and harvesting, and with the changing aspects that in the different years those important affairs presented to the anxious eye of the labourer. They commenced with the ceremonies early in the year—in the time of our February. At that time, in the houses and on sacred spots—mountains, caves, water-holes, and localities considered as the abodes of the rain-gods—they set up poles to which papers painted with the emblems of the *numina* of these localities were attached; and they carried children, who were bought from their parents, to the same localities and sacrificed them to the rain-gods, in order that these divinities might grant rain in sufficient quantity for the crops of the new year.

In the second twentieth they celebrated a great feast to Xipe Totec, the god of vegetation, a form of the ancient moon-god. This was just before sowing, and it seemed to those ancient philosophers to be necessary to fertilize the earth, that she might receive the germ and bring forth the crops. For this important business a sacrifice of value and a vigorous man were required.

They took a prisoner of war, the most gallant whom they had at hand, and with him performed a ceremony that was in a way a testang. He was fastened by a rope to the central hole of a

stone of flat cylindrical shape, the so-called *temalacatl* (spinning wheel of stone). There he had to fight with four other men until he was exhausted, after which they bound him, with extended arms and legs (*manacoultico*), to a wooden frame, where he was shot with arrows, so that the blood might drop on the earth and fertilize it. This was the original form of the ceremony, as it is seen in the pictographs, and as it was performed in certain ancient towns up to the time of the conquest. In Mexico City, however, when the prisoner was exhausted and no longer able to defend himself, he was sacrificed in the regular way, by cutting the breast and tearing out the heart; and many prisoners were sacrificed in the same way after him. The bodies of the sacrificed were skinned, and the skins donned by certain men who represented the god in the following ceremonies, to show by this garb that the earth-god had put on a new cloak. From this custom this second annual feast was called *Tlacaxipeualiztli*, 'flaying men.' The feast concluded with a great ceremonial dance, where priests disguised as maize-ears, maize-stalks, and other vegetables, or as beings connected with the fields, exhibited to the people the abundance of food which the new year was expected to bring.

In the third and fourth twentieths, called *Toçoztli*, 'awakening,' the temples and shrines were adorned with green stalks, and the ears destined for sowing were brought to the temple of the maize-goddess to be consecrated. The fifth feast, called *Toxcatl*, fell at the time when the sun, shifting to the north, came to the zenith. This was regarded as the real feast of the new year, and the present writer has shown, in his explanation of the Humboldt Codices, that the day-names by which the Mexicans designated the different years correspond to the days with which the feast *Toxcatl* began. In this feast a living image of the god *Tezcatlipoca*, i.e., a prisoner of war who in the disguise of this god had represented him all the year round, was sacrificed, and immediately replaced by another prisoner, who, invested with the paraphernalia of the god, had to represent him in the new year. The sixth twentieth, the time when the rainy season set in, was celebrated by a general and severe fasting of all the priests of all the temples, including the little boys in the priestly schools. The Mexicans ate at this feast a certain meal prepared with maize in grain and beans, called *etzalli*, whence it bears the name *Etzqualiztli*, the 'eating of the meal of maize and beans.' In the seventh and eighth twentieths the sprouting of the young maize-ears was celebrated by a ceremonial dance of the kings and rulers of the town, and a general feeding of the people, the feast being called *Tecuilhuitl*, the 'feast of the kings.' The ninth and tenth twentieths were called *Tlaxochimaco* and *Xocotl uetzi*, 'when the *Xocotl* comes down (or is born),' or *Miccailhuitl*, the 'feast of the dead.' At these festivals living prisoners were thrown into the fire as a sacrifice to the god of fire, and the image of *Xocotl* or *Otontecutli*, the 'god of the *Otomi*,' the 'soul of the dead warrior,' having the shape of a bird, a butterfly, or of a mummy packet, was placed on the top of a high pole, and brought down by the male youth, vying with each other in climbing to the top.

The eleventh twentieth, called *Ochpaniztli*, 'sweeping the roads,' was the harvest feast, and at the same time a great expiation ceremony, by which evil was taken out of the town.

A woman representing *Teteo innan*, the 'mother of the gods,' having been decapitated at midnight and flayed, a priest put on the skin and represented the goddess in the following ceremonies. From a portion of the skin of the thigh, a mask was made and worn by the son of the 'mother of the gods,' *Centēotl-itztlacōliuhqui*, the maize-god, the 'curved obsidian knife,' who is described as the god of cold and punishment, and is, in fact, only another form of the morning star, the son of the moon-goddess. The principal ceremony consisted in a ceremonial impregnation of the goddess by *Uitzilopochtli*, and, on the way to meet the god, *Teteo innan* was accompanied by warriors and by phallic deities called *Cuxtecca* (men of the province of the Huasteca). Ceremonial dances followed, where *Teteo innan* was replaced by the maize-goddess. At the end of the feast warriors, racing with each other, took the mask out of the town, and buried it somewhere in the territory of their enemies. The goddess

herself, i.e., the priest wearing the skin of the victim, was likewise driven out of the town, and the skin was hung up, beyond the boundaries of the town, on a frame-work dedicated to *Teteo innan*, being her sanctuary.

In the twelfth twentieth, called *Teotleco*, the Mexicans celebrated the return of their gods, i.e., of the fire-gods, who were reputed to have gone out of the country during the rainy season. The feast may also be called the 'birthday of *Uitzilopochtli*.' It concluded with another fire-ceremony, in which living prisoners were thrown into the flames. The thirteenth feast, called *Tepēilhuitl*, the 'feast of the mountains,' was another harvest feast, when the pulque-gods—the gods of fecundity—were honoured by sacrifices, and offerings were brought to the rain-gods, i.e., to the gods of the mountains. The fourteenth feast, called *Quechollī*, was dedicated to *Mixcoatl*, the god of hunting and war, and was celebrated by a great ceremonial hunting. Arrows and other weapons were made.

The fifteenth feast, called *Panquetzaliztli*, 'raising the banners,' was the great feast of the god *Uitzilopochtli*, when the myth of the birth of this god and the victory which he obtained over his brethren, the *Centzon Uitznaua* (the stars), were dramatically represented by a combat between the warriors and the prisoners designated for sacrifice. The fire-snake, the weapon with which *Uitzilopochtli* had killed his sister *Coyolxauhqui*, came down from the upper platform of the temple to burn the offerings heaped up on the great cylindrical stone at the foot of the staircase leading up to the platform. The sixteenth feast, *Atemoztli*, was dedicated to the rain-gods. The seventeenth, *Tititl*, was a commemoration feast of the dead, at which the *ciuatētl*, the 'women-goddesses,' i.e., the deified women, the spirits of the women who died in child-bed, and their patroness *Ilamatecutli*, the old goddess, the goddess of fire, played an important part. The eighteenth and last feast was called *Izcaltl*, 'increasing,' and was dedicated to *Xiuhtecutli*, the god of fire, who was honoured by offerings of all kinds of animals thrown into the flames. The god was represented in this feast by two different figures—at one time as a god of vegetation, clothed in green quetzal-feathers and wearing a mask of turquoises and green stones, and at another time as the god of the burning fire, clothed in feathers of the red macaw and wearing a mask of red and black stones. The five last days of the year, called *nemontēmi*, were deemed unlucky. No feast was celebrated on them, nor any business of importance taken in hand.

Other ceremonies were performed to the deities who were believed to rule certain days, according to the name of the day in question, these names being composed of one of the numbers one to thirteen and of one of the twenty day-signs. As these names, in the different years, were not assigned to a fixed date—the initial days of the years bearing different names—the feasts of the rulers of the days were denominated 'movable feasts.'

8. Priests.—For the performance of all these ceremonies, filling out, in the true sense of the word, nearly the whole year, and for the regular service of the different gods, many priests were employed, called *tlamacazqui*, 'servants.' They were divided into different classes, such as the *tlenamacaque*, 'incense-burners,' the *teouaquē*, 'guardians of the idols,' the *guauaquiltim*, 'old priests,' and the *ometochtēim*, 'pulque priests,' who were at the same time the musicians and the singers. At the head of all these priests there were in Mexico City two high priests, called *Quetzalcoatl Totec tlamacazqui* and *Quetzalcoatl Tlaloc tlamacazqui*, i.e., the special priests of the two great gods, *Uitzilopochtli* and the rain-god

Tlaloc, whose sanctuaries were situated close to one another on the top of the principal pyramid.

9. General characteristics.—In spite of their adherence to bloody sacrificial rites, the Mexicans were sober, honest people, of tender susceptibility, governed by laws of a high moral standard, respecting the rights of property, detesting lying and falsehood, cheerful with their friends, brave in war, and unflinchingly obedient to their native kings. Their governors and princes exercised arbitrary power, but were restrained by unwritten laws, handed down from their forefathers, and by public opinion. Their punishments were severe, but never cruel. Vices such as drunkenness and untruthfulness arose with the misery and slavery of the Spanish times. In material culture, too, the Mexicans were nearly equal to their conquerors. Spanish government did not add very much to their cultural standard, and to-day the Indians are, if not the most refined, certainly the most honest, component of the population of the Mexican territory.

EDUARD SELER.

MEXICANS (Modern).—An intimate knowledge of the religion of the ancient peoples of Mexico is necessary in order to understand the religious life of the present native population of the country. On first acquaintance with the people an impression is given that the Roman Catholic religion is everywhere present, yet many of the pre-Columbian religious ideas remain. Too much cannot be said of the energies and the fervour of the Roman Catholic priesthood in their attempts to Christianize the natives. The originality of their methods and their enthusiasm for the work resulted in a marked success. They learned the native languages, and collected much data upon the customs and religion of the people, and to these early accounts we owe practically all our knowledge of the pre-Columbian life.

The clergy soon noted the ability of the people to read in pictures, and this was turned to account in their teaching of the Roman Catholic Catechism. Figures were drawn on large pieces of cloth representing most ingeniously, in a series of pictures, the various teachings of the Church. These pictures were also made in books, some of which, according to N. León (*Am. Anth.*, new ser., ii, [1900] 726), are still used among the Mazahuas of Michoacan. A more ambitious attempt was made by the priests to teach the natives the Latin words of the Lord's Prayer and other Articles of the Church. A native monosyllabic word was selected, the sound of which was similar to a syllable of the Latin word, and this word was represented by a picture. The first syllable, *pa*, of *pater*, was shown by a picture of a flag, which in Nahuatl was *panthi*, and the second syllable, *ter*, was represented by a drawing of a stone, *teŋi* in Nahuatl. In this way, picture by picture, the native word was known, and each word recalled a similar word or syllable in the Latin.

J. de Torquemada tells us (*Monarquía Indiana*, Madrid, 1723, xv.) that the Christian priests illustrated the vicissitudes and the instability of life by pictures representing a great expanse of water on which were vessels manned by sailors. On one ship Indian men and women were praying, with

garlands of roses in their hands, and they went to heaven accompanied by angels, while on another vessel the Indians were shown fighting with one another, ogling women, becoming intoxicated, and receiving glasses of wine from devils. According to J. de Acosta's statement (*The Natural and Moral Hist. of the Indies*, ed. C. R. Markham, London, 1880, bk. vi. ch. vii.), in illustrating the doctrine of the Trinity, God was pictured with three carved heads, and St. Peter and St. Paul were drawn as two carved heads with keys and sword. As Sapper remarks:

'It is easy to suppose that this sort of picture must have been absolutely incomprehensible to an Indian, but there is little doubt that the effect of these pictures was extremely favourable to the spread of Christianity' (*Globus*, lxxx, 120).

The Spanish *padres* were not content with these mnemonic and symbolic methods of teaching the Christian religion, but soon learned the languages of the country, translated the Catechism into the various dialects, and preached in the native tongues. Priests taught the Indians how to record their languages phonetically by the use of the Spanish characters, and from the early days of the Conquest there was a constantly increasing amount of printed and MS material in the languages of the different peoples of Spanish America.

With a knowledge of the native languages, together with the names and attributes of the various gods, the Spanish priests had a wonderful asset in their teaching, and they used their knowledge to good effect. Their explanation of the native pantheon was an earnest attempt to incorporate it, as much as possible, into their own religion, and, accordingly, we find many of the ancient myths turned into a new setting, with the saints now figuring as the actors in the ancient tales. It is difficult to determine how much of this transformation was due to the initiative of the priests of the new faith, and how much may be attributed to the Indians' own attempts to reconcile their old religion with the new. Knowing the tendency of primitive man to explain everything in terms of his own mental fabric, we may suppose that many of the strange metamorphoses which came about were the natural result of implanting ideas upon an older foundation, but a result not recognized or authorized by the Church. In many cases the gods of the ancient religion were incorporated into the new, as when the three most important gods were sometimes turned into the Trinity, while the lesser gods became the saints of the Church. The evil one already had a counterpart in the Mexican religion; among the Mayas he was Kisin, the earthquake.

The present population of Mexico may be divided, for the purposes of this article, into four classes as regards their religion: (1) those of Spanish descent who are true Roman Catholics; (2) those of mixed descent who are nominally Roman Catholics, but still retain some of the ancient pre-Columbian religious ideas; (3) those of mixed blood who are fundamentally pagans from the Christian point of view, with religious rites coloured by Roman Catholic teaching; and (4) those who show no trace of the Roman Catholic teaching, and still continue to practise the ancient religion. It is, of course, impossible to draw a hard and fast line between any two of these classes; the two middle divisions are differentiated only by the degree in which the Christian or the native religion predominates.

Class 1.—In the large cities and towns there is a numerous population of Spanish-speaking people who have little or no Indian blood, and these carry out the rites and ceremonies of the Roman Catholic Church as practised in Spain. The festivals of the Church are celebrated with great pomp and ceremony. An interesting survival of the teaching of the early Franciscans is seen in the *Nacimientos*,

the *Pastorales*, and the Mystery Plays performed at Corpus Christi and at other times. Soon after the Conquest the sacred dramas, so popular in Spain at that time, were introduced into Mexico, and were regarded as an important means of propaganda.

Class 2.—The casual observer seldom sees any of the native element among the peoples who have been placed in this division, and he considers the population good Roman Catholics. It is only after close intimacy extended over a considerable period of time, together with a knowledge of the nature of the native practices, that one gradually finds that the underlying principles of the religion are based on the native ideas rather than upon the Christian faith. The veneer of Roman Catholicism is removed, and the native religion stands out clearly. The greater part of the population of Mexico are of mixed blood, with a strong preponderance of the Indian over the Spanish strain. This type of native is present even in the large cities and towns, where a great proportion of the people fall into Class 2, whose religion is Roman Catholic, with an undercurrent of the old ideas. The *gente* of Mexico City, e.g., are of this class.

Holy Week throughout Mexico is a time of great religious enthusiasm. In addition to the Passion Plays which have already been mentioned, there is a constant round of festivals, many of which are strongly flavoured by the native elements. The season of prayer and fasting appeals to the natives, some of whom wear the crown of thorns and flagellate themselves. From Holy Thursday until the Gloria of Saturday the bells of the churches are silent, and the *matracas*, or rattles, take their place. Each child and adult has a rattle, and the streets are full of vendors, each selling some sort of noisy toys. On the *Sábado de Gloria* new fire is struck from the blessed flint. The burning of Judas is a common sight in every Mexican town; figures of Judas, representing him as a man or woman, a negro, a soldier or a knave, a devil or a gentleman, are burned in every village plaza. Many of these figures contain jars filled with various objects, and, when the container is broken, the contents fall into the struggling crowd. Fire-crackers and rockets often form the hands and feet of these Judas figures. It is a time of much merriment.

In Mexico City on *Viernes de Dolores*, the eve of Palm Sunday, there is a long procession of decorated boats in the Viga Canal; and flowers, small shrines, and altars are displayed everywhere, the native love of flowers and their varied use of them as decoration being seen at this time at its best. These religious festivals play a very important part in the life of the people.

The custom of erecting wooden crosses along the roads and trails is very common in Mexico. The traveller, in passing one of these crosses for the first time, usually deposits a stone or a flower before it.

It is on the magical side of the religion that we find the greatest number of survivals at the present time. Symbolic and contagious magic abounds among all strata of the population. Some of their ideas are, of course, derived from the Spanish element, but the greater number are purely native. Hypnotic suggestion is the important feature in all the ceremonies which deal with healing the sick. The air is full of evil spirits, which linger round the entrances of the villages, and precautions must be taken to placate or outwit them.

Class 3.—This class is represented in the small *pueblos* in the country districts, where the headman of the village performs the offices of the Church, except at infrequent intervals when the priest of the district makes his visit to celebrate

Mass and to perform marriages and baptisms. The native religious ideas are much in evidence, for the visits of a priest of the Church are often too infrequent to make much headway against the presence of the strong native religious element. This cannot be stamped out among the people, and it remains a sturdy growth unless persistent and energetic efforts are made to counteract its influence by Christian teaching. It is among people of this class that the blending of pre-Columbian and Christian ideas may best be studied.

The native elements come to the front especially in connexion with agriculture and the burial of the dead. Incense is burned and offerings are made to the gods of fertility at the time of sowing; other gifts are presented to the gods of rain; in some cases offerings are given to the wind-gods when the burning of the brush of the maize-field is undertaken; and abstention from sexual intercourse before the planting is another of the survivals. Among the Otomi an idol is buried in the maize-field, another is kept in the domestic house, and a third in the granary. The hunter may burn incense for a successful hunt, the traveller for a prosperous journey. Every house has its *santo*, or saint, often the crudest kind of picture or image, and the firstfruits of the harvest are usually placed before this shrine; in time of sickness and death many offerings are made and incense is burned. It is the nature of the gifts and the spirit in which they are made, rather than the act itself, that show the pre-Christian ideas.

In many of the prayers the native element is seen. Sapper tells (*Das nördl. Mittel-Amerika*, p. 270) of the Kekchi praying, 'Thou art my mother, thou art my father,' a form common in the *Popol Vuh* (q.v.). The Indian origin of many of the prayers is seen in the poetical form, the parallelisms, the antitheses, and the repetitions of single words and phrases. Seler tells of a stone idol discovered in a cave in the State of Puebla before which offerings of flowers, eggs, and wax candles were found. In another case the visiting *padre* saw, to his indignation, a stone idol occupying the place of honour beside the crucifix, on the altar of the village church. In a cave in Oaxaca a pottery incense pan and two turkey feathers were discovered, the feathers having undoubtedly been used in connexion with the sacrifice of human blood, so common a part of the religious ritual of the ancient Mexicans. These definite examples will show the hold which the older ideas have upon the people, who are nominally good Roman Catholics.

Class 4.—The number of individuals who have been placed in this division is comparatively small, and, as might be expected, they are found only in the most unsettled and inaccessible portions of the country. They show practically no influence from the outside world in their customs, their languages, or their religion. Spanish is seldom understood, and the native languages show little change from those portions which were recorded by the early Spanish conquerors. It is among these people that one can obtain a clear picture of the pre-Columbian aborigines. The polytheistic ideas are still maintained, and many of the gods now worshipped may be identified with the ancient deities of the people—Sakaimoka of the Huichols, e.g., is recognized as the old rain-god, Tlaloc. It is seldom that the ancient gods of the sun, the moon, the morning star, and other planets can be noted in the present pantheon, although among the Seri of Lower California the sun and moon find a place among the gods, and among the Tarahumare there is a 'father-sun' and 'mother-moon.' Among the present-day Mayas the sun and moon are servants of the gods.

Worship by means of prayer, divination, and sacrifice takes many different forms. Human sacrifice has been abolished, although there are a few sporadic cases where it has been reported within the last century. Blood sacrifice is not uncommon among people of this class, the ear and other parts of the body being cut with a stone knife, and the blood allowed to drop upon the idols. Offerings of food and drink now form the main portion of the religious practices of the population, although burning of copal or other incense to the gods is also very common. Compulsory intoxication—a common feature of the ancient religion—is still carried out by means of the *pulque* of the Mexicans, the *hibuli* of the Huichols, the *tesvino* of the Tarahumare, and the *balche* of the Lacandones. Divination is practised in many forms, and among many peoples there is a class of soothsayers who look into the future by means of the movements of sacrificed animals, the smoke of the incense, the crystal, the image on the surface of a basin of water, and many other ways. The prayers of the Cora, collected and translated by Preuss (*Die Nayarit-Expedition*), furnish an excellent criterion of the native point of view towards the gods and religion in general. The dances of the people are often held for magical purposes. Among the Tarahumare, e.g., the dance is a prayer, a petition for prosperity for the harvest, or for health and freedom from ill-fortune.

The idea of renovation, the renewal of the incense-burners and the cleansing of the houses and of the places of worship at certain times of the year, is an ancient practice. Among the Lacandones, at the main ceremony of the year, when the firstfruits are offered, the entire collection of incense-burners is renewed. The old ones are 'dead,' and new ones are made to take their place. Priests no longer form a distinct class by themselves in Mexico, but the head-man of the village or the head of the family now performs the priestly functions, and among some of the tribes the class of *shamans* still remains. It is claimed that one-fourth of the Huichols (g.v.) of Northern Mexico are *shamans*; the name of the tribe signifies 'the doctors or healers.' It is they who have the power to look into the future and who understand and interpret the will of the gods. Religious temples, so common a feature of the pre-Columbian culture, no longer play a part in the religious life, though the Lacandones still make pilgrimages to the ruined structures where they believe their gods reside, carrying with them incense-burners and other offerings. The religious practices are usually carried on either in the domestic habitations or in a house set apart for the purpose, this house being called *topina*, 'the house of all,' among the Huichols. Women are usually excluded from these religious places, except at the termination of the worship, when general feasting takes place, and the offerings, previously made to the gods, are consumed by the worshippers. Perhaps the best example of a people who have had no contact with Spanish ideas are the Lacandones, who live in the State of Chiapas on a tributary of the Usumacinta River, which forms a portion of the boundary between Mexico and Guatemala. The early efforts of the Spanish to Christianize these people met with failure, and they have remained undisturbed for three hundred years. The customs, and especially the religion, of this people are important as an aid in understanding much of the life of the early Maya tribes, and many of the ceremonies are counterparts of those represented in the pre-Columbian MSS.

A geographical survey of the principal religions of the native Mexicans shows an interesting change from north to south. From the religious point of

view, the ideas of the tribes of Sonora and Chihuahua are directly associated with those of the natives of the south-western portion of the United States: the religion of the Puebloan peoples and of the Navahos and Apaches shows a striking similarity to the religious ideas of the Huichols, the Cora, and other peoples of Northern Mexico. The rain and the importance of rain are the prime factors in the religion of all these peoples. The symbolism of the Huichols centres in the phenomena of nature. In Central and Southern Mexico the religious ideas of the present native population show a great number of survivals of the ancient religion of the formerly highly cultured peoples belonging to the Nahuatl, the Maya, and kindred civilizations.

MICHAELMAS.—I. The origin of the festival and the Michael churches in Italy.—The *Martiloge in Englysshe*, translated by Richard Whytford of Syon monastery and printed by Wynkyn de Worde in 1526, records the Roman and Sarum tradition of the origin of the festival:

'The xxix day of September. In the moit of gargane the reuerend memory of saynt Mychael the archauegel where a chirche of hym is cosecrate that is but of poore byldyng yet notw'standyng it is adourned w' many grete vertues' (Henry Bradshaw Society, iii. [1891] 153).

The Sarum Missal in the calendar has: '3 kl. Oct. Michaelis archangeli,' and in the text: 'Michaelis archangeli' (*Miss. ad usum . . . Sarum*, Burntisland, 1861-83, pp. 25⁺, 918). The calendar of the Westminster Missal of 1362-86 has: 'iii kl. Oct. Sancti Michaelis archangeli' (H. Bradshaw Soc. i. [1891] p. xiii). The Missal of Robert of Jumieges, an English Service-Book written, probably at Winchester, between the years 1008 and 1023, has in the *Kalendarium*: 'iii. Kl. Oct. Sci. Michaelis archangeli.' The rubric in the text reads: 'iii. Kal. Oct. Dedicatio Basilicæ Sancti Michaelis Archangeli' (H. Bradshaw Soc. xi. [1896] 17, 215). This agrees with the title in the Leofric Missal (A), a French MS of the first half of the 10th cent.: 'iii. Kal. Oct. Dedicatio basilicæ sanoti Michaelis archangeli' (*Leofric Missal*, ed. F. E. Warren, Oxford, 1883, p. 162). The *Kalendarium* of the Leofric Missal (B), a Glastonbury MS of the latter part of the 10th cent., has: 'iii. Kl. Oct. Sci. Michaelis archangeli' (*ib.* p. 31). The Leofric Missal (A) is a Gregorian Sacramentary, and the title is based upon that in the Codex Vaticanus (ii.) published by Muratori: 'iii. Kalendas Octobris id est xxix Die mensis Septembris. Dedicatio Basilicæ Sancti Angeli' (L. A. Muratori, *Liturgia Romana Vetus*, Venice, 1748, vol. ii. col. 125). This is evidence of the 9th century.

The earlier Gelasian Sacramentaries carry the evidence back to the 7th century. The Vatican MS of the 7th or early 8th cent. has 'Orationes in Sancti Archangeli Michaelis.' The Rheinau MS and the S. Gall MS, of the 8th or early 9th cent., have the title: 'Dedicatio Basilicæ Angeli Michaelis' (H. A. Wilson, *The Gelasian Sacramentary*, Oxford, 1894, p. 200).

The rubric in the Leonian Sacramentary throws still further light on the origin of the festival. It stands alone in assigning it to 30th Sept. and not 29th Sept., but it adds a note of locality which differs from that of the later Roman tradition: 'Prid. Kāl. Oct. N̄ Basilicae Angeli in Salaria' (C. L. Feltoe, *Sacramentarium Leonianum*, Cambridge, 1896, p. 106). Feltoe refers to a 9th cent. MS at Padua, which reads: '29 Sept. Dedic. basil. S. angeli Michaelis via Salaria' (*ib.* p. 203). Martin Rule, in his 'Analytical Study of the Leonian Sacramentary' (*JThSt* ix. [1908] 515 ff., x. [1908] 54 ff.), traces the materials of this Verona MS of the 7th cent. to three collections made during the pontificates of Leo I. (440-461), Hilarus (461-468), and Simplicius (468-483). This carries the evidence of the rubric to the 5th century.

The festival is, therefore, in its origin the dedication festival of a church. The evidence is not confined to the liturgical books of the Roman rite. The early Mozarabic rite is represented in a MS of the 11th cent. at Paris (Bibl. Nat. nov. acq. lat. 2171). In a short treatise, *Admuntiationes Festivatum*, the festival is announced thus: 'Adveniente diae il. festivas erit dedicatio sancti Michaelis archangeli vel sociorum eius' (MS 2171, p. 25). And in the *Martirum Legium*, a calendar in the same MS under Sept. 29, is: 'iii. (Kal. Oct.) dedicatio sancti Michaelis archangeli' (G. Morin, 'Liber Comicus', *Anecdota Maredsolana*, i. [1893] 392, 402). A contemporary MS from the same Spanish monastery of Silos in Old Castile (Brit. Mus. Add. MS 30851) has two hymns: 'in diem Sancti Michaelis Archangeli,' where reference is made to the 'socii.' The first hymn has the line: 'ut gloriatur in deo cum consortes socios'; and the second: 'Urielo Gabrielo Rafaelo socius' (*Mozarabic Psalter*, H. Bradshaw Soc. xxx. [1905] 254, 256). The Ambrosian rite in the 12th cent. refers to the 'dedicatio in monte Gargano.' The *Kalendarium* has: 'iii. k. Oct. s. Michaelis in monte Gargano,' and the *ordo pro denariorum divisione*: 'dedicatio s. Michaelis in monte Gargano' (Beroldus, ed. M. Magistretti, Milan, 1894, pp. 11, 17).

i. *The Castello S. Angelo at Rome.*—Quentin has sifted the further evidence of the Martyrologies. The earliest entry is that of the Martyrology of Bede: 'iii. Kl. Oct. Dedicatio ecclesiae sancti angeli Michaelis.' This is modified by the Mācon MSS: 'Romae, dedicatio basilicae sancti angeli'; by the Clermont MS: 'Romae, dedicatio basilicae sancti Michaelis archangeli'; and by the Bologna MS with the insertion of the words 'miliario sexto' between 'Romae' and 'dedicatio.' The earliest evidence supports that of the Leonian Sacramentary, and points to the dedication of a church at the sixth mile-stone on the Via Salaria. The MSS of Toul and Remiremont read: 'In Monte Gargano, dedicatio basilicae sancti Michaelis archangeli.' This is the source of the entry in the Martyrology of Ado, archbishop of Vienne, c. 870; but he adds:

'Sed non multo post, Romae, venerabilis etiam Bonifatius pontifex ecclesiam sancti Michaelis nomine constructam dedicavit, in summitate circi, criptatum miro opere altissime porrectam. Unde et idem locus, in summitate sui continens ecclesiam, inter nubes situs vocatur' (Quentin, *Les Martyrologues historiques*, p. 661).

The entry in the Martyrology of Ado is the most ancient testimony to the consecration of the tomb of Hadrian to St. Michael. A century later Liutprand of Cremona witnesses to this church on the top of the Castel S. Angelo:

'Munitio vero ipsa . . . tantae altitudinis est, ut ecclesia quae in eius vertice videtur, in honore summi et caelestis militiae principis archangeli Michaelis fabricata, dicatur sancti Angeli ecclesia usque ad caelos' (*ib.* p. 561).

Baronius also identified the Church of St. Michael 'inter nubes' with the Castle of S.

Angelo, assigning its dedication to Boniface III. (606) or Boniface IV. (607-614), in memory of the staying of the plague under Gregory the Great (C. Baronius, *Martyrologium Romanum*, Venice, 1602, p. 544).

ii. *The church on the Via Salaria.*—The dedication festival of Sept. 29 would seem to have three steps in historical progress. The earliest has reference to the church on the Via Salaria, the second to the Apulian church on Monte Gargano, the third to the church on the Castel S. Angelo. The sixth mile-stone on the Via Salaria is north of the site of Fidenae, somewhere between Castel Giubileo and Casale Marcigliano. The Casali Sette Bagni, which lies on the hill-side north of the little stream of the Allia, cannot be far from the old Basilica of St. Michael. The evidence from the Michael shrine near Spoleto, which was known for its healing springs, may explain the origin of the dedication.

iii. *The church on Monte Gargano.*—Monte Gargano juts out from the north end of Apulia into the Adriatic. The Michael shrine is on the Monte S. Angelo, about ten miles from Manfredonia, the ancient Sipuntum. The dedication is assigned to the last years of the 5th century. Baronius refers to it under the year 493 (*Annales Ecclesiastici*, ed. Mainz, 1601-05, sub anno xliii.; cf. his *Martyr. Rom.*, p. 261). The 'Apparito S. Mich. Ang.' is kept on May 8. The *Liber Pontificalis* of Anastasius Bibliothecarius reads: 'Huius temporibus inventa est Ecclesia sancti Angeli in Monte Gargano' (*Liber Pont.* ch. 50, S. Gelasius). It was a great centre of pilgrimage in the 10th century. Otto III. visited the sanctuary in 998. The fact rests on the credible witness of the *Vita S. Romualdi* of Petrus Damianus (F. Gregorovius, *Storia della città di Roma*, Ital. ed., Venice, 1872-76, iii. 559). In the church was a spring of water which was held to be a cure for fever:

'Exipso autem saxo quo sacra contunditur aedes: adaquilonem altaris dulcis et nimium lucida guttatum aqua dilabitur: quam incolae stillam vocant. Ad hoc et vitreum vas . . . argentea pendet catena suspensum . . . denique nonnulli post longas febrium flammās hac austā stilla celebris confestim refrigerio potiuntur salutis' (B. Mombritius, *Sanctuarium*, ed. duo Monachi Solesmenses, Paris, 1910, i. 391).

iv. *The Michael sanctuary in Umbria.*—The Antonine *Itinerary* thus notes two stations on the way from Rome to Milan by the Via Flaminia: 'civitas spolitio . . . mil. vii: mutatio Sacrarum . . . mil. viii.' This 'mutatio' is placed at Le Vene, near Spoleto (*Itin. Ant. Aug.*, ed. G. Parthey and M. Pinder, Berlin, 1848, pp. 288, 378). Wesseling rejects the theory of P. Cluver that this referred to a sanctuary of Jupiter Clitumnus, and accepts that of L. Holstein that there was a Christian sanctuary on this site when the *Itinerary* was written (P. Wesseling, *Vet. Rom. Itineraria*, Amsterdam, 1735, p. 613). H. Leclercq states definitely that the sanctuary cannot have been dedicated to the 'God of Angels' before the epoch of Theodosius, or at the latest before the beginning of the 5th century. The inscriptions of the *Tempio di Clitunno* belong to this date. The inscription over the central door reads: 'SCS DEUS ANGELORUM QUI FECIT RESURRECTIONEM.' Leclercq says:

'Cet édifice, dont la première destination n'était pas chrétienne, et qui portait primitivement le nom de sacrarium, n'a pu être transformé et dédié au Dieu des anges qu'à l'époque de Théodose' (*DACL*, art. 'Anges', p. 2147).

And again, after examining the theory of H. Grisar that these buildings (i.e. the Tempio di Clitunno and the Church of S. Salvatore at Spoleto) are works of a school of the 12th cent., he concludes:

'Nous pensons donc, jusqu'à nouvelle démonstration, que contrairement à l'opinion de Luc Holstein, le *tempio di Clitunno* a eu une destination primitivement païenne, il fut un de ces *sacraria* qui bordaient en assez grand nombre la rive du Clitunno pour avoir fait donner le nom de *Sacraria* au gîte d'étape situé entre Spolète et Trevi' (*ib.* p. 2149).

The consecration of the healing water of the Clitumnus to the God of Angels suggests a similar origin for the basilica on the Via Salaria, and may perhaps lie behind the dedication on Monte Gargano. The early Christian association of angelic agency with healing springs is recognized in Jn 5⁴. Leclercq states that there is evidence of the prevalence of the cult of angels in Umbria from the first half of the 5th century. The Church of S. Salvatore outside the walls of Spoleto is on the site of a small church originally dedicated to St. Michael in 429. There is another in the parish of Mandorleto near Perugia, of the same epoch, called in the inscription: 'basilicam sanctorum angelorum' (*ib.* p. 2148).

2. **The Michael churches in the East.**—i. *St. Michael of Khonai.*—The Church of St. Michael the Archistrategos was the centre of the angel cult of Asia. When the hill-station of Khonai took the place of Colossæ in the 7th cent., the Church of Colossæ became known as the Church of St. Michael of Khonai. The legend tells that St. Michael had saved the people of the Lycus valley from inundation by clearing the gorge outside Colossæ. The miracle of Khonai in its present forms is of the 9th cent., but it represents the foundation legend of the great Church of Colossæ. W. M. Ramsay has no doubt of the identity of the Church of St. Michael of Khonai with the Church of Colossæ. The raid of the Turks in 1189 swept along the Lycus valley. Khonai on the hill-side escaped them, but the threshing-floors along the valley were destroyed, and the great church was burnt (Nicetas Choniates, *Annales de Isaac Angelo*, bk. ii. ch. 2 [*Hist. Byzant.*, Venice, 1729, xii. 210]). The legend also explains the origin of a spring of sweet water on the north of the city (Ramsay, *Cities and Bishoprics of Phrygia*, i. 214 ff.). St. Michael of Khonai in the later Christian legend takes the place of the Zeus of Colossæ of pagan tradition. The power associated with Zeus was in the Christian period attributed to St. Michael. Ramsay sums up the importance of the legend in its bearing on early Christian history:

'The worship of angels was strong in Phrygia. Paul warned the Colossians against it in the first century (Col. ii. 18). The Council held at Laodicea on the Lycus, about A.D. 363, stigmatised it as idolatrous (Conc. Laod. Can. 36). Theodore, about 420-50 A.D., mentions that this disease long continued to infect Phrygia and Pisidia (Interpr. Ep. Col. ii. 16). But that which was once counted idolatry, was afterwards reckoned as piety' (*Church in the Roman Empire*, London, 1893, p. 477).

ii. *Asia.*—Michael the Archangel was honoured throughout Asia. His name is preserved in Mikhayil near Prymnessos, in Mikhalitch on the Sangarios, and in other city names (Ramsay, *Phrygia*, i. 31 f.). He is connected with the introduction of Christianity into Isaura, and is associated with the cities of Akroinos-Nicopolis and Gordium-Eudokias. Sozomen speaks of the cures wrought at the Michaelion, a shrine built by Constantine on the north shore of the Bosphorus (*HE* ii. 3). Its ancient name was Hestias, and was traditionally associated with a temple built by the Argonauts (Cedrenus, *Hist. Comp.* [*Hist. Byzant.* vii. 96]; Ramsay, *Church in Rom. Emp.*, p. 477, n.). It was 35 stadia from Constantinople, and is now represented by Arnautköi.

Procopius describes the rebuilding of this basilica by Constantine, and the building of another under the dedication of St. Michael at Proconthous on the Asiatic shore (Procopius, *de Aedificiis*, i. 8). He built another on the Asiatic coast at Mokadion (*ib.* i. 9). Procopius also mentions the Michael churches erected by Justinian at Antioch (*ib.* ii. 111) and at the healing springs of Pythia in Bithynia, with a house of rest for the sick (*ib.* iv. 3), while at Perga in Pamphylia stood a ptocheion of St. Michael (*ib.* v. 9).

iii. *Constantinople.*—There are important references to the Michael churches of Constantinople and the neighbourhood in the *Imperium Orientale* of Anselmo Banduri (*Hist. Byzant.*, xxiii. and xxiv.) and in the *Constantinopolis Christiana* of C. D. du Cange (*Hist. Byzant.* xxii.). The latter gives a list of fifteen churches (*Const. Christ.* iv. 3) in the city and five monasteries in the suburbs (*ib.* iv. 15). The chief festival of St. Michael in the Eastern Church is kept on Nov. 8.

iv. *Alexandria.*—The *Annals* of Eutychius of Alexandria († 940) have a legend connected with a Michael church in Alexandria. It was on the site of a temple of Saturn, in which had been an image of brass named Michael. The image was broken up, and the pagan festival was transferred to St. Michael (R. Sinkler, *DCA*, p. 1179).

3. **The Michael churches in the West.**—In Italy and the East, headland, hill-top, and spring sanctuaries now dedicated to St. Michael were formerly sacred sites of earlier religions. The associations rest frequently on folk-lore; the testimony is that of legend and tradition or place-name. The same associations are to be expected in the West. In some cases the legend may be traced; in others it may linger in folk-lore, and can be looked for only in local tradition. But, given an ancient dedication to St. Michael and a site associated with a headland, hill-top, or spring, on a road or track of early origin, it is reasonable to look for a pre-Christian sanctuary.

i. *Headland and coast churches.*—On the French coast are St. Michel near the mouth of the Loire, St. Michel on the Pointe du Raz in Brittany, St. Michel en Grève to the south of Lannion, the Île St. Michel near the Cap de Fréhel, and, best-known of all, Mont St. Michel. The legend associated with Mont St. Michel suggests the tradition of an ancient sanctuary of Celtic heathendom. The giant slain by Arthur on the site is said to have come from Spain, the Hades of Celtic mythology (Rhys, *Celtic Heathendom*, p. 90 f.). He is said to have ravished Elen, who is equated with a goddess of Welsh mythology (*ib.* p. 161). Thus, by the overthrow of a giant by the champion of Christendom, the Celtic sanctuary becomes the sanctuary of St. Michael.

Among the coast and headland churches in England are St. Michael's Mount, the church of Lyme Regis, and that of Bere near Seaton, all of ancient origin. There are also St. Michael near the mouth of the Camel opposite Padstow, St. Michael, Mawnan, overlooking Falmouth Bay, and St. Michael-Caer-hayes. On the west coast there is a Michael church at Workington in Cumberland; on the east coast, Garton in the East Riding, Sidestrand and Ormesby St. Michael, in Norfolk; on the south coast, Newhaven in Sussex and East Teignmouth, Devon. With a few exceptions the majority are in Dorset, Devon, and Cornwall, where the old lore lingered longest.

ii. *Hill-top churches.*—These are to be found throughout the West, sometimes as hermitage chapels, sometimes as town and village churches. St. Michel is the central church of Limoges, the Augustoritum or metropolis of the Lemovices. St. Michel is also the central church of Castelnaudary on the old road between Carcassonne and Toulouse. These sites are frequently the high-places consecrated to early religious rites. The church of Penkridge in Staffordshire is dedicated to St. Michael. Penkridge is the Celtic site of the ancient city of Pennocrucium, 'a place-name which bears evidence to the worship of the heathen god in the centre of ancient Britain' (Rhys, *Celtic Heathendom*, p. 202 f.). It is the Brythonic equivalent of the Irish *Cenn Cruach*, 'the Chief of the Mound,' who bowed before the staff of St. Patrick.

Penkridge was formerly the sanctuary of the Celtic Zeus.

A Michael church may often witness to some pre-historic centre of religious worship.

The story of a bull is associated with the foundation-legend of the Church of St. Michael 'in Monte Gargano.' The legend rests on a 'libellus' which was kept in the church. Garganus, a rich citizen of Sipuntum, missed his bull from the herd:

'Quem dominus collecta savorum multitudine per devia queque requirens, invenit tandem in vertice montis foribus cuiusdam asistere speluncæ. Itaque promotus our solivagus incederet: statim corripit ira motus arcum, et appetit illum sagitta tossicata que venti flamme retorta: eum a quo iacta est mox versa percussit' (Mombritius, *Sanctuarium*, l. 390; cf. Hereford Breviary in Chapter Library, Worcester, 15th cent., ap. H. Bradshaw Soc. xl. [1911] 399).

The sanctity of the bull-shrine is here vindicated. The terror is averted by the dedication of the site to St. Michael.

The life of St. Francis of Assisi alludes to the forty days' fast in honour of St. Michael. It was kept 'ad heremum Alvernae.' It was on the occasion of one of these fasts that the birds gathered round his cell. They are called his 'sorores aviculæ' (Mombritius, *Sanct.* i. 512). The vision of the stigmata is assigned to the same sanctuary.

'Biennio itaque antequam spiritum redeat caelo . . . perductus est in montem excelsum seorsum: cui nomen Alvernae. Cum igitur iuxta solitum morem quadragesimam ibidem ad honorem archangeli Michaelis jejunare coepisset . . . coepit immisionem cumulatius dona sentire' (ib. l. 524).

iii. *The spring churches.*—The dedication of wells and springs to St. Michael may be noted in the Michael churches of Askerswell, at the head of the Asker Valley in Dorset, at Barwell in Lincolnshire, and at Houghton-le-Spring in Durham. In Portugal near Leiria on the Monte de São Miguel a warm and a cold spring issue close together from the Olhos de São Pedro.

There is a remarkable example of a Michael church in association with a spring at Llanfihangel near Llantwit Major in Glamorganshire. The church is in a dell, and just outside the N.W. corner of its churchyard is a spring. The spring-head is ornamented with the bust of a woman, and the water used to issue from the breasts. It is now (April 1915) nearly filled up with mud.

iv. *The Llanfihangel churches in Wales.*—It has been noted by W. L. Bevan (*Dioc. Hist. of St. David's*, London, 1888, p. 36, ap. Willis Bund, *The Celtic Church of Wales*, p. 336) that the Michael churches in the diocese of St. David's, to the number of forty-five, with one exception, are in the country districts. It has been suggested by Willis Bund (p. 336) that they mark a second stage in the spread of Christianity in Wales:

'The group of Michael churches would therefore represent the villages of the lay tribe that had become Christian, but which still belonged to the lay tribe, and so could not be called by the name of the Saint, or the tribe of the Saint, or of his family. They thus form a group which marks the spread of Christianity. . . . The term selected was one that would celebrate the victory of the cross over the Pagan' (ib. p. 336).

The Michael churches of Anglesey bear out this suggestion. There are four of them; and they are all in the near neighbourhood of sites of great antiquity, associated with the legend and myth of Wales. Llanfihangel-ty'n Sylwg, on the coast north-west of Beaumaris, is within the pre-historic site of Bwrdd Arthur. Llanfihangel Tre'r Beirdd derives its name from the ancient Carneddau Tre'r Beirdd. It lies to the east of Llanerchymedd. Llanfihangel-yn-Nhowyn, south-east of Valley, is near the site of Cær-Ellen. Llanfihangel Esceifog is parochially connected with the old site of Plas Berw. This association of the Michael churches of Anglesey, taken together with the evidence of the churches in Italy and the East, can hardly be accidental. It would seem to support the evidence that the Michael churches occupy the shrines and sites of Celtic heathendom.

v. *The Michael churchyards.*—The churchyard of

St. Michael's at Lichfield is referred to in the MS *Historia Ecclesie Lichfeldensis* in the Cathedral Library at Lichfield. It was a venerated site even in the time of St. Augustine:

'Corporibus occisorum sepeliendis insolitæ magnitudinis coemeterium quod fano Divi Michaelis adiacet, fertur inservisse; quod fertur Augustino, qui Anglorum Apostolus dicitur, cum illas insulæ partes inviserat, religione venerabile fuisse' (MS *Hist. Eccl. Lichf.*, ap. H. E. Savage, *The Church Heritage of Lichfield*, Lichfield, 1914, p. 14).

A note 'de Cemeteriis' in the same MS speaks of certain national burial-places in the early ages of the Church:

'In primordius nascentis Ecclesie Anglicanæ cetera erant rara, pauca sed amplissima et spaciota: ut coemeterium Avelloniae sanctum in quo Rex Arthurus sepultus est; coemeterium Dorovni Cantorum; Eboraci Brigantium; Lindisferne; atque adeo coemeterium Divo Michaeli sacrum Lichfeldiæ ab Augustino Anglorum Apostolo, ut fama est, consecratum' (ib. p. 14).

There is a passage in Bede which probably refers to a similar burial-place in the neighbourhood of Hexham:

'Est mansio quaedam secretior, nemore raro et vallo circumdata, non longe ab Hagustaldensi ecclesia . . . habens clymeterium sancti Michaelis archangel, in qua vir Dei sæpius, . . . manere cum paucis, atque orationibus ac lectioni quietus operam dare consueverat' (HE v. 2).

The Church of St. Michel at Bordeaux is on the site of an ancient cemetery, the soil of which has the property of preserving the bodies.

vi. *The Angel Victor in Ireland.*—The *Genair Patraic*, the hymn of St. Fiace in honour of St. Patrick, has two references to St. Michael under the name of Victor. In v. 4 it is by his command that Patrick went across the seas:

'Asbert Victor tri gníad
Míl con tessad for tonna,'

'Said Victor to Milchu's bondsman, that he should go over the waves' (*Irish Liber Hymnorum*, H. Bradshaw Soc. xiii. [1898] 98, xiv. [1898] 32).

In l. 47, an angel sends Patrick to Victor, who stopped him from going to Armagh at his death:

'Dofaith fa-deas co Victor,
ba he ar 'id 'ra 'lastai,'

'He sent him south to Victor: it was he [Victor] that stopped him' (ib. xiii. 102, xiv. 34).

The gloss on v. 4 reads:

'Victor 1 angel communis Scotticæ gentis sein: quia Michael angelus Ebreicæ gentis, ita Victor Scottorum' (ib. xiii. 98).

The translation of the Irish gloss on v. 46 reads: 'i.e. to meet him, to summon him to go to Victor. He was his soul-friend, and he is the common angel of the Gaels [angel coitend na nGoedel]; sicut est Michael Iudeorum ita Victor Scottorum' (ib. xiii. 102, xiv. 184).

The hymn seems based on notes written by Muirchu Maccu Machtheni in the 7th cent. and preserved in the Book of Armagh. The hymn itself belongs to the 8th century (ib. xiv. 176). The name Victor may be traceable to the *inlatio* of the Mozarabic Missal for Michaelmas:

'E celo missus: iniquum hostem perimmet in inferno: et ipse victor exultans victori plaudet: a quo victor manebit' (*Missale Mixtum dictum Mozarabes*, ed. A. Lesley, Rome, 1755, p. 392).

It is a point of affinity between the liturgical uses of Ireland and Spain.

But the name Michael is not sunk in the title Victor. J. H. Bernard, in his note on the Hymn of St. Colman Mac Murchon in honour of St. Michael, says:

'St. Michael was very popular in Ireland. In the Second Vision of Adamnan we read in section 19: "the three hostages that were taken on behalf of the Lord for warding off every disease from the Irish—are Peter the Apostle, and Mary the Virgin, and Michael the Archangel." There are a large number of fragmentary Irish poems in praise of St. Michael in the manuscript collection of the Royal Irish Academy. There were churches dedicated to him in many localities; the place-name *Temple-Michael* still exists in 6 or 7 counties' (H. Bradshaw Soc. xiv. 188).

4. *The Michaelmas goose.*—There is an old saying: 'If you eat goose on Michaelmas-day you will never want money all the year round' (Hone, *Every-Day Book*, i. 1339). In Herefordshire in 1470, 'one goose fit for the lord's dinner on the feast of St. Michael the archangel' was due as

part of service or rent for land (*ib.*). G. Gascoigne, in his poems published in 1575, alludes to a similar custom :

'At Christmasse a capon,
At Michaelmasse a goose,
And somewhat else at New-yeres tide,
For feare their lease file loose' (*ib.*).

Such customs lie deep in the folk-lore and religious ideas of a people. Geese have sacred associations. They saved Rome ('anserem non fefellerent: quibus sacris Junoni' [Livy, v. 47]). The goose-pond, or 'fuente de las ocas,' is still preserved in the cloister court of the cathedral of Barcelona. The cathedral is built on the site of a Roman temple—a temple ascribed to Hercules. Some columns in an adjoining street still witness to the antiquity of the site. There were sacred geese in the Greek temples (*ERE* i. 518). Geese were tabu to the ancient Britons ('leporem et gallinam et anserem gustare fas non putant' [Cæsar, *de Bell. Gall.* v. 12]). They also have a place in the story of St. Werburga ('in Wedune mansione, quod est iuxta Hamptoniam . . . infinita aucarum silvestrium . . . multitudo' [Nova Legenda Anglie, ed. C. Horstmann, Oxford, 1901, i. 423]). The witness of East and West, the folk-lore and legend of Britain, alike point to the sacred associations of the Michaelmas goose. This established Michaelmas custom rests, together with the sites of so many of our Michael churches, on a foundation of primitive religion, and in Britain they are no less sacred to Christianity for thus keeping alive the deep-rooted religious convictions of Celtic heathendom.

5. The liturgical meaning of the festival: St. Michael and All Angels.—The festival of Michaelmas is specially in honour of St. Michael, but the words of the *officium* or *introit* to the mass in all Western uses are: 'Benedicite Dominum omnes angeli.' The festival thus includes All Angels. The English Prayer-Book entitles the festival 'St. Michael and All Angels.' The Colbertine Breviary of c. 1675 (H. Bradshaw Soc. xliii. [1912] p. xxxvi) agrees in this title: 'S. Michaelis et omnium Angelorum.' The Dedication of the Great Hall of the Baths of Diocletian in 1564 under the title *S. Maria degli Angeli* shows the same intention.

The Collect 'Deus, qui miro ordine'—'the services of Angels and men in a wonderful order'—is common to all the uses. Its subject is the ministry of angels. The gospel, offertorium, and postcommunio are also common to all. The Gospel—'Quis putas maior'—refers to the guardianship of the angels, the Offertory—'Stetit Angelus'—to the incense of prayer, the Postcommunio—'Beati Archangeli tui Michaelis'—to the intercession of St. Michael. The Epistle common to the Roman and Sarum and most of the Western uses—'significavit Deus quæ oportet fieri cito'—commemorates the Angel of the Apocalypse (H. Bradshaw Soc. xii. [1897] 1595).

The Epistle in the English Prayer-Book, 'There was war in heaven,' represents a different strain of liturgical tradition, and celebrates the victory of St. Michael over the dragon, 'that old serpent, called the devil and Satan, which deceiveth the whole world.' The Westminster Missal of c. 1375 has this Epistle as a First Lection, followed by the usual Epistle, 'Significavit Deus.' It is a rare instance of two prophetic lessons before the gospel, which of itself shows the influence of Gallican use. This inference is strengthened by its use as the First Lection in the Mozarabic *Missale Mixtum* (ed. Lesley, p. 389). It also appears as a Matins lesson in the Milan Breviary (*Breviarium Ambrosianum*, Milan, 1896, Pars Aestiva, ii. Prop. de Tempore, p. 403). Wickham Legg traces it in the Missals of Durham, Abingdon, and Sherborne among old English uses; and in that of Rouen of 1499 and

the Cistercian Missal of 1627 (H. Bradshaw Soc. xii. 1595).

The English Epistle is inspired by the thought of the triumph of Christianity over heathenism, and belongs to the same cycle of ideas as the Angel Victor in Ireland.

MICIUS.—'Micius' is the latinized form of the words otherwise transliterated Mih Tsze, or Mo Tsze, meaning 'the philosopher Mih.' His personal name was Teih (or Ti). He was a native of the State of Sung, and is regarded by some as a younger contemporary of Confucius (E. Faber, E. H. Parker), and by others as 'very little anterior to Mencius' (J. Legge). His opinions are preserved in 71 chapters arranged in 15 books; but 18 of the chapters, in some cases along with their very titles, have been lost. Faber speaks of him as an ancient Chinese socialist, and Parker calls him 'a Quixotic Diogenes,' head of 'the school of simplicity, socialism, and universal love' (*China and Religion*, London, 1905, p. 67). It is this doctrine of universal love by which he is best known, largely because of the criticism of it by Mencius (*q.v.*). All social disorders in the empire, and between persons, families, or States, spring from selfishness, and would be impossible if men loved the persons, families, and States of others as they love what belongs to themselves. Such universal love may be difficult; but, if men can be induced to sacrifice their lives for the sake of pleasing their sovereign, how much less difficult should they find it to practise universal love, which, moreover, would be responded to by love. Others would follow if only rulers would lead the way by administering their government on this principle, taking pleasure in it, stimulating men to it by rewards and praise, and aweing them from opposition to it by punishment and fines. Micius adduces the ancient kings as examples, for equally with Confucius he builds on the ancient books. What gives rise to hate and all its evils is the principle of making distinctions. In spite of the brevity of life and the selfish desire to make the most of it for oneself, each man should be for the other as for himself. There is no one who would not prefer as his friend or his sovereign one who practises universal love rather than one who acts on the opposite principle. To the objection that universal love is injurious to filial piety Micius replies that the filial son is one who wishes to secure the happiness of his parents by inducing men to love and benefit them, and that to love and benefit the parents of others is precisely to secure for one's own the same treatment in return (*bk. iv.*). It is here that Mencius joins issue with the Mihist I Tsze. Taking Micius's doctrine as inculcating *equal* love to all, he argues from the actual facts of human nature, pointing out that a man's affection for his brother's child is not merely the same as his affection for the child of his neighbour, and that man is related in a special way to his own parents, heaven having made man to have this one root (Mencius, *bk. iii. pt. i. ch. 5, pt. ii. ch. 9*). Legge admits that Micius appears to lose sight of the other sentiments of the human mind in his exclusive contemplation of the power of love, but denies that Micius taught equal love to all. It is true that we do not find in Micius the phrase 'without difference of degree,' used by I Tsze, though it may be held that I Tsze represents the logic of his master's doctrine. I Tsze

also exposed himself to Mencius's criticism by his exaggeration of his master's teaching on simplicity in funeral rites (Mencius, bk. iii. pt. i. ch. 5). Micius did no more than discourage extravagance on utilitarian grounds, as being of no profit to men or gods, while he allowed all that was necessary for a decent interment (Micius, bk. v. ch. 25). Among other points worthy of notice are these. In bk. iii., on the value of uniformity, Micius holds that men originally were hopelessly at sixes and sevens, each having his own view of right, and that order is based on submissive acceptance of the judgment of the supreme ruler, whose judgment, however, must conform to heaven if heaven-sent punishments are to be avoided. Hence the piety of the ancient kings. Micius is firmly convinced of the existence of spiritual beings, the instruments of heaven's righteous administration, and so far affirms the necessity of religious belief for social stability (bk. viii.). Of two chapters criticizing the Confucian school one survives, though Chinese editors are inclined to deny this reference of his remarks. On the whole Micius deserves Legge's praise of him as 'an original thinker,' who exercised a bolder judgment on things than Confucius or any of his followers.

MIDRASH AND MIDRASHIC LITERATURE.—The term *midrāsh* (from the root *dārash*, 'to seek,' 'inquire') signifies 'research,' 'inquiry,' 'study.' Applied by the Chronicler to historical writings of didactic import,¹ as the Midrash of the Prophet Iddo (2 Ch 13²²) and the Midrash of the book of Kings (2 Ch 24²⁷), it assumed later, with the advent of the *sōferim*, or scribes, upon the stage of Jewish history, the connotation of free exposition or exegesis of Scripture, eventually becoming a general term for pure theoretic study as opposed to a practical pursuit of knowledge.² From the latter usage the Jewish academy received its name *bēth ham-midrāsh*, 'house of study.' In a narrower sense, *midrāsh* is employed to mean any specific exposition of a Scriptural passage differing essentially from the *pshat*, the literal meaning (the plural form in such case being *midrāshōth*), and the name is then transferred to a collection of such free expositions, known collectively as *mid-rāshim*, Midrashic works.³

The intellectual activity of the Rabbis with regard to this free exposition of the Bible was developed along two distinct lines, the *Hālākhāh* and the *Haggādāh*, and a few brief remarks on the basic differences between these two currents of Rabbinic thought, flowing in parallel streams, are of paramount importance. Reduced to their bare etymology, the terms signify: *hālākhāh*, 'way of acting,' 'habit,' 'rule of conduct'; *haggādāh* (also known in its Aramaic form 'aggādāh or 'agadā), 'narrative,' 'explanation.'⁴ The *Hālākhāh* confines itself to the legalistic aspect of the Scriptures; the *Haggādāh* to their moralizing and edifying aspect. From the Rabbinic standpoint, the Bible is a microcosm in which is reflected every move and event of the great universe. One teacher comments: 'Turn it, and again turn it; for the all is therein, and

thy all is therein' (*Sayings of the Jewish Fathers*, p. 96). It requires only the light of a great thinker to extract from its compact pages all this esoteric wisdom; like a hammer which strikes the inherent sparks from the rock, it is possible to unravel all the secrets which lie beneath the surface of the cold letter of the text (*Sanh.* 34a). The *Hālākhāh* takes up this work of rekindling the mystic spark of knowledge in the legal field; in all other fields of human activity that task is undertaken by the *Haggādāh*. The *Hālākhāh* relies, for its powers, mainly on the intellectual and logical faculties of man; the *Haggādāh* on the imaginative and emotional faculties. The *Hālākhāh* strives to preserve the letter of the law by insisting on the observance of all the details in the ritual; the *Haggādāh*, by a well-defined analysis of the relation of man to his environment, seeks to preserve its spirit.¹

Midrashic study, therefore, assumes a twofold aspect. On the one hand, it is concerned with the evolution of legalism—the *Hālākhāh*; on the other, it centres about the problems of God, man, and the universe—the *Haggādāh*. The origin of Midrashic study is shrouded in the gloom of antiquity. The Rabbis themselves often assign Midrashic interpretations of Scripture to Biblical personages, but such statements are not to be taken literally. A noteworthy instance of this occurs in the Mishna (*Sh'kālīm*, vi. 6): 'This is the midrash which Jehoiada, the high-priest, taught,' etc. By such assertions the Rabbis probably meant to emphasize the continuity and binding force of the traditional law. There can be no doubt, however, that this free method of inquiry into Scripture was well established during the period of the early scribes, the men of the Great Synagogue, who took up the reconstructive work initiated by Ezra.² The author of Daniel uses Midrashic exegesis quite liberally in interpreting the words of Jeremiah (25^{11, 29}) in his famous prophecy of the weeks (ch. 9). With the advent of the scribes Midrashic study becomes a permanent institution in the Jewish intellectual world and passes through its process of evolution during the succeeding ages. Three historical periods are generally distinguished: (a) the period of the *sōferim*, or scribes, 400 B.C.—A.D. 10; (b) the period of the *Tannaitim*, the early Rabbinical authorities, A.D. 10–220; (c) the period of the *Amoraitim*, later Rabbinic authorities, A.D. 220–500. The historical side of the development of Midrashic study has been ably dealt with in the works of L. Zunz, *Die gottesdienstlichen Vorträge der Juden*, Frankfurt, 1892; Z. Fränkel, *Hodegetica in Mishnam*, Leipzig, 1859, and *Introductio in Talmud Hierosolymitanum*, Breslau, 1870; D. Hoffmann, 'Zur Einleitung in die halachischen Midraschim' (*Beilage des Rabbiner-Seminars zu Berlin*), 1887; and especially in the works of W. Bacher, *Die Agada der Tannaiten*, Strassburg, 1903, *Die Agada der babylonischen Amoräer*, do. 1878, and *Die Agada der palastinischen Amoräer*, do. 1892–99. Only few traces remain of the Midrashic exegesis of the early scribes (cf. *Mishnāh Sōtāh*, viii.; *Ma'aser Sheni*, v. 10 f.). During the second period, the Tannaitic, Midrashic study must have developed to grand proportions, as is evident from the fact that the various schools of Rabbis, begin-

¹ Cf. I. H. Weiss, *Zur Geschichte der jüdischen Traditionen*, Wilna, 1904, III. 220.

² The following passage is of interest as confirming this position. Rabbi Levi says: 'We have received this midrash from the men of the Great Synagogue. Wherever Scripture uses the expression "and it came to pass," the phrase generally implies calamity' (*Megillāh*, 10b). Parallel passages on the authority of a number of different teachers are found in *Berishith Rabbā*, xli. 3; *Wayikra Rabbā*, xl. 7; *Ruth Rabbā*, i. 7 proem.; *Ester Rabbā*, i. 1 proem.; *P'sqitā Rabbāthi*, 5. In these the period of the Babylonian Exile is assigned as the date for this midrash (cf. N. Krochmal, *Mōreh Nebukhē haz-Zemān*, Warsaw, 1894, p. 224).

³ Cf. S. R. Driver, *Introduction to the Literature of the OT*, Edinburgh, 1913, p. 529.

⁴ E.g., Rabban Simeon, the son of Gamaliel, adds: 'Not the *midrāsh* (pure theoretic study) is the groundwork, but the deed' (*Sayings of the Jewish Fathers*, ed. C. Taylor, Cambridge, 1897, p. 5, Heb. text).

⁵ Cf. W. Bacher, *Die exegetische Terminologie der jüdischen Traditionsliteratur*, Leipzig, 1899–1908, I. 103.

⁶ Bacher (*JQR* iv, [1892] 406–426) derives this word from the formula *maggid sh'*, 'the text explains that,' in use in the earliest Midrashic works.

ning with Hillel, laid down specific rules for exegesis to keep the study within definite bounds.¹ The period of the *Amora'im* was most prolific in the field of Midrashic research, most of the collections, in fact, having their beginnings during that period.

1. Halakhic Midrashim.—The legalistic exegesis of Scripture did not proceed in an unsystematic manner. Each school of Rabbis would hand over the results of its work to the next in the form of rules of legal hermeneutics which were derived from a collation of similarly worded passages in the Pentateuch. Accordingly, the school of Hillel, at the beginning of the first century of our era, left seven such rules, which, in the school of Rabbi Ishmael, were later amplified into thirteen.² These are either based on some logical syllogism or of purely exegetical character. Thus the seven original rules laid down by the school of Hillel embrace the following: (1) the inference from minor and major (at the bottom of which is a *fortiori* reasoning); (2) the analogy of expressions; (3) the generalization of one special provision; (4) the generalization of two special provisions; (5) the effect of general and particular terms; (6) the analogy made from another passage; (7) the explanation derived from the context.³

From the school of Rabbi Ishmael a complete commentary on the legal portion of the Pentateuch was issued, the following parts of which have been preserved.

(a) The *Mekhilta* (Aramaic for 'rule' or 'measure'), which is the earliest Rabbinic work extant, is a running commentary to the legal portions of Exodus. It begins with the injunction concerning the Paschal lamb in 12^{1st}, and ends with the injunction concerning the kindling of fires on the Sabbath (35th). A large portion of Haggadic material has also been added. In the *Mekhilta*, as well as in all the other Halakhic Midrashim, the activity of the Rabbis in the legal field is analyzed; in the Mishna it is synthesized. The *Mekhilta* went through the hands of later redactors, whose work is still traceable. The *editio princeps* was Constantinople, 1515, and the two critical editions are *Mekhilta . . . von I. H. Weiss* (Vienna, 1865) and *Mekhilta de Rabbi Ismael . . . von M. Friedmann* (do. 1870).⁴

(b) The existence of a commentary to Leviticus from the same school is posited by Hoffmann ('Einleitung,' pp. 72-76) from fragments preserved in various places in Rabbinic literature.

(c) The Halakhic Midrash to Numbers from the same school is the *Sifre* to Numbers, forming a running commentary to 5-35th with omissions. The work is generally bound together with the *Sifre* to Deuteronomy, and both were, for a long time, considered of similar origin. The latter work, however, originated in the school of Rabbi Akiba. The name *Sifre* probably means 'books.' The first edition was printed in Venice, 1545, and a critical edition was issued by M. Friedmann, *Sifre deḥe Rab* (Vienna, 1864).

(d) Fragments, from the same school, of a commentary to Deuteronomy were published by D. Hoffmann, in *Jubelschrift zum siebenzigsten Geburtstag des Dr. Israel Hildesheimer*, Berlin, 1890, pp. 1-32.

Opposed to the methods pursued by the school of Rabbi Ishmael was the more rigoristic school of Rabbi Akiba. The latter, in expounding the law, followed a method known as 'extension and limitation' (*ribbui u-mi'ut*), introduced by his teacher, Nahum of Gimzo. According to this system, it

was necessary to consider the amplifying or limiting value of certain particles used in the Pentateuch when considering the legal question involved in the passage, in order to include the additions of tradition or to exclude what it no longer sanctions. Thus the particles 'even,' 'every,' 'also,' 'with,' were considered as amplifying, the particles 'but,' 'only,' 'from' as limiting, the original law. Rabbi Akiba's disciples included the most distinguished teachers of the Law, such as Rabbi Me'ir, Judah ben 'Tai, Simeon ben Yohai, and Yosef bar Halafta. His disciple, Aquila, followed his methods of exegesis in his Greek version of the OT. From the school of Rabbi Akiba the following Halakhic Midrashim have been preserved: (i.) the *Mekhilta* of Rabbi Simeon ben Yohai on Exodus, contained in the *Midrash hag-Gadol*, and published by D. Hoffmann (*Mekhilta de Rabbi Simon b. Joḥai*, Frankfurt a. M., 1905);¹ (ii.) the *Sifra* or *Torath Kohanim*, 'the Law of the Priesthood,' which is a most complete running Halakhic commentary to Leviticus, and was edited by Rabbi Hiyya (middle of 2nd cent.; cf. Hoffmann, 'Einleitung,' p. 22); the *editio princeps* was Venice, 1545, and the standard edition is *Sifra, Commentar zu Leviticus . . . nebst Erläuterung des R. Abraham ben David und I. H. Weiss . . . herausgegeben von Jakob Schlossberg*, Vienna, 1862; (iii.) the *Sifre Zuta*, the Halakhic commentary to Numbers from the school of Rabbi Akiba, existing only in fragmentary form in various collections, foremost among which is the *Yalkut Shim'on*, the *editio princeps* of which uses the expression *Zuta*, 'smaller,' to distinguish this Midrash from the *Sifre* to Numbers mentioned above (cf. Hoffmann, 'Einleitung,' pp. 59-66); and (iv.) the *Sifre* to Deuteronomy, which is the legal commentary to this book issuing from the same school. It is usually bound with the *Sifre* to Numbers emanating from the school of Rabbi Ishmael (cf. above).

These Midrashic collections are but small remnants of the great number of such works which the ravages of time have destroyed. They were compiled, for the most part, during the first two centuries of our era. While their scope is primarily Halakhic, the Haggadic content in each instance forms no mean proportion, for the Rabbis felt themselves bound by no rigorous division-line in arranging their material. The later Mishna and Talmud are similar extensive collections which comprise the greatest efforts of the Rabbis in the realm of Halakhah and Haggadah.

To illustrate the methods of the Halakhic Midrash the following passage, in which the legal aspect of tort is discussed, will be of interest:

"Eye for eye" [Ex 21²⁴] means a money-compensation. This, however, is a mere assertion; perhaps we are actually to understand the passage in its literal sense. Says Rabbi Eleazar: "Scripture unites in one passage [Lv 24²¹] the two injunctions, 'He that killeth a beast shall make it good: and he that killeth a man shall be put to death.' For what purpose is this collation?—in order to establish a like precedent for the laws of tort in the case of man and beast. Just as the damage inflicted on a beast is punishable by a fine, so the damage inflicted on a human being is punishable by a fine." Rabbi Isaac adds: "In the case where one's beast had repeatedly inflicted death on several human beings, Scripture specifically imposes a fine on the owner to escape a deserved death-penalty [Ex 21²⁸]; in this case, where the Scriptural penalty is only the loss of an eye, there is all the more reason to believe that the text meant to allow a money compensation" (cf. *Mekhilta* of Rabbi Ishmael, *Mishpatim*, 8).

The binding force of the decisions of the Rabbis with regard to their interpretations of the Mosaic law is clearly expressed in the following:

"Concerning the authority of the words of the scribes, Scripture says [Dt 17¹¹]: 'According to the tenor of the law which they shall teach thee.' It does not say which the Torah

¹ Cf. S. Horowitz, in *JH* viii, 549.

³ Cf. *Tosefta, Sanhedrin*, ch. 7; *Abhoth of Rabbi Nathan*, ch. 87; and *Sifre*, introductory ch.

⁴ Cf. J. Winter and A. Wünsche, *Die jüdische Literatur*, Trèves, 1894, i. 371-410; and *JH* viii, 554 f.

shall teach thee, but rather which *they* shall teach thee. . . . Furthermore, it enjoins, "Thou shalt not turn aside from the sentence which they shall shew thee, to the right hand, nor to the left," which means that thou shalt listen to their opinions in reference to what is right, if they tell thee that it is right, and in reference to what is left, if they tell thee that it is left; and even if they were to tell thee concerning the right that it is left, and concerning the left that it is right, thou must yield to their opinion' (*Shir hash-Shirim Rabbā*, 1. 2).

2. Haggadic Midrāshim.—The Haggādāh is the expression of the philosophy of Jewish life, and, as a result, had a wider appeal than the more abstruse Halakhāh. With a keen appreciation of the consoling powers of the Haggādāh, Rabbi Isaac informs us:

'Generations before, when the penny had a freer circulation, there was a desire to listen to lectures on Mishnah and Talmud; but to-day, however, when the penny is scarce, there is only a desire for Scripture and Haggādāh' (*Pesikṭā of Rav Kahana, Bahodesh hash-Shlishi*).

The Haggadic Midrāshim are of two kinds: (1) exegetical, and (2) homiletic. The first form running commentaries to the text of the various books of the OT, and in this respect follow the method of the Halakhic Midrāshim. They are, however, frequently introduced by several proems—opening remarks generally based on some text in the Hagiographa—which is rather a characteristic of the homiletic Midrāshim. The latter are collections of homilies or sermons which were delivered during the Sabbath and festival services in the synagogues, and which were based on the portion of the law read during such service. The homiletic Midrāshim, therefore, differ essentially, in structure as well as in the treatment of their subject-matter, from all the other Midrashic works. They are regularly introduced by proems in which a passage from the Hagiographa or Prophets is explained and introduced into the context. Several homiletic works (notably the *Tanhūmā*) also resort to a Halakhic exordium. The lesson of the day is then attached to the opening verses of the portion of the law read during the service, the text being often used merely as a basis for a lesson on morals quite fully developed. The homilies close, for the most part, with verses of encouragement, prophesying the redemption of Israel and the advent of the Messianic era. Two cycles of homiletic Midrāshim are in existence: (a) those originating in the three-year-cycle of Scriptural Sabbath readings then in vogue in Palestine—the *S'dharim* cycle¹—and (b) those based on the readings during the special Sabbaths in the Jewish calendar (occurring before Purim and Passover) and on the festivals and fast-days—the *Pesikṭā* cycle.

3. Exegetical Midrāshim.—Of these the oldest and most important is *Brēshith Rabbā*, a Haggadic commentary to Genesis.² It is the first in the collection known as *Midrāsh Rabbā*, or *Midrāsh Rabbōth*, which comprises ten Midrashic works, one for each book of the Pentateuch, and one for each of the Five Scrolls (the books of Esther, Canticles, Ruth, Lamentations, and Ecclesiastes). The works included in this collection are of a miscellaneous character, and their time of composition extends from the 6th to the 12th cent.—the period in which the different Haggadic Midrāshim were redacted. Of the Haggadic Midrāshim *Brēshith Rabbā* is, no doubt, the oldest as well as the richest from the point of view of subject-matter. Like most of the Midrāshim, it had its origin in Palestine, and was put into its final form no later than the 6th century. Older authorities assign the work to Rabbi Hoshaiāh, a Palestinian teacher of the 3rd cent. (with whose remarks the book opens), but he cannot be responsible for the

work in its present form. The historical and legendary content of Genesis furnishes ample material for Haggadic exposition. The ten Midrashic works forming the collection *Midrāsh Rabbā* were printed for the first time in Venice, 1545. The standard edition is that of Wilna, 1878–87. The collection was translated into German by August Wünsche in *Bibliotheca Rabbinica, eine Sammlung alter Midraschim*, Leipzig, 1880–85, and L. Shapiro translated a part of *Brēshith Rabbā* into English (*Midrash Rabbā*, New York, 1906).

Ekhā Rabbāthi, a Haggadic commentary to Lamentations, is also a very early exegetical Midrash, and is included in the *Midrāsh Rabbā*. This work (as well as *Brēshith Rabbā*) is introduced by many elaborate proems followed by commentary to the text of Lamentations. The book is especially rich in anecdotes and legends of the pathetic events that transpired during the destruction of Jerusalem. A critical edition has been issued by S. Buber, *Echa Rabbati*, Wilna, 1899.

Shir hash-Shirim Rabbā is an exegetical Midrash to Canticles, included in the *Midrāsh Rabbā*. The entire work is an elaborate allegorical rendition of the relation between God and Israel implied in the dialogues between the shepherd and his bride.

Ruth Rabbā (also included in the *Midrāsh Rabbā*) is an exegetical Midrash to Ruth. The book is introduced by a series of proems, and the conversion of Ruth furnishes many a beautiful lesson to the Rabbinical commentators.

Kōheleth Rabbā (also included in the above collection) is an almost complete exegetical commentary on Ecclesiastes. The author utilized much of the material found in the Talmud and in various earlier Midrashic works, and mentions several sources by name—a sign of the late origin of the Midrash.

Finally, *Estēr Rabbā* is an exegetical commentary on Esther included in the *Midrāsh Rabbā*. This is one of a number of extant Haggadic Midrāshim to the book of Esther, very popular because of its use during the Purim festival. The others were published by S. Buber, *Sammlung agadischer Commentare zum Buche Esther*, Wilna, 1886, and *Agadische Abhandlungen zum Buche Esther*, Cracow, 1897.

Besides the above-mentioned Midrāshim to the Five Scrolls, Buber published several other extant Midrāshim to the books of Canticles, Ruth, Lamentations, and Ecclesiastes, in *Midrasch Suta*, Berlin, 1894.

There are still extant several Haggadic Midrāshim dealing with the remaining books of Scripture. There can be no doubt that originally such exegetical works existed on all the books, but they have been lost. Foremost among them is *Midrāsh Tehillim*, a Haggadic commentary to the book of Psalms. It is also known as *Shōhēr Tōbh*, 'He that seeketh good' (Pr 11²⁷), which are also the opening words of the book. This Midrash is especially rich in the rhetorical devices employed by the Haggadists—analogies, legends, fables, maxims, etc. A critical edition was issued by Buber (*Midrasch Tehillim*, Wilna, 1891). A Midrash to the book of Samuel has, likewise, been preserved, known as *Midrāsh Sh'mū'el*. It is a collection of Haggadic comments on the book, gleaned from various parts of Rabbinic literature. The first edition of the work was Constantinople, 1517. A critical edition was issued by S. Buber (*Midrasch Samuel*, Cracow, 1893). *Midrāsh Mishlā* is an incomplete Haggadic Midrash to Proverbs. The comments in this Midrash are exceptionally brief, so that the work approaches the character of a Biblical commentary. A critical edition was

issued by S. Buber (*Midrasch Mischle*, Wilna, 1893). The Midrashim to the books of Isaiah and Job are mentioned by older authorities, and, of the latter, extracts are found in the collection, *Yalkut Makhiri* (to Is 61¹¹), and in a few other old works. Several fragments of a Midrash to the book of Jonah have been published by A. Jellinek (*Beth ham-Midrash*, Leipzig, 1853-77, i. 96-105); and by C. M. Horowitz (*Sammlung kleiner Midraschim*, Berlin, 1881).

Finally, there are in existence a number of works known as *Yalkutim*, 'collections,' which are in the nature of thesauri to all the books of Scripture, and which give (with their proper sources) a wealth of Haggadic material for each of the books. Three of these works are very important: the *Yalkut Shim'on*, frequently known merely as *Yalkut*, ascribed to Rabbi Simeon, the preacher (last edition, Wilna, 1898), the *Yalkut ham-Makhiri*, ascribed to Rabbi Machir ben Abba Mari, only portions of which have appeared (Buber, *Yalkut Machiri . . . zu den 150 Psalmen*, Berdyczew, 1899), and the *Midrash hag-Gadol*, of which the part to Genesis has been published by Schechter (*op. cit.*), and the part to Exodus by D. Hoffmann (Berlin, 1913-15).¹

4. Homiletic Midrashim.—The purely homiletic Midrashim belonging to the *St'hārīm* cycle (based on the triennial readings of the Pentateuch in the synagogues of Palestine) are: (1) the *Tanhūmā*, (2) *Aggādath Bereshith*, and (3) the four remaining works in the *Midrash Rabbā* on the four last books of the Pentateuch. The *Tanhūmā* (also known as *Ylamm'denā*, 'Let him teach us,' because of the frequent use of this formula to introduce the Halakic exordiums in the Midrash) is a complete homiletic commentary to the Pentateuch, extant in two versions, containing also special homilies for the days of the *P'siktā* cycle. A third version is known to have existed. A critical edition was issued by Buber (*Midrasch Tanchuma*, Wilna, 1885). *Sh'mōth Rabbā* on Exodus, *Wayikpā Rabbā* on Leviticus, *B'midhbar Rabbā* on Numbers, and *D'bhārīm Rabbā* on Deuteronomy are four homiletic works of different origin belonging to the same cycle. Of these the homilies to Leviticus are, no doubt, among the oldest, and are characterized by a frequent use of popular sayings and proverbs to illustrate the lesson of the day. The other three works include many homilies that are already found in the *Tanhūmā* collection. *Aggādath Bereshith* is a collection of homilies to portions of Genesis and to portions of the Prophets and Psalms, and was edited by Buber (*Aggādath Bereshith*, Cracow, 1902).

Two collections of homilies of the *P'siktā* cycle have been preserved: (1) *P'siktā of Rav Kahana*, and (2) *P'siktā Rabbathī*. The first consists of thirty-four homilies on the lessons for the special Sabbaths and the feast days. It was edited by Buber (*Pesikta . . . von Rav Kahana*, Lyck, 1868). The *P'siktā Rabbathī* is a later work, and also contains homilies for the special days of the *P'siktā* cycle. It was edited critically by M. Friedmann (*Pesikta Rabbathi*, Vienna, 1880).

5. Style and content of the Haggadic Midrash.

¹ Besides the collections already mentioned, there are special Haggadic works of didactic import based upon a large amount of material in previous works, but not arranged in the form of commentaries to the Scriptures. Such are the *Pirke de Rabbi Eliezer*, Warsaw, 1879; *Tannā d'bhī El'yāhū*, crit. ed., M. Friedmann, Vienna, 1907; and the whole collection known as *Smaller Midrashim*, dealing with Haggadāhs on special subjects, such as the Decalogue, the death of Moses and Aaron, etc., scattered in various collections, and especially in the works of Jellinek (*op. cit.*); C. M. Horowitz (*op. cit.*), and *Beth Eked Hagagadāh*, Frankfurt, 1881; S. A. Wertheimer (*Bath Midrashim*, Jerusalem, 1898); L. Grünhut (*Sammlung älterer Midraschim*, do. 1858-94); and J. D. Eisenstein (*Osar Midrashim*, New York, 1915). The Midrash known as *Lekah Tobh* (ed. Buber, Wilna, 1889), of Tobiah ben Eliezer, is not a true Midrash, but rather a commentary on the Pentateuch.

—In order to make their teachings most effective, the Rabbis resort to well-known rhetorical devices.¹ Foremost among these is the use of the *māshāl*, 'analogy.' The analogy, or extended metaphor, is a well-known figure in literary composition; in the hands of the Rabbis it reached the zenith of its didactic powers. The analogies were drawn from two sources—first, from the events of every-day life, and, secondly, from the institutions of the Roman empire, during which period the Rabbis lived. On the subject of the political institutions of Rome as depicted in the *māshāl* an interesting volume of no mean size has been written (I. Ziegler, *Die Königsgleichnisse des Midrasch beleuchtet durch die römische Kaiserzeit*, Breslau, 1903). On the comparative side, Paul Fiebig has contributed an interesting volume on the differences between the Rabbinic and the NT use of the *māshāl* (*Altjüdische Gleichnisse und die Gleichnisse Jesu*, Tübingen and Leipzig, 1904). The analogy was most helpful in explaining difficulties in the textual narrative, and often in accounting for extraneous matter in Scripture not quite adaptable to preaching purposes. A few examples will suffice to illustrate the use of the *māshāl*.

A *mairona* once asked Rabbi Yōsé bar Hīlāfā, 'Why does Scripture say: "He giveth wisdom unto the wise, and knowledge to them that know understanding" [Dn 2:21]? It were meet that the passage should read, "He giveth wisdom unto the unwise, and knowledge to them that have no understanding." This Rabbi Yōsé met with the following: "Let me give you an analogy. If two men, one poor and one wealthy, were to approach thee to borrow a sum of money, to whom wouldst thou lend the money, to the poor man or to the rich?" "Of course to the rich man," she replied, "for, in the event of its loss, he still has assets from which I might recover, whereas from the poor man I could not get a penny." Thereupon Rabbi Yōsé replied: "Would that thy ears would hear what thy mouth doth utter! If the Holy One, Blessed be He, were to grant wisdom to simpletons and fools, they would decant this wisdom from the public baths, the theatres, and at other unseemly moments; He therefore granted wisdom to the wise, who confine it to its proper place in the synagogue and the academy" (*Kheleth Rabbā*, i. 7).

In commenting upon the fact that the Pentateuch does not enumerate by name the participants in the sedition of Korah, the Rabbis use the following *māshāl*:

Rabbi Judah, the son of Simon, explained, on the authority of Rabbi Levi ben Parā—'This may be compared to the son of a decurion who once committed a theft in the public bath, and the keeper of the bath does not desire, for tactical reasons, to reveal his name; but describes him as "a handsome youth dressed in white." Similarly the Pentateuch does not mention the names of all the participants in the sedition of Korah, but merely describes them in the following terms: "princes of the congregation, called to the assembly, men of renown" (Nu 16:2; cf. *B'midhbar Rabbā*, xiii. 5).

Another form of the *māshāl* was the fable or parable. Collections of parables are already associated in the Jewish world with the name of the wise king, Solomon, who is said to have spoken 'of beasts, and of fowl, and of creeping things, and of fishes' (1 K 4:33). In the Talmud two collections are mentioned on several occasions—a collection of fox-fables and a collection of date-tree parables (cf. *Sukkah*, 28a; *Bābhā Bathrā*, 134a). The OT uses the parable in the speech of Jotham (Jg 9:8-15) and in that of Jehoash (2 K 14:9). A casual example will illustrate its use in the Midrash. In the following, the fable of the fox and the fishes is effectively employed by Rabbi Akiba:

During one of the persecutions, when the study of the Torah was forbidden under penalty of death, Pappus discovered Rabbi Akiba busily engaged in its study. Pappus asked him, 'Rabbi, art thou not endangering thy life in transgressing the royal mandate?' Whereupon Rabbi Akiba replied, 'Let me give thee an analogy in the following story: Once the fox rambled alongside the bank of a river and, beholding the fishes, exclaimed, "Come out to me, and I shall hide you from all harm in the crevices of the rock, where you will never fear capture." To which the fishes replied, "Thou, who art the most clever of beasts, art nothing more than a simpleton. Our whole life depends on the element of water, and thou wouldst have us leave it for the dry land." Similarly, the life of Israel is wrapped up

¹ For the following, cf. Zunz, pp. 102-179; and Krochmal, pp. 222-230.

in one element—the study of the Torah, as it is written, "For he is thy life, and the length of thy days" (Dt 30²⁰), and thou wouldest have me leave it because of personal danger" (*Tanhūmā* *Tābhō*, 4; *B'ṛākhoth*, 61b).

Another means of impressing a lesson is the aphorism, maxim, or proverb. The OT already contains extensive gnomologies in proverbial form. The wisdom of the great Ben Sira later added to this original store, and the *Sayings of the Jewish Fathers* is a historically arranged gnomology written in the Tannaitic period, and comprising the most important maxims of the learned teachers from the time of Simon the Just to the period of the Amōraim. A later author, Rabbi Nathan, is said to have made a large collection of such maxims; and in the *Abhōth of Rabbi Nathan* (ed. Schechter, Vienna, 1887) a substratum of his original work remains. This work is characterized by the frequent use of the numerical proverb, in which a number of sayings are associated by means of a numerical key.¹ The material in these collections, as well as the sayings current among the masses (generally introduced by the formula 'as the people say'), was employed by the Rabbis in teaching their lessons. Many of these proverbs are also found in the Gospels.² For example, the well-known saying in the Sermon on the Mount, 'With what measure ye mete, it shall be measured unto you' (Mt 7²), is very frequent in Haggadic literature (cf. *Tanhūmā*, *B'rēshith*, 33; *T'hillim*, xxii. 2; and *Mishnāh Sōtāh*, i. 17). Similarly, 'Enough for the servant that he be as his lord' (Mt 10²⁰) is found in *Tanhūmā*, *Lekh Lekhā*, 23; *T'hillim*, xxvii. 5; and in the Talmud (*B'ṛākhoth*, 58b). Only a few of these gems can be quoted here:

'A single coin in an empty jar makes a loud noise' (*T'hillim*, i. 21, and in the Talmud, *Bābhā M'ṣā*, 85b). 'Say to the bee, I want not thy honey and I crave not thy sting' (*T'hillim*, i. 21; *B'midbar Rabbā*, xx. 10). 'Woe to the dough which the baker condemns as unfit' (*T'hillim*, ciii. 14). 'Woe to the living who implores aid of the dead, woe to the hero who intercedes with the weakling, woe to the seer who ask help from the blind, and woe to the generation whose leaders are women' (*ib.* xxii. 20).³

Another rhetorical device for impressing a lesson is the pun. This leads into the field of Rabbinic humour. Scripture has set the precedent for its usage in carefully executed word-plays and puns especially on the names of individuals.

'And she bare Cain, and said, I have gotten' (Heb. *kānthū*) (Gn 4). 'God shall enlarge (yaf) Joseph' (*yefeth*) (Gn 37). The prophet Isaiah (57) very eloquently says, 'He looked for judgment (*mišpāṭ*), but beheld oppression (*mišpāḥ*); for righteousness (*ṣ'dāhāhāh*), but beheld a cry (*ṣ'āhāh*).

Similarly, the Rabbis take great liberties in punning on proper names.

'Wherefore was the prophet called Jeremiah? Because, during his life, Jerusalem was left in a state of *ṣ'pūlā* ('desolation') (*Kheleth Rabbā*, i. 2). 'The name of the daughter-in-law of Naomi was Orpah because she turned her back (*ōref*) to her mother-in-law. The name of the other was Ruth, because she apprehended (*rā'athāh*) the words of her mother-in-law' (*Ruth Rabbā*, ii. 9).

The Rabbis decide from a pun that the language of the creation was Hebrew.

'She shall be called Woman (*'ishshāh*), because she was taken out of Man (*'ish*)' (Gn 2²³), from this it is evident that the Torah was given in the holy tongue.' Rabbi Phinehas and Rabbi Hilkiah claim the following on the authority of Rabbi Simon: 'Just as the Torah was given in the holy tongue, so was the world created with the holy tongue. For, hast thou ever heard anyone derive a form *gynia* from the word *gynē* (Gr. *gynē* 'woman')? Or does one derive *anthropia* from the word *anthropos* (Gr. *anthropos*, 'man'), or *ge'harta* from *gabhra* (Syr. for 'man')? But one does say *'ishshāh* (Heb. for 'woman') from *ish* (Heb. for 'man')' (*B'rēshith Rabbā*, xvii. 4).

The Massoretic variations of the Heb. text of the Bible open up new channels for Haggadic exegesis. The Midrash often assigns explanations for the

¹ A. Wünsche has collected all the numerical proverbs in the Talmud and the Midrash in *Die Zahlensprüche im Talmud und Midrash*, Leipzig, 1912 (reprinted from *ZDMG* lxx.-lxxi.)

² For the Haggadāh, as used by the Church Fathers, the work of L. Ginzberg is important (*Die Haggada bei den Kirchenvätern*, i., Amsterdam, 1899, ii., Berlin, 1900).

³ Among the great number of collections of Rabbinic proverbs the work of M. Schul (*Sentences et proverbes du Talmud et du Midrash*, Paris, 1878) deserves mention.

defective writing in the text or for the marginal variations (*k'ṣr* and *k'thōb*). The following is an example:

'"When it giveth its colour (lit 'eye') in the cup" (Pr. 23³¹) is rendered "the script reads 'in the purse' (Heb. *bakits*), not 'in the cup' (Heb. *bakkōs*), referring, on the one hand, to the drunkard, who giveth his eye in the cup; and, on the other hand, to the merchant who fixeth his eye on his purse" (*Tanhūmā Sh'mānt*, 7).

The Midrash also employs the well-known kabbalistic method of exposition, *gematriā*, which consists in deducing hidden meanings from the numerical value of the letters in the Heb. words.¹

Finally, the Midrash employs the anecdote to advantage. The value of the anecdote as a didactic force is generally recognized. But, more than this, we are to seek in the anecdote for historical events witnessed by contemporaries, for folk-lore, for primitive conceptions of natural science, etc. Only a few examples can be given here. The following pathetic tale is one of a series of anecdotes depicting the events that transpired during the destruction of the Holy City:

The story is told of Miriam, the daughter of Naḥdīmōn (Nico-demus), whom the sages had granted an allowance of 500 (*sic*) gold denarii for her daily ointment expenditures, and who maligned them for it in the words "Thus mistreat your own daughters!" . . . Says Rabbi Eleazar: "So sure may I be of seeing [Zion's] consolation as I am that I saw her [some time after the destruction] in Acco, picking barley-grains from beneath the stalls of horses, and I applied the Biblical verse to her case, "It thou know not, O thou fairest among women, go thy way forth by the footsteps of the flock, and feed thy kids beside the shepherds' tent" (*Ca 15*) (*Ekhā Rabbāth*, i. 48).

The superstitions of the day were shared alike by Rabbi and priest. Many are the stories told of demons infesting wells and desert places (cf. *Tanhūmā*, *B'rēshith*, 27; *ib.* *K'dhōshim*, 9), often driven out through the opportune intervention of the Rabbi who called magical formulæ to his aid. Very often the heathen practices of antiquity are recorded. Thus, in *Ekhā Rabbāth* (proem 23), it is said, 'The Arab slays a lamb and inspects the liver for the purpose of anguring future events.' This practice is well known to students of *Kulturgeschichte*. Philosophy, primitive conceptions of science, natural history—all cater to the one end of teaching a lesson in ethics or morals, which is ever the ultimate aim of the Haggadic Midrash.

LITERATURE.—This is given throughout the article.

SOLOMON T. H. HURWITZ.

MIGRATION.—See RACE.

MIKIRS.—i. Name and history.—The people known to the Assamese by the name Mikir are one of the numerous Tibeto-Burman races of Assam. Their own name for themselves is Aṛlèng, which (like many other tribal names in this region and elsewhere) means 'man' in general. Their numbers, according to the Census of 1911, were 106,259—a large total for a homogeneous Tibeto-Burman group in Assam; of these 736 were classed in the returns as Hindus, 1182 as converts to Christianity, and the remainder as animists. The race occupies the central portion of the Assam range, looking north to the Brahmaputra, and the isolated mountainous block south of that river between Nowgong and Sibsāgar called the Mikir Hills; a few have settled in the plains of Nowgong and Kāmrup, and north of the river in the Darrang district, and follow plough cultivation, but the main strength of the tribe is found in the hilly region of the Kāmrup (about 11,000), Khāsi and Jaintia Hills (15,600), Nowgong (45,000) and Sibsāgar (25,000) districts. They are essentially a hill race, practising the form of cultivation by axe, fire, and hoe known as *jhum*. Their remembered history, like that of most tribes of the kind, goes back a very short distance in time. There is reason to believe, from the local names of places and streams, that they once occupied the

¹ In Heb. the letters have numerical values.

southern portion of the hill tract north of the Kachar valley, where they are not found at the present day; it is certain that they afterwards resided in mass in the eastern portion of the Jaintia Hills, as subjects of the Jaintia Raja; and a still clearer tradition relates that, being harassed by warfare between Khāsi (or Jaintia) chiefs, they resolved to move into territory governed by the Ahoms, and thereupon migrated into the tracts which they now hold in the Nowgong and Sibsāgar districts. This migration probably took place, as can be gathered from the Ahom annals, about A.D. 1765. As the figures just given show, large numbers continued to live in the Khāsi and Jaintia Hills and along the Kāmṛūp border, which tract they call Nihāng, the territory into which they migrated in the east being called Nilip. They are a peaceful and unwarlike race, and are said to have given up the use of arms when they placed themselves under the protection of the Ahom kings. Their traditions tell of fights with the Hill Kachāris, or Dimāsā, but these were anterior to the migration into Jaintia territory, or at any rate to that into the Ahom dominions.

2. Physical characteristics.—Physically they present the ordinary features of the Tibeto-Burman hill races of Assam: a light yellowish-brown complexion, an average height of about 5 feet 3 inches, cephalic index 77.9. The nose is broad at the base, and often (but not always) flat, with a nasal index of 85.1 and an orbito-nasal of 107.7. The facial hair is scanty, and only a thin moustache is worn. The front of the head is sometimes shorn; the hair is gathered into a knot behind, which hangs over the nape of the neck. The body is muscular, and the men are capable of prolonged exertion. They have been largely employed (like the Khāsis) as porters in frontier expeditions in Assam, and carry heavy loads, the burden being borne upon the back and secured by a plaited bamboo or cane strap passing round the forehead; this, however, is the general method of carriage from Nepāl eastwards along the whole sub-Himālayan region, and not peculiar to the Mikirs. The staple food is rice, fish, and the flesh of pigs, goats, and fowls, but meat is chiefly eaten at sacrifices. The flesh of cows is not eaten, nor is milk drunk. Large quantities of rice-beer are made and consumed, being prepared by each household, and spirit is also distilled. Opium is used to a large extent, as by other races in Assam. Tobacco and betel-nut are also commonly used.

3. Marriage and inheritance.—The Mikir people are divided into three sections, called Chintōng, Rōnghāng, and Amṛi. These, however, are only local names, the first representing that portion of the tribe inhabiting the Mikir Hills, the second the central portion, in the hilly parts of Nowgong and N. Kachar, and the third those in the Khāsi and Jaintia and Kāmṛūp Hills. The whole tribe, wherever settled, is divided into five large exogamous groups, and these into sub-groups. The five main groups are called Ingṭi, Terāng, Lèkthē or Inghī, Terōn, and Timung. Within each of these groups intermarriage cannot take place. The scheme of society is patriarchal, the children being counted to the father's group. The most usual marriage, however, is between first cousins on the mother's side, and the maternal uncle occupies a privileged position at the funeral ceremonies; this may be a custom adopted from the Khāsis, among whom the strictly patriarchal system prevails. Ordinarily the son on marriage brings his wife home to his parents' house; but, if he has to make a payment to his father-in-law, he may stay a year, two years, or even for life, according to agreement, giving his work to the family in return for his bride. There are

traces of a former condition of things analogous to that which obtains among the Nāga tribes, in which the boys of a village lived together in the *terāng*, or bachelors' house, and the unmarried girls are said also either to have had their own *terāng* or to have lived in that of the boys, when promiscuous intercourse and illegitimate births were common. This practice, however, no longer obtains anywhere. The marriage-tie is said to be ordinarily observed with strictness, but divorce is permissible. Polygamy has been adopted sporadically from the Assamese, but generally monogamy prevails. The sons inherit; if there are none, the brothers; after them the deceased's nearest agnate of his own exogamous group. The wife and daughters get nothing, but retain their personal property, ornaments, clothes, etc.

4. Gods.—The religion of the Mikirs has been to some extent affected by ideas borrowed from the Khāsis, and in a larger degree by Hinduism. One of their gods, Pirthāt Rēchō (the god of thunder), bears a Khāsi name; but borrowings here are chiefly noticeable in the funeral ceremonies and the methods of divination. Hinduism has contributed the name of Jōm, or Yama, as the god of the dead, and the abode of spirits is called Jōm-ārōng, or 'Yama's town.' Possibly Mahādeva may be the original of Ārnām-kethē (= 'the great god'), who is a house-god worshipped by a triennial sacrifice; and one of the gods, called Ārnām-pārō (= 'the hundred-god'), includes under this name Kāmākhyā, the Hindu goddess of Nilāchal above Gauhati. The original Mikir conception of deity is, like that of the rural population of India generally, open to the adoption into the pantheon of any divine agency venerated or propitiated by their neighbours. The word *ārnām* ('god') may be generally defined as 'anything felt to be mighty or terrible.' All natural objects of a striking or imposing character have their divinity. The sun and moon are regarded as divine, but are not specially propitiated. Localities of an impressive kind, such as mountains, waterfalls, deep pools in rivers, great boulders, places where a river disappears underground, have each their *ārnām*, who is concerned in the affairs of men and has to be placated by sacrifice. Such local divinities of the jungle are propitiated chiefly to avert mischief from tigers, which are a terrible plague in some parts of the Mikir country.

Besides these divinities of flood or forest, there are other deities of a more specific character. These may be classified into house-gods, concerned in the welfare of the household, and gods concerned in the prosperity of the village generally, while a third class preside over various kinds of disease or trouble. The most important of the house-gods is Hēmphū ('head of the house,' or 'householder'), who owns all the Mikir people. With him is associated Mukrāng, who is slightly lower in dignity. These two gods, the preservers of men, are approached by the sacrifice of a fowl or goat. Everybody can sacrifice to them at any time, and Hēmphū must be invoked first in every sacrifice, being the peculiar owner of men. Pēng, another house-god, lives in the house, and gets the offering of a goat, sacrificed once a year in the space before the house; maize, rice, and a gourd of rice-beer are placed for him above the verandah of the house, and the first-fruits of the harvest are offered to him. Ārnām-kethē, already mentioned, is another house-god, but lives in heaven, not, like Pēng, in the house itself. He is propitiated by the sacrifice of a castrated pig once in three years. Both Pēng and Ārnām-kethē have to be specially invoked to take up their abode in the house, and their introduction to it is generally due to the action of a diviner (*uchā*), called in on the occurrence of a case of sick-

ness, who declares (after the appropriate incantations) that Ānām-kethē or Pēng wishes to join the household. If it were not for this, Mikir families would generally be satisfied with Hēmphū and Mukràng.

The village or communal gods are called Rēk-ànglòng (= 'mountain of the community') or Inglong-pī (= 'great mountain'), and Ānām-pārō, already mentioned. The Mikir villages are nomadic, moving from place to place as the soil in the neighbourhood becomes exhausted. Rēk-ànglòng is the god of the hill on which the village stands, the *deus loci*, with whom they have to be at peace. He is worshipped in the field, and only men eat the sacrifice, which is a fowl or goat per house once a year. Ānām-pārō is the name of a god who takes a hundred shares of rice, rice-flour, betel-nut, and the red spathe of the plantain-tree cut up; the name seems to be a collective, and to indicate all the divine powers in the neighbourhood. He is worshipped with a white goat and a white fowl. These two gods figure particularly at the Rōng-kēr, or great annual festival, celebrated for the most part in June at the beginning of the year's rainy-season cultivation, or in some villages during the cold weather. The sacrifice is eaten in common by the men only of the village, and they keep apart from their wives on the night of the festival. The observances correspond with the custom of *genua* (village tabu), which is common among the neighbouring Naga tribes.

The gods named above are all invoked and propitiated to grant prosperity and avert misfortune, both generally and specially. There are, besides, numerous gods who take their titles from the special diseases over which they preside or which they are asked to avert; such gods are called after rheumatism, cholera, barrenness among women, goitre, phthisis, stone, diarrhoea, dysentery, smallpox, black and white leprosy, elephantiasis, etc. Each worship has its appropriate ritual, often of a complicated character. Among these deities perhaps a trace of Hinduism may be discovered in the name for smallpox, *pī-āmūr*, 'the mother's flowers': in Assamese and Hindi the goddess of smallpox is known as 'the mother' (Mātā, or Sitalā Māi). It is difficult to draw the line which divides the gods, *ānām-ātum*, who preside over these plagues from the demons or devils, *hī-ī*, who are also said to cause continued sickness. They too are propitiated with sacrificial offerings in the same manner as the gods.

An interesting name in the list of gods is Lām-āphū, 'the head or master of words,' a power probably of modern origin. He is the deity sacrificed to by a man who has a case in court; the sacrifice is a young cock, which should be offered at night, secretly, by the sacrificer alone, in a secret place.

There is no worship of trees or animals, and the gods have no visible shape, temples, or shrines. Idols are not in use. At the time of the sacrifice the gods to whom it is offered are addressed in set forms of words by the worshipper, but there does not appear to be any separate class of priests charged with the sacrificial ritual. The animal sacrificed is beheaded, as in Hindu sacrifices, by a stroke delivered from above with a heavy knife.

5. Diviners.—The most important person with reference to the worship is the diviner (*uchē*, fem. *uchē-pī*), who decides on the deity to be invoked. Here, again, there does not appear to be any caste or hereditary function: any one may be an *uchē*. The diviners are of two kinds—the inferior, generally a man, called *sang-kelàng-ābàng*, 'he who inspects grains of rice, whose art is acquired by instruction and practice; and the superior, called *lodēt* or *lodētpi*, invariably a woman, who works under the inspiration or *afflatus* of divine powers.

The services of these persons are generally sought in cases of sickness, the *lodēt* being inquired of in the more serious cases.

The humbler practitioner proceeds by arranging grains of rice, taken at random from those left in the pot, in particular fashion in small heaps; the grains in the heaps are then counted, and, if the odd numbers predominate, the omen is good. Cowries are sometimes used instead of grains of rice. Another way, apparently borrowed from the Khāsis, is to arrange in a circle, equidistant from a point marked on a board, as many little heaps of clay as there are gods suspected in the case, each heap being called by the name of a god. An egg is then sharply thrown at the point marked in the middle of the board; when it breaks and the yolk is scattered, that heap which receives the largest splash of yolk, or towards which the largest and longest splash points, indicates the god responsible for the affliction. Another mode is to hold upright in the hand a long iron knife of special form, called the *ndkyir*, which is invoked by a spell to become inspired and to speak the truth. The holder then asks questions of the *ndkyir* as to the probability of the sufferer's recovery and the god responsible for his sickness, and the *ndkyir* shakes at the correct answer and name.

The *lodēt* is an ordinary woman (not belonging to any particular family or group) who feels the divine *afflatus*, and, when it is upon her, yawns continually and calls out the names and will of the gods. Her assistance is invoked when witchcraft (*māyā*) is suspected.

She bathes her hands, feet, and face in water in which the sacred basil (*ocymum sanctum*, the *tulsi* of Indian languages) has been steeped, and begins to shake and yawn. A gourd of rice-beer is brought, of which she drinks some, and begins to call out the names of gods, and they descend upon her. She is now inspired, and, when questioned, indicates, by indirect and riddling answers, the enemy who has bewitched the sufferer, or the gods to whom sacrifices must be offered.

Charms are much used for the treatment of disease, as they are everywhere else in India, and do not present any special features. Oaths and imprecations take the place of ordeals, the speaker inviting evil on himself if he swears falsely or fails to perform a promise.

6. Funeral ceremony.—The most elaborate celebration is the funeral ceremony, of which a long account, full of detail, is given in Stack and Lyall's monograph on *The Mikirs* cited at the end of this article. Much money is spent upon it, and it is spread over several days. It is the only occasion on which dances are performed by the young men of the village or music used, except (to a much less extent) at the harvest-home. The ceremony is considered obligatory in all cases except that of a child who has been born dead, or who has died before the after-birth has left the mother; in such cases the body is buried without any ceremony. Victims of smallpox or cholera are buried shortly after death; but the funeral service is performed for them later on, the bones being dug up and duly cremated. When a person is killed by a tiger, if the body or clothes are found, they are buried at a distance from the village, because the tiger is supposed to visit the burial-place. Such persons cannot gain admittance to Jōm-ārōng unless elaborate funeral and expiatory ceremonies are performed for them. Being killed by a tiger is generally imputed to the victim's sin; his spirit is believed to dwell in the most dreary of the places where dead men's spirits go. Except in such cases, the dead are disposed of by cremation, the burnt bones being afterwards buried.

What is chiefly noticeable about the ceremony, as described in the work referred to, is the confident assumption of the continued existence of the dead person's spirit, for whom food, specially prepared by the *uchē-pī*, or divining woman, is set apart; the insistence upon the due performance of the rites in order to get admission to Jōm-ārōng; and the use of dancing, which is marked by its name (*chomāng-kàn*) as adopted from the Khāsis, in the ceremony. If the deceased is a person of unusual importance, a still more elaborate ceremony is required, and monumental stones, upon the model of those erected by the Khāsis, are set up.

7. Ideas of future life.—Apart from the ritual of

the funeral, the Mikirs seem to have a strong conviction of the survival of the dead. They speak of having seen the 'shade' or 'image' (*ārjān*) of a dead man; a sickly or neurotic person catches such glimpses in the house, on the road, etc. *Phārlo*, 'spirit,' is used both of living persons and dead. They say of one deceased, 'Last night in my spirit I saw him,' where *phārlo* is the spirit of the sleeping man. When such glimpses are experienced, betel and food are set aside in the house, and after a time thrown away. After a death a chant is composed, setting forth the parentage and life of the dead, and ending: 'You will now meet your grandparents, father, deceased brother, etc., and will stay with them and eat with them.' As already mentioned, food is regularly provided for the spirit until the completion of the funeral; after that there are no regular offerings, but occasionally a man or woman puts aside from his or her own share of food a portion for the dead, as, e.g., when another funeral reminds them of those who have died before. There is said to be no fear of the dead coming back to trouble the living. The Mikirs' conception of 'Jöm's town' is that everything there is different from the earth-life. An idea, perhaps borrowed from Hinduism, is said to prevail that the spirits of the dead do not stay for ever in Jöm-aröng, but are born again as children, and this goes on indefinitely. On the other hand, Stack records, in the words of his informant, the following:

'The Mikirs give the names of their dead relations to children born afterwards, and say that the dead have come back; but they believe that the spirit is with Jöm all the same' (*Mikirs*, p. 29).

8. Conclusion.—The unwarlike character of the Mikirs has prevented them from becoming, like their neighbours, the Nāgas and Kukis, split up into different units, with hostile feelings towards all outside the community, and with languages gradually diverging more and more from the common standard. Their speech is very uniform wherever they are found, and a large amount of co-operation and friendly intercourse exists among them. On the other hand, the group differs very much, in habits, institutions, and particularly in language, from the other tribes by whom they are surrounded. A study of their speech and social institutions has led to the conclusion that they should be classed with those tribes which form the connecting link between the Nāgas and the Kuki-Chins, and that the preponderance of their affinities lies with the latter race, especially with those dwelling in the south of the Arakan Roma range, where the Chin tends to merge into the Burman of the Irawadi valley.

LITERATURE.—All that has as yet been put on record about the Mikirs is summarized in the volume in the series of Assam Ethnographical Monographs entitled *The Mikirs*, from the papers of E. Stack, edited, arranged, and supplemented by C. J. Lyall, London, 1908. C. J. LYALL.

MILINDA.—Milinda is the Indian name for the Greek king of Bactria called in Greek Menander. When Alexander's empire broke up on his death, Greek soldiers on the east of India founded separate States, and the names of about thirty of them and their successors are known by their coins. Of these the most powerful and successful was Menander, who must have reigned for at least thirty years at the end of the 2nd and the beginning of the 1st cent. B.C. He died probably about 95 B.C., but we know neither the boundaries of his kingdom nor how far he was merely over-lord, rather than the actual administrative sovereign over the various portions of his vast domain. He is the only one of those Greek or half-Greek potentates whose memory has survived in India; and he is there remembered, characteristically enough, not as a political ruler, nor as a victor in war, but as an intelligent and

sympathetic inquirer into the religious beliefs of his subjects.¹

This has found expression in a very remarkable book, the *Milinda Pañha* ('Questions of Milinda'). Just as in one of the most popular of the Dialogues of the Buddha Sakka, the king of the gods, is represented as coming to the Buddha to have his doubts resolved, so in this work the Greek king is represented as putting puzzles in religion to Nāgasena, a wise teacher among the Buddhists of his time. In all probability it was with the *Sakka Pañha Suttanta* in his mind that the author of the *Milinda Pañha*, whoever he was, framed his work.

The *Milinda Pañha* is divided into seven books. The first is introductory, and is very cleverly so drawn up as gradually to raise the expectations of the reader regarding the great interest of the encounter of wit and wisdom which he will find in the following books. Bk. ii., 'On ethical Qualities,' and bk. iii., 'On the Removal of Difficulties,' contain a number of questions, put by the king and answered by Nāgasena, on the elementary doctrines of Buddhism. On the conclusion of this book the king is converted, and devotes himself to a long and careful study of the text of the Pāli canon. In bk. iv., the *Mendaka-pañha*, or 'Dilemmas,' the king submits to Nāgasena the difficulties which he has met in the course of his studies. The discussion of these difficulties leads up to and culminates in the meaning of *nirvāṇa*, and closes with an eloquent peroration on that subject.

Having thus brought his reader up to the bracing plateau of emancipation, the author proceeds in the next book, the *Anumāna Pañha*, 'Problem of Inference,' to describe what is to be found there. In an elaborate allegory of the City of Righteousness he sets out the various mental and moral treasures enjoyed by the *arahant* who has reached in this life the ideal state. The next book, the *Dhutāṅgas*, 'Extra Vows,' is devoted to an exaltation of those who have adopted the ascetic practices so called. The last book, incomplete in our existing MSS, consists of a long list of types of the *arahant*, showing how he has, e.g., five qualities in common with the ocean, five with the earth, five with water, and five with fire. The details of sixty-seven such similes are given. Of the remaining thirty-eight only the list is given, the detailed explanations being lost.

There are peculiarities both of merit and of defect in this book. The author, or authors, have an unusual command of language, both in the number of words used and in the fitness of the words chosen in each case. There is great charm in the style, which rises occasionally throughout the book to real eloquence; and there is considerable grasp of the difficult and important questions involved. On the other hand, there is a great weakness in logic. The favourite method is to invent an analogy to explain some position, and then to take for granted that the analogy proves the position taken to be true; and quite often, when the right answer to a dilemma would be a simple matter of historical criticism, the answer given savours of casuistry, or is a mere play on the ambiguity of words. Then the author, though he naturally avoids the blunders so often repeated in European books against Buddhism—that *nirvāṇa*, e.g., is a state to be reached by a 'soul' after it has left the body, or a state not attainable except by a 'priest' or a 'monk'—does not stand on the ancient Path. His description of the *arahant*, whom he calls a *yogi* (a term not found in the older books), lays more stress on those qualities afterwards ascribed to the *bodhisattva* (q.v.) than on those belonging to the Path, or mentioned (of the

¹ See the authorities quoted in Rhys Davids, *Questions of King Milinda*, i. (SBE xxv.) pp. xvii-xxiii.

arahant) in the *Nikāyas*. His Buddhism has advanced beyond that of the *Nikāyas*. The ethics of the Aryan Path are barely referred to; the doctrine of causation, the necessity of seeing things as they really are (*yathābhūtam pi jānanam*), is not even mentioned, notwithstanding its cardinal importance in the earlier teaching. The author devotes a whole book to the *dhutāngas*, a term not occurring in the *Nikāyas*, and in that book manifests a spirit entirely opposed to the early teaching.¹ All these peculiarities of style and mental attitude are uniform throughout the work. It would seem, therefore, most probable that it was the work either of one author or of one school within a limited period of the history of that school. Probably the latter will eventually be found to be the right explanation.

The work is four times quoted as an authority by the great Buddhist commentator, Buddhaghosa.² It is the only work outside the Pāli canon which he thus quotes. It is also quoted as an authority in the *Dhammapada* commentary (i. 127).³ All these references may be dated in the 5th cent. A.D. They are taken from the second, third, and fourth books, which at least must be considerably older than the works in which the *Milinda* is quoted as an authority. None of the quotations is exactly word for word the same as the corresponding passage in Trenckner's edition of the text,⁴ and the present writer has pointed out elsewhere the various interpretations possible of these interesting, though slight, discrepancies.⁵ In one passage (p. 102 of the text) Buddhaghosa seems to have the better reading. Nāgasena is also quoted in the *Aśvadharmakośavyākhyā*, a Sanskrit Buddhist work which may be dated in the 6th cent. A.D.⁶ There are also several incidental references in Chinese 'translations' of Indian books. When we know the dates of the latter, and can be sure that the references really occur in them, those references may have importance.

At the beginning of the work (p. 2 of the text) there is a table of contents giving the titles of the subdivisions of the book. The editor, V. Trenckner, also gives us titles, which differ, however, from those in the table of contents given in the text. Hnatikumbure's translation into Sinhalese⁷ likewise gives titles, presumably from the much older Pāli MSS which he used. These titles differ from both the other lists. Trenckner, who has certainly made one glaring mistake (p. 362), gives no *apparatus criticus* for his titles; and, as he used only three of the seven MSS of the work known to exist in Europe,⁸ one would like to be informed also as to what readings are given by the other four. Even for the canonical books the discrepancies in the subsidiary titles are very frequent, and it is often probable that such titles are later than the text to which they refer. It is clear that, pending further information, Trenckner's titles to the divisions of the *Milinda* cannot be relied on as original.

B. Nanjio, in his most useful catalogue of Chinese Buddhist books,⁹ gives under no. 1358 the title of one called *Nāśien Bikkhu King*, 'Nāgasena the Bhikkhu's Book.' The attempt to reproduce the sound of the words of this title suggests that the words before the translator must have

⁹ *Catalogue of the Chinese Translation of the Buddhist Tripiṭaka*, Oxford, 1883.

been, not Sanskrit (*bhikkṣu*), but Pāli (*bhikkhu*) or some other Indian dialect akin to Pāli. J. Takakusu has discussed the date of this work, which purports to be a translation of some Indian book with the same title.¹ It is first mentioned in a catalogue dated A.D. 785-804, and subsequently in others. But, though the compilers of all these catalogues are usually careful to give the name or names and the date of the translators or authors of the books which they mention, they do not do so in this case. They add, however, a remark:

¹ The translator's name is lost, and we register it as belonging to the Eastern Tsin dynasty (A.D. 317-420).

So we have a book known to have existed at the end of the 8th cent., and then believed, on grounds not recorded, to have existed in the 4th cent. A.D. There is no evidence that the original was in Sanskrit.

There are two recensions of this book in Chinese, the longer one about half as long again as the shorter one. The difference arises mainly from the omission in the shorter of two long passages found in the longer. In other matters the two are much the same. These omissions are probably due to a mere mistake, perhaps of the translator, perhaps of the printer, and the two recensions may be considered as really one. This bears to the Pāli text the following relation.

The translation into English by the present writer consists of 580 pages. The Chinese corresponds more or less to 90 of these pages (one recension omitting about 34 of those 90). The paragraphs corresponding in Chinese and Pāli are those on pp. 40-135 of the English version. But there are seven or eight omissions, and three additions of whole paragraphs, and quite a number of smaller variations or discrepancies.² It is clear that there is some connexion between the Chinese and Pāli books. It is possible that the Indian original (for there was only one) of the Chinese book may be the original out of which the Pāli was developed, mainly by the addition of the last three books. It is equally possible that the Indian work translated into Chinese was itself derived from an older work in seven books, and that its author or authors omitted the last three books as dealing with *arahant*-ship, in which he (or they) took no interest. This would be precisely in accord with the general feeling in the north-west of India at the period in question—the end of the 3rd cent. B.C. The doctrine of an emancipation to be reached in this life by strenuous mental exertion was, not unnaturally, yielding place to a doctrine of salvation in the next life through *bhākti*, personal devotion to a deity. The psychological details of the old system of self-control rather bored people. So the *Milinda* may, quite possibly, have been reduced to a short and easy book, with the sting of *arahant*-ship taken out of it.

A solution of this *Milinda* problem would be of the utmost importance for the elucidation of the darkest period in the history of Indian literature. Unfortunately, each of the alternatives suggested above involves great difficulties, and none of the scholars who have written on the subject has so far been able to persuade any other to accept his conclusions. The evidence at present available is insufficient. When the Tibetan translation has been properly examined, when all the quotations from the *Milinda* in the Pāli commentaries are edited, when all the references elsewhere (and especially those in the numerous Buddhist Sanskrit works still buried in MSS) have been collected, we shall be better able to estimate the value of the external evidence as to the history of the *Milinda* literature in India. When an adequate compari-

¹ *JRAS*, 1896, p. 12 ff.

² See the comparative table given by F. O. Schrader, *Die Fragen des Königs Menandros*, p. 120 f.

son has been made between the words used and the ideas expressed in the Pāli *Milinda* and those found in the canon on the one hand and the commentaries on the other, we shall have more valuable internal evidence than is yet available. The lists of about a hundred words peculiar to the *Milinda* published by the present writer in 1890¹ was necessarily inadequate, and has not since then been improved upon.

MILITARISM.—See WAR.

MILK (Primitive Religions).—That milk should have become an object of sacred importance in the mind of early man was inevitable. All food was sacred, and milk, so beneficial in every way, has been accorded a special place among the objects of religious veneration by mankind at nearly all stages of his development. Anthropologists have not specifically dealt with the first stages in the domestication of animals, except as a part of the larger question of totemism. There are people who have practically no tamable animals, and these are in the lowest stages of savage culture. An observation of O. T. Mason is clearly indicative of where these first stages must be looked for.

'Women were always associated especially with the milk- and fleece-yielding species. Before the domestication of milk-yielding animals and in the two continents where they were not known in aboriginal times, the human mother had to suckle her young two or three years until they were able to walk at her side and partially take care of themselves. The effect of this upon her nature and all social life was on one side in her favour, but on the other dreadfully increased her burdens and retarded the growth of population' (*Women's Share in Primitive Culture*, London, 1895, p. 151).

The two continents here referred to are America and Australia, and E. J. Payne has succinctly summarized the economical and social results of the absence of milk-producing animals (*Hist. of America*, Oxford, 1892, i. 287-292).

These results may be contrasted with the corresponding condition of the people inhabiting the European, Asiatic, and African continents, who have, as far as observation goes, always possessed milk-producing animals. Milk takes an important part in their religious belief and ceremonial. It is not clear, however, whether the diverse practices obtaining among the varied races of these continents have any relationship as stages in the evolution of man's religious attitude towards milk. Consideration of the subject from this point of view can be conducted only by the widest survey of the evidence, and it will be well to approach it from the highest form to which religious belief concerning milk has attained and proceed thence to some of the lower forms of the cult.

The use of milk in religion has reached its climax among the Toda tribes of India. The sanctity of the dairy among these people is the chief element in their religion. The gods take part in the churning, and the dairy organization marks off two great clan divisions: 'The most important dairy institutions of the Todas belong to the Tartharol, but their dairymen are Teivaliol' (W. H. R. Rivers, *The Todas*, London, 1906, p. 680). The milk of the

¹ *Questions of King Milinda*, i. p. xlii ff.

buffaloes is sacred. The ritual connected with the buffalo and with the dairy is 'certainly of a religious character,' and there can be little doubt that the dairy formulæ 'are intercessory and that they bring the dairy operations into definite relations with the Toda deities' (*ib.* p. 231). The dying are given milk to drink when on the point of death (W. E. Marshall, *A Phrenologist amongst the Todas*, London, 1873, p. 171), and the dead body is taken into the dairy (Rivers, 339 ff.). From these facts, carefully marshalled by Rivers, it is clear that these people have developed the sanctity of milk to its highest point. With them it is an essential feature of organized worship.

There is nothing like this in any other part of the world. It is the highest specialized use of milk in religious observance. The sacred character of milk in other parts of the primitive world is shown by its use in various ceremonies of a religious character, but not in connexion with an organized religious cult, as among the Todas. Both in Africa and in India these ceremonies reach a high grade in places, but do not attain the Toda level. Perhaps the royal milk-drinking observances of the king of the Unyoro, a section of the Bantu people in Africa, affords the nearest parallel (J. G. Frazer, *Totemism*, London, 1910, ii. 526-528) to the Toda practice. An interesting Kafir folktale, 'The Story of the Bird that made Milk' (G. M. Theal, *Kaffir Folk-lore*, London, 1882, pp. 1-46), appears to be founded on the first use of milk and refers to events which preceded the use of milk, but it contains details which bring it within the general condition of the African beliefs. 'They used to get milk from a tree. This was got by squeezing, and the people who drank it were always thin.' The Kaffirs now drink a kind of fermented milk, and it is noticeable that, 'when poured out for use by the master of the household, who is the only one permitted to touch the milk sack, a portion is always left behind to act as leaven' (*ib.* p. 195). These are clearly religious practices which require further investigation, but in the meantime it is permissible to classify them as less developed in form than the Toda example.

Every one knows the reverence paid to the cow in India; but, in spite of the attempt of the early mythologists to identify the cow with the higher forms of Hindu religion (A. de Gubernatis, *Zoological Mythology*, London, 1872, i. 1-41), the fact remains that the cow is not a god. The reverence for the cow is quite human in its character, and the 4th book of the *Laws of Manu* contains the clearest evidence of this.

Crooke points out that respect for the cow in India is of comparatively modern date, and gives some interesting data to show the lines along which it has developed (*PR* ii. 226-236). This view is confirmed by the uses to which the products of the cow were put. According to Vignu, a house is purified by plastering the ground with cow-dung, and land is cleansed by the same process; cows alone make sacrificial oblations possible by producing sacrificial butter, and among six excellent productions of a cow which are always propitious milk and sour milk are included (*Institutes of Vishnu* [SBE vii. (1900)], xxiii. [1883] 56-61).

On the other hand, the evidence from the Panjāb is that, when a cow or buffalo first gives milk after calving, the first five streams of milk drawn from her are allowed to fall on the ground in honour of the goddess (D. C. J. Ibbetson, *Panjāb Ethnology*, Calcutta, 1883, p. 114). It is also a protective from the evil eye, and has various uses in magic and divination. This suggests that in the Panjāb milk is on its way towards a definitely religious position.

In Europe the once sacred character of milk is indicated by the evidence of folk-lore, which records

the protective measures which have to be taken to secure it against harm from witches and other malevolent powers (*GB*³, pt. i., *The Magic Art*, London, 1911, ii. 52f.).

The best examples are found in Russia, where the people on Midsummer eve drive the cattle through the fire to protect the animals against 'wizards and witches, who are then ravenous after milk' (W. R. S. Ralston, *Songs of the Russian People*, London, 1872, p. 391). This rite affords the explanation of a curious story told of an Irish prince, Bress, son of the Fomorians Elatha. It is related of him 'that he arrogated to himself the milk of all the hairless dun cows in the land,' and he 'caused a great fire of ferns to be made, and all the cows in Munster to pass through it, so that they might fulfil the necessary conditions, and their milk become the royal property' (H. d'Arbois de Jubainville, *Irish Mythological Cycle*, Eng. tr., Dublin, 1903, p. 95). Included in this tradition are the following ritual observances—the restriction to cows of a single colour, the passing through fire to secure protection, and the right of the king to a royal supply of milk. The restriction as to colour also appears elsewhere in Irish folklore (C. Plummer, *Vitæ Sanctorum Hiberniæ*, Oxford, 1910, vol. i. p. cxlvi, and K. Meyer and A. Nutt, *Voyage of Bran*, London, 1895–97, ii. 186). The legend of the Dun Cow of Whittingham near Preston is of the same order, the attacking witch being successful in this case (J. Harland and T. T. Wilkinson, *Lancashire Legends*, London, 1882, pp. 16–19).

Ritual in custom and ritual in myth are parallels, and it would be well to inquire whether in folklore there is more than this suspicion of sanctity in the attitude of popular belief as to milk. The milk-maid is almost everywhere an important personage in the social fabric of the village, and her utensils share her importance. The present writer differs from Lady Gomme in her explanation of the famous game of 'Milking Pails' as a mere teasing of the mother (*Dict. of Traditional Games*, London, 1894–98, s.v.) in that it appears to be a cumulative estimate of the superior value of the milking-pail as an article of domestic use, and it is pertinent to note in this connexion that the Irish chieftain had 'in his house constantly a cask of milk' (*Anc. Laws of Ireland*, Dublin, 1865–1901, iv. 311). That milk was poured on the ground is attested by J. G. Dalryell (*Darker Superstitions of Scotland*, Glasgow, 1835, p. 193), and W. Gregor states that at death all the milk in the house was poured out on the ground (*Folklore of N.E. of Scotland*, London, 1881, p. 206). This must have originally been an offering to the earth-god as in the Panjāb. In Ireland it is called an oblation to the fairies (W. G. Wood-Martin, *Traces of the Elder Faiths of Ireland*, London, 1902, ii. 7), and the fairies are the successors of the gods. It was offered every Sunday on Brownie's stone in the island of Valay and other islands (M. Martin, *Western Islands*, London, 1716, pp. 67, 110).

This brings us very close to the stage when milk was a sacred object in the cult of the gods. In the Christian Church it was substituted for wine in the elements of the communion. This was afterwards prohibited by canon law (Dalryell, p. 193, quoting Gratian, *Decretalia*, p. 111), but it may be surmised that it originated as one of the surviving rites of ancient pagan religion. St. Bridget was in some degree regarded as the special patron of milking, as appears in the beautiful milking-songs of Scotland (A. Carmichael, *Carmina Gadelica*, Edinburgh, 1900, i. 261–275), and she was at her birth bathed in milk (*Lives of Saints from the Book of Lismore*, ed. Whitley Stokes, Oxford, 1890, pp. 184, 318). St. Bridget is in many of her attributes a pre-Christian goddess, and her association

with milk in the surviving forms once more takes us back to ancient pagan religion.

That bathing in milk was also a death rite is shown both in traditional ballad lore and in traditional games. In the beautiful ballad of 'Burd Ellen,' preserved by R. Jamieson (*Popular Ballads and Songs from Tradition*, etc., Edinburgh, 1806, p. 125), is the verse:

'Tak up, tak up my bonny young son,
Gar wash him wi' the milk.
Tak up, tak up my fair lady,
Gar row her in the silk.'

Lady Gomme has analyzed the different versions of the children's game of 'Green Gravel,' and has shown from the general movements of the game that it is derived from a funeral rite. This view is confirmed by the fact that the most constant formulae in the game rhymes include the line,

'Wash them in milk and clothe them in silk' (i. 172)

There seems little doubt that these words are survivals of an ancient burial rite.

In the religions of antiquity there is more definite evidence. J. E. Harrison, in her discussion of primitive baptism (*Prolegomena to the Study of Greek Religion*, Cambridge, 1903, p. 596 f.), asks 'what was the exact ritual of the falling into milk? . . . Did the neophyte actually fall into a bath of milk, or . . . is the ritual act of drinking milk from the beginning metaphorically described?' and, in spite of a useful parallel from Egyptian ritual, comes to the conclusion that 'of a rite of immersion in milk we have no evidence.' This, however, cannot be quite true if St. Bridget represents, as there is strong evidence to prove, an early Celtic goddess who has brought into her Christian attributes traditions and rites of pre-Christian origin. There is the further example of the Picts in Ireland saving themselves from the poisoned arrows of their Fir-Fidga enemies by taking a bath filled with the milk of one hundred and twenty white hornless cows, where the single colour condition is again repeated. The rite of bathing in milk attributed to St. Bridget was certainly not of Christian origin any more than the offering of milk and honey in early baptismal rites was Christian (*ib.* p. 597 f.), and we must take it that these rites come from early Celtic religion. The offerings of milk and honey were made to the nymphs and to Pan (*Theocr. Id.* v. 53 f. and 58 f.), and to this day in modern Greece they are made to the Nereids (J. C. Lawson, *Modern Greek Folklore*, Cambridge, 1910, p. 150 f.).

To sum up the evidence—it would appear that in primitive religions there are three stages in the sacred characteristics attributed to milk: (1) where it is a definite part of the dominant religious cult; (2) where it is extensively used in religious ceremonial, but is not an exclusive or predominant element in the ceremonial; (3) where it is looked upon as a religious object, and is, consequently, subject to danger from outside forces, from which it demands various forms of protection. The survey seems to make it clear that the unique example of the Todas is a highly specialized development of the religious conception of milk, and not a normal condition, while the evidence of folklore and of the religion of antiquity leads us to conclude that the endowment of milk with sacred properties arose from its enormous social influences, which led to specialization of its use on solemn and important occasions. This would be the normal position of milk in religious thought. A last stage is represented by the necessity of protecting it from malignant influences. This is survival from the normal stage, and arises only when it was no longer a protective force itself.

LITERATURE.—This is given fully in the article

L. GOMME.

MILK (Civilized Religions).—1. As food and sacrifice.—Since man is a mammal, milk is universally known; and, as man early learned to use the milk of goats, cows, and camels, milk became a natural symbol of nourishment. The ancient Egyptians sometimes pictured the heavens as a woman with hanging breasts, and sometimes as a cow with full udder,¹ thus suggesting that the heavens nourished men. The Babylonians suggested, similarly, that milk is the divinely given nourishment of man by picturing the mother-goddess with breasts so full that she must support them with her hands.² Since milk is so universal an element of human diet, it is but natural that it should have been offered at times in sacrifice to deities, as meat, meal, and firstfruits were. Thus in *Yast* xv. of the Avesta there is frequent mention of a sacrificial gift of boiled milk, and it was mingled with *haoma* (*q.v.*) in sacrifice.³ Among the Arabs flesh seethed in milk is still a common dish,⁴ yet the Hebrews were prohibited from boiling a kid in its mother's milk. W. R. Smith thought that this was because milk for boiling is usually sour, so that such boiling would involve the offering of a fermented sacrifice, or that possibly milk was here regarded as a substitute for blood.⁵

2. In a supposed Semitic myth.—In the OT 'flowing with milk and honey' is a phrase frequently used to designate the fertility of Palestine. It occurs in Ex 3⁸, 13³ 33³, Lv 20²⁴, Jer 11⁵ 33², and Ezk 20⁶ 15. Curdled milk (the modern *laban*) and honey are also mentioned in Is 7¹⁸ as the food of the child that is to be named 'Immanuel.' It occurs again in the same chapter (7²⁵), where it is more difficult to interpret, and where its occurrence may be due to editorial redaction. The phrase 'flowing with milk and honey' occurs in the J document (c. 850 B.C.), and continued to be used till the time of Ezekiel. T. K. Cheyne⁶ in 1901 noted that the phrase is more poetical than the context seems to justify, and suggested that it might be a survival of a description of Israel's idealized past. Since ancient poetry is always tinged with mythology, he thought it not improbable that this phrase was of mythological origin. Usener⁷ in 1902 held that the phrase was of mythological origin, and that it was borrowed by the Hebrews from Iranian mythology, where, according to him, we hear of heavenly honey and holy cows. The phrase had, he thought, descended by one line to the Hebrews and by another to the Greeks, who described the food of the infant Zeus on Crete as curds and honey. Stade,⁸ in commenting on Usener's article, claimed that the phrase 'flowing with milk and honey' was not used earlier than the time of Ezekiel, that in the J document and Jeremiah it was a later addition, and that Usener was right in claiming that in Jl 3¹⁸ the use of the figure was due to Greek influence. Whether 'curd and honey' could have been a mythological phrase introduced from Assyria, he thought, was a problem for Assyriologists. H. Zimmern⁹ in the next year, 1903, claimed from the Assyriological side that honey and curd played a great rôle in the Babylonian cult, and that it was of mythological origin, though he offered little proof for the statement. Finally, Gressmann¹⁰ in 1905 endeavoured to work this view into an elabor-

ate scheme of Hebrew mythology, which formed, he believed, the basis of the prophetic eschatology.

Before accepting this view, it should be noted just what part milk and curdled milk, or *laban*, played in the life of the Hebrews. Milk, like wine, was in early Israel a symbol of prosperity and plenty. An old poet sang of Judah:

'His eyes shall be red with wine,
And his teeth white with milk' (Gn 49¹²).

Laban was a dish so relished as an article of diet that Abraham is said to have offered it to his guests (Gn 18⁸), and Jael to the tired Sisera (Jg 5²⁵); honey and *laban* along with wheat, barley-meal, beans, and lentils were furnished as food to David and his men (2 S 17²⁷⁻²⁹). It is natural, therefore, that *laban* and honey, the two most delicious viands known to them, should enter into poetical descriptions of abundance, fertility, or prosperity (see Dt 32¹⁸, Job 20¹⁷ 29⁶, Sir 39²⁶). The natural uses of these articles of food are sufficient to account for these poetic allusions.

The strongest arguments of the mythological school rest, however, on the highly-coloured language of Joel and later apocalyptic writers, and upon supposed Assyrian parallels. In Jl 4¹⁸ (EV 3¹⁸) we read:

'And it shall come to pass in that day that
The mountains shall drop sweet wine,
And the hills shall flow with milk
And all the water courses of Judah
Shall flow with water.
And a spring shall come forth from the house of Yahweh
And water the valley of Shittim';¹

in the *Sibylline Oracles*, iii. 744 ff.:

'For Earth the universal mother shall give to mortals her best
Fruit in countless store of corn, wine and oil.
Yea, from heaven shall come a sweet draught of luscious honey,
The trees shall yield their proper fruits, and rich flocks,
And kine and lambs of sheep and kids of goats.
He will cause sweet fountains of white milk to burst forth';
and again, *ib.* v. 231 f.:

'But the holy land of the godly alone shall bear all these things.
An ambrosial stream distilling honey and milk shall flow from
rock and fountain for all the righteous'.²

In view of the aridity of the desert, it would seem to need no mythology, but only a little poetic exaggeration, to lead to the designation of Palestine by the nomads as a 'land flowing with milk and honey.' The use of these viands in the life of the Hebrew nation easily accounts for the poetic use in Deut. and Job, and these in turn furnish the point of departure for the later more hyperbolic language in Joel and the *Sib. Or.* Unless we can find some outside parallels, there is, then, no need for the mythological hypothesis.

Most of the Assyrian parallels hitherto cited turn out to be unreal. Thus a passage cited by Zimmern simply enumerates honey and *laban* along with oil, wool, gold, and silver as desirable things.³ Another passage deserves more attention. It is part of an incantation for driving the demon of sickness from a man's body. It runs:

'*Laban* from a pure stable they shall bring,
Milk from a pure corral they shall bring,
Over the pure *laban* from the pure stable utter
an incantation:
May the man, son of his god, become pure!
May that man become pure as *laban*!
Like that milk may he become pure!'⁴

It is clear that no mythological meaning can be involved in this passage. It is the purity of the *laban* and the milk that is emphasized. A mythological quality is as much out of place as it would be in the Avesta, when milk is enumerated among the foods which may be given to a woman who has

brought forth a still-born child, in order to effect her purification (see *Vendidad*, v. 52, vii. 67). Milk is here only one of several ingredients—meat, bread, wine, water. As she had first to drink ox-urine, the milk can hardly have been chosen for mythological reasons. Another fragmentary text which has been frequently cited on the basis of an indefinite reference by Friedrich Delitzsch¹ runs as follows:²

'Crown of . . .
For the shepherd of the black-headed [people] . . .
I pray a prayer . . .
A sceptre of lapis lazuli may his hand [grasp] . . .
For the shepherd of the black-headed [people] . . .
Honey and *laban* abundantly . . .
The mountain bearing produces . . .
The steppe, the field bearing fruit . . .
The orchards bearing fruit . . .
On his left hand may the god Sin . . .
To the king in person may they do homage!'

This is clearly a prayer for a Babylonian ruler. The petitioner asks that great fertility and prosperity may come in his time. The language resembles that of Joel and the Sibyl, but the imagery is capable of as natural an explanation as is that of the Hebrew seers.

The other passage which has been thought to show that the Babylonians and Assyrians held mythological views of milk and honey occurs in an incantation. The part in question reads:

'Pure water bring into its midst.
The exalted lord, the great serpent of heaven,
By his pure hands shall establish thee;
Ea to a place of purity shall bring thee,
To a place of purity shall bring thee,
With his pure hands shall bring thee,
Into honey and *laban* shall bring thee.
Water of an incantation he shall put to thy lips,
Thy mouth with an incantation he shall open.'³

Here at last we have a passage that moves in such a realm of heavenly unreality that it may fairly be regarded as based on a myth, but the mythical part does not centre at all in the honey and *laban*, but in the action of the god. Honey and *laban* are used to denote a place of fertility and plenty, and it may fairly be claimed that they were introduced here from such usage as that of the preceding passage, and are no necessary part of the myth.

The Semites probably had their origin as a separate people in Arabia,⁴ which was a land of deserts and oases. It was thus that the oasis and its palm-tree became one of the symbols of paradise and an emblem of the Golden Age, and finally entered as one of the elements into the Christian symbolism of the New Jerusalem.⁵ It seems probable that in the primitive language of the desert an oasis or a fertile land like Babylonia and Palestine may have been designated as a 'land flowing with milk and honey.' The occurrence of the phrase among both Babylonians and Hebrews points in this direction; it probably had an origin in their common ancestry. As the phrase is lacking, however, in the description of paradise both in Gn 2, 3 and in Ezk 28, it can hardly have formed an integral part of the traditions of the Golden Age, or have entered as an important element into the mythology of the Semites.

Indeed, in the paradise story of Gn 3 the food which makes man like God is not milk and honey, but the fruit of a tree. So in the corresponding Babylonian story, the Adapa myth, it was not milk and honey, but 'food and water,' that might have gained immortality for Adapa.⁶ As these

accounts are doubtless both variants of the same primitive paradise myth, it is impossible to resist the conviction that milk and honey formed no part of that myth among the Semites, but was simply a descriptive phrase employed by the dwellers in the desert to describe fertile lands—a phrase which survived both in Babylonia and in Palestine, and which came only in post-Exilic times among the Hebrews to designate a Golden Age that was still future.

3. In the Avesta.—Among the Persians these ideas apparently did not in the early time play a prominent rôle. Milk was offered in sacrifice and was used in certain incantations, as noted above. Homage was rendered to it,¹ and it was regarded as a divinely purified provision in the breasts of females, as was the seed in males;² a prosperous woman was 'rich in children and rich in milk.'³ The cow was regarded as a beneficent animal guarded by Ahura Mazda as he guarded all other things on which the prosperity of people depends,⁴ but in no sense a heavenly animal. So far from Jews having borrowed a myth from Persians, as Usener thought, the elements of the supposed myth appear only in the later syncretistic Mithra cult, and would seem to have been borrowed from the Semites.

4. In the Vedas.—In India milk was viewed as a symbol of nourishment. The Atharvaveda regards a house full of nurture as one full of milk,⁵ and the earth is a mother who can pour forth milk for her supplants.⁶ Nevertheless in the Rigveda both milk and honey were employed in the ritual, though they were both subordinate to the all-prevailing *soma*. When milk was used as an offering, it was sometimes sweet and sometimes sour, both kinds of offerings being recognized.⁷ As in Iranian ritual, the milk was often mixed with *soma*, the lacteal element sometimes being sour.⁸ Honey was in the same way used as an offering; sometimes it was mixed with *soma*,⁹ but sometimes with milk. Thus Rigveda, VIII. iv. 8, addresses Indra:¹⁰

'With honey of the bees is the milk mixed;
Come quick, run and drink!'

Milk was created in kine by Varuna, even as he gave cool breezes to the forests, swiftness to horses, wisdom to the heart of man, lightning to the clouds, the sun to the sky, and *soma* to the mountains (Rigveda, v. lxxxv. 2). This reveals a high estimate placed upon milk and honey as foods, but lacks any mythical element,¹¹ as does the passage (X. lxiii. 3) in which the sky (*dyau*) gives milk to the All-Gods.

The Sanskrit poets often allude to the ability of the swan to separate milk from water; but this, as C. R. Lanman has shown, has no mythological significance. It is a reference rather to the fact that these birds fed on the milk-like juice of the lotus stalks, which grew beneath the water.¹² Similarly the religious teachers of India often use as an illustration of a changing existence the relationship between sweet milk, sour cream, and butter, not because they saw anything mythological in them, but because they illustrated change in forms of existence.¹³

In India, then, it can only be said that milk and honey were so highly valued as food that they

naturally formed a part of the most valued offerings to the gods. Perhaps the proper mixture of these viands was supposed to have some magic significance, for one passage (Rigveda, IX. xi. 2) says that they were mixed by the *atharvans*;¹ but there is no trace of such a myth as some have supposed for the Semites.

5. In Egypt.—In Egypt, as already noted, the sky-goddess was pictured as either a woman or a cow with full breasts; but this was only to symbolize her nurture of her earthly children. If milk had in early Egyptian thought any mythological significance, we should expect to find it prominent among the foods promised to the deified kings to whom the pyramid-texts of the Old Kingdom promised a place among the gods. True, the departed king is frequently represented as suckled by the sky-goddess or some other divinity connected with Re. The goddess is once thus addressed: 'O mother of this king Pepi . . . give thy breast to this king Pepi, suckle this king Pepi therewith.' The goddess replies: 'O my son Pepi, my king, my breast is extended to thee, that thou mayest suck it, my king, and live, my king, as long as thou art little.'² Milk was, then, the food of the celestials only during their heavenly childhood. When Pepi was grown, he was promised 'bread which cannot dry up' and 'beer which cannot grow stale.'³ Later he is given a 'snared fowl.'⁴ Bread is called 'the bread of the god.' Pepi is invited to 'sit down to thy thousand of bread, thy thousand of beer, thy thousand of oxen, thy thousand of geese, thy thousand of everything whereon the god liveth.'⁵ Another source of food for the deified king is the tree of life situated in a mysterious isle at a distance, and this king Pepi sought and attained.⁶ This tree of life is probably a survival from a desert and oasis life similar to that of the Semites.⁷ Milk plays very little part in these Egyptian myths.⁸ It is only the food of the deified kings during that part of their celestial life which corresponds to childhood on earth.

6. In Græco-Roman literature.—Among the Greeks and Romans, as among the Semites and people of India, milk and honey were delicacies that were much appreciated, and their use goes back to an early time. Libations of milk and honey were, according to the *Iliad*,⁹ poured out for the dead, and such libations appear to have continued down to the Christian era.¹⁰ In case of pestilence milk and honey were among the offerings presented at the sacred mountains of Pelion and Ida;¹¹ and, before eating, milk, honey, and bread were offered to Hestia.¹² Milk and honey were also symbols of plenty and prosperity. Thus Pindar († 442 B.C.) says:

'Rejoice, my friend! Lo, I send you, though at late hour, this honey mixed with white milk, fringed with the froth of blending, a draught of song conveyed in the breathings of Aeolian flutes.'¹³

Though here metaphorical for sweet poetry, the metaphor attests the use of milk and honey as delicacies. In course of time both milk and honey became symbols of plenty. Thus Tibullus († 18 B.C.) says:

'The oaks themselves give honey, and beyond the sheep
Bring udders of milk ready to the hand of the care-free.'¹⁴

Similarly Ovid:

'Now rivers of milk, now rivers of nectar run,
And yellow honey distills from the green ilex.'¹

With these poets milk and honey have become emblems of the Golden Age, but with many others they are simply symbols of plenty.²

Latin writers are, of course, dependent on Greek models for their imagery, and it is possible that Tibullus and Ovid were influenced directly or indirectly by Semitic ideas. A usage of milk and honey, however, which goes back to Homeric times cannot have been borrowed from the Persians. Possibly it may have come from Semitic Mesopotamia through the Hittites, since Hittites appear to be mentioned in the *Odyssey*,³ but we know as yet too little of Hittite ritual to regard this as more than a remote possibility. Possibly, too, it may have been carried to the Aegean lands by Phœnicians, but it is quite as probable that the uses of milk and honey developed in the Aegean lands independently of Semitic ideas.

7. Among Christians.—The many references to milk and honey in Patristic literature collected by Usener⁴ are clearly echoes of Joel and the Sibyl. Some curious Christian myths connected with the milk of the Virgin Mary are, however, still current in Bethlehem and its vicinity. There is at Bethlehem a cave called the 'Milk Grotto.'⁵ A legend has it that the Holy Family once took refuge there, and that, as the Virgin nursed the Child, a drop of her milk fell on the floor. Because of this it is still believed that a sojourn in the grotto not only increases the milk of women and animals, but cures them of barrenness. In reality this legend arose to Christianize a grotto that was originally a shrine of Ashtoreth.⁶

All about Bethlehem the limestone crumbles and forms little white pebbles about the size of peas. These are accounted for by the story that a drop of the Virgin's milk fell on the rock, and that these pebbles are the miraculous result. Similarly it is said that, as the Virgin nursed the Child by the wayside, a drop of her milk fell on a thistle, which on this account became flecked with white and is called 'Mary's thistle.'⁷ These myths are the outgrowth of the transfer to the Virgin of the old grotto of the mother-goddess, and are really much more exotic to Christianity than the quotation in the Patristic writers about the Golden Age.

In the early Church the newly baptized were given milk and honey to taste (or, in some Western churches, milk and wine) as symbolizing their regeneration through baptism (cf. 1 Co 3², He 5¹², 1 P 2²). By the twenty-fourth canon of the Third Council of Carthage (397) this milk and honey was to be consecrated at the altar on Easter Even, the most solemn day for baptism; but the use has been forbidden since the Trullan Council of 692.⁸

MILL, JAMES AND JOHN STUART.—The two Mills, father and son, occupy a unique position in the history of British thought. They were, after Bentham, the greatest figures in the utilitarian school and the leaders of the philosophical radicals in politics.

1. **James Mill.**—Next to Bentham, James Mill was the force that moulded the early expression of utilitarian doctrine. He was a Scotsman by birth, the son of humble parents (his father a country shoemaker and his mother a farmer's daughter), born at North Water Bridge, on the North Esk, in the parish of Logie-Pert, Forfarshire, on 6th April 1773. By his intellectual ability and his indomitable power of work, he raised himself to the commanding position that he ultimately attained. His early education was received at the parish school of his native place, and afterwards at Montrose Academy, where he had as school-fellow Joseph Hume. From Montrose Academy he went to Edinburgh University (in the palmy days of Dugald Stewart), where he graduated M.A. in 1794, and forthwith proceeded to the study of Divinity, and was licensed as a preacher of the gospel in the Church of Scotland in 1798. The ministry, however, was not destined to keep him long. Being appointed tutor to the only daughter of Sir John Stuart of Fettercairn (Member of Parliament for Kincardineshire), he came under the special notice of Sir John, and went with him to settle in London in 1802. He was not long in London before he made his presence felt. In 1803 we find him active in originating *The Literary Journal* and making many contributions to it. In 1804 he produced his pamphlet on the *Corn Trade*. Thenceforth he contributed articles, in an unceasing flow, to innumerable periodicals and magazines—*The Philanthropist*, *The Annual Review*, *The Westminster Review*, *The London Review*, *The Edinburgh Review*. But his most outstanding essays were written for the Supplement to the fifth edition of the *Encyclopædia Britannica*, the chief of them being on 'Government,' 'Education,' 'Jurisprudence,' and 'Laws of Nations.' A reprint of the *Encyclopædia* articles was made in book form and had a wide influence. For about eleven years (from 1806 to the end of 1817) he worked strenuously at his *History of British India*, which, on its publication, produced a great impression. The immediate result was his appointment to a post in the India House, in the department of Examiner of India Correspondence, where he became head of the office in 1830. Besides a little book on the *Elements of Political Economy* (1821), largely reproducing Adam Smith, but embodying also the distinctive principles of Ricardo, he produced his great psychological work, the *Analysis of the Phenomena of the Human Mind*, which was brought out in 1829. This at once raised him to the position of psychologist in chief of the utilitarian school, filling the gap that had been left in the elaborate and multifarious teaching of Bentham. With Bentham himself Mill was on terms of the most intimate friendship, and the master regarded him as his most stalwart disciple. So staunch a Benthamite, indeed, was Mill that it has been doubted whether he was anything more than a brilliant reproducer of Bentham's opinions. That, however, does Mill an injustice. He was no mere echo, but a voice. His psychology alone proves it; and he was potent as a political force to an extent that even Bentham hardly equalled. When he died (his death took place in London, on 23rd June 1836), he was generally admitted to be the great inspiring spirit of radicalism and the one man who could have made the radical propaganda the success that it had become. In the year before his death (1835) appeared his *Fragment*

on *Mackintosh*. This is really a vigorous defence of empiricism against intuitionism, though it assumes the form of a vehement criticism of Mackintosh, and is chiefly valuable as presenting Mill's philosophical positions in a clear and condensed light, rendered all the more effective by the polemic setting.

Mill's fame as a psychologist rests on his consistent experientialism, his thoroughgoing application of association to the phenomena of the mind, and his uncompromising insistence on the power of associationism to explain the mind and all its processes. But this has already been brought out in the art. ASSOCIATION, and need not be further dwelt on. A word, however, may be said on his psychological ethics. Mill's ethics is essentially hedonistic: the human will is moved by pleasure (or the avoidance of pain) and by this alone; and with a view to the attainment of pleasure (or to the getting rid of pain) men habitually act. But there is such a thing as disinterested conduct; and by the utilitarian himself benevolence is regarded as the supreme virtue. How, then, explain this? In the first place, Mill has recourse to the distinction (of which Bentham had made so much) between motive and intention, and maintains that, while our intention in benevolence is disinterested, our motive is interested; in other words, a benevolent action pleases the individual, gives him satisfaction, else he would not do it, but it also promotes the happiness of others. Now, this being pleased with acting benevolently towards another—what else is it than the individual identifying another's happiness with his own? And what more could be demanded of him? 'Can any greater degree of social love be required,' asks Mill, 'than that the good of others should cause us pleasure; in other words, that their good should be ours?' (*Frag. on Mackintosh*, p. 294). Then, again, there is the ethical principle of transformation (the phrase is not Mill's) to be considered—the principle that we see at work in the miser, whose nature is so changed by his traffic with money that the original desire of money for the pleasure that it can procure him becomes ultimately the desire of money for its own sake. What happens in the case of the miser happens in the case of disinterestedness and benevolence. Although individual pleasure lies at the root of a man's benevolent action, he has come, through continued intercourse with men and the experience of mutual help, to submerge the thought of his own pleasure and make benevolence itself his end.

What, then, of conscience, with its intuitions and its vaticinations? Conscience to Mill is not a simple and elementary faculty in human nature, but the product of association. That gives to it its power, and explains its peculiarities, and indeed constitutes its value. The ultimate test of morality is utility: right and wrong are qualities of conduct and are to be gauged by the tendency of actions to produce pleasure or pain.

Education occupied a large share of Mill's attention. As a utilitarian radical, he was eager that the people should be educated—educated so as to develop and improve their intelligence, and render them fit to be worthy citizens. Hence, he took a practical interest in the educational movement of the time, and entered as a keen polemic into the controversy between the Lancasterian and the Bell systems of education; he tried to establish a school (but failed) on the principles of Bentham laid down in his *Chrestomathia* ('Study of useful things'); and he was one of the small band of ardent educationists who originated the University of London. But his claim to honour as an educationist rests on his broad-minded theory of education, as developed in his *Encyclopædia* article, where education is shown to be the work of a man's life-time, where

the roots of it are laid in associationist psychology, and where the principles of Helvetius regarding the almost unlimited power of education in transforming the individual are vigorously enforced.

In the realm of jurisprudence Mill made for himself a great name in the sphere of international law. His *Encyclopædia* article on that subject is, within its limits, almost perfect. It might be elaborated at points and more fully illustrated, but it is everywhere wise and suggestive. Particularly striking are its handling of the rights of nations in the time of war, and its treatment of the possibility of an effective court of arbitration in international quarrels.

As a philosophical politician Mill achieved fame by his theory of government. It is not a theory that is invulnerable. It lays itself open to objection as to the adequacy of its analysis of human nature; it was attacked by Macaulay on the ground of its deductive method and disregard of the inductive mode of procedure; and Sir James Mackintosh attacked it on the side of its extreme advocacy of popular representation, which seemed to ignore the danger of democratic tyranny, or the abuse of power on the part of the 'masses' in defiance of the interests of the 'classes.' The foundation of the theory is that the individual man is by nature self-centred, that he aims at pleasure for self and as much of it as he can obtain, and that, in his pursuit of personal interest, he is ready to lay hold of everything that ministers to his gratification, regardless of the pleasures and desires of others. Hence the need of government, and its meaning: government just signifies keeping one man from grasping at and mercilessly pursuing what belongs to another. But the members of a government are themselves men, with men's selfish passions and readiness to tyrannize over others, and, consequently, need themselves to be restrained. The restraint comes and only can come from the people; and the only tolerable form of government is a representative government—a government where the people's representatives act as a check on legislative abuse. It is only when the people are governed by men elected by themselves and representing them that the interests of governors and governed can be identified. Yet this identification of interest is liable to be broken through, if the representatives are not themselves watched. A body of representative men, if left entirely to their own actions, will have 'sinister' interests and may become as selfish and oppressive as an individual may be. The safeguard lies in frequent parliamentary elections: thus only (so it appeared to Mill) could the people retain a proper hold on their own representatives.

Into social reform Mill threw himself with much energy. Reforming zeal was the great characteristic of the utilitarians. This was but the practical side of their all-controlling principle, the general welfare, or the greatest happiness of the greatest number. Prisons and prison discipline, mendicancy, the Poor Laws, and such like engaged his pen; and it was through the influence of his views, to no small extent, that subsequent reforms were effected.

2. John Stuart Mill.—The eldest child of James Mill was John Stuart Mill (born in London on 20th May 1806; died at Avignon, in France, on 8th May 1873). His early education was conducted solely by his father, who, although constantly occupied in literary and exacting work, did not grudge to act as schoolmaster to his son. His method of teaching was altogether of an exceptional kind; and, although the result of it was also exceptional, the method has not been imitated by others or regarded as generally practicable. At three years of age the boy was set to learn

Greek, which was his chief study for the next five years, English and arithmetic being added as secondary subjects. This created in the youthful learner a love for Greek—not only for the language, but for the literature and the thought of Greece—that lasted throughout his life. There is nothing more noticeable in his writings than his genuine appreciation of the dialectic method of Plato and his constant use of the Socratic mode of inductive defining, in order to secure clear concepts and exact verbal expression of them, with a view to truth. At the age of eight, the boy had Latin added to his Greek; and, by the time that he was fourteen years of age, he was indoctrinated into the principles of logic, psychology, and political economy. These were stiff subjects for a boy of that age; but they were the subjects in which he afterwards excelled.

All the time that these subjects were being set as tasks, the father was making the boy his constant companion, sharer in his daily walks, and, through his conversation and judicious cross-questioning, was gradually developing the boy's mind and imparting to him clearness and exactness of thought and confidence in thinking. This Socratic procedure was supplemented at the earliest moment by making the boy himself a teacher. He was set to superintend the education of the younger members of the family, thereby enabling him to gain further clearness of ideas and to strengthen his intellectual faculty. No wonder that the precocity of young Mill became proverbial.

A further stage in his education was a year's sojourn in France, as the guest of Sir Samuel Bentham, at the age of fourteen. This introduced him to the French language and to French literature and politics; and, through excursions in the Pyrenees and elsewhere, aroused in him an enthusiasm for natural scenery and a love for botany and zoology. These things all influenced him in later life.

On his return from France, he was further taken in hand by his father. He was now directly introduced to Bentham's teaching, in the French translation and exposition of it in P. E. L. Dumont's *Traité de législation* (London, 1802). 'The reading of this book,' he says (*Autobiography*, p. 64), 'was an epoch in my life; one of the turning points in my mental history.' At this time also he studied Roman law under John Austin, the jurist.

At the age of sixteen, the youth was beginning to feel his intellectual independence. Burning with enthusiasm for Bentham, he started a Bentham Club of young men, which he designated 'The Utilitarian Society.' Somewhat later he became a member of 'The Speculative Society,' and was also a prominent figure among the youths who met, at stated times, in George Grote's house for discussion of philosophical and economic questions. Later he took an active share in 'The Political Economy Club.' Thus was the development of young Mill's thought and mind further aided by a variety of powerful intellectual agencies.

In 1823, at the age of seventeen, came his appointment, by the East India Company, to the post of Assistant Examiner, under his father, in the Office of the Examiner of India Correspondence. This continued till he reached the position of Chief of the office in 1856—two years before the abolition of the East India Company.

A turning-point in his life was his break-down in health in 1826. There is little doubt that hard work, long-continued and unintermitted, and the over-strain of early education under his father's tuition were largely the cause of this. But there was something more. There was the emotional

nature of the young man, which had been cramped but not destroyed by his father's one-sided training, craving for satisfaction. The end of the crisis was what he himself regards as analogous to a 'conversion.' It came in large measure through study of the poetry of Wordsworth and the philosophy of Coleridge, and showed itself in a revolution both in his intellectual opinions and in his character. He was no longer the indiscriminating follower of Bentham that he had been; he was no longer neglectful of the emotional side of human nature. He emerged from the ordeal a new man, with wider mental outlook and deeper and intenser sympathies. The extent of the change may be seen by reference to his two remarkable essays on Bentham and Coleridge, republished in vol. i. of his *Dissertations and Discussions* (London, 1859-67).

Another important factor in his life was the influence over him of Mrs. Taylor, who became his wife in 1851.

His work in connexion with literary journals was enormous. He wrote articles almost without number and on an exhaustless variety of subjects (philosophical, political, economic, social). They began with *The Westminster Review* and extended to other magazines—especially *The London Review* and, afterwards, *The London and Westminster Review*. They are valuable as enabling us to trace the development of his opinions, the growth of his views in philosophy, and the gradual modification of his radicalism in politics.

His first great intellectual work was his *System of Logic, Ratiocinative and Inductive*, which appeared in 1843. This was followed, in due course, by his *Essays on some Unsettled Questions of Political Economy* (1844), and *Principles of Political Economy* (1848). In 1859 appeared his little treatise on *Liberty*, and his *Thoughts on Parliamentary Reform*. His *Considerations on Representative Government* belongs to the year 1860; and in 1863 (after first appearing in magazine form) came his *Utilitarianism*. In 1865 came his *Examination of Sir William Hamilton's Philosophy*; in 1867 his *Rectorial Inaugural Address* at St. Andrews University, on the value of culture; in 1868 his pamphlet on *England and Ireland*; and in 1869 his treatise on *The Subjection of Women*. In 1869 also was published his edition of his father's *Analysis of the Phenomena of the Human Mind*, with many valuable notes illustrative and critical by J. S. Mill himself, by Bain and Grote, and by Andrew Findlater. His two posthumous works are his *Autobiography* (1873) and his *Three Essays on Religion* (1874). To these have to be added the two large volumes of *Letters* (ed. Hugh S. R. Elliot) published in 1910.

A phase of Mill's life has still to be noted—his parliamentary career. In the Parliament of 1865-68 he sat as Radical member for Westminster. Three things in chief did he advocate in the House of Commons—women suffrage, the interests of the labouring classes, and land reform in Ireland.

In philosophy J. S. Mill's fame rests chiefly on his *Logic*, his *Political Economy*, and his *Examination of Sir William Hamilton*, to be taken in connexion with his notes in his edition of his father's *Analysis*.

As a logician he stands out as the great empiricist who formulated and elaborated inductive logic, who re-stated and in part revolutionized deductive logic, who made systematic application of logical principles to the moral sciences (including politics), and who enforced, in polemic form, the power of experience to be the criterion or ultimate test of truth. The brilliancy of his thought and the clearness of his style (including an unwonted aptitude for felicitous illustration, ranging over a wide field of knowledge) cannot be too highly praised.

The stimulus to the student derivable from a study of his *Logic* is undoubted. The epoch-making character of his great work must be acknowledged without reserve. But how far he has succeeded in bridging the gulf between inductive and syllogistic logic may be disputed—even Bain, his intimate friend and associate, has his doubts (see his *Dissertations on Leading Philosophical Topics*, London, 1903, pp. 21-26); and empirical logic has made great advances since his day. On the other hand, it must be allowed that these advances were rendered possible only through Mill's work.

In psychology Mill upheld the associationism of his father, but gave a more attractive expression of it as 'mental chemistry.' He carried forward his psychology into theory of knowledge and formulated his doctrine of psychological idealism (founding on Berkeley), which, resting on the empirical genesis of knowledge through the various senses operated by association, issues in the conception of matter or objective reality as 'the permanent possibility of sensations' and of mind as 'the permanent possibility of feeling.' In the case of mind, however, there is a peculiarity: it is conscious of its states. This we must accept, as it is given in our experience, but we must accept it as inexplicable—no further account of it is possible. He was unbending in his opposition to those who base truth on intuition. Not that he denied the fact of intuition, but he demanded that it should be tested by experience, so that it may not become (as it had become to a school of philosophers at the time) the bulwark of prejudice and irrationality and the hindrance to intellectual, political, and social progress.

Mill's great work on *Political Economy* (equal in originality of thought and in importance to his *Logic*) is a clear exposition of the various branches of the science—wealth, distribution, consumption, and exchange, and all the various topics that arise out of these. It shows him also as a keen, but fair, critic. But his chief merit lies in his widening the scope of political economy and removing from it the reproach of being 'the dismal science.' This he did (partly under the influence of Auguste Comte) by infusing into it human feeling and associating it with the philosophy of society. Economic principles were now conjoined with their practical applications, and a transformation took place. Not only do we have a minute and scientific handling of such things as labour, capital, rate of interest, money, international trade, and all the other points that the ordinary political economy dealt with, but also a stimulating discussion and wise treatment of such deeply interesting problems as the future of the labouring classes, the land question, socialism, etc. In explanation of the exceptional popularity of the treatise he himself says:

'It was, from the first, continually cited and referred to as an authority, because it was not a book merely of abstract science, but also of application, and treated Political Economy not as a thing by itself, but as a fragment of a greater whole; a branch of Social Philosophy, so interlinked with all the other branches, that its conclusions, even in its own peculiar province, are only true conditionally, subject to interference and counteraction from causes not directly within its scope: while to the character of a practical guide it has no pretension, apart from other classes of considerations' (*Autobiog.*, p. 236).

That is, doubtless, absolutely correct.

Mill's utilitarian ethics, as expounded in his *Utilitarianism*, is extraordinarily significant; both the matter and the style fascinate, not less than the glow of conviction that permeates the whole. Justice has rarely been done to it by opponents, because they have failed to see (a) that it is not a treatise of pure abstract reasoning, but one written out of the living conviction of a man who loved his fellow-men; (b) that it is practical in its object, and not merely theoretical; and (c) that,

although it sets forth pleasure or happiness as the standard and test of human conduct, it makes supreme the conception of man as a social being and conditions all by the conception of the general welfare. His view of the human will as determined by character, and of character as formed by a man, and not for him, is his contribution to the solution of the free will problem, and his defence of the position that there can be such a thing as a science of ethics—and, if of ethics, then also of economics.

Mill as a political thinker is a great subject. As a radical democrat, he loved the people and worked hard for them in parliament and out of it. But he would not submit in any degree or for a moment to their irrational desires and expectations. They had to be led and not followed. He was acutely conscious of their tendency to tyrannize and their selfish disregard of justice. He was exceptionally alive to their readiness to domineer over minorities; hence, he powerfully advocated the principle of parliamentary proportional representation. Thus alone, he thought, could minorities of electors get their rights. He saw the people's jealousy and suspicion of the educated and refined classes of society; hence, he stood fast by the principle of plurality of votes, as determined by culture and social position. He was very sensitive to the tendency in the masses to act unscrupulously and in an underhand fashion; therefore he opposed vote by ballot.

On the other hand, he was a strong upholder of the liberty of the individual; and he gave a powerful defence of individualism in his treatise *Liberty*—a defence of the right of the individual to hold his own opinions and to give free expression to them, and his right to live in such a way as seemed fit to himself, so long as his mode of living did not interfere with the rights and liberties of others. In the same spirit, though he was quite alive to the necessity of the government dictating and controlling within limits, and, therefore, restricting the liberty of the individual to that extent, he thought that the less government interfered the better: his legislative principle, with necessary qualifications, was *laissez-faire*.

Another object that lay near to Mill's heart was that of women suffrage. His book on the subject has exhausted the handling of the theme from that point of view. But he added active support to theory by consistently advocating universal franchise in parliament, and by pushing on and personally guiding the Women Movement in London and the provinces.

The problems of the universe were constantly in Mill's thoughts. He puzzled himself long and anxiously over the question of the freedom of the will, and ultimately reached the deterministic solution that has just been referred to. The nature of the external world and of the human ego also exercised his mind; and his doctrine of 'psychological idealism' was the result. But there still remained the problem of God. With the conception of the Deity as 'the Absolute,' unknown and unknowable, to whom no attributes (such as knowledge, mercy, and love) could be applied, he had no sympathy. His criticism of H. L. Mansel's view, as set forth in his Bampton Lectures on *The Limits of Religious Thought* (London, 1870), is scathing and effective. But Mill's thought on the great theme is best given in his supremely interesting posthumous *Essays*. His honesty of character and his 'indifference to truth' (as Locke would express it) here come out in a very striking fashion. Discouraged from theistic thinking by his father in his early training, and not encouraged to it by his utilitarian friends and fellow-thinkers in after life, he yet had that openness of mind that

would willingly receive truth to whatever extent it might reveal itself. He fain would have been optimistic in his view of the universe, but he could not; and the most that he could do was to allow a conception of God that conserved His goodness but limited His power. In face of our harrowing experience of Nature 'red in tooth and claw with ravin' and of the unutterably hard and harsh experiences of life in general, he could not rise to the idea of a Great Power who was All-loving, Omniscient, and Omnipotent. But he was willing, or, at any rate, not unwilling, to believe in a Power of Goodness or of Love who would, if He could, subdue evil and put an end to suffering and misery and was only hindered by the recalcitrant circumstances of the world. This admission, combined with his admiration of Jesus of Nazareth as the highest of ethical teachers, shows his power of detachment from early upbringing and from immediate social environment, and his readiness to respond to the light whenever it came. This was the noblest trait of his character.

Mill's nature was, in many ways, an attractive one, characterized by high and sterling qualities. He was generous in his outlook and sympathetic with men in their struggles, aspirations, and doubts. He was eager to be fair in his estimate of others and of their opinions, and always ready to admit that there is likely to be some truth in every doctrine and belief that has been sincerely held; there was nothing of the persecutor in him. His disinterested regard for truth was unbounded; and he took little care to cloak or hide unpalatable opinions, but expressed himself freely without regard to personal consequences. He delighted in championing persons and causes that he conceived to be unjustly treated by society or by the law of the land. His public spirit was intense; and he never feared to attack legislative or other injustices, and to uphold unpopular views, in the interest of the working classes or of the down-trodden. His life was consistently devoted to one end—furtherance of the good and welfare of his fellow-men.

WILLIAM L. DAVIDSON.

MILLENNIUM.—See ESCHATOLOGY.

MILTON—I. Life.—John Milton was born in London at the Spread Eagle in Bread Street, Cheapside, on 9th Dec. 1608. He was the eldest son of John Milton, a London scrivener, whose conversion to the faith of the Anglican Church had led to his being disinherited by his father, a yeoman of Shotover Forest and a staunch Roman Catholic. The poet inherited the stubborn self-will of his grandfather and the more sensitive and cultured spirit of his father, from whom he also derived his taste for music. From the first the boy was studious, and his father supplied him with the best teachers. When in 1625 (Feb. 12) he entered Christ's College, Cambridge, at the age of sixteen, he had already acquired, under his first tutor, Thomas Young (a graduate of

St. Andrews), and at St. Paul's School, under the older and the younger Alexander Gill, a mastery of Latin, a competent knowledge of Greek, and even some acquaintance with Hebrew. 'From the twelfth year of my age I scarce ever forsook my nightly studies for bed before midnight' (*Defensio Secunda*, 1654). In English poetry he was familiar with Joshua Sylvester's translation of Du Bartas (1605), Fairfax's *Tasso* (1600), and probably Spenser, Drummond, and others. The older Gill was a reader of English literature, but probably Shakespeare and play-books were not welcomed in a religious family like that of the scrivener's, where 'last of all, not in time, but as perfection is last, that care was ever had of me, with my earliest capacity, not to be negligently trained in the precepts of Christian religion' (*Apology for Smectymnus*, 1642). Milton was not attracted by the dialectical and theological studies of Cambridge. The lines *At a Vacation Exercise* and some Latin pieces show that he took his part in the prescribed work, but his favourite studies were literary and classical, 'grave orators and historians,' the 'smooth elegiac poets,' from whom he passed in 'riper years' to 'the shady spaces of philosophy; but chiefly to the divine volumes of Plato and his equal [*i.e.* contemporary] Xenophon.' To a knowledge of the classical poets he added now the Italians, 'the two famous renowners of Beatrice and Laura,' the 'lofty fables and romances' of Boiardo and Ariosto (*Apology for Smectymnus*, Intro.). On the world of mediæval romance Milton looked out through Italian windows, but he was familiar (later, at any rate) with Geoffrey of Monmouth and probably with Malory. The poems of this period, both English and Latin, bear witness to the double source of Milton's poetic inspiration—classical literature and the Biblical Christianity of Puritan England. The finest expression of these, not always entirely compatible, tastes is the tender (an epithet so rarely applicable to Milton's poetry) and beautiful ode, *On the Morning of Christ's Nativity* (1629); while some lines of the *At a Vacation Exercise* and the short odes, *On Time* and *At a Solemn Music*, show the poet of *Paradise Lost* 'mewing his mighty youth' and meditating the sublimest flights of religious song:

'Yet I had rather, if I were to choose,
Thy service in some graver subject use,
Such as may make thee search thy coffers round,
Before thou clothe my fancy in fit sound—
Such where the deep transported mind may soar
Above the wheeling poles, and at Heaven's door
Look in, and see each blissful deity,' etc.

(*At a Vacation Exercise*, 29 ff.).

Milton left the University in 1632 without taking orders, and the next six years of his life were spent at Horton in the quiet prosecution of his studies in classical literature, history, mathematics, and music, with occasional visits to London to purchase books, to visit the theatre, to be an onlooker perhaps at Court ceremonials,

'Where throngs of knights and barons hold

In weeds of peace high triumphs hold' (*L'Allegro*, 119 f.),

and to enjoy the company of friends, among whom the first place was held by Charles Diodati. A young Italian girl, too, of whom we know only that her first name was Emilia, seems to have touched his fancy and occasioned the writing of his earliest Italian verses. The experience is perhaps referred to in the seventh of his Latin elegies. During these years he also extended his knowledge of English poetry from Chaucer and *Piers Plowman* to Shakespeare (at Cambridge he had already written his famous lines for the second folio), Jonson, and the later Elizabethans. All the poems written at this period bear witness to this native and Elizabethan influence, and some of them, as *L'Allegro* and *Il Penseroso*, are composed in a lighter, more secular and Epicurean vein than

any English pieces (some of the Latin elegies are very much in this vein) had been or were ever again to be written by Milton. But in *Comus*, or *A Maske Presented at Ludlow Castle* (1634), which he composed at the invitation of Henry Lawes, all the resources of Milton's learning and art were employed to set forth his deepest ethical and religious convictions, his passionate love of purity, his sense of the dependence of all human virtue on the protecting grace of God. The theme of the second book of the *Faerie Queene* is rehandled by a poet of a higher moral temper and a no less, though more controlled and classically educated, sense of beauty.

Milton had gone to Cambridge with a view to taking orders, and, though he left without doing so, there is no evidence that he had ceased to be, when he settled at Horton, an orthodox Anglican. He was a communicant; he had signed the Articles; nothing had yet betrayed that he was by conviction a Presbyterian in his views on Church government; while on the doctrine of predestination in its relation to the human will his position was always closer to that of the Arminians than to that of the Calvinists. What alienated Milton from the Church of England was less its dogma than its practice, the rigour of Laud and the identification of Episcopacy with the Court and its arbitrary policy. His intense and ideal love of liberty was awakened, and the first notes of the coming storm were heard in *Lycidas* (1638), the most passionate, plangent, and musical poem which Milton had yet written. In the same year he went abroad, still intent rather on self-culture and the preparation for the task of writing a great poem than on controversy and theology. In Paris he met the Dutch savant Hugo Grotius, whose *Adamus Exul* was one of the sources of *Paradise Lost*. He spent two months in Florence, conversing and interchanging Latin and Italian verses with young Academicians. He proceeded to Rome, where he visited the Vatican Library and the English College, and heard Leonora Baroni sing at the palace of Cardinal Barberini. The elevated strain of compliment in the Latin verses addressed to her betrays the influence of Italian preciosity. At Naples he met Manso, Marquis of Villa, Tasso's patron and Marino's, and in a Latin poem addressed to him prays that he may find a like patron when he undertakes to sing of

'reges,
Arturumque etiam sub terris bella moventem,
Aut dicam invictae sociali foedere mensae
Magnanimos Heroes, et (O modo spiritus adsit!)
Frangam Saxonicas Britonum sub Marte phalanges!'
(*Sylva*, 'Mansus,' 80 ff.).

But Milton was not destined to sing of kings or the knights of the Round Table. The meeting of the Long Parliament determined him to return home, and he made his way back to England by Venice and Geneva to plunge soon into that long course of controversy, ecclesiastical and political, which determined the choice of themes, the doctrinal framework, and the temper and spirit of *Paradise Lost*, *Paradise Regained*, and *Samson Agonistes*.

The first of the controversies into which Milton plunged with ardour and vehemence was that concerning Church government, and the rival claims of a Presbyterian and Prelatical organization. In the first pamphlet, *Of Reformation in England* (May–June 1641), he raises the question why the English Reformation had lagged behind that on the Continent and attacks Episcopacy and English bishops and their 'policy' from Cranmer and Ridley to the promoters of the war with Scotland, closing with an amazing denunciatory prayer. *Of Prelatical Episcopacy* (June–July 1641) is an examination of the origin of Episcopacy in reply to a

tract by Archbishop Ussher. Of the other pamphlets two, *Animadversions upon the Remonstrant's Defence against Smectymnus* (July 1641) and *An Apology against a Pamphlet called a Modest Confutation of the Animadversions of the Remonstrant against Smectymnus* (March–April 1642), were contributions to a controversy on Episcopacy between Hall and certain now little-known Puritan divines, of whom Thomas Young was one. The most fully reasoned and interesting statement of Milton's ideal Presbyterianism is contained in *The Reason of Church Government urged against Prelaty* (Jan.–March 1641–42). Two undercurrents of thought run through the main stream of controversy, rising to the surface from time to time, the one with unmistakable and eloquent distinctness, the other with less obtrusive yet sufficient clearness. The first of these concerns the great poem which he was meditating; the other shows him full of high thoughts concerning the mysteries of love and marriage. The Puritan movement had heightened men's ideals both of purity and of marriage, and Milton was as impassioned a champion of chastity as he was an enemy of asceticism. Love had touched his fancy in youth, but, when in May 1643 he married, it was clearly the act of one whose choice of the individual was too hastily determined by an ideal regard for the wedded estate; and the result was, what, as Milton himself complains, is more often the fate of the chaste and unworlly student than of the libertine, the discovery that in the wife whom he had chosen was to be found none of the qualities that he had so fondly anticipated, no intellectual help-meet, but an 'unconversing inability of mind,' 'a mute and spiritless mate,' begetting 'that melancholy despair which we see in many wedded persons' (*Doctrine and Discipline of Divorce*, i. 4). Others have experienced the same misfortune and in the end have managed to work along; but Milton was no average man, and he turned passionately round to discover an escape, and that one which should enjoy the approval of his own conscience and the Christian Church. *The Doctrine and Discipline of Divorce Restored* (Aug. 1643) was written and published (anonymously and without licence) before his wife had given any definite ground for separation. An enlarged and improved edition appeared in February 1644 with a signed introductory letter to 'the Parliament of England with the Assembly.' A second tract, *The Judgment of Martin Bucer concerning Divorce*, followed in July of the same year, vindicating Milton's position against critics; and to the same end he issued in March 1645 *Tetrachordon*, a discussion of four passages in Scripture, and *Colasterion*, a savage onslaught upon a certain Joseph Caryl, one of the licencers. Incidentally the divorce controversy called forth the most famous of Milton's pamphlets, *Areopagitica*, *A Speech . . . for the Liberty of Unlicensed Printing* (Nov. 1644).

The outcry which the divorce pamphlets evoked opened Milton's eyes to the interval that separated his ideal Church from the Presbyterian Church which its votaries were seeking to invest with all the divine right and intolerant authority of the overthrown Episcopal Church of England, and helped him to formulate his own conception of Christianity as independent of any visible and authoritative Church. He never, therefore, identified himself with the Independents, but from this time to the close of the Commonwealth his sympathies were with that party in politics; and, when the death of the king completed the rupture between them and the Presbyterians, Milton came forward as the champion of regicide and the impugner of all connexion, whether of authority or endowment, between Church and State.

On 13th February 1649—a fortnight after the execution of Charles—appeared *The Tenure of Kings and Magistrates*, 'proving that it is lawfull, and hath been held so through all Ages, for any who have the Power, to call to account a Tyrant or wicked King, and after due conviction to depose and put him to death, if the ordinary Magistrate have neglected, or deny'd to do it. And that they who, of late, so much blame deposing are Men that did it themselves.' The sting in the tail of this bold title is intended for the Presbyterians, who are roughly handled throughout as hypocrites and revolvers from their own principles. The *Eikonoklastes*, of the same year, follows chapter by chapter the *Eikon Basilike* in Milton's most scornful style. To Salmasius and other impugnors of the King's execution Milton replied in his first and second *Defensio pro populo Anglicano* (1651, 1654). The *Defensio contra Morum* (1655) was a savage onslaught on one who, he believed, had slandered himself. His last purely political pamphlet, the *Ready and Easy Way to Establish a Free Commonwealth* (March 1660), was published on the eve of the Restoration.

That conception of the Church's influence and authority as purely spiritual which is evident in Milton's first sketch of an ideal Presbyterianism, and had been intensified by his rupture with the Presbyterians, led him to disapprove of Cromwell's attempt to combine religious endowment with a wide though still limited toleration; and his own position was expounded in the *Defensio Secunda* (in the middle of a eulogy of the Protector and his associates) and, after Cromwell's death, in *A Treatise of Civil Power in Ecclesiastical Cases* (Feb.–March 1659). When the Rump superseded Richard Cromwell and the question of tithes was raised, Milton published his *Considerations touching the likeliest Means to remove Hirelings out of the Church* (Aug. 1659), a bitter onslaught on the clergy, Presbyterian or Independent, who claimed tithes or fees instead of trusting to the 'benevolence and free gratitude' of their flocks. Milton's last religious works were the short pamphlet *Of True Religion, Heresy, Schism, and what best Means may be used against the Growth of Popery* (1673) and the body of divinity *De Doctrina Christiana*, on which he had been busy for many years, but which was not printed till 1825.

Throughout the rule of the Commonwealth Milton's life had been the twofold one of a private student and tutor (to children living in or coming to his house) and of a servant of the State as Latin secretary to the Council of State (1649–59). The incidents of his private life are few. In 1653 his wife died, and in 1656 he married Catharine Woodcock, whose early death in 1658 is referred to in the most touching of his sonnets. His marriage with Elizabeth Minshull in 1663 was a convenient arrangement.

During all these years Milton had written very little poetry. From 1640 to 1642 his mind had been full of his great projected work, and the commonplace-book preserved at Trinity College, Cambridge, shows the steady trend of his thoughts towards a drama on the subject of the Fall. Two sketches of the drama are set down, and his nephew, Edward Phillips, reports that the speech of Satan at the opening of the fourth book of *Paradise Lost* is part of the original scheme. The interest of controversy and the shock of his unhappy marriage interrupted the work and it was not resumed till 1658. In the interval the only English poems which Milton wrote were some sonnets on public events or persons and private incidents in the dignified manner of his Italian predecessors in similar poems, and in Italian form, for even the device of running the sense on from octave to sestet (which has been

thought a device peculiar to himself) had been practised by Italian poets known to Milton. In 1658 *Paradise Lost* was resumed in epic, not dramatic, form; was composed to dictation, corrected, and completed by 1665; and published in 1667. It was followed in 1670 by *Paradise Regained*, an epic on 'the brief model' of the book of Job, and *Samson Agonistes*, Milton's sole experiment in those 'dramatic constitutions wherein Sophocles and Euripides reign.'

2. *Thought and works.*—Of Milton's early poems no more need be said here. Apart from their rare poetic beauty they bear delightful witness to the delicate purity and profound piety of the poet's childhood and youth, combining in an effect of unique and too transitory loveliness literary and classical culture with the finer spirit of a Puritanism which was not yet heated and hardened by the fires of religious and political controversy. The purpose of the present article is to outline the creed of Milton as it took shape in the years of storm and stress which followed his return to England and to consider the reflexion of this creed, and the temper which it at once expressed and intensified, in his longer poems.

In his earliest pamphlets Milton ranges himself on the side of the Presbyterian reformers of the Anglican Church. The Scriptures are the sole authority for the right government of the Church, which is not a matter that has been left to human discretion and experience to devise. God, who shaped to its minutest detail the government and worship of the Jewish temple, 'should he not rather now by his own prescribed discipline have cast his line and level upon the soul of man which is his rational temple, and, by the divine square and compass thereof, form and regenerate in us the lovely shapes of virtues and graces, the sooner to edify and accomplish that immortal stature of Christ's body which is his church, in all her glorious lineaments and proportions?' (*Reason of Church Government*, i. 2). But the NT recognizes only two orders, bishops or presbyters (they are the same thing) and deacons—so Paul writes to Timothy ('not once naming any other order in the Church'). Prelacy is an addition of man's devising and ambition ('Lucifer . . . was the first prelate angel') opposed to 'the reason and end of the gospel' (*ib.* i. 3 ff.).

But, when Milton came to state the respect in which Episcopal jurisdiction opposes the reason and end of the gospel, he parted company at once (how far consciously it is hard to say) with his Scottish and English sympathizers, and with the actual practice of dominant Presbyterianism. For his objection to Episcopal jurisdiction is the, for Milton, fundamental principle 'that jurisdictional power in the Church there ought to be none at all.' His objection is to the archidiaconal courts with their penalties and fines, and the Star Chamber. Over the outward man, person, and property, authority belongs to the State, which is not concerned with inner motives but with 'the outward peace and welfare of the commonwealth, and civil happiness in life' (*ib.* ii. 3). The authority of the Church is over the inward and spiritual man, and her sole weapons are instruction, admonition, reproof, and, finally, excommunication, the last to be so used as always to keep open the door of reconciliation to repentance. The motive to which the Church appeals is not terror, but shame, 'the reverence and due esteem' in which a man holds himself 'both for the dignity of God's image upon him and for the price of his redemption which, he thinks, is visibly marked upon his forehead,' making him account 'himself a fit person to do the noblest and godliest deeds, and much better worth than to deject and defile, with such a debase-

ment, and such a pollution as sin is, himself so highly ransomed and ennobled to a new friendship and filial relation with God' (*ib.*). Such a conception of Christian conduct as springing from a man's sense of his own worth, a worth conferred by God from the beginning and renewed by redemption, is as characteristic of Milton, nurtured on the Bible but nurtured also upon the classics, as it is alien to the general trend of Protestant thought in Milton's England, which laid more stress on man's worthlessness than on his worth, and appealed less to shame as a motive than to fear of death and the judgment to come. Bunyan and Milton are separated by a wide gulf; and the noble temper of Milton's early lines *On Time* shows as little of Ronsard's or Shakespeare's regretful sense of the ravages of 'Time's fell hand' as of such a preacher as Donne's awed apprehension of the terror and the ecstasy of the Christian's death. And the idea of a Church whose authority is purely spiritual is even more remote from the thought and practice of Presbyterianism in power whether in Geneva, Holland, or Scotland. It was not to promote general toleration that the Scottish Presbyterians signed the Solemn League and Covenant.

Milton was quickly made aware of the interval that separated him from the Presbyterians by the publication of his pamphlets on divorce. The opposition which they excited seems to have taken him by surprise, but the anger which followed was intense and coloured all his subsequent thought. Repelled by Protestant orthodoxy—though he maintained strenuously that some of the greatest Protestant divines were on his side—he was driven to reconsider the whole question of orthodoxy; and he set out, with all the confidence of Satan voyaging across the 'wild abyss' of chaos, to articulate a creed for himself in the dogmatic manner of Trent and Westminster. The record of this progress is to be found in the controversial pamphlets, the elaborate *De Doctrina Christiana*, and, finally, in *Paradise Lost* and *Paradise Regained*.

Two principles control all Milton's findings. The first is that the ultimate arbiter of every question is the individual reason and conscience 'than which God only is greater.' The mind of each man is absolutely free to try all things and hold fast by his own conclusions uncontrolled by State or Church. This liberty is 'the fundamental privilege of the Gospel, the new birthright of every true believer, Christian liberty' (*A Treatise of Civil Power*, etc., also *De Doctrina Christiana*, Dedicatory Epistle). No one could assert more absolutely the fundamental principle of the Renaissance—the emancipation of the individual; and Milton approaches the solution of each question in the spirit of the later age of reason, with this difference that he accepts as a fundamental experience not to be reasoned upon—more than one can reason upon the fact of an external world—the Christian consciousness of sin and of redemption and regeneration through Christ as set forth in the Scriptures. This directs us to the second of the principles on which Milton's conclusions rest. The final source of all saving religious knowledge is the Bible. It is on this that the emancipated mind must exercise itself, from this its conclusions must be drawn. Milton's method, therefore, in discussing every question which he takes up, from the divinity of Christ to the liberty of the press, is twofold when the subject admits of both lines of argument: firstly, what does reason declare?—and Milton is as confident of the competence of a *priori* reasoning on political and social questions as any later theorist of revolution; secondly, what has Scripture declared, to what conclusion does it lead us when

different passages are duly compared and when all are interpreted in the light of the Christian law of charity, in the spirit of the words 'the sabbath was made for man, and not man for the sabbath'? The one consideration to which Milton never condescends is expedience, the difficulties and the practical means of obviating these revealed by experience; he has none of Burke's reverence for 'prudence constituted as the god of this lower world.'

Milton's polemical pamphlets are, accordingly, a bewildering blend of ideal reasonings, high *a priori* principles set forth in glowing and harmonious but elaborately Latinized periods; a pedantic, at times captious and wrong-headed, citation and cross-examination of Biblical texts; truculent polemic, condescending not infrequently to coarse personal abuse; and withal a general absence of the mellower wisdom that proceeds from experience and charity. There is much to inspire and delight in these pages burning with fires that are perhaps not yet altogether extinct but in general have died down; there is little to interest the statesman. If Milton's pamphlets yet live, it is as eloquent statements of high and abstract ideals, to ignore which altogether is to reduce political expedience to sheer opportunism.

The divorce pamphlets have nothing to say upon the difficult problems of children and the mutual relations of the family and the State. They combine elevated reflexions on the ideal significance of marriage as a spiritual rather than a carnal union (regarded solely from the point of view of the man) with a tedious, passionate, wrong-headed attempt to reconcile Christ's prohibition of divorce 'but for adultery' with Moses' permission. God cannot have at any time permitted sin. The later command cannot have been intended, therefore, to annul the earlier, but merely to check certain prevalent abuses. Milton was not without apprehension of the fact of moral and religious progress. He went beyond the English Protestantism of his day in asserting that under the new dispensation the Mosaic moral as well as ceremonial law had been abolished. But the new law was, he maintained, a law of liberty, of greater responsibility because of greater freedom. Such a rigid law of marriage as the Churches asserted was a curtailment of the liberty which even the Law had granted, a fresh enslavement of the spirit to the letter. Looking at the question exclusively from the man's point of view, he advanced to an assertion of divorce as the private concern of the individual and to a defence of polygamy (*De Doctr. Christ.* i. 10).

The *Areopagitica* was an overflow from the divorce controversy, and is a magnificent *a priori* vindication of freedom of thought and speech as the fundamental condition of the successful quest of truth. The practical difficulties which have beset the attempt to find a solution, other than a compromise varying in different countries, lay outside Milton's ken; nor could he foresee all the evils that have attended the freedom allowed to a Chauvinist or a commercial press to deceive and to pervert.

The same lofty but *a priori* idealism combined with exposition of texts and interchange of personalities characterizes the pamphlets, Latin and English, written to vindicate the execution of Charles I., and those on, what became his favourite themes, an unendowed clergy and a universal toleration of all religious bodies, the Roman Catholic Church alone excluded. Of the original and inalienable rights of subjects and the duties and responsibilities of kings Milton writes with all the passion of a mind nurtured upon

classical republicanism and OT history, and heated by the fires of civil war:

There can be slain
No sacrifice to God more acceptable
Than an unjust and wicked king'
(Seneca, *Hero. Fur.* 992, tr. in *The Tenure of Kings and Magistrates*).

The doctrine of the civil contract is buttressed by precedents from the turbulent annals of Israel, the early history of the Britons, the rebellions in Scotland and Holland. Of the real difficulties of the problem, as Hobbes saw them, of the fact that somewhere in every society there is and must be an authority against which no rights can be pleaded, Milton shows no suspicion. He was at work recasting with the utmost confidence the government of England at the moment of the Restoration. His sympathies were aristocratic: the best should rule. Of the difficulty of securing this he knows nothing. Hooker's claim for a divine sanction attaching to usage and expedience is spurned by Milton's contempt for tradition, confidence in *a priori* reasoning, and conception of the Bible as the sole oracle of God, of authority in all fields of thought and experience. His Latin orations and English pamphlets on the issue between parliament and king made no enduring contribution to the political thought of the 17th century.

Milton's denunciation of an endowed clergy—a subject on which he found himself at variance with his hero Cromwell—and his claim for complete tolerance of all religious differences of opinion were the natural outcome of that conception of the purely spiritual character of ecclesiastical authority with which he set out, of his growing dislike of the Presbyterian clergy and their claim to usurp the privileges and intolerance of their Anglican predecessors, and of the purely individualistic character of his philosophical Christianity. From rejecting ecclesiastical discipline and authority Milton was driven onward by a ruthless logic to the denial that any regard is due, in religion or ethics, to the collective consciousness of Church or society. Yet without such collective consciousness, however imperfectly developed, is either religion or morality possible? For Milton every man is his own Church; his creed the product of his own study of the inspired text. The true heretics are those who follow a Church against their conscience and their convictions based on Scripture. Congregations of like-minded men, meeting to worship together, Milton seems to assume there will always be; but for the service of a clergy, except to teach the young and to exhort the careless, there is no need.

'If men be not all their life-time under a teacher to learn logic, natural philosophy, ethics or mathematics, which are more difficult—certainly it is not necessary to the attainment of Christian knowledge that men should sit all their life long at the feet of a pulpit divine' (*The likeliest Means to remove Hirelings*).

Let there be a voluntary, simple, itinerant clergy living by the labour of their hands and the free-will offerings of the richer congregations.

This conception of Christian doctrine as something as definable and demonstrable as mathematics (but easier of comprehension) is crucial for a right apprehension of what Milton was in quest of throughout these years of theological and political polemic—that justification of God's ways to men which was to be the theme of his great poem. For a study of that thought as finally articulated we must go to the *De Doctrina Christiana*. 'Joannes Milton Anglus Universis Christi Ecclesiis Necnon Omnibus Fidem Christianam Ubicumque Gentium Profitentibus' are the dedicatory words of the MS in which was set down the creed of the Church of John Milton, the final result of his resolve to have done with traditions and definitions, councils and assemblies, and to formulate for himself,

from a study of the text of Scripture, a complete and articulate body of divinity and morality.

The creed so formulated is, as might have been anticipated, at variance in essential respects with the creed both of orthodox Protestantism and of historical Christianity. Milton's faith might be described as Protestant Christianity accommodated to the spirit of the classical Renaissance, for the points on which Milton stands most resolutely aloof from orthodox Calvinist Protestantism are just those in which the latter seemed to compromise the dignity and liberty of the human mind which the Renaissance had re-asserted.

In this respect Milton's Arianism, though the most startling, is not the most important of the dogmas which he formulates. Yet it reflects the poet's temperament, and is in harmony with the religious tone of the two epics. The doctrine of the divinity of Christ regarded on its psychological side is the expression of the transcendent worth ascribed by the Christian consciousness to the personality and life of Jesus; it is the intellectual expression of a passionate devotion. Milton's reverence for the 'author and finisher' of the Christian faith is sincere and profound, but it is not animated with the ardent flame of love which throbs in Dante's *Divina Commedia* or Bunyan's *Pilgrim's Progress* or Thomas à Kempis' *Musica Ecclesiastica*, or many others of the great distinctively Christian works of feeling and imagination. A high and austere monotheism is of the innermost texture of Milton's soul.

The same high, not to say proud, soul is revealed in Milton's refusal to accept the Calvinist doctrine of predestination and the complete corruption of man's soul after the Fall—his refusal to sacrifice the reality of human freedom, the intrinsic worth of human nature. Predestination, he declares, extends to election only, not to reprobation. It did not determine man's fall, but the means of his redemption, since God foresaw that of his own free will man would fall:

'For man will hearken to his glozing lies,
And easily transgress the sole command,
Sole pledge of his obedience: so will fall
He and his faithless progeny. Whose fault?
Whose but his own? Ingrate, he had of me
All he could have; I made him just and right,
Sufficient to have stood, though free to fall.'
(*Paradise Lost*, iii. 93 ff.).

The redemption purchased by Christ is in the same way freely offered to all, not to an elect, predestined number. To all, God gives grace, 'though not in equal measure yet sufficient for attaining knowledge of the truth and final salvation':

'for I will clear their senses dark
What may suffice, and soften stony hearts
To pray, repent, and bring obedience due.
To prayer, repentance, and obedience due,
Though but endeavoured with sincere intent,
Mine ear shall not be slow, mine eye not shut' (ib. 188 ff.).

Nor—and here again Milton diverged from orthodox Protestantism—is all apprehension of and aspiration after good extinguished in man as a result of the Fall. The result, indeed, of Adam's sin is not only guilt but spiritual death, which is 'the obscuration to a great extent of that right reason which enabled man to discern the chief good,' 'that slavish subjection to sin and the devil which constitutes, as it were, the death of the will.' Yet the divine image in man's soul is not wholly extinguished.

This is evident, not only from the wisdom and holiness of many of the heathen, manifested both in words and deeds, but also from what is said Gen. ix. 2 *the dread of you shall be upon every beast of the earth*, v. 6. *whoso sheddeth man's blood by man shall his blood be shed*, for in the image of God made He man. These vestiges of original excellence are visible, first, in the understanding Ps. xix. 1 *the heavens declare the glory of God*; which could not be if man were incapable of hearing their voice. . . . Nor, secondly, is the liberty of the will entirely destroyed (*De Doctr. Christ.* i. 12 [Sumner's tr.]).

Man retains sufficient liberty at least to en-

deavour after righteousness, at least to make him responsible for his sins, though its power is so small as to afford him no subject for boasting.

In accordance with the same high regard for the will, for conduct as the test of a living religion, Milton refuses to accept the orthodox distinction of faith and works and the ascription of justification to the former alone. In the text 'A man is justified by faith without the deeds of the law' (Ro 3²⁸), he insists that stress must be laid on the words 'of the law.'

For Paul does not say simply that a man is justified without works, but without the works of the law; nor yet by faith alone, but "by faith which worketh by love," Gal. v. 6. Faith has its own works which may be different from the works of the law. We are justified therefore by faith, but by a living not a dead faith; and that faith alone which acts is accounted living. James i. 17, 20, 26' (ib. i. 22).

The same spirit makes Milton assert more completely than the Westminster Confession the liberty of the Christian under the new dispensation. It is not the ceremonial law alone that is abolished, but the entire Mosaic law, including the Decalogue (ib. i. 28 f.), the place of which is taken by a higher law 'written not in tables of stone, but in fleshy tables of the heart,' the law of love given in our Lord's words, 'Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbour as thyself' (Lk 10²⁷). In the Decalogue is included the Fourth Commandment (ib. i. 10, ii. 7), on which English Puritanism laid so much stress. In his first pamphlet Milton had joined in the general condemnation of the Book of Sports and its instigation to 'gaming, jiggling, wassailing and mixed dancing' on 'that day which God's law, and even our reason, hath consecrated.' But in *The likeliest Means to remove Hirelings*, 'the seventh day is not moral, but a convenient recourse of worship in fit season, whether seventh or other number.' Our rigid observance is an unnecessary cause of separation from the Reformed Churches of the Continent. The argument (e.g., of the Westminster Confession) that the Jewish law of the Sabbath had been transferred intact to the first day of the week is invalid (*De Doctr. Christ.* ii. 7).

'Under the gospel no one day is appointed for divine worship in preference to another, except such as the church may set apart of its own authority for the voluntary assembling of its members, wherein, relinquishing all worldly affairs, we may dedicate ourselves wholly to religious services as far as is consistent with the duties of charity' (ib.).

Such are some of the most important divergences of Milton's creed from the creed of the Protestant Churches around him. Of this creed *Paradise Lost* and *Paradise Regained* are the poetical setting forth. Like the *Divina Commedia*, the *Paradise Lost* is not primarily an epic, but a didactic exposition of a theological creed; and, as all the details of Dante's creed may be discovered in the *Summa* of Thomas Aquinas, so Milton's conception of God, of Christ, and of the angels and devils is that which he has set down more drily in the *De Doctrina*; and the purpose which Milton declares he has in view—

'To justify the ways of God to men'—

is theologically conceived. His poem is not an attempt to reconcile the heart and the imagination to truths already accepted. It is a restatement in poetic form of these doctrines in such a way as will finally justify God and indict man. 'Therefore thou art inexcusable, O man, whosever thou art that judgest' (Ro 2¹).

Looked at steadily from this point of view, it cannot justly be said that *Paradise Lost* will bear comparison with the *Divina Commedia* or the *De Natura* of Lucretius. Take away from either of these poems the high purpose that shines through them, and half their beauty is gone. It is its symbolic, mystic character that gives sublimity to

every detail of Dante's heaven and hell. Few today read *Paradise Lost* with any desire to discover Milton's creed, or, if they do, will accept with any conviction, any such willing suspension of criticism as it is the function of poetry to beget, his justification of God's way to men, this stern and harsh rendering of Paul's 'as in Adam all died.' The time is past in which Milton's poem was read almost as if it were the Bible itself, the poetic presentation of those momentous events as if they actually occurred, to judge of the justice or injustice of which was forbidden. Now we can see that the epic form and the spiritual intention of the poem are not capable of being harmonized. The poem is held together from the first line to the last by the miracle of Milton's style—a veritable 'cloth of gold' encrusted with all the barbaric spoil of his multifarious learning—and by the miracle of his verse harmonies. But, when we look beneath this dazzling surface, we see that the unity is not so complete as we imagined, that a magnificent epic story is troubled and rendered abortive by the cramping theological purpose. All that is greatest in *Paradise Lost* is the product of Milton's creative, mythopoeic faculty working as freely on the scanty material of Biblical record and ecclesiastical tradition as did Homer or any primitive poet when shaping and embroidering popular myths. But the result has nothing in it that is essentially Christian. The splendid scenes of the opening books—Satan and his companions debating in hell, Satan voyaging through chaos or descending through the heavenly bodies in the first freshness of their creation, the scenes in Eden, the wars in heaven—these might be fragments from the primitive myths of some forgotten religion, and perhaps nowadays we should read them with greater and less troubled interest if we might do so without the necessity of a reference to our own religious traditions and feelings, without having to ask ourselves 'Is this our God? Is this the Second Person of the Trinity?' For, as Milton approaches his proper theme, in the theological disquisition in heaven, in the story of the Temptation and what follows, we cannot but feel, despite frequent beauties, a steady subsidence of the creative power of the opening; the didactic displaces the epic poem. The magnificent promise of the opening books seems to be unfulfilled. The great characters there brought upon the stage achieve nothing. Even the Satan of the Temptation strikes us as not quite the Satan of the first and second books, of whose dauntless, passionate soul we should have expected some action larger, more magnificent, than this rather over-elaborately treated temptation of a not too wise woman. The simple Bible story will not adapt itself to the classical epic treatment. The large, creative movement of the earlier episodes is lost as the poet feels himself confined by the original story and the didactic purpose.

The harmonizing of story and didactic is better achieved in *Paradise Regained*, Milton's epic on the 'brief model' of the book of Job; but it is so because the didactic and argumentative strain is, as in Job, dominant throughout. The poem is a finely wrought presentation of Milton's ideal Christian virtues, obedience, temperance, and the scorn of worldly glory. But, beautiful poem as it is, austere in spirit and chaste yet rich in texture, there is none of the wonderful creative power of the great episodes and characters in the longer poem; and its austerity of tone marks its limits as a religious poem, for obedience, temperance, and unworldliness are Christian virtues only as they flow from or lead to charity, and but little of the radiance of Christian love illumines and warms this severe and stately poem.

The passion which sleeps under Milton's austerest

lines flowed forth like a flood of lava in the work which closed his career. *Samson Agonistes* has the rare interest and beauty of the personal passages in *Lyndas* and *Paradise Lost*. Unfettered by Scriptural details or didactic purpose, Milton pours into the artificial mould of classical tragedy all the passionate feeling with which he reviewed the course of his own life and the history of the cause with which he had identified himself so wholeheartedly. The never-closed wound of his first marriage, the loss of his sight, the defeat of the high hopes which he had conceived for his country as a chosen people, a Kingdom of God on earth, the triumph of the hated prelates and the despised

sons
Of Belial flown with insolence and wine'—

all found utterance in the severely moulded lines and choruses of this tragedy, not a lament, as Treitschke called it, but the last utterance of Milton's indomitable will, that unshakable self-confidence which he called faith in God—a fitting close to the career of the loftiest soul among English poets:

'Samson hath quit himself
Like Samson, and heroically hath finish'd
A life heroic' (*Samson Agonistes*, 1709 ff.).

Of Milton's supreme greatness as a poet there is no question. In sustained loftiness of soul, elaborate magnificence of language, and mastery of varied cadences he has no superior. His works have become the touchstone of poetic taste, for, unless a reader has an ear and taste for the technique and music of poetry, he may not find much to attract him in Milton; if he does, he will find endless delight. To the question whether he is also to be considered a great Christian poet a more modified answer must be given. A study of his articulated creed bears out the impression communicated by his poetry that Milton's was not an *anima naturaliter Christiana*. His was rather the soul of an ancient Stoic, blended with that of a Jewish prophet, which had accepted with conviction the Christian doctrine of sin and redemption. The spirit of his poetry wants two of the most distinctively Christian notes—humility and love. Milton's soul was as proud as Dante's; he was less conscious of the failing (*Purg.* xiii. 186 ff.). It is the absence in all his poetry of the note of passionate self-surrender to the love of Christ that separates him, not only from Dante, but from a Puritan like Bunyan, an Anglican like Herbert, a Roman like Crashaw and Vondel, among his contemporaries. It was on another side that Christianity claimed Milton. His work begins and ends in the idea of liberty and its correlative duty, human freedom and the responsibility that it carries with it of living

'As ever in the great Taskmaster's eye.'

God is, for Milton, indeed the great Taskmaster, but he rejoices in the tasks; 'the victories of the conscience are gained by the commanding charm which all the severe and restrictive virtues have for him' (Emerson, in *North Amer. Review*, xlvii. [1838] 65); for Milton freedom is obedience in the highest and hardest tasks. To restore this freedom is the great service of Christianity, the fruit of Christ's perfect obedience and the regenerating work of the Holy Spirit. Christianity alone is perfect liberty, a liberty that no human authority, Church or State, may limit. Milton, with all his defects, is an ethical and religious poet because of the conviction which his poetry imparts that, in the words of a recent French writer,

'God is for Milton the all in all of life. There is no more terrible evil than sin which separates us from God; there is no more sublime mystery than the Redemption which reconciles us to God' (P. Chauvet, *La Religion de Milton*, Paris, 1900, p. 241).

All his acts and writings were inspired by his desire that the Kingdom of God might come on

earth, be it that his conception of that Kingdom was in some way maimed and incomplete, that it was not always given him to distinguish between his own will and God's :

'O, may we soon again renew that song,
And keep in tune with Heaven, till God ere long
To His celestial consort us unite,
To live with Him, and sing in endless morn of light !'
(*At a Solemn Music*, 25 ff.).

LITERATURE.—i. EDITIONS.—Edd. of Milton's poems are numerous, but a really good annotated ed. has yet to be made. T. Newton's ed. (London, 1749-52) is still valuable because of its collection of classical sources. Of later edd. mention may be made of D. Masson's (London, 1874) and W. Aldis Wright's (Cambridge, 1903). Collected edd. of the prose works are J. Toland's (Amsterdam, 1698), T. Birch's (London, 1733, 1753), and J. A. St. John's (Bohn's Libraries, 1896). Some of the pamphlets—e.g., *Areopagitica*—have been edited separately.

ii. CRITICISM.—The criticism of Milton begins with Dryden's epigram and includes J. Addison, *The Spectator*, Dec. 1711-May 1712; S. Johnson, *Lives of the Poets*, London, 1778-81; S. T. Coleridge, *Literary Remains*, do. 1836-39, *Seven Lectures*, do. 1856; T. B. Macaulay, *Critical and Historical Essays*, do. 1854 (the essays on 'Milton' appeared in the *Edinburgh Review*, 1825, on the occasion of the publication by C. R. Sumner of the newly-discovered *De Doctrina Christiana*, Cambridge, 1825); R. W. Emerson, 'Milton,' *North Amer. Rev.* xlvii. [1858] 56 ff.; W. S. Lander, *Imaginary Conversations*, London, 1846; T. De Quincey, *Collected Works*, do. 1853, vols. vi, x; E. H. A. Scherer, *Études critiques de littérature*, Paris, 1878; H. von Treitschke, *Historische und politische Aufsätze*, Leipzig, 1865; J. R. Lowell, *Among my Books*, Boston, 1876; Matthew Arnold, *Mixed Essays*, do. 1879, *Essays in Criticism*, 2nd ser., do. 1888; Mark Pattison, *Milton (English Men of Letters)*, London, 1879; T. H. Ward, *English Poets*, do. 1880; E. Dowden, *Transcripts and Studies*, do. 1888; R. Garnett, *Life of John Milton*, do. 1890; W. Raleigh, *Milton*, do. 1900. H. J. C. GRIERSON.

MIMAMSA.—*Mimāṃsā* in Sanskrit signifies 'investigation,' 'explanation.' The word is usually employed as the title of one of the six systems of philosophy recognized as orthodox by the Brāhmanas. The *Mimāṃsā* system is most closely related to the Vedānta (see art. VEDĀNTA); for in them both the subjects of ancient Indian speculation which meet us in the Brāhmaṇas and Upaniṣads are methodically developed.

The two systems form a connected whole in the sense that the *Mimāṃsā* comprises the ritualistic doctrine of works, the Vedānta the doctrine of salvation by knowledge. Each, while limited to its own sphere, makes reference also to the other, so that it is impossible to doubt that they received a literary form at the same time. It is due chiefly to this close connexion with the Vedānta doctrine, and in the second place probably to the form into which it has been cast, that the *Mimāṃsā* has found a place in India among the philosophical systems; for with philosophy its particular subject-matter has nothing to do.

Mimāṃsā as a name of the ritualistic system is an abbreviation of *Pūrva-* or *Karma-mimāṃsā*, 'first explanation,' or 'explanation of the function of work.' These names are explained by the connexion of the system with the Vedānta, which on its side is termed *Uttara-* or *Brahma-mimāṃsā*, 'second explanation' or 'explanation of the All-Soul,' also *Sārīraka-mimāṃsā*, 'explanation of the incarnation' (of Brahma). The oldest and most important text-book of the *Mimāṃsā* is the *Mimāṃsādarśana* of Jaimini. H. Jacobi places the composition of this work (and the contemporary completion of the Vedānta- or Brahma-sūtras) between c. A.D. 200 and 450 (*JAS* xxxi. [1911] 1 ff.).

The aim of the *Mimāṃsā* is to give rules for the correct interpretation of those Vedic texts whose subject is the Brāhmanical ritual. Since these texts contain in great parts an imperfect and obscure description of the ceremonies, and, besides, are interspersed at every step with speculations on the mystical meaning of the separate acts and implements, the assistance of rules was, in fact, absolutely necessary for the sacrificer, who believed that he had to dread the most serious con-

sequences from the least mistake in ceremonial observance. The *Mimāṃsā* offers a solution of all doubts which might present themselves with regard to the details of the sacrifice, and also professes to remove the discrepancies which are actually found in the Vedic texts. These last, however, according to the view of the *Mimāṃsā*, are in every instance only apparent. The system, moreover, discusses at the same time the rewards which are offered for the correct performance of the sacrifice; so that the *Mimāṃsā* is a compendium of the special theology of the Brāhmanas.

The *Mimāṃsā* does not recognize the existence of God. Nevertheless this fact interferes as little here as in the Sāṅkhya and the other systems with belief in the supernatural beings of the popular Indian faith. If we ask on what authority the instruction given with regard to the sacrifice and its consequences rests, the *Mimāṃsā* answers that the Veda needs no authority, but is eternal and uncreated; and that its revelation concerns only things existing from eternity, and self-evident. This conviction is in India maintained with remarkable tenacity, and is strangely opposed to the entirely personal wishes, for the most part quite worldly, which were continually presented to the gods by the authors of the ancient Vedic hymns. In reality the teachers of the *Mimāṃsā* associate the word *Veda* less with these ancient hymns than with the ritualistic texts of the second period of Vedic literature, in which the individuality of the authors is not so prominent.

It has been already remarked that the form in which the *Mimāṃsā* is presented may have contributed towards its being regarded, in spite of its essentially unphilosophical character, as a system on a level with the other five systems of Indian philosophy. For the contents of the Veda are here classified under definite categories, and every subject of investigation is explained according to a method which represents already a high degree of logical skill in arrangement. This methodical and established scheme, which the other schools also adopt as their standard, contains the following five divisions: (1) the proposition, (2) the doubt as to its correctness, (3) the erroneous method of treating the question, (4) the refutation of the erroneous method by the true argument, (5) the result of the investigation. Occasionally also, for the purpose of establishing the special doctrines of the *Mimāṃsā*, questions of philosophical import are discussed. This is true especially of the proposition that sounds and therefore words are eternal, and likewise the connexion of words with their meaning. On the basis of this theory the *Mimāṃsā* teaches that the relation of word and meaning is not dependent on general agreement, but that the meaning is naturally inherent in the word. The *Mimāṃsā* was compelled to propound this theory in order to protect the Veda from the suspicion of fallibility which attaches to all human works. If the Veda were to be regarded not as a collection of books composed or inspired, but as something uncreated, existing independently from eternity, then the connexion of the words of which the Veda is composed, with their meaning, could not be the result of human activity; but the words, and in the last resort the sounds that form the words, must have existed from all eternity—a view which could have held sway only within the narrow horizon of a school to which one language alone was known.

LITERATURE.—*Mimāṃsādarśana*, ed. Mahesachandra Nyāyaraṭna, Calcutta, 1878-89; *Arthasāṅgraha*, ed. G. Thibaut, Benares, 1882, Introductory Remarks; A. Barth, *Religions of India*, London, 1891, F. Max Müller, *Six Systems of Indian Philosophy*, do. 1899, ch. v.; *Sarva-darśana-saṅgraha*, tr. E. B. Cowell and A. E. Gough, 2nd ed., do. 1894, ch. xii.

MINÆANS. — See ARABS (ANCIENT), SABBÆANS.

MIND.—Questions of empirical psychology and of the relations between body and mind are discussed in other articles (see BODY, BODY AND MIND, BRAIN AND MIND). The present article must be limited to a discussion of the metaphysical theories of mind. Owing to the peculiar position which these problems occupy in philosophy, as well as in the study of ethical and religious problems, it is advisable, first of all, to make explicit some of the epistemological problems which especially confront the student of the nature of mind; and, in order to do this, we must, in view of numerous traditional complications which beset the theory of the knowledge of mind, open our discussion with some general statements concerning the nature of problems of knowledge.

The history of epistemology has been dominated by a well-known contrast between two kinds of knowledge, namely, perceptual knowledge and conceptual knowledge. This dual contrast seems insufficient to supply us with a basis for a really adequate classification of the fundamental types of knowledge. It is proposed in the present article to base the whole discussion upon a threefold classification of knowledge. Having begun with this threefold classification and briefly illustrated it, we shall go on to apply it to the special problems which we have to face in dealing with mind. We shall then consider in some detail what kinds of mental facts correspond to the three different kinds of knowledge thus defined. In conclusion, we shall deal with some problems of the philosophy of mind in the light of the previous discussion.

1. Perception and conception as fundamental cognitive processes.—A careful study of the processes of knowledge, whether these occur in the work of science or in the efforts of common sense to obtain knowledge, shows us three, and only three, fundamental processes which are present in every developed cognitive activity and interwoven in more or less complicated fashion. Of these two have been recognized throughout the history of science and philosophy, and their familiar contrast has dominated epistemology. The third, although familiar and often more or less explicitly mentioned, was first distinguished with sharpness, for epistemological purposes, by the American logician, Charles Peirce. We shall speak first of the two well-known types of cognitive process, perception and conception.

The name 'perception' is used in psychology with special reference to the perceptions of the various senses. We are here interested only in the most general characteristics of perception. William James has used, for what is here called perception, the term 'knowledge of acquaintance.' He distinguishes 'knowledge of acquaintance' from 'knowledge about.' In the simplest possible case one who listens to music has 'knowledge of acquaintance' with the music; the musician who listens in the light of his professional knowledge has not only 'knowledge of acquaintance,' but also 'knowledge about'; he recognizes what changes of key take place and what rules of harmony are illustrated. A deaf man who has learned about the nature of music through other people, in so far as they can tell him about it, but who has never heard music, has no 'knowledge of acquaintance,' but is limited to 'knowledge about.' 'Knowledge of acquaintance' is also sometimes called 'immediate knowledge.' In the actual cognitive process of the individual human being it never occurs quite alone, since, when we know something perceptually or by acquaintance, we also always have more or less 'mediate' knowledge, i.e., one who listens

to music, but who also considers the person of the artist, the relation of the music to the programme, the name of the composer, or the place of this experience in his own life, has in his knowledge that which is more than the immediate hearing of the music.

'Knowledge about' includes, on occasion, mental processes which may vary very widely and which may be mingled with 'knowledge of acquaintance' in ways which are far too complex to analyze here. But 'knowledge about' is especially opposed to 'knowledge of acquaintance' in one class of cases which need to be emphasized through the use of a special name. We may name that class by calling the kind of knowledge involved in it by the name already used, 'conceptual knowledge.' Conceptual knowledge is knowledge of universals, of relations, or of other such 'abstract' objects. The Socratic-Platonic theory of knowledge called attention from its very beginning to universals and relations, and consequently made this type of knowledge specially prominent.

No doubt, even if one is disposed to cling to this merely dual classification of knowledge, one may well question whether all knowledge which is not merely 'knowledge of acquaintance' is of the grade of conceptual knowledge. For there is much 'knowledge about' concerning which we should all hesitate to say that it is knowledge of universals. Socrates himself, in his effort to define the knowledge of universals, met at the start with the fact that much of our knowledge of universals is confused and inarticulate. But if, for the moment, we neglect the intermediate cognitive states in which we more or less mingle 'knowledge of acquaintance' and conceptual knowledge, or possess conceptual knowledge in imperfect degrees of development, we may readily admit that this traditional dual classification of cognitive states is sufficient to call attention to a distinction which is of the utmost importance, both for empirical science and for metaphysics.

While the distinction between perceptual and conceptual knowledge is of great importance in determining the distinction between the deductive and the inductive methods in the sciences, the classification of these two modes of cognition does not of itself suffice to determine what constitutes the difference between inductive and deductive science. When we have clear and accurate conceptual knowledge, we are in general prepared to undertake scientific processes that in the case of further development will involve deductive methods. Thus, in particular, a conceptual knowledge of universals leads, in the mathematical sciences, to the assertion of propositions. Some of these propositions may appear at the outset of a science as axioms (*q.v.*). Whether accepted as necessarily true or used merely as hypotheses, these propositions, either alone or in combination, may, and in the mathematical sciences do, form the starting-point for a system of rational deductions. The type of knowledge involved in this deductive process will be, in the main, the conceptual type. In what sense and to what degree a 'knowledge of acquaintance' enters into a process of mathematical reasoning we have not here to consider. All will admit that the sort of knowledge which dominates such a deductive process is 'abstract,' is concerned in reaching results which are true about the propositions that themselves form the premisses of the deduction. And so our knowledge concerning numbers, the operations of a mathematical science, and similar cases form exceptionally good instances of what characterizes conceptual knowledge in its exact and developed form.

In the inductive use of scientific methods we find a more complicated union of the perceptual

and the conceptual types of knowledge. When a hypothesis, such as Newton's formula for gravitation, or Galileo's hypothesis concerning the laws of falling bodies, is stated, the type of knowledge involved in formulating and in understanding the hypothesis is prevaillingly conceptual. When the hypothesis is tested by comparing the predictions based upon it with experience, the test involves appealing at some point to perceptual knowledge, or 'knowledge of acquaintance.' The processes of experiment used in an inductive science might seem to be typical cases of processes involving perceptual knowledge. And experiments unquestionably do involve such knowledge. But an experiment reveals a truth, because it brings concepts and percepts into some sort of active synthesis. Upon such active synthesis depends the process of validation which is used as the basis for the definition of truth used by recent pragmatists (see ERROR AND TRUTH).

In so far as we insist upon this dual classification of fundamental processes of cognition, the questions which most come to our notice, regarding both knowledge and its objects, concern (1) the relative value of these two cognitive processes, and (2) the degree to which, in our actual cognitive processes, or in ideal cognitive processes (such as we may ascribe to beings of some higher order than ours), the two can ever be separated. These two questions have proved especially momentous for the theory both of knowledge and of reality.

(1) Regarding the relative value of the two fundamental types of cognition, Plato, as is well known, held that conceptual knowledge is the ideal type, the right result an expression of reason. Conceptual knowledge gives truth; perceptual knowledge gives illusion or appearance—such is, on the whole, the Platonic doctrine. In recent discussion the pragmatists—and still more emphatically Bergson—have insisted upon the relative superiority of the perceptual type of knowledge. The familiar expression of this view is the thesis of recent pragmatism that conceptual knowledge has only a sort of 'credit value'; perceptual knowledge furnishes the 'cash of experience'; conceptions are 'bank notes'; perceptions, and perceptions only, are 'cash.' The statement of Bergson goes further, and declares that, if we had unlimited perceptual knowledge, i.e. 'knowledge of acquaintance' whose limits and imperfections we had no occasion to feel, because it had no limits and no imperfections, then conceptions could have no possible interest for us as cognitive beings. In other words, we use concepts, i.e., we seek for a knowledge of universals, only when our perceptions in some way fail us. Conceptual knowledge is in its very essence a substitute for failing perceptual knowledge. The opposition between Plato and Bergson regarding this estimate of the relative significance and truthfulness of the two kinds of cognitive processes is thus characteristic of the contrast which is here in question. Of course all the philosophers admit that, in practice, our knowledge makes use of, and from moment to moment consists in, a union which involves both conceptual and perceptual processes.

(2) On the question whether the two foregoing types of knowledge, however closely linked in our normal human experience, can, at least in ideal, be separated—i.e., whether a knowledge by 'pure reason' is possible on the one hand, or a knowledge of 'pure experience' is ever attainable on the other hand—the historical differences of opinion are closely related to well-known metaphysical controversies. For Plato, as (in another age, and in a largely different metaphysical context) for Spinoza, it is at least in ideal possible for philosophy, or for the individual philosopher, to attain a purely

intellectual insight into the realm of 'ideas' or into the nature of the 'substance.' For various forms of mysticism, as well as for theories such as the one set forth in the *Kritik der reinen Erfahrung* (Leipzig, 1888-90) of R. H. L. Avenarius, a mental transformation may be brought about through a process which involves either a practical or a scientific correction and gradual suppression of erroneous intellectual illusion; and, at the limit of this process, reality becomes immediately and perceptually known, without confusion through abstractions.

The 'radical empiricism' of James's later essays makes use of a theory of knowledge which attempts, as far as possible, to report, apart from conceptual constructions, the data of pure experience.

2. Interpretation through comparison of ideas as a third fundamental cognitive process.—It is an extraordinary example of a failure to reflect in a thoroughgoing way upon the process of knowledge that until recently the third type of cognitive process to which we must next refer has been neglected, although every one is constantly engaged in using and in exemplifying it.

When a man understands a spoken or written word or sentence, what he perceives is some sign, or expression of an idea or meaning, which in general belongs to the mind of some fellow-man. When this sign or expression is understood by the one who hears or who reads, what is made present to the consciousness of the reader or hearer may be any combination of perceptual or conceptual knowledge that chances to be in question. But, if any one cries 'Fire!', the sort of knowledge which takes place in my mind when I hear and understand this cry essentially depends upon this fact: I regard my fellow's cry as a sign or expression of the fact either that he himself sees a fire or that he believes that there is a fire, or that, at the very least, he intends me to understand him as asserting that there is a fire, or as taking an interest of his own in what he calls a fire. Thus, while I cannot understand my fellow's cry unless I hear it, unless I have at least some perceptual knowledge, and while I equally shall not have a 'knowledge about' the nature of fire, and so a 'knowledge about' the object to which the cry refers, unless I am possessed of something which tends to be conceptual knowledge of his object, my knowledge of my fellow's meaning, my 'grasping of his idea,' consists neither in the percept of the sign nor in a concept of its object which the sign arouses, but in my *interpretation* of the sign as an indication of an idea which is distinct from any idea of mine, and which I refer to a mind not my own, or in some wise distinct from mine.

It is to be noted that, however we reach the belief in the existence of minds distinct from our own, we do not regard these minds, at least in ordinary conditions, as objects of our own perceptual knowledge. For the very motives, whatever they are, which lead me to regard my perceptions as my own even thereby lead me to regard my fellows' perceptions as never present within my own field of awareness. My knowledge of my own physical pains, of the colours that I see, or of the sounds that I hear is knowledge that may be called, in general terms, perceptual. That is, these are objects with which I am, or upon occasion could be, acquainted. But with my fellow's pains I am not acquainted. To say this is merely to say that, whatever I mean by 'myself' and by 'the Alter,' the very distinction between the two is so bound up with the type of cognition that is in question that whatever I am acquainted with through my own perception is *ipso facto* my own object of acquaintance. Thus, then, in general, perceptual knowledge has not as its object what is

at the same time regarded as the state of another mind than my own.

But, if the mind of my fellow, in particular his ideas, his feelings, his intentions, are never objects of perceptual knowledge for me, so that I am not directly acquainted with any of these states, must we regard our knowledge of the mind, of the ideas, of the intents, purposes, feelings, interests of our fellow-man as a conceptual knowledge? Is our fellow-man's mind the object of a concept of our own? Is the fellow-man a universal, or a relation, or a Platonic idea? Wherein does he differ from a mathematical entity or a law of nature? Unquestionably we regard him as possessing conceptual knowledge of his own, and also as engaged in processes of knowledge which may be conceptual, or which may involve any union of percept and concept. But the fact remains that neither by our own perceptions can we become acquainted with his states of mind, nor yet by our own conceptions can we become able to know the objects which constitute his mental process. In fact, we come to know that there are in the world minds not our own by interpreting the signs that these minds give us of their presence. This interpretation is a third type of knowledge which is closely interwoven with perceptual and conceptual knowledge, very much as they in turn are bound up with it, but which is not reducible to any complex or combination consisting of elements which are merely perceptual or merely conceptual.

Every case of social intercourse between man and man, or (what is still more important) every process of inner self-comprehension carried on when a man endeavours to 'make up his own mind' or 'to understand what he is about,' involves this third type of cognition, which cannot be reduced to perception or to conception. It is to this third cognitive process that, following the terminology which Peirce proposed, we here apply the name 'interpretation.'

In order to distinguish more clearly the three types of cognition, we may say that the natural object of perception is some inner or outer datum of sense or of feeling, such as a musical tone, a colour, an emotional state, or the continual flow of the inner life upon which Bergson so much insists. For these are typical objects of perceptual knowledge, *i.e.* of 'knowledge of acquaintance.' The typical objects of conceptual knowledge are such objects as numbers, and relations such as identity and difference, equality, and so on. But typical objects of interpretation are signs which express the meaning of some mind. These signs may be expressions of the meaning of the very mind which also interprets them. This is actually the case whenever in memory we review our own past, when we reflect upon our own meaning, when we form a plan, or when we ask ourselves what we mean or engage in any of the inner conversation which forms the commonest expression of the activity whereby an individual man attains some sort of explicit knowledge of himself.

The form of cognitive process involved in the social relations between man and man is essentially the same as that involved in the cognitive process by which a man makes clear to himself his own intent and meaning. For, despite well-known assertions to the contrary on the part of Bergson, nobody has any adequate intuitive 'knowledge of acquaintance' with himself. If such perceptual or intuitive knowledge of the self by the self were possible, we should not be obliged to acknowledge that the world of human beings is dominated by such colossal and often disastrous ignorance of every man regarding himself, his true interests, his real happiness, his moral and personal value, his intents, and his powers, as we actually find

characterizing our human world. In brief, man's knowledge, both of himself and of his neighbour, is a knowledge which involves an interpretation of signs. This thesis, very ably maintained by Peirce in some of his early essays, involves consequences which are at once familiar and momentous for the theory of knowledge.

That the type of knowledge involved whenever signs are interpreted is a fundamental type of knowledge which cannot be represented either to perception or to conception can be exemplified in most manifold ways, and will appear somewhat more clearly through the illustrations given below. It may be useful to point out here that, while all our interpretations, like all our perceptual and conceptual knowledge, are subject to the most manifold illusions in detail, it still remains the case that, whenever one is led to attempt, propose, or believe an interpretation of a sign, he has actually become aware, at the moment of his interpretation, that there is present in his world some meaning, some significant idea, plan, purpose, undertaking, or intent, which, at the moment when he discovers its presence, is from his point of view not identical with whatever idea or meaning is then his own.

If somebody speaking to me uses words which I had not intended to use, I may misunderstand the words, or I may not understand them at all. But, in so far as I take these words to be the expression of a meaning, this meaning is one that just then I cannot find to be my own—*i.e.*, these words do not express my ideas, in so far as these ideas are by me interpreted as my own. The cognitive process here in question divides, or at least distinguishes, that part of the objects, ideas, or meanings in question into two distinct regions, provinces, or modes of mental activity. One of these regions is interpreted at the moment as 'my own present idea,' 'my own purpose,' 'my own meaning'; the other is interpreted as 'some meaning not just now my own,' or as 'some idea or meaning that was once my own'—*i.e.*, as 'my own past idea,' or as 'my neighbour's meaning,' or perhaps as 'a meaning that belongs to my social order,' or 'to the world,' or, if I am religiously minded, 'to God.' In each case the interpretation that is asserted may prove to be a wrong one. Interpretation is fallible. So, too, is conception, when viewed as a cognitive process, and so is perception, whose character as 'acquaintance with' is no guarantee of its accuracy, whether mystical apprehension or ordinary observation is in question. The fact for our present purpose is not that our human knowledge is at any point infallible, but that there is the mode or type of cognition here defined as interpretation. Interpretation is the knowledge of the meaning of a sign. Such a knowledge is not a merely immediate apprehension, nor yet a merely conceptual process; it is the essentially social process whereby the knower at once distinguishes himself, with his own meanings, ideas, and expressions, from some other self, and at the same time knows that these selves have their contrasted meanings, while one of them at the moment is expressing its meaning to the other. Knowledge by interpretation is, therefore, in its essence neither mere 'acquaintance' nor yet 'knowledge about.'

There is another way of expressing the distinction of these three kinds of knowledge which proves useful for many purposes. Knowledge of the first kind, 'knowledge of acquaintance,' may for certain purposes be characterized as 'appreciation.' Conceptual knowledge, owing to the means often employed in making a concept explicit, may be for many purposes called 'description.' In each case, as will be noted, the main character of the

type of knowledge in question can be designated by a single term, namely, appreciation or description, just as in the foregoing these two types of knowledge have been designated each by a single term, acquaintance in one case and conception in the other.

In designating the instances of interpretation it is well to note that every interpretation has three aspects. For the one who interprets it is an expression of his own meaning. With reference to the object, *i.e.* to the sign, or to the mind whose sign this is, the interpretation is the reading or rendering of the meaning of this mind by another mind. In other words, every interpretation has so far a dual aspect: it at once brings two minds into quasi-social contact and distinguishes between them or contrasts them. In the light of this contrast and with reference to the direction in which it is read, the two minds are known each in the light of the other. As has already been said, the two minds in question may be related as a man's own past self is related to his present or future self. And in fact, as Peirce has pointed out, every act of interpretation has also a triadic character. For the cognitive process in question has not only a social character, but what one may call a directed 'sense.' In general, when an interpretation takes place, there is an act *B* wherein a mental process *A* is interpreted, read, or rendered to a third mind. That the whole process can take place within what, from some larger point of view, is also a single mind with a threefold process going on within it has already been pointed out. Thus, when a man reflects on his plans, purposes, intents, and meanings, his present self, using the signs which memory offers as guides, interprets his past self to his future self, the cognitive process being well exemplified when a man reminds himself of his own intents and purposes by consulting a memorandum made yesterday for the sake of guiding his acts to-day. Every explicit process involving self-consciousness, involving a definite sequence of plans of action, and dealing with long stretches of time, has this threefold character. The present self interprets the past self to the future self; or some generally still more explicit social process takes place whereby one self or quasi-self has its meanings stated by an interpreter for the sake of some third self.

Thus, in brief, knowledge by interpretation is (1) an expression (by an 'interpreter' of (2) the idea or meaning whereof some other mind gives a sign, and (3) such an expression as is addressed to some third mind, to which the interpreter thus reads or construes the sign.

3. Self-interpretation, comparison of one's own ideas, and knowledge of time.—When such interpretation goes on within the mind of an individual man, it constitutes the very process whereby, as is sometimes said, he 'finds himself,' 'comes to himself,' 'directs himself,' or 'gets his bearings,' especially with reference to time, present, past, and future. In the inner life of an individual man this third mode of cognition, therefore, appears at once in its most fundamental and simplest form as the cognitive process whose being consists in a *comparison of ideas*. The ideas compared here belong in one sense to the 'same self'; but they differ as the ideas of 'past self' and 'future self'; or, in various other ways, they belong to different 'quasi-minds.'

That such a process is, indeed, irreducible to pure perception, to pure conception, or to that active synthesis of the two which James has in mind when he uses the term 'idea,' readily becomes manifest if we consider what takes place when two 'ideas' are 'compared,' whether these two belong to men who are 'different individuals' or to the

past, present, or future selves of one who is, from another point of view, the same man.

An 'idea,' when the term is used in the sense which recent pragmatism¹ has made familiar and prominent, is not a mere perception, nor a mere collection or synthesis of various perceptions, images, and other immediate data; nor yet is it a mere conception, whether simple or complex. It is, for James and his allies, a 'leading,' an 'active tendency,' a 'fulfilment of purpose,' or an effort towards such fulfilment, an 'adjustment to a situation,' a seeking for the 'cash,' in the form of sense-data, such as may, when found, meet the requirements, or 'calls,' made by the conceptual aspect of the very idea which is in question. This concept has, in Bergson's phrase, its 'credit value.' Eventual sense-data may furnish the corresponding 'cash.' The idea is the seeking for this 'cash.' When the wanderer in the woods decides to adopt the idea that 'yonder path leads me home,' he makes an active synthesis of his concept of home and of his present sense-data. This active synthesis, expressed in his idea, 'I am homeward bound,' is a 'leading,' which, if he is successful, will result in furnishing to him, when his wanderings cease, the perceptions of home which constitute the goal of his quest. This, then, is what is meant by the term 'idea' in that one of its senses which pragmatism has recently most emphasized.

In this way we may also illustrate how the cognitive process possesses the two forms or aspects which have usually been regarded as the only fundamentally distinct aspects of knowledge: perception and conception. We meanwhile illustrate that active *union* of these two which constitutes the 'idea' as defined by recent pragmatism. But we do not thus illustrate an aspect of cognition which is equally pervasive and significant, and which consists in the *comparison of ideas*. It is just this aspect of cognition upon which our present theory most insists. For by what process does the wanderer, when he reaches home, recognize that this home which he finds is the very home that he had sought? Not by the mere presence of a 'home-feeling,' not by a perception which, merely at the moment of home-coming, pays the 'cash' then required by some then present conception of home, but by a process involving a comparison of his ideas about his home, at the moment when he reaches home, with his memories of what his ideas were while he was lost in the woods and while he still inquired or sought the way home.

In order to consider what such a comparison essentially involves, it is not necessary to suppose that the act of comparison must take place in a form involving any high grade of self-consciousness, or depending upon a previous formation of an elaborate system of ideas about the self, the past, and similar objects. The essentially important fact is that whoever begins, even in the most rudimentary way, to take account of what seems to him as if it were his own past, whoever is even vaguely aware that what he has been seeking is the very object which now he finds, is not merely perceiving the present, and is not conceiving the past, and is not simply becoming aware of his present successes and disappointments as present facts—he is comparing his ideas of present success or failure with his ideas of his past efforts. This comparison is essentially an interpretation of some portion of his own past life, as he remembers that life, in the light of his present successes or disappointments, as he now experiences them. A third cognitive process is then involved. This interpretation compares at least two ideas: (1) the past idea or 'leading' (*e.g.*, the past search for home by the path through the woods); (2) the present success

¹ See W. James, *Pragmatism*, London, 1907.

or failure (*e.g.*, the reaching home itself, or getting to the close of some stage of the wandering); and, in making this comparison, this interpretation estimates the result, perhaps in the light of one's idea of one's own future ('and henceforth I need search no more'), or perhaps in the light of one's idea of one's entire self ('I have succeeded,' or 'I am a knower of the truth,' or 'So much of the world of reality is mine'). In any case two comments may be made upon every such act of comparing two ideas and interpreting one in the light of the other.

(1) Unless such processes of comparing ideas were possible, and unless, in at least some rudimentary form, it took place, we could never make even a beginning in forming a coherent view of our own past and future, of our own selves as individuals, or of selves not our own. Our ideas both of the Ego and of the Alter depend upon an explicit process of comparing ideas. The simplest comparison of ideas—such as the case upon which recent pragmatism lays so much stress—the comparison upon which the very idea 'my success' also depends, the comparison, namely, which is expressed by saying, 'What I sought at a past moment is the very same as what, at the present moment, I now find,' is an instance of an act of interpretation, and is not reducible to the two other types of knowledge.

(2) All such processes of comparison are equally characteristic of the cognitive activity which goes on during our explicitly and literally social life and of the cognitive activity which is needed when we think about our relations to our own individual past and future. In brief, neither the individual Ego nor the Alter of the literal social life, neither past nor future time can be known to us through a cognitive process which may be defined exclusively in terms of perception, of conception, and of the ideal 'leadings' of the pragmatists. The self, the neighbour, the past, the future, and the temporal order in general become known to us through a third type of cognition which consists of a comparison of ideas—a process wherein some self, or quasi-self, or idea interprets another idea, by means of a comparison which, in general, has reference to, and is more or less explicitly addressed to, some third self or idea.

4. The relation of the three cognitive processes to our knowledge that various minds exist and to our views about what sorts of beings minds are.—The use of the foregoing classification of the types of cognitive processes appears of special importance as soon as we turn to a brief outline of some of the principal theories about the nature of mind which have played a part in the history of philosophy. Nowhere does the theory of knowledge show itself of more importance in preparing the way for an understanding of metaphysical problems than in the case of the metaphysics of mind. No attentive student of the problem of mind can easily fail at least to feel, even if he does not very explicitly define his feeling, that in dealing with the philosophy of mind both common sense and the philosophers are accustomed to combine, sometimes in a very confused way, a reference to different more or less hypothetical beings, while the ideas that are proposed with regard to the nature of these beings are of profoundly different types.

Thus it may be a question for common sense or for a given metaphysical doctrine as to whether or not there exists a so-called soul. Now it makes a great difference for the theory of the soul whether the kind of soul which is in question is viewed as in its essence an object of a possible immediate acquaintance or perception, as an object of a possible adequate conception, or as an object

whose being consists in the fact that it is to be interpreted thus or so. Unless the three kinds of cognition are clearly distinguished, the one who advances or tests a given theory of the soul does so without observing whether he himself is speaking of the soul as a possible perception, or is treating it as if it were, in its inmost nature, an object which can be known only through some adequate conception. If one has called to his attention the fact that he is speaking now in perceptual and now in conceptual terms of the mind or soul which his theory asserts to be real, he may then attempt to solve his difficulties in the way which recent pragmatism has emphasized, *i.e.*, he may declare that his doctrine is of necessity a 'working hypothesis' about the nature of the soul, that it is, of course, in part stated in conceptual terms, but that the concepts are true only in so far as they prove to be somewhere directly verifiable in terms of immediate percepts.

Yet nowhere does recent pragmatism, in the form in which William James left it, more display its inadequacy as a theory of knowledge than in the case where it is applied to an effort to define the truth of hypotheses concerning mind, or to test such truth. For, as a fact, nobody who clearly distinguishes his neighbour's individual mind from his own expects, or can consistently anticipate, that his neighbour's mental states, or that anything which essentially belongs to the inner life or to the distinct mind of his neighbour, can ever become, under any circumstances, a direct perception of his own. For, if my neighbour's physical pains ever became mine, I should know them by immediate acquaintance only in so far as they were mine and not my neighbour's. And the same holds true of anything else which is supposed to be a fact essentially belonging to the individual mind of my neighbour. At best I can hope, with greater or less probability, to *interpret* correctly the meaning, the plan, or some other inner idea of the mind of my neighbour; but I cannot hope to go beyond such correct interpretation so far as to perceive my neighbour's mental states. For, if my neighbour's states became the immediate objects of my own acquaintance, my neighbour and I would so far simply melt together, like drops in the ocean or small pools in a greater pool. The immediate acquaintance with my neighbour's states of mind would be a knowledge neither of himself as he is in distinction from me nor of myself as I am in distinction from him. For this general reason 'working hypotheses' about the interior reality which belongs to the mind of my neighbour can never be 'converted into the cash of experience.' My neighbour's mind is never a verifiable object of immediate acquaintance, precisely as it is never an abstract and universal idea. The one sort of knowledge for which recent pragmatism has no kind of place whatever is a knowledge, statable in pragmatistic terms, concerning my neighbour's mind.

James himself follows a well-known and ancient philosophical tradition by declaring that our assertion of the existence of our neighbour's mind depends upon the argument from analogy. Because of similar behaviours of our organism we regard it as by analogy probable that both our neighbour's organism and our own are vivified by more or less similar mental lives, so that we have similar experiences. But to regard or to believe in the mind of our neighbour as an object whose existence is to be proved through an argument from analogy raises a question whose answer is simply fatal to the whole pragmatistic theory of knowledge. Surely an argument from analogy is not its own verification. For pragmatism the truth of a hypothesis depends upon the fact that

its conceptual constructions are capable of immediate verification in terms of certain facts of immediate experience. But my neighbour's inner states of mind can never become for me objects of immediate acquaintance, unless they become my states of mind and not his, precisely in so far as he and I are distinct selves.

The hypothesis that our mental lives are similar may thus be suggested by analogy or may be stated in terms of analogy; but the analogy in question is essentially unverifiable in the required terms, *i.e.*, in terms of immediate perceptions. For my neighbour can immediately perceive only his own states, while I, in so far as I am not my neighbour, can verify only my own states. From the point of view, then, of the argument from analogy, my neighbour, in observing his own states, does *not* verify my hypothesis in the sense in which my hypothesis about him demands verification, namely, in terms of the experience of the self who makes the hypothesis. From this point of view, the problem of the mind of my neighbour remains hopeless.

It is possible, of course, to say of the foregoing argument from analogy what is also said both by common sense and by science, on the basis of a theory of truth which is in its essence conceptual and realistic. One can, of course, assert that in actual fact the mental states of my neighbour really exist and are in a certain relation which makes it true to say that they are analogous to mine. This real relation may be asserted to be as much a fact as any other fact in the universe. If this fact of the real analogy is granted, then it may be declared that my hypothesis to the effect that my neighbour's mind is a reality is actually true. This, however, is precisely the type of truth which William James's pragmatism undertakes to reject.

A very different appearance is assumed by the whole matter if we recognize that there is a third kind of knowledge, which is neither conceptual nor perceptual, and which is also not the sort of union of conception and perception which is completely expressible in terms of the favourite metaphor of Bergson and the pragmatists, namely, the metaphor of the conversion of conceptual credits or bank-notes into perceptual cash, *i.e.*, into immediate data of experience. For interpretations are never verified merely through immediate data, nor through the analysis of conceptions. This is true whether I myself am the object of my own interpretation or my neighbour is in question. If we seek for metaphors, the metaphor of the conversation, already used, furnishes the best means of indicating wherein consists the relative, but never immediate, verifiability of the truth of an interpretation.

When I interpret (whether my own purposes or intents or the ideas of another man are the objects which I seek to interpret), what I first meet in experience is neither a matter of acquaintance nor a mere 'knowledge about.' What I meet is the fact that, in so far as I now understand or interpret what I call myself, I have also become aware, not immediately but in the temporal process of my mental life, that ideas have come to me which are not now my own, and which need further expression and interpretation, but which are already partially expressed through signs. Under these circumstances, what happens is that, as interpreter of these signs, I offer a further expression of what to me they seem to mean, and I make the further hypothesis that this expression makes more manifest to me both the meaning of this sign and the idea of the mind or self whereof this sign gave partial expression. It is of the essence of an expression which undertakes to interpret a sign

that it occurs because the sign already expresses a meaning which is not just at the present moment our own, and which, therefore, needs for us some interpretation, while the interpretation which at the moment we offer is itself not complete, but requires further interpretation.

In literal conversation our neighbour utters words which already express to us ideas. These ideas so contrast with our own present ideas that, while we find the new ideas intelligible, and, therefore, view them as expressions of a mind, we do not fully know what they mean. Hence, in general, our neighbour having addressed us, we in reply ask him, more or less incidentally or persistently, whether or not this is what he means—*i.e.*, we give him back our interpretation of his meaning, in order to see whether this interpretation elicits a new expression which is in substantial agreement with the expression which we expected from him. Our method in a conversation is, therefore, unquestionably the method of a 'working hypothesis.' But since this 'working hypothesis' refers to our neighbour's state of mind, it is never conceivably capable of direct verification.

Nor does what the pragmatists are accustomed to call the successful 'working' of this hypothesis consist in the discovery of any perceptible fact with which we get into merely immediate relation. Our interpretation of our neighbour satisfies our demands, precisely in so far as our interpretations, which are never complete, and which always call for new expressions and for further interpretations, lead to a conversation which remains, as a whole, essentially 'coherent,' despite its endless novelties and unexpected incidents.

Our whole knowledge of mind, in so far as by this term we mean intelligent mind, not only depends upon, but consists in, this experience of a consistent series of interpretations, which we obtain, not merely by turning conceptual 'credits' into the 'cash of immediate acquaintance,' but by seeking and finding endlessly new series of ideas, endlessly new experiences and interpretations. This never-ended series of ideas, in so far as we can hold them before our minds, tends to constitute a connected, a reasonable, a comprehensible system of ideal activities and meanings. The essence of mental intercourse—we may at once say the essence of intelligent mental life and of all spiritual relations—not only depends upon, but consists in, this coherent process of interpretation.

Or, again, an interpretation is not a conceptual hypothesis which can be converted into 'perceptual knowledge'; it is a hypothesis which leads us to anticipate further interpretations, further expressions of ideas, novel bits of information, further ideas not our own, which shall simply stand in a coherent connexion with one another and with what the original interpretation, as a hypothesis, had led us to expect. When I deal with inanimate nature, I may anticipate facts of perception, and then my hypotheses about these facts 'work,' in so far as the expected perceptions come to pass. But, when I deal with another mind, I do not merely expect to get definable perceptions from that mind; I expect that mind to give me new ideas, new meanings, new plans, which by contrast are known at each new stage of social experience to be not my own, and which may be opposed to my own and in many respects repellent to me.

But it is essential to the social intercourse between minds that these endlessly novel ideas and meanings should, through all conflicts and novelties and surprises, retain genuine coherence. Thus, in dealing with other minds, I am constantly enlarging my own mind by getting new interpretations, both of myself and of my neighbour's life. The contrasts, surprises, conflicts, and puzzles which

these new ideas present to me show me that in dealing with them I am dealing with what in some respects is not my own mind. The coherence of the whole system of interpretations, ideas, plans, and purposes shows me just as positively that I am dealing with a mind, *i.e.*, with something which through these expressions constantly interprets itself, while, as I deal with it, I in turn constantly interpret it, and even in and through this very process interpret myself. It will and must be observed that this Alter, with which I have to deal, both in reflecting on my own mind and in seeking for new light from my neighbour, is never a merely single or separable or merely detached or isolated individual, but is always a being which is of the nature of a community, a 'many in one' and a 'one in many.' A mind knowable through interpretation is never merely a 'monad,' a single detached self; its unity, in so far as it possesses genuine and coherent unity, tends, in the most significant cases, to become essentially such as the unity which the apostle Paul attributes to the ideal Church: many members, but one body; many gifts, but one spirit (Ro 12^{4st})—an essentially social unity, never to be adequately conceived or felt, but properly the object of what the Apostle viewed, in its practical and religious aspect, as the spiritual gift of charity, in its cognitive aspect as interpretation: pray rather that ye may interpret (1 Co 14¹³).

5. Metaphysical theories of the nature of mind.

—(a) *Predominantly perceptual theories.*—The nature of mind may be defined by a given metaphysical theory mainly in terms which regard mind as best or most known through possible 'perceptions' or through possible 'acquaintance' with its nature. Such theories have been prominent throughout the whole history of human thought. They depend, first, upon ignoring the fact that what is most essential to the mind is known through the cognitive process of interpretation. They depend, further, upon making comparatively light of the effort to give any abstract conceptual description of what constitutes the essence of mind. They depend upon turning to what is sometimes called 'introspection,' or, again, 'intuition,' to bring about an immediate acquaintance with mind.

Since, in general, any one who forms a predominantly perceptual idea of what mind is very naturally is not depending solely upon his own personal experience, but upon the experiences which he supposes other minds to possess, these perceptual theories of the nature of mind actually make a wide use of the reports of other people and so, more or less consciously, of arguments from analogy.

The simplest and vaguest, but in some respects the most persistent, of all theories of mental life appears, upon a largely perceptual basis, and also upon a basis of an argument from analogy, in countless forms of so-called 'animism.' Leaving aside all the historical complications, we may sum up the animistic theory of mind thus. We perceive, within ourselves, certain interesting processes which include many of our feelings, embody many of our interests, and characterize many of our activities. These activities, which in ourselves we more or less directly observe, are closely connected with the whole process of the life of the organism, *i.e.*, of the body in whose fortunes each one of us is so interested. That which produces all these feelings, awakens in us all these interests, vitalizes our own body, and forms for each of us a centre of his own apparent world—this is the mind. The mind, then, strives and longs. It feels pain and pleasure. It prospers as the body prospers, and suffers as the body suffers.

Analogy shows that other people have such minds. These minds are as numerous as the organisms in question. They resemble one another and differ from one another, much as the organisms resemble and differ from each other. An extension of this analogy, on the basis of many motives, leads us to regard the world about us as containing many minds which are not connected with human bodies—at least in precisely the same way in which our minds are connected with our bodies. When the vast mass of superstitious beliefs which have made use of such analogies and such experiences can be more effectively controlled through the advances of the human intelligence, this primitive animism tends to pass over into theories of which we find some well-known examples in early Greek philosophies. These early Greek theories of mind appear, on a somewhat primitive and already philosophical level, as 'hylozoistic.' The world, or, at all events, the organic world, has life principles in it which vary as the organisms vary, and which are also of a nature that feeling and desire reveal to our relatively immediate 'knowledge of acquaintance' with our own minds.

The theories of mind of this type have played a great part in the life both of philosophy and of religion. As a general theory, animism has proved very persistent, and that for obvious reasons.

One of the Hindu *Upaniṣads*¹ well suggests both the origin and the logical basis—such as it is—of these theories when, in an allegory, it represents the question arising within the body as to where and what the soul most is. The question is disputed amongst the various bodily organs, each asserting itself to be the principal seat of life and also of mind. To discover which view is true, the members of the body take turns in leaving the organism. When the eyes go, blindness ensues, but life and mind continue, and so on with various other members. But, when the breath starts to leave the body, all the other members together cry, 'Stay with us! You are the life, you are the soul, you are the self or Ātman.'

This allegory sufficiently indicates how primitive, how vague, and how stubborn is such a perceptual theory of mind when defined in terms of immediate intuition, and of a more or less pragmatic testing of various views about the physical organism.

Later in its origin, but continuing in its influence to the present day, is another perceptual theory of mind, which the later *Upaniṣads* present at length, and which, in another form, is exemplified by a notable assertion of H. Bergson in his *Introduction to Metaphysics*²—namely, that of one object at least we all have intuitive knowledge, this object being the self. The entire history of mysticism, the history also of the efforts to discover the nature of mind through introspection, can be summarized by means of these instances in the Hindu *Upaniṣads* that discover the true self through the experiment with breathing, and of the latest vision of Bergson, who defines the nature of mind, and also its contrast with body, in terms of the *élan vital*; for all these views emphasize, in various more or less primitive, or in more or less modern, forms, essentially the same theory of mind: the essence of the mind is to be known through immediate acquaintance. That which Schopenhauer calls the will to live, that which Bergson characterizes in the terms just mentioned, that which the shamans and medicine-men of all the more intelligent tribes have sought to know, is, in every case, mind viewed as an object of possible perception.

In the history of thought such perceptual theories of mind have become more highly developed and diversified, and have assumed other and very widely influential forms, by virtue of an insistence that we have an immediate perception of what is variously called 'mental activity,' 'the active soul,' or 'the principle of individual selfhood.'

¹ *Bṛhadāraṇyaka Upaniṣad*, vl. I. 7-14, tr. in P. Deussen, *Sechzig Upaniṣads des Veda*, Leipzig, 1887, p. 503.

² Eng. tr., London, 1913.

Motives which as a fact are not statable in purely perceptual terms have joined with this fondness for defining mind in perceptual terms to make emphatic the assertion that this theory of mind ought to be stated in expressly 'pluralistic' terms. It has, consequently, been freely asserted that we 'immediately know' our own self to be independent, to be distinct from all other selves, and thus to be unique. Since it is also sometimes asserted that we know, or that we 'know intuitively,' upon occasion, the fact that we can never be directly acquainted with the conditions of our neighbour's mind, such perceptual theories have given rise to the so-called problem of 'Solipsism.' For, if we know mind by perception only, and if we are sure of it only when we perceive it, and if each of us can perceive only his own mind, then what proves for any one of us that there is any mind but his own? The analogy which primitive animism so freely and so vaguely used becomes, for the critical consciousness, questionable. In consequence, the problem of Solipsism has remained in modern times a sort of scandal of the philosophy of mind.

The solution of the problem of Solipsism lies in the fact, upon which Peirce so well insisted,¹ that no one of us has any purely perceptual knowledge of his own mind. The knowledge of mind is not statable, in the case either of the self or of the neighbour, in terms of merely immediate acquaintance. If the truth of this proposition is once understood, the entire theory of mind, whether for metaphysics or for empirical psychology, is profoundly altered. Until this inadequacy of knowledge through acquaintance to meet the real end of human knowledge is fully grasped, it is impossible to define with success either the mind or the world, either the individual self or the neighbour.

(b) *Predominantly conceptual theories.*—As is the case with every highly developed doctrine, the conceptual form is very naturally assumed by any philosophical theory of mind which seeks for theoretical completeness. The conceptual theories of mind have been in history of two general types: (1) the purely conceptual, i.e. 'the abstractly rational' metaphysical theories; and (2) the more inductive conceptual theories based upon the more or less highly developed 'empirical psychologies' of the period in which these theories have flourished. We need not enumerate these theories or give their history.

Of principal importance in their history have been (1) that type of vitalism whose most classical representative is the Aristotelian theory of mind; (2) the monistic theory of mind, which often depends not so much upon the general metaphysical tendency to define the whole universe as One, but rather upon the effort to conceive mind and matter by regarding them both as the same in substance; and (3) the various types of monadology, which are characterized by the assertion of the existence of many real and more or less completely independent minds or selves, whose nature it is either to be themselves persons or to be beings which under certain conditions can assume the form of persons.

Of those various important theories which are expressed in the predominantly conceptual form that of Aristotle is very deeply and interestingly related to primitive animism on the one hand, while, on the other hand, it looks towards that development of the idea of the distinct individual self upon which more modern forms of monadology have depended.

Whatever special forms the conceptual theories of mind may assume, the well-known problem

remains: How are these conceptions of the various mental substances, or principles, or monads, which are each time in question related to the sorts of experience which the psychologists, the students of the natural history of mind, have at any stage of knowledge discovered or may yet hope to discover? From the point of view of modern pragmatism, conceptual theories of mind might be entertained as 'working hypotheses' if they led to verification in perceptual terms.

In fact, the modern physical sciences, in conceiving the nature of matter, deal with manifold problems, but use conceptual hypotheses regarding the nature of matter which are, in a large measure, subject to pragmatic tests. Molecules and atoms and, of late, various other types of conceptual physical entities, which were formerly supposed to be incapable of becoming objects of physical experience, now appear to come within the range of the experimenter's verifications. Therefore the processes of the experimental verification of physical hypotheses have, on the whole, a direct relation to the sort of knowledge upon which the pragmatists so much insist. The 'conceptual credits' of physical hypotheses are, on the whole, verifiable in terms of the 'perceptual cash' of laboratory experience. When this is not the case, there is a tendency towards such direct verification. Hence physical hypotheses, at least regarding what is generally called the phenomenal nature of matter, have generally proved to be topics for an inquiry within the strict realm of inductive science.

But it has been, in the past, the reproach of the conceptual theories about the nature of mind that no pragmatic test can be discovered by which one might learn what difference it would make to an observer of mental processes and, in particular, of his own mental processes whether minds are 'soul substances,' or Leibnizean monads, or not, or whether the introspective observer of his own sensations or feelings is or is not himself a Leibnizean monad or Aristotelian 'entelechy'; or, again, whether he is essentially persistent and indestructible. Thus, from the pragmatic point of view, the majority of these conceptual hypotheses regarding the nature of mind show little sign of promising to prove more verifiable than they thus far have been. In consequence, the outcome of conceptual views regarding the real nature of mind has been, for many reasons, on the whole sceptical. In fact, the whole nature of mind cannot be adequately conceived, and could not be so conceived even if one's power to perceive mental processes were increased indefinitely, unless another type of cognitive processes were concerned in such an enlargement. For a mind is essentially a being that manifests itself through signs. The very being of signs consists in their demanding interpretation. The relations of minds are essentially social; so that a world without at least three minds in it—one to be interpreted, one the interpreter, and the third the one for whom or to whom the first is interpreted—would be a world without any real mind in it at all. This being the case, it might well be expected that a conceptual theory of mind would fail precisely as a perceptual theory fails. Such theories would fail because they do not view the cognitive process as it is and do not take account of that which is most of all needed in order even in the most rudimentary fashion to grasp the nature of an intelligent mind.

(c) *Theories making use of the cognitive process of the interpretation.*—Despite the inadequate development of the doctrine of interpretation thus far in the history of epistemology, there have not been lacking theories regarding the nature of mind according to which mind is an object to be

¹ See Royce, *Problem of Christianity*, II.

known through interpretation, while its manifestations lie not merely in the fact that it possesses or controls an organism, but in the fact that, whether through or apart from an organism, it expresses its purposes to other minds, so that it not merely has or is a will, but manifests or makes comprehensible its will, and not merely lives in and through itself, as a monad or a substance, but is in essence a mode of self-expression which progressively makes itself known either to its fellows or to minds above or below its own grade.

That theories of mind which are based upon such a view have existed, even from very primitive times, is manifest wherever in the history of religion a consultation of oracles, discovery of the future or of the will of the gods through divination, or, in fact, any such more or less superstitious appeals to other minds, and readings or interpretations of these appeals, have taken place. Primitive belief in magic arts has apparently, on the whole, a conceptual type of formulation. Therefore magic has been called the physics of primitive man. It depends upon the view that man is subject to laws which, if he could discover them, he could use for his purposes, just as we now make use of the known laws of physics for industrial purposes. The supposed realm of magic arts is thus analogous to our present realm of industrial arts. The view of pragmatism—that primitive magic is not true merely because its hypotheses regarding how to cause rain or how to cure diseases do not 'work'—is in this case fairly adequate to express the situation both epistemologically and metaphysically.

Moreover, as we have seen, animism, in its more primitive forms, expresses a predominantly perceptual theory of mind, and whether such a theory, either of mind or of the relations between mind and the physical world, is held in some simple form by the medicine-man of an obscure tribe or is impressively reiterated in a Hindu *Upanishad*, or is fascinatingly placed in the setting of a modern evolutionary theory by Bergson, makes comparatively little difference to the essential views of the philosophy of mind which are in question. But that view of the nature of mind which gained, apparently, its earliest type of expression when men first consulted, and hereupon more or less cautiously interpreted, the oracles of their gods has (as befits a theory of mind which is founded upon a fundamental cognitive process) persisted throughout the history of human thought. This way of viewing mind has, in fact, persisted in a fashion which enables us to distinguish its expressions with sufficient clearness from those which have had their origin either in the conceptions of primitive magic or in the perceptions which guided primitive animism.

From the point of view of the cognitive process of interpretation mind is, in all cases where it reaches a relatively full and explicit expression, equally definable in terms of two ideas—the idea of the self, and the idea of a community of selves. To an explicit recognition of what these two ideas involve a great part of the history of the philosophy of mind has been devoted. Both ideas have been subject to the misfortune of being too often viewed as reducible either to purely conceptual terms or to purely perceptual terms. If the self was defined in predominantly conceptual terms, it tended to degenerate into a substance, a monad, or a mere thing of some sort. Under the influence of a too abstract epistemology (such as the Kantian) the self also appeared as the 'logical ego,' or else as the 'pure subject.'

The fortunes of the idea of the community have been analogous. In religion this idea has proved one of the most inspiring of the ideas which have

gradually transformed tribal cults into the two greatest religions which humanity possesses—Buddhism and Christianity. In ancient philosophy the community, viewed as the soul 'writ large,' inspired some of the most fruitful philosophical interpretations of Plato, Aristotle, and the Stoics. In the general history of civilization loyalty, which is identical with the practically effective love of communities as persons that represent mind on a level higher than that of the individual, is, like the Pauline charity (which is explicitly a love for the Church universal and for its spirit), the chief and the soul of the humanizing virtues—that virtue without which all the others are but 'sounding brass or a tinkling cymbal.' Yet, in the history of thought the idea of the community has greatly suffered, less frequently from the attempt to view it as the proper object of a direct mystical perception than from the tendency to reduce it to a purely conceptual form. As a conceptual object the 'mind of the community,' the 'corporate mind,' has tended to be thought of as an entity possibly significant in a legal or in a sociological sense, but difficult, and perhaps unreal, in a metaphysical sense.

Experience shows, however, that the two ideas—the idea of the individual self and that of the community—are peculiarly adapted to interpret each the other, both to itself and to the other, when such interpretation is carried on in the spirit which the religion of Israel first made central in what undertook to be a world religion, and which the apostle Paul laid at the basis both of his philosophy of human history and of his Christology.

Modern idealism, both in the more vital and less formal expressions of Hegel's doctrine and in its recent efforts at a social interpretation of the self, of the course of human evolution, and of the problems of metaphysics, has already given a partial expression to a theory of which we tend to become clearly aware in proportion as we recognize what the cognitive process of interpretation is, and how it contrasts with, and is auxiliary to, the processes of conception and perception. Only in terms of a theory of the threefold process of knowledge can we hope fully to express what is meant by that form of idealism which views the world as the 'process of the spirit' and as containing its own interpretation and its own interpreter.

LITERATURE.—The epistemology of Charles Peirce is discussed at length by the present writer in *The Problem of Christianity*, London, 1913, ff. (In Index, s.v. 'Peirce,' references will be found which will serve as a guide to the understanding of Peirce's theory of knowledge, and its relation to the metaphysical theories of the nature of mind).

MINIM.—Certain persons of Jewish origin mentioned in the Talmud and contemporary Rabbinical literature, usually with severe disapproval, are called Minim. Considerable difference of opinion has existed upon the question who the Minim were; but the view is now generally, though not universally, held that they were mainly Jewish-Christians. This theory has the support of Graetz, Jost, Weiss, Bacher, and Lévi; the chief opponent is Moritz Friedländer. The writer of this article, from an independent study of the evidence, decides for the Jewish-Christian interpretation, while admitting a wider denotation in a few passages. The evidence, consisting of the whole of the passages (so far as they are known to him) where mention is made of the Minim, is presented in full in the writer's work

Christianity in Talmud and Midrash, to which the reader is referred for details which cannot be given in the short space of this article.

The book *Siphre*, § 115, p. 35^a, quoting Nu 15³⁰ 'And ye shall not walk after your heart,' says, 'This is Minūth'—meaning that this is the state of mind, or principle of conduct, characteristic of the Minīm. This is the earliest attempt at a definition of the term, though the word itself was in use earlier. It amounts to saying that a 'Min' (singular of Minīm) was one who followed the dictates of his own selfish nature as against those of the lawful authority. The result of doing so is, indirectly, the rejection of beliefs and practices enjoined on those who hold the true religion. A Min, accordingly, disregards the authority of the Rabbis, as teachers of religion and expounders of the Torah both written and unwritten, and also maintains doctrines and practices which are not those of the true religion. Tos. *Sanh* xiii. 4 f. has the following censure on the Minīm:

'The sinners of Israel, and the sinners of the nations of the world, descend into Gehenna, and are judged there twelve months. . . But the Minīm, and the Apostates, and the betrayers, and the Apīqôrōsīm. . . Gehenna is shut in their faces, and they are judged there for generations of generations.' If the term Minīm denoted all unfaithful Jews, there would be no need of four descriptive names. The distinction between the four is as follows. The betrayers (M'sôrōth) are political informers, 'delators.' Apostates are those who wilfully and openly transgress some part of the ceremonial law, thereby proclaiming their disloyalty. Apīqôrōsīm are 'Epicureans,' free-thinkers, whether Jewish or Gentile. The Minīm are those who are false at heart, but who do not necessarily proclaim their apostasy. They are the more dangerous because more secret; they are not an open enemy, but the foe within the camp; and it is in accordance with this that the Talmud refers to the Minīm more frequently and with more hostility than to the other classes of unfaithful Jews. The Min might be an apostate or a delator, and could hardly fail to be a free-thinker; but the real nature of his offence was moral rather than intellectual.

Why was the name Min given to such persons? Various derivations of the word have been given, some of them mere fanciful guesses. The best explanation seems to be that proposed by Bacher (in *REJ* xxxviii. 45) and accepted by I. Lévi (*ib.* p. 205), according to which *min* (מִן) is at first the ordinary word for 'sort,' 'kind,' and is translated in the LXX, Gn 1², by γένος. Figuratively the word is used to denote a 'sect' (αἵρεσις), and more particularly the sect of the Sadducees (τὸ Σαδδουκαϊστικὸν γένος, Jos. *Ant.* XIII. x. 6, where ἡ Σαδδουκαϊστικὴ αἵρεσις is also used). Gradually the term lost the meaning of 'sect' and took on that of 'sectary,' the Jew who separated himself from the community and adopted false doctrines. If this explanation is correct, it throws light on the fact that in the Rabbinical texts the reading sometimes varies between Min and Šaddūkī (Sadducee). It is usually said that the latter word is due to the Christian censor, who objected to the word Min, but in some cases the reference is certainly to the Sadducees, while yet the word Min, or possibly both words, may have been read. The writer of this article proposed another derivation of the word Min (*op. cit.* p. 362), but now surrenders it in favour of the one just set forth.

The Minīm, then, were Jewish heretics of some kind. The question is, Of what kind? The answer resolves itself into a choice between Jewish-Christians and Jewish-Gnostics. That they were Jews is beyond dispute, for a Gentile is never called a Min, unless in one or two instances through ignorance or inadvertence. The only conspicuous advocate of the Gnostic interpretation is Fried-

lander (*Der vorchristliche jüdische Gnosticismus*; cf. also a defence in reply to criticism in *REJ* xxxviii. 194 ff.), but it is a serious defect of Friedlander's book that the argument is based on Rabbinical texts from which he strikes out, as interpolations, passages of crucial importance, without mentioning the fact. By this method any hypothesis could be proved. Bacher and Lévi, in articles in *REJ* (xxxviii. 38, 204) have severely handled Friedlander's hypothesis as well as his peculiar method of proof, and Lévi elsewhere refers to it as 'cet échafaudage de propositions puériles' (*RHR* li. [1905] 412). The evidence for the view that the Minīm were Jewish-Christians may be briefly summed up as follows. In many of the passages where they are mentioned there is nothing distinctive, certainly nothing definitely Christian; but in a few passages a connexion between Minūth and Christianity is so definitely stated that it cannot be excluded from neutral passages except on the ground of equally definite statements to the contrary. Such contrary evidence is not to be found, and even Friedlander does not produce any. (1) In a famous passage, Bab. *Abhōdāh Zārāh*, 16b (and in three other places), it is told how a certain Rabbi Eliezer (end of 1st cent.) was arrested for Minūth. He accounted for this afterwards by saying that he had once met 'one of the disciples of Jesus the Nazarene, by name Jacob of K'phar Š'khanyā,' who told him the exposition of a text and added, 'Thus hath Jesus the Nazarene taught me.' Also, in the same treatise, p. 27a, the same Jacob is called 'Jacob the Min,' and it is said that he offered to cure a sick man, while in Tos. *Hull.* ii. 22 f. the same Jacob proposed to work his cure 'in the name of Yeshūa' ben Pandirā, i.e. Jesus. (2) In Bab. *Shabb.* 118a there are mentioned, in close connexion, the books of the Minīm and the Evangelion, i.e. the Gospels. (3) The characteristic doctrine of the Minīm—that of Two Powers in Heaven—is closely allied to, if not identical with, the teaching of the Ep. to the Hebrews, and is not the Gnostic doctrine of the Demiurgus. The connexion of this doctrine with Christianity is shown by a passage in *Pesiqṭā Rab.* xxi. 100b: 'If the son of the harlot saith to thee, "There are two Gods," etc., where "the son of the harlot" denotes Jesus.

The combined force of these arguments, which could be supported in great detail if space allowed, seems conclusive in favour of the Jewish-Christian interpretation; and this view is strongly confirmed by a passage in Jerome:

'Usque hodie per totas Orientis synagogas inter Iudaeos hae resis est, quae dicitur *Minaeorum*, et a Phariseis nunc usque damnatur; quos vulgo Nazaraeos nuncupant, qui credunt in Christum, filium Dei, natum de virgine Maria, et eum dicunt esse qui sub Pontio Pilato passus est et resurrexit, in quem et nos credimus; sed dum volunt et Iudaei esse et Christiani, nec Iudaei sunt nec Christiani' (*Ep.* cxli. [lxxxix.] 13 [*PL* xxii. 924]).

The general conclusion to be drawn from the evidence, of which the foregoing is the most important, is that, wherever in the Talmud and Midrash mention is made of the Minīm, the author of the statement intended to refer to Jewish-Christians. At the same time it is possible that the Rabbis attributed to Minīm actions or opinions which, in fact, were not those of Christians; and, further, that the Rabbis occasionally applied the term Min to Gentiles as being enemies of Judaism.

The references to the Minīm in the Rabbinical literature are few and fragmentary. The passages where they are mentioned amount to about 120, most of which contain either polemical dialogues between a Min and a Rabbi or allusions to heretical interpretations of texts, although a few are anecdotes of events in connexion with the Minīm. It is not possible to construct a history of the Minīm; the material is sufficient only to give a few glimpses

of them, and to throw some little light upon their relations with orthodox Jews.

The *Minim*, as stated above, were apostates who concealed their apostasy, and it was necessary, therefore, to have some means of detecting them. This was the object with which the Formula against the *Minim* was introduced. It is stated (Bab. Ber. 28b, 29a) that R. Gamaliel II. (president of the Sanhedrin at Jabneh) said to the Rabbis: 'Is there any one who knows how to compose a Benediction of the *Minim*?' Samuel the Little stood up and composed it. The following year he forgot it, and sought to recall it for two and even three hours, and they did not call him up (from the lectern). The 'Benediction' of the *Minim* was an addition made to the Eighteen Benedictions (*Sh'moneh Esreh Berakhoth*), which are short prayers, some of them very ancient, forming the nucleus of the Jewish liturgy. The twelfth in order, as composed or adapted by Samuel the Little, runs: 'May there be no hope for the *Minim*.' Those who were *Minim* could not, of course, join in this prayer, and would be detected. The introduction of this formula marks the official condemnation of the *Minim* by the Rabbis; and the date may be placed at A.D. 80, or thereabout. This does not imply the separation of the *Minim* from the strict Jews at and after that time; they were still to be found, as Jerome says, in all the synagogues of the East in his time; but it is true, nevertheless, that the *Minim* did to some extent possess a separate organization, with synagogues of their own.

The reason why a formula of detection against the *Minim* became necessary about A.D. 80, was, in part, that the Temple had been destroyed ten years before. As long as the Temple stood, Jewish-Christians in Jerusalem appear to have taken part in the ritual observances equally with non-Christian Jews. After the destruction of the Temple, however, it was possible to argue that the ceremonial law was not merely *de facto* suspended (as the Jews admitted), but *de jure* abrogated; and this is the link which connects the original Jewish-Christians with the *Minim*. The latter appear, from the notices of their doctrines, to have held a theology closely akin to that set forth in the Ep. to the Hebrews; and, if so, the inference is ready to hand that it was the symbolic interpretation of the ceremonial law that opened the way for a Christology more highly developed than that of the original Jewish-Christians.

The hostility towards, and dread of, the *Minim* were at their height in the 2nd cent.; afterwards they declined, till in the 4th cent. we find comparatively friendly relations with them. The *Minim* of Caesarea applied to R. Abahu to find them a teacher, and he sent them R. Saphra, a Babylonian Jew of unquestioned orthodoxy (Bab. *Abhodah Zarah*, 4a). The meaning of this gradual change is that at first it was not evident to the Rabbis that the Christian Church would not develop on Jewish-Christian lines. When, in course of time, it appeared that the *Minim* did not represent the strength of the Christian movement, there was the less reason to dread it; there was less danger to Judaism from a Gentile Christianity than from a Jewish form of it. Of Gentile Christianity the Rabbinical literature takes scarcely any notice. Space does not allow of illustrations of the polemics between *Minim* and Jews, or of the anecdotes which represent the former as being not only apostates but licentious. It must suffice to say that they appear to have been a dwindling sect, in Judaism but not of it, spurned alike by Jews and by Christians. In their theology they departed from the strict monotheism of Judaism, and held a doctrine—called the Doctrine of the Two Powers in Heaven—which corresponds with the relation between God and Christ

set forth in the Ep. to the Hebrews. No mention is made in any of their polemical discussions of the Messiahship of Jesus, nor is there more than one very slight trace of the doctrine of the Trinity (Jerus. Ber. 12d, 13a). Jerome identifies them with the Nazarenes, and the corresponding name, *Nōgrim*, is found in two passages (Bab. *Abhodah Zarah*, 6a; Bab. *Ta'an*. 27b). The name *Ebionite* does not occur in the Rabbinical literature.

R. T. HERFORD.

MINISTRY (Early Christian).—An attempt will be made in this article to collect the more important facts in connexion with the ministry as far as the first five or six centuries of our era are concerned. About the facts themselves there is general agreement; but the interpretation of the facts has been disputed. A summary will be made, as briefly as possible, of the theories that have been deduced from the facts as to the institution of a ministry by our Lord, and its development in subsequent ages. But a discussion of these theories is not part of the design of the article.

1. The Apostolic Age.—In Acts and in the Epistles of the NT we find in active operation a ministry of two kinds, itinerant and local.

i. THE ITINERANT MINISTRY.—We read of apostles, prophets, and evangelists, all of whom come under this heading. The first of these terms includes at least a few (even in the early ages) who were not of the Twelve (see below, §2). The qualification of an apostle seems originally to have been that he should have seen our Lord, and have been His 'witness' (Lk 24⁴⁸, Ac 1⁸). Thus, when the vacancy in the number of the Twelve has to be filled up, the qualification mentioned by St. Peter is that the person chosen should have 'compared with [the Eleven] all the time that the Lord Jesus went in and went out among' (or 'over,' *ēnt*) them, 'beginning from the baptism of John, unto the day that he was received up from' them; so that he might become a witness with them of Jesus' resurrection (Ac 1²¹). St. Paul received his qualification, though in a different way, at his conversion (cf. Gal 1¹, 'An apostle, not from men, neither through man, but through Jesus Christ, and God the Father'). That St. Barnabas and the others mentioned below (§2) had seen Christ is not stated, but is quite probable. Hegesippus says (Eus. *HE* ii. 1) that Barnabas was one of the Seventy. This qualification may have been waived in the sub-apostolic period.

Hort (*Christian Ecclesia*, p. 28) thinks that the word 'apostle,' which is of comparatively rare occurrence in the Gospels, referred originally only to the mission to the villages, though such passages as that about judging the twelve tribes (Mt 19²⁸, Lk 22²⁹) were indications of the extended significance of the name which we find in Acts.¹ It is clear, however, from Lk 6¹³ (the reading in || Mk 3¹⁴ is doubtful) that our Lord gave them the title; and that He intended more than a mere mission to the villages by the designation appears almost certain from such passages as Lk 12⁴¹⁻⁴⁸, where He speaks of a commission for future ages (see below, §9). St. Luke certainly uses the name without reference to the mission to the villages.

Christian prophets are frequently mentioned in the NT—Agabus and others (Ac 11²⁷, 21¹⁰); those at Antioch, 'prophets and teachers,' including

¹ The name 'apostles' for the Twelve is found, according to Westcott and Hort's text, only in Mt 10², Mk 3¹⁴ 6³⁰, Lk 6¹³ 9¹⁰ 17⁶ 22¹⁴ 24¹⁰, and not at all in Jn, though 13¹⁶ seems to be an allusion to the title.

Barnabas and Saul, also Symeon Niger, Lucius of Cyrene, and Manaen (Ac 13¹); Judas and Silas (15²²); and an unstated number in 1 Co 12²⁸. (see § 2) 14²⁹⁻³⁵. Prophets are mentioned as a class in Eph 2²⁰ 3⁵ 4¹¹ (see § 2), possibly in 1 Th 2¹⁵; also in Rev 18²⁰ 22⁹. They are coupled in Eph. and Rev. with apostles.¹ They are described as receiving revelations (1 Co 14²⁶⁻²⁸). Christian prophetesses are also mentioned (Ac 21⁹, Philip's daughters). But it may be doubted if 'prophets' ought to be described as a class of the ordinary Christian ministry. Their office was purely charismatic (see below, § 3).

It is otherwise with 'evangelists.' These are mentioned in Ac 21⁴ (Philip), Eph 4¹¹ (see below, § 2), 2 Ti 4⁵ (Timothy). This name would seem to be that given to those who, though not apostles, because they had not the qualification stated above, yet were itinerant officials and not of the local ministry. Eusebius (*HE* iii. 37) gives the name to those who 'occupied the first place among the successors (*διαδοχῆς*) of the apostles' and were itinerant preachers of the gospel. He says that, when they had only laid the foundations of the faith in foreign places, they appointed others as pastors (*ποιμένες*) and then went on to other countries and nations. A few lines later he talks of 'pastors or evangelists,' and seems to mean by the former the local, by the latter the itinerant, ministry.

Apostles and prophets are also mentioned in the *Didache* (§§ 10-13), a manual probably of the beginning of the 2nd century. These were normally itinerant officials, and were perhaps identical (see *Did.* § 11). The value of this evidence is discounted by J. A. Robinson (*JThSt* xiii. [1912] 339), who thinks that the writer does not describe the conditions of his own day, but those which he thought had been in force at an earlier time. This theory, however, is very doubtful (for Robinson's earlier view see his *Com. on Ephesians*², London, 1904, p. 98, n.).

The function of the itinerant ministry was evangelistic (cf. 1 Th 2⁸, 1 Ti 2⁷). The itinerants might settle for a time at a place, as Timothy settled at Ephesus, Titus in Crete, and St. Paul himself at various places where he founded churches; but this was not their normal work. In the *Didache* it is recognized that a prophet may settle in a place (§ 12 f.).

ii. THE LOCAL MINISTRY.—Under this heading are included in the NT 'bishops,' 'presbyters,' and 'deacons.' For other names of these officials see § 2. The functions of the local ministry were administrative and pastoral. Thus baptism seems to have been specially entrusted to it (cf. 1 Co 1¹⁴, and perhaps Ac 19⁶; cf. v. 6). In the beautiful story of St. John and the young robber related by Clement of Alexandria (*Quis dives*, 42), the apostle does not himself baptize the young man, but gives him over to the local bishop-presbyter to baptize (see below).

(a) *Bishops*.—During the period covered by the NT, we read of this name being given to Christian ministers only in Gentile churches—at Philippi (Ph 1¹), at Ephesus (Ac 20²⁸, 1 Ti 3^{1a}), in Crete (Tit 1^{7a}). So St. Peter, writing to the churches in most of the provinces of Asia Minor, uses the participle *ἐπισκοποῦντες*, 'exercising the bishop's office' (1 P 5²). That the 'bishops' are the same as 'presbyters' in the Apostolic Age seems to follow from a comparison of Ac 20¹⁷ with 20²⁸, where the same individuals are called by both titles; and of

1 Ti 3¹⁻⁷ with 5¹⁷⁻¹⁹, the first of which passages describes the qualifications of 'bishops,' the second of which gives regulations for 'presbyters' as for those who have already been mentioned in the Epistle; and of Tit 1⁵ with v. 7 ('appoint presbyters in every city . . . for the bishop must be blameless'); also from the use by St. Peter of *ἐπισκοποῦντες* when speaking of presbyters (see above, and 1 P 5³). The same thing is apparently found in Clement of Rome (*Cor.* 42, 44), where the local ministers are called 'bishops and deacons,' and yet 'presbyters' are spoken of, and their 'episcopate' (*ἐπισκοπή*). He says that the apostles knew through our Lord Jesus Christ that there would be strife over the name of the episcopate. In the *Didache* also (§ 15) the local ministry consists of 'bishops and deacons.' Perhaps 'presbyter' expressed the rank, and 'bishop' the function.

Hort (pp. 98 f., 189-212) takes a different view. He holds that the words 'bishops' and 'deacons' are used in a non-technical sense in the NT as meaning 'those who have oversight' and 'those who minister.' He thus interprets the words in Ac 20²⁸, 1 Ti 3^{1a}, and deduces the conclusion that the same holds good in Ph 1¹, where *ἐπισκόποις* and *διακόνους* have no article. He does not deny that 'deacons' may have become the name of the officials before the Pastoral Epistles were written, but he thinks that St. Paul uses the word in a non-technical sense.

(b) *Presbyters*.—The name was perhaps taken over by the Christians from the Jews, who gave it to the members of the Sanhedrin and others. But inscriptions show that the heathen Greeks used it for members of a corporation, and the same thing appears from the papyri. A. Deissmann thinks (*Bible Studies*, Eng. tr., Edinburgh, 1901, p. 154 ff.) that the Christians of Asia Minor may have adopted the term, not from the Jews, but from the Greeks. In Egypt, as Deissmann shows (p. 233), pagan priests were called 'presbyters.' [It may be added that inscriptions also prove that the title *ἐπίσκοπος* was used for certain officials in Greek-speaking countries in pre-Christian times (Deissmann, p. 230 f.).] In the early Church the name 'presbyter' was specially used, as it would seem, at Jerusalem (Ac 11³⁰ 15² etc. 16⁴ 21¹⁸), but it was also used by the Christian Jews of the Dispersion (Ja 5¹⁴), and in the Gentile communities, for Paul and Barnabas appointed 'elders in every church' on a journey in Asia Minor (Ac 14²³).

The identity in the NT of 'bishops' and 'presbyters' was completely forgotten before the end of the 2nd century. Thus Irenæus (*Hæc.* iii. xiv. 2), referring to Ac 20^{17a}, speaks of St. Paul meeting at Miletus bishops and presbyters from Ephesus and the other cities; the last four words are no doubt due to the plural 'bishops,' as to Irenæus the idea of more than one bishop (in the sense in which the word was used in his day) in any city would be quite foreign. Clement of Alexandria, at the end of the century, was also ignorant of the identity; he speaks (*Pæd.* iii. xii. 97) of commands in Holy Scripture given to presbyters, bishops, deacons, widows (in that order), as to distinct persons. In *Quis dives*, 42, he speaks of a single 'bishop' in one of the cities of Asia in St. John's time; this is doubtless historically correct, yet we may notice that a few lines later he calls the bishop 'the presbyter.' This is an instance of that fluidity of phraseology which we shall have occasion to notice below (§ 2). In the 4th cent. Jerome and other Fathers had learnt that the bishops and presbyters of the NT were the same persons (see references in Lightfoot, *Philippians*, p. 93 f.).

(c) *Deacons*.—These ministers are mentioned in the NT in Ph 1¹, 1 Ti 3^{8, 10, 12a} only. They are not found in the Epistle to Titus. They are also mentioned, together with 'bishops,' in Clement of Rome and the *Didache* (as above). The usual view has been that they represent the Seven whose appointment is recorded in Ac 6. Others think

¹ In Eph 2²⁰ the Church is said to be built upon the foundation of the apostles and prophets (no article before 'prophets'). Both here and in 3⁵ prophets come after apostles, and Christian prophets must therefore be meant. Hort (p. 185) gives good reasons for thinking that here (not in 4¹¹) the same persons are meant by both designations. All the apostles were probably prophets, though all the Christian prophets were not apostles.

that the Seven were the prototypes both of the diaconate and of the presbyterate, and that at some time after St. Stephen's death the office was divided into those two branches. Another view is that the appointment of the Seventy (or Seventy-two) in Lk 10¹ was the foundation of the presbyterate. The Seven of Ac 6 were appointed in the first instance for the administration of relief (v.), but that they were also preachers of the gospel is seen from the history of Stephen and Philip, and might be inferred from their solemn ordination with prayer and laying on of hands.

iii. THE POSITION OF JAMES THE LORD'S BROTHER AT JERUSALEM.—Christian antiquity agrees in giving St. James a local ministry at Jerusalem, and yet in making him, in a real sense, equal to the Twelve, and in ascribing to him rule or presidency over the presbyters, though nothing is said of any autocratic powers possessed by him. This account of his position is borne out by the NT writers. In Ac 12¹⁷ Peter bids those who are assembled in Mary's house tell of his escape 'unto James and to the brethren.' In 15¹⁸ James presides over, or at least takes a leading part in, the apostolic council, and gives the decision, i.e. interprets the evident sense of the assembly. In 21¹⁸ Paul and his companions visit him assembled with the presbyters in a formal meeting. In Gal 1¹⁹ he is, perhaps, called an apostle (see § 2); he and Cephas are visited by Paul at Jerusalem. In 2⁹ he is named before Cephas and John, and the three are 'reputed to be pillars.' In 2¹² the Jewish Christians who come from Jerusalem to Antioch are said to come 'from James.' Of the Fathers the earliest to bear witness to St. James's position in Jerusalem is Hegesippus, known as the father of Church history (c. A.D. 160). He says that 'James, the brother of the Lord, succeeded to the government of the Church in conjunction with the apostles' (Eus. *HE* ii. 23); he describes the appointment of Symeon, a cousin of the Lord, as 'the next bishop' (iv. 22). So Eusebius, who depends on Hegesippus, says (iii. 11) that they pronounced Symeon to be worthy of the throne of that diocese (*παροικία*), and (iii. 32) that Symeon was the second bishop of the Church of Jerusalem; in the former passage he says that there was a second Apostolic Council on the occasion of Symeon's election. The last statement is very doubtful; but the tradition probably gave rise to the detailed pseudography of the Church Orders, which assign all sorts of directions to the apostles. The same supposed council has been thought by some to have decreed the establishment of diocesan episcopacy; but the latter was probably of gradual growth rather than the result of an enactment of a formal council (see below, § 4). The position of James is also spoken of by Clement of Alexandria (*Hypotyposes*, bk. vi., quoted by Eus. *HE* ii. 1):

'Peter, James, and John, after the ascension of our Saviour, as if also preferred by our Lord, strove not after honour, but chose James the Just bishop of Jerusalem. . . . The Lord after His resurrection imparted knowledge to James the Just and to John and Peter, and they imparted it to the rest of the apostles, and the rest of the apostles to the Seventy, of whom Barnabas was one.'

The phrase about imparting knowledge to James may probably be a reference to 1 Co 15⁷. The description of him as 'bishop of Jerusalem' is an anachronism of nomenclature, but it roughly describes his position. His office at Jerusalem is a favourite theme in the 'Clementine' literature, but the date of these works is uncertain.

iv. ANGELS IN THE APOCALYPSE.—The 'angels' in Rev 1³⁰–3²² have been taken by some to be the chief ministers of the Church in the province of Asia. But this interpretation is so doubtful that no argument can be built upon it.

v. There is no certain trace of any local officials

in the NT inferior to the 'bishops and deacons.' Interpreters are mentioned in 1 Co 14²⁸, for those who speak with tongues (cf. 12³⁰). But there is no indication that an ecclesiastical office is intended.

2. Fluidity of phraseology.—It is important to remember that the names of Christian ministerial offices were not stereotyped in the Apostolic Age. Many theories have been erroneously built on the supposed identity of offices in different centuries, because of the identity of names. In the earliest age the names of the orders of the ministry were in a fluid condition, even if the functions and duties of the offices were fixed, which is doubtful.

(a) The name 'apostle.'—This is used in the NT of the Twelve (see above, § 1). It is also used of certain other persons who had equal authority with the Twelve in the early Church—Paul, Barnabas, probably James the Lord's brother (see Lightfoot, *Galatians*⁵, pp. 84, 95; cf. 1 Co 15⁷), probably also Andronicus and Junias, who were 'of note among the apostles' (Ro 16⁷; but some think that the latter was the name of a woman), perhaps Silvanus, who was associated with St. Paul in writing to the Thessalonians (1 Th 2⁶; cf. 1¹). Timothy might have been included under the same designation but that he is excluded from it by 2 Co 1¹, Col 1¹, doubtless because he had not seen Christ (see § 1). The name is also used in the NT of messengers simply (2 Co 8²³, Ph 2²⁵), and of our Lord Himself (He 3¹; cf. Jn 20²¹). In the Syriac-speaking churches it was given to any missionary; and so the Greek-speaking Irenæus says (*Hæc*. ii. xxi. 1): 'After the twelve apostles, our Lord is found to have sent forth seventy others.' Tertullian (*adv. Marc.* iv. 24) gives the name to the Seventy as well as to the Twelve ('he chose also seventy other apostles besides the twelve'). Note that St. Luke (10¹), in describing the appointment of the Seventy, says that Jesus 'sent them forth' (*ἀπέστειλεν*), whence the name *ἀπόστολος* comes at once. It means 'one commissioned.' Certain persons, called 'false apostles,' arrogated the name to themselves (2 Co 11¹³, Rev 2²).

(b) The names 'bishop' and 'presbyter.'—We have already seen that the name 'bishop' was used in the 1st cent. in a sense different from that which it afterwards acquired. And we may notice how fluid was the phraseology with regard to both 'bishop' and 'presbyter.' Our Lord is called a 'bishop' in 1 P 2²⁵; St. Peter a 'presbyter' in 1 P 5¹ (*συμπρεσβύτερος*), St. John in 2 Jn 1, 3 Jn 1. In the 2nd cent. the term 'presbyters' came to be used somewhat as we use the term 'the Fathers.' We may also notice how easy was the change from 'presbyter' to 'old man'; so much so that it is not always easy to determine in any given passage which translation ought to be taken. In 1 P 5⁵ St. Peter, who has been addressing the presbyters, suddenly says: 'Likewise, ye younger [men], be subject to the elder' (*πρεσβυτέρους*). Clement of Rome (*Cor.* 1) says: 'Submitting yourselves to your rulers (*ἡγουμένους*), and rendering to the presbyters [Lightfoot: 'older men'] among you honour,' etc.; and so in § 21. A little later Polycarp, after saying that 'the young men must be blameless,' goes on to exhort the Philippian to submit themselves 'to the presbyters and deacons' (*Phil.* 5). The association of the presbyterate and old age survived for a long time. It is found in the *Apostolic Church Order* (Bohairic version), where it is said that presbyters should live 'after the manner of old men' (§ 18; H. Tattam, *Apost. Const. in Coptic*, London, 1848, p. 20). The ordination prayer of a presbyter in the *Testament of our Lord* (c. A.D. 350?) speaks by a paranomasia of 'the Spirit [masc.] of the presbyterate who doth not grow old' (i. 30). Pseudo-Pionius (4th cent.) in the *Life of Polycarp* (§ 17; Lightfoot, *Apost.*

Fathers, pt. ii., 'Ignatius and Polycarp,' iii. 447 f.) unhistorically makes Polycarp to be an old man before he is ordained presbyter. So perhaps Hermas, *Vis.* ii. 4 (2nd cent.), where the presbyters are the officials of the *πρεσβυτέρα* ('aged woman'), who is interpreted as the Church. Gregory of Nazianzus (*Orat.* xlii. 11, 4th cent.) speaks of the presbyters being 'honoured for years and wisdom.'

(c) *The name 'deacon.'*—In addition to the use of the word *διάκονος* in the non-ecclesiastical sense of a 'servant,' as in Mt 22¹³, Jn 2⁵⁻⁸, and elsewhere in the Gospels, and (metaphorically of a ruler as God's servant) in Ro 13⁴, or of a 'follower' (of Christ) in Jn 12²⁶, we have it used frequently of others than the ordinary 'deacons.' Our Lord is called a 'deacon' in Ro 15⁸ ('deacon of the circumcision'); St. Paul in Col 1^{23, 25}, 2 Co 3⁶ 6⁴ (pl.), Eph 3⁷, 1 Co 3⁸ (also Apollos); Timothy in 1 Th 3² (Westcott-Hort's text), 1 Ti 4⁶ (cf. the technical use of *διάκονος* in 3²⁶); Epaphras in Col 1⁷; Jewish Christians in 2 Co 11²². Satan's 'deacons' are mentioned in 2 Co 11¹⁵. This fluidity of expression would be realized by the English reader if the translation 'deacon' (instead of 'minister') were adopted throughout, and if it were borne in mind how often *διακονία* and *διακονέω* are used in the NT, always in the non-technical sense of 'service' and 'to do service.'

(d) *St. Paul's lists of the ministry* show a great fluidity of nomenclature. But they do not give technical names to the various classes of the ministry. In 1 Co 12²⁸ we have: apostles, prophets, teachers, powers, charismata of healings, helps, governments, kinds of tongues. These cannot all be offices; some are (as we see from v. 29) purely charismatic, namely powers (working of miracles), healings, tongues. Probably no orders of the ministry are here explicitly enumerated, but only the different kinds of work done in the Christian Church. On the other hand, officials of the ministry are enumerated in Eph 4¹, where we have apostles, prophets, evangelists, pastors¹ and teachers (the last two are one class). These offices are said to be 'for the perfecting of the saints unto the work of ministering,' i.e., to equip the members of the body for the function of service to the whole (Robinson, *Ephesians*², p. 98 f.; the RV inserts a comma after 'saints,' but the two clauses probably go together). In this list we have no 'bishops,' 'presbyters,' or 'deacons,' and yet these officials existed at Ephesus (Ac 20^{17, 28}, 1 Ti 5¹⁷). Hence in this Pauline list we cannot look for technical designations, but rather for a description of the work done by different officials. The 'pastors and teachers' appear to be the local ministry. In Ro 12⁶ we have the abstract charismata or gifts: prophecy, ministering (*διακονία*), teaching, exhortation, giving [alms], ruling, showing mercy. In 1 Th 5¹² we have leaders (*προϊστάμενοι*); cf. 1 Ti 3^{4, 12} 5¹⁷, where this word is used of 'bishops' and 'deacons.'

(e) *Fluidity of 'hieratic' language.*—In the NT and the sub-apostolic writers the word *ιερεύς* is not used of a Christian minister, though Christians as a body are called 'priests' and 'a priesthood' (*ιερέυεια*) in 1 P 2^{5, 9}, Rev 1⁶ (cf. Rev 5¹⁰ 20⁶), just as all Israel had been 'priests' (Ex 19⁶). Our Lord Himself is called a 'priest' or 'high priest' (*ἀρχιερεύς*) in He 3¹ 5¹⁴, 7^{11, 26} 10²¹, etc. Clement of Rome, Ignatius, and Irenaeus do not use 'hieratic' language of the Christian ministry, but the *Didache* says of the Christian prophets: 'they are your

¹ The word 'pastor' or 'shepherd' (*ποιμήν*) is used of our Lord in He 13²⁰, 1 P 2²⁵ (cf. 1 P 5⁴, Jn 10^{11, 14}). It was often applied to bishops by later writers (e.g., *Apost. Const.* ii. 1). The verb *ποιμαίνω* is used of the Christian ministry in Jn 21¹⁶, Ac 20²⁸, 1 P 5² (cf. Jude¹²). In Ac 13¹ 'prophets' and 'teachers' are joined together (cf. 1 Co 12²⁸).

high priests' (§ 13). Polycrates, bishop of Ephesus, c. A.D. 190, says (quoted by Eus. *HE* v. 24) that St. John was a priest, wearing the mitre (or 'golden plate,' *πέραλον*); but the meaning is not clear.¹ Justin Martyr (c. A.D. 150) calls the Christian body 'the true high-priestly race of God' (*Dial.* 116). Tertullian at the end of the century speaks of the bishop as 'high-priest' ('*summus sacerdos*,' *de Bapt.* 17), and, in reference to the Christian ministry, speaks of 'functions of priesthood' ('*sacerdotalia munera*,' *de Praeser.* 41). Hippolytus, early in the 3rd cent., uses similar language (*Haer.* i. pref.): 'We being their [the apostles'] successors and participators in this grace of high-priesthood,' etc. In Cyprian the bishop is frequently called 'sacerdos,' and his office 'sacerdotium.' The *Older Didascalia* (3rd cent.) calls the bishops 'high-priests' (Funk, *Didasc. et Const. Apost.*, Paderborn, 1905, i. 102), and says that the Jewish priests and levites now correspond to the deacons, presbyters, widows, and orphans. The names 'high-priest' for the bishop, and 'priests' and 'levites' for the presbyters and deacons respectively, were frequently used in the 4th cent. and onwards, and are often found in the Church Orders (for references see Maclean, *Ancient Church Orders*, p. 67, n.). In the ordination prayer for a presbyter in the *Apost. Const.* viii. 16 (c. A.D. 375) and in the Epitome known as *Constitutions through Hippolytus*, § 6 (Funk, ii. 80), his functions are called *ιερωσύλαι*, 'priestly duties.' Of other 4th cent. writers we may take as an example Epiphanius, who uses *ιερεύς* for a Christian priest (*Exp. Fid.* 21), and whose 'priesthood' (*ιερωσύνη*) includes subdeacons, but not readers (*ib.*). Jerome calls his famous treatise on the ministry 'Concerning priesthood' (*Περί ιερωσύνης*). At the Council of Laodicea (c. A.D. 380, can. 27, 30), 'hieratics' (*ιερατικοί*) are the bishops, priests, and deacons, as opposed to the 'clerics' (*κληρικοί*), who include the minor orders. In *Apost. Const.* iii. 15, and in the *Apost. Canons*, 63 (c. A.D. 400), the minor orders are included among the 'hieratics.' In the Syriac-speaking Churches the word *kāhnūthā* (which is the translation of *ιερωσύνη*) is used for all orders of the ministry.

The use of this language does not mean that a new conception of the ministry was entertained by those in whose writings it is first found. It was not likely to be used as long as any Jewish priests or levites were in the ranks of the Christian ministry. For example, Barnabas was a levite (Ac 4³⁶), and could not well have been called a 'priest,' without considerable confusion. When 'hieratic' language was first used in the Christian Church, it was a new nomenclature, but did not imply any new functions. It is a fallacy to describe some 2nd cent. Christian writers as unsacerdotal, and some as sacerdotal. The use of 'hieratic' language meant that the writers who employed it ascribed to Christian officials the ministry delivered by the Great, and in the strictest sense the Only, High Priest, our Lord Himself. The writers like Ignatius who do not use 'hieratic' language are even more emphatic about the authority of the ministry than those who do.

3. *Charismatic ministry.*—This term properly indicates those who are endowed with any spiritual gifts, called *χαρίσματα* ('gifts') in 1 Co 12⁴ or simply *πνευματικά* ('spiritual [things]') in 12¹⁴; but it is conveniently used for those who had 'extraordinary' charismata. We must distinguish between the 'charismatic' and the official ministry. As long as extraordinary charismata continued, the two went on side by side. Yet the same person might be of

¹ H. Delf's theory is that the 'beloved disciple' (whom he distinguishes from the apostle John) was a native of Jerusalem and belonged to one of the high-priestly families (W. Sanday, *Criticism of the Fourth Gospel*, Oxford, 1905, p. 99 f.).

both ministries; thus St. Paul was an apostle, and yet spoke with tongues more than all (1 Co 14¹⁸). The charismata enumerated in 1 Co 12⁸⁻¹⁰ include wisdom, knowledge, faith, healings, miracles, prophecy, discerning of spirits, tongues, interpretation of tongues. Of these probably the most prominent was prophecy. For the passages in which Christian prophets are mentioned see § 1, above; these, however, do not imply that Agabus, Judas, Silas, and others held office in the Church as prophets, though they may have done so in another capacity. It is recognized that any one might receive a revelation, and so be a 'prophet' (cf. 1 Co 14³⁰). Thus those whom we should call 'laymen,' as not being of the official ministry, spoke in the Christian assemblies (*ib.*). But women were not allowed to do so (v. 34), though they might be prophetesses (Ac 21⁹). In 1 Co 14 the charisma of tongues is somewhat disparaged as compared with prophecy.

Prophecy long continued. For the prophets in the *Didache* see above, § 1. Quadratus, early in the 2nd cent., was renowned for his prophetic gifts (Eus. *HE* iii. 37). Polycarp is called in the letter written by the Smyrnaeans 'an apostolic and prophetic teacher' (*Mart. Pol.* 16; A.D. 155 or 156). Hermas received revelations, and his *Shepherd* (c. A.D. 150?) was widely received as a prophetic writing. Even in the 4th cent. the Church Orders speak of charismata, and in particular of revelations, being expected; e.g., the *Test. of our Lord* speaks of those expected by the bishops, presbyters, widows, and by any Christians (i. 21, 23, 29, 31 f., 40); gifts of healing or of knowledge or of tongues are referred to as being a possible endowment of any Christian (i. 47). Such a one was not to be ordained ('a hand is not laid on him'), but to be had in honour (*ib.*). See also below, §§ 6-8.

The term 'charismatic ministry' is capable of being misunderstood, as if the official ministry was considered a purely mechanical one, and only of human appointment. But St. Paul clearly recognizes the official ministry as charismatic in another sense. Timothy had the charisma in virtue of his ordination (1 Ti 4¹⁴). The official ministry had the 'spiritual gift,' though it was not of the same nature as that of those who had extraordinary endowments; and the two ministries, as we have seen, might overlap.

4. Bishops, presbyters, and deacons from the 2nd cent. onwards.—(a) *Bishops*.—In the Epistles of Ignatius (c. A.D. 110) we find bishops in the later sense of the word fully established. We may here make an endeavour to collect the facts with regard to the diocesan episcopate, postponing a statement of the theories that have been advanced as to its origin. The phrase 'diocesan episcopate' is perhaps the best that we can use, as it begs no question as to the relation of the bishop to the presbyter; the phrase 'monarchical episcopate,' which is used by many writers, is open to this objection.

The establishment of bishops in the later sense in the Churches of the province of Asia and elsewhere is ascribed by a steady tradition to John the Apostle. Clement of Alexandria (*Quis dives*, 42) says that 'after the tyrant's death' John 'returned to Ephesus from the isle of Patmos,' and 'went away, being invited, to the contiguous territories of the nations, here to appoint bishops, there to set in order whole Churches, there to ordain such as were marked out by the Spirit.' Tertullian similarly says (*adv. Marc.* iv. 5) that 'the order of the bishops' [of the Seven Churches of Asia, or of all the Churches of the province] 'when traced up to their origin' rests 'on John as their author.' And the *Muratorian Fragment* (c. A.D. 180?) says that John was exhorted by 'his fellow disciples and bishops' to write his Gospel.

Ignatius speaks of bishops being established all over the world (*Eph.* 3). But we do not find the diocesan episcopate established in all places at an equally early date. Thus Ignatius writes to the Philippians, but makes no mention of their bishop. Clement of Rome (c. A.D. 95) likewise omits all reference to a bishop at Corinth when writing to the Corinthians. It is, of course, possible that the office at Philippi and Corinth was vacant at the dates of these letters; but this hypothesis cannot be proved, and the deduction has usually been made that the diocesan episcopate was not established in these two places so soon as elsewhere. The position at Rome at the end of the 1st cent. has been considered doubtful. Clement writes in the name of his Church (not of the presbyters), but he does not call himself its bishop, nor does he name himself at all; we have to gather information about the authorship of this Epistle from subsequent writers. Clement obviously held a prominent position in the Roman Church; and, though nomenclature and organization matured themselves more slowly at Rome than elsewhere, the testimony of all antiquity must be taken as showing that he held the first place in it. Thus Irenæus makes Clement the third bishop of Rome in the list which he gives of bishops of that city up to his own time (*Hær.* iii. iii. 3). He says that Linus, the first bishop, received the office from the apostles Peter and Paul, and that Anacletus succeeded him, and was in turn succeeded by Clement. Before Irenæus, Hegesippus had already made a list of the bishops of Rome, as all the Greek MSS and the Syriac versions of Eus. *HE* iv. 22 assert (see Lightfoot, *Apost. Fathers*, pt. i., 'Clement,' i. 154). The alternative (rejected by Lightfoot but accepted by Harnack) of *ἐπισκοπὴν* for *ἐπισκοπῆν* is a conjecture based on the loose paraphrase of Rufinus. But, as Hegesippus's list is not extant, we cannot tell where it began. We notice that Ignatius, in writing to Rome, mentions no bishop there, and that, as G. Salmon remarks (*Introd. to the NT*, London, 1892, p. 519, n.), all through the first two centuries the importance of the bishop of Rome is merged in the importance of his Church. Dionysius of Corinth (c. A.D. 170) writes to the Church of Rome, not to Soter its bishop, though he mentions him in the third person.

Long before the end of the 2nd cent. the diocesan episcopate was universal, so much so that writers like Clement of Alexandria, as we have seen, did not know that the 'bishops' of the NT were the same as the presbyters. It is therefore unnecessary to carry further an investigation into the spread of the system in the 2nd century (for detailed information reference may be made to Lightfoot, 'Dissertation,' in his *Philippians*). But it is desirable to refer to the conception of the episcopate which we find in the works of Cyprian, bishop of Carthage in the middle of the 3rd century. Ignatius and Irenæus had described the bishop as a centre of unity, and Cyprian emphasizes this still more in his treatise *de Unitate Ecclesie* and in his *Epistles*. In this connexion he dwells strongly on the sin of schism from the visible unity symbolized and guarded by the bishop. It has been said that he 'magnified his office,' and extended its claims to autocracy; yet no one emphasizes more than he the necessity of constitutional action on the part of the bishop, and his obligation to carry his clergy and laity with him (see below (b)). He also dwells on the election of the bishops by the people (see art. LAITY, § 4). There is no real foundation for Hatch's view, from which his German translator Harnack dissents, that the rule that there should be only one bishop in each community was not fully

established before Cyprian's time, and was due to his dispute with Novatian (*Organization of the Early Christian Church*, p. 103; for an account of Cyprian's view of the ministry reference may be made to Gore, *The Church and the Ministry*⁵, pp. 151-156, with his quotations in the footnotes).

It would seem that at the first the primary object of a local ministry was liturgical. Thus the *Didache*, immediately after mentioning the Sunday worship (§ 14), continues: 'Appoint (χειροτονήσατε) for yourselves therefore bishops and deacons' (§ 15). And so in the succeeding ages one of the principal functions of the diocesan bishop was to celebrate the Eucharist. In the Church Orders of the 4th and 5th centuries the newly-consecrated bishop himself begins to exercise his functions by doing so, rather than the principal consecrator, as in modern times. The same idea underlies the ancient practice, still preserved in some parts of Christendom, of 'concelebration,' that is, of the newly-ordained presbyters joining aloud with the bishop who has just ordained them, in consecrating the Eucharist. (In the early ages concelebration was not confined to ordinations.) We may compare the custom, which also survives, of a newly-ordained deacon reading the liturgical gospel, that being one of his functions which he immediately begins to discharge. In this connexion we may notice that the bishop and the presbyter were the only persons allowed to celebrate the Eucharist (see art. LAITY, § 5 (a)).

The Council of Nicæa enacted that bishops were not to be translated from one see to another (can. 15; A.D. 325). But this rule was almost immediately disregarded (see Athanasius, *Apol. c. Arian*. 25). The Nicene Council applied it also to presbyters and deacons.

(b) *Presbyters*.—In early Christian literature the presbyters are frequently recognized as the councillors of the bishop. Ignatius, who says that the presbytery is attuned to the bishop as strings to a lyre (*Eph.* 4), bids the people submit to the bishop and presbyters (*Eph.* 2, 20, *Trall.* 13), and do nothing without them (*Magn.* 7, *Trall.* 2 f., 7); he speaks of 'the bishop presiding (προκαθήμενον) after the likeness of God, and the presbyters after the likeness of the council (συνοδόν) of the apostles' (*Magn.* 6); in *Smyrn.* 8, the bishop is compared to our Lord, and the presbyters to the apostles (cf. *Magn.* 13: 'with your revered bishop and with the filly-wreathed spiritual circle of your presbytery, and with the deacons who walk after God'). In the same way, more than a century later, Cyprian says (*Ep.* xiv. [v.] 4, 'To the presbyters and deacons') that he had determined from the beginning of his episcopate to do nothing without the advice (*consilium*) of the presbyters, and the concurring feeling (*consensus*; see art. LAITY, § 8) of the people. The presbyters are here recognized as councillors of the bishop in a higher sense than the laity. This is not quite the same position as in *Ep.* xxxviii. (xxxii.) 1 ('To the presbyters, deacons, and people'), where Cyprian speaks of consulting them all before he ordained clergy. This is the equivalent of the more modern *Si quis* or public intimation of a proposed ordination. Origen likewise compares the 'councillors' and 'rulers' of the Church with those of the city, clearly meaning the presbyters and the bishop (*c. Cels.* iii. 30). A similar state of things is seen in the *Older Didache*. (ii. 28, 3rd cent.; Funk, i. 108), where it is said that the presbyters are 'honoured as apostles and councillors of the bishop, and the crown of the Church, for they are the council and curia of the Church.' The derived *Apost. Const.* (ii. 28) use nearly the same language.

It is for this reason that the bishop had his throne in the church with the presbyters sitting

round him on either side. Thus in the *Apost. Ch. Ord.* (c. A.D. 300; for the Syriac text and tr. see *JThSt* iii. [1901] 59) the presbyters are appointed by the bishop, and sit on either side of him, those on the right being the regulators of the service of the altar, those on the left the regulators of the people; and the presbyters are 'sharers in the mysteries' with the 'shepherd' (the bishop; see above, § 2). In the *Older Didache*. (ii. 57; Funk, i. 158), the *Apost. Const.* (ii. 57), and the *Test. of our Lord* (i. 19) the same arrangement is found. In the last-mentioned manual the more exalted and honoured presbyters, who 'labour in the word,' sit on the right, and 'those of middle age' (i.e. the younger ones; see above, § 2 (b) for the association of the presbyterate and old age) sit on the left. For an ambiguity as to the position of the bishop and presbyters when ministering at the altar, see Maclean, *Ancient Church Orders*, p. 37.

The presbyters were charged with celebrating the Eucharist, at least when the bishop was absent (see above), and with pastoral duties to the flock. In the 4th cent. the *Apost. Const.* thus sum up the functions of bishops and presbyters (viii. 28):

'The bishop blesses, but does not receive the blessing; he lays on hands (χειροθετεί), ordains (χειροτονεί), offers (the Eucharist), receives a blessing from bishops, but not at all from presbyters; the bishop exercises discipline (καταγράφει) over every cleric who deserves discipline, except over a bishop, for alone he cannot (do this). The presbyter blesses, but does not receive the blessing except from a bishop or fellow-presbyter, and so he gives it to a fellow-presbyter; he lays on hands but does not ordain; he does not exercise discipline, but he separates those inferior to him,' etc.

An interesting feature is that the presbyter is allowed to confirm, for this seems here to be the meaning of χειροθετεί,² blessing and ordaining being mentioned as different actions. Ordinarily the presbyter baptized, and brought the neophyte to the bishop for confirmation; this is the regular practice in the Church Orders and was the earlier custom in both East and West. In the East the presbyter has for many centuries confirmed, both in the Orthodox and in the Separated communions, but he uses chrism consecrated by the bishop. The same thing is also found in the West, but only in exceptional cases. Innocent I. in his *Epistle to Decentius* (§ 3; A.D. 416) shows that Western presbyters had the power by custom, though he did not approve of their exercising it. The Council of Orange (A.D. 441) says (can. 1, 2) that in the absence of a bishop a presbyter may receive penitent heretics, marking them with the chrism and benediction, i.e. (apparently) confirming them. Still earlier the first Council of Toledo (A.D. 400) shows the same thing by implication. It forbids (can. 20) a presbyter to consecrate the chrism, and allows only a bishop to do so, but says that deacons or subdeacons shall fetch the chrism from the bishop before Easter. The Council of Carthage, A.D. 390 (can. 3), also forbids presbyters to consecrate the chrism. This implies a regular practice of confirming by presbyters (for further references see Duchesne, *Christian Worship*, p. 338, n.). For Egypt we have the evidence of the writer known as Ambrosiaster (in *Eph.* iv. 12), who says that in that country the presbyter 'signs' (*consignat*) if the bishop be not present; and we read the same in *Quæst. Vet. et Nov. Test.* § 101, printed as an appendix to vol. iii. of the Benedictine ed. of Augustine (another reading there has 'consecrate,' i.e. consecrate the Eucharist). Lightfoot ('Disserta-

¹ One good MS reads: 'ordains, does not lay on hands.'

² It has, however, been interpreted of the absolution of penitents. C. H. Turner (*JThSt* xvi. [1915] 61), who adopts the alternative reading, interprets this 'laying on of hands' of the custom of the presbyters laying on hands at the ordination of a presbyter. Against this, however, is the fact that in the *Apost. Const.* that custom is not mentioned, and is perhaps negatived (see below, § 8 (a)).

tion,' p. 231) makes the surely strange error of supposing that this 'consignatio' means 'ordination'.¹

There are traces in our period of a very close connexion between presbyter and bishop. Thus in the *Canons of Hippolytus*, which in their present form are perhaps of the 4th cent., but which adhere very closely to their 3rd cent. source, we read that a bishop and a presbyter are ordained with the same prayer except for the name of the office, and except that in the case of the presbyter enthronization is omitted. 'The bishop is in all things put on an equality with the presbyter, except the name of the throne and ordination, for the power of ordination is not given to him,' i.e. to the presbyter (can. iv.; ed. H. Achelis, Leipzig, 1891, §§ 30-32). So in the *Egyptian Church Order* (§ 32) there is only one ordination prayer for bishop and presbyter. The later Church Orders have separate prayers.

A bishop is still called a 'presbyter' in the 2nd and later centuries (see, e.g., *Iren. Hær.* iii. ii. 2, 'successions of presbyters', which in iii. 2 he explains as 'successions of bishops'). In his letter to Victor Irenæus speaks of 'the presbyters before Soter who presided over the Church which thou rulest' (*Eus. HE* v. 24). Dionysius, bishop of Alexandria (c. A.D. 258), speaks of 'my fellow-presbyter Maximus' (*Eus. vii. 11*). For Clement of Alexandria see above, § 1 (b), and for Firmilian see below, § 8 (a).

(c) *Deacons*.—This was a numerous and important order in all the early ages. The deacon's functions are summarized by the author of the *Apost. Const.* (viii. 28), by saying that he does not bless or baptize or offer [the Eucharist], but that, when a bishop or presbyter has offered, he gives [the sacrament] to the people, not as a priest (*ιερεύς*) but as one who ministers to the priests. He is described in the oldest as well as in the later liturgies as assisting at the Eucharist, and especially as saying the short exhortations and the ectene, or litany (see, e.g., the liturgies in the *Test. of our Lord* and in the *Apost. Const.* viii.); he keeps order in service time (*Test. i. 34*; *Older Didasc.* ii. 57, etc.); he assists at baptism in all the Church Orders which describe the rite; in some authorities he is allowed to baptize in the absence of bishop and presbyter (see art. LAITY, § 5); he often reads the liturgical gospel at the Eucharist (Sozomen, *HE* vii. 19; *Test. i. 27*), as at this day in the West; he administers the eucharistic gifts in Justin Martyr (*Apol.* i. 65), and often in the Church Orders (for details see J. Cooper and A. J. Maclean, *Test. of our Lord*, Edinburgh, 1902, p. 223; for *Apost. Const.* see above); he has many pastoral duties, such as visiting the sick (*Test. i. 34*, *Apost. Const.* ii. 32, 44, iii. 19, *Egypt. Ch. Ord.* 33), entertaining strangers (*Test. i. 34*), arranging for burials² (*ib.* and *Eus. HE* vii. 11). The deacon also attends to the eucharistic offerings

and is often the almoner of the Church (*Older Didasc.* ii. 57; *Apost. Const.* iii. 19). In some authorities the bishop and presbyters exercise the discipline of the laity through the deacons (*Test. i. 36 f.*; *Apost. Const.* ii. 16; *Ethiopic Didasc.* § 4). As time went on, deacons pressed their claims and relegated several of their lesser functions to the minor orders. We find several writers repressing deacons for this reason—e.g., Cyprian (*Ep.* iii. [lxiv.] 13, 'ad Rogatianum'), the Council of Arles (can. 15; A.D. 314), which says that many deacons attempted to celebrate the Eucharist, that of Nicea (can. 18; A.D. 325), and almost all the Church Orders, the *Test. of our Lord* being a solitary exception, for in that manual the position both of deacons and of 'widows who preside' is greatly extolled.

(d) *Number of the clergy*.—Cornelius, bishop of Rome, writing to Fabian or Fabius, bishop of Antioch, A.D. 251 (the letter is given by *Eus. HE* vi. 43), enumerates the various orders and classes at Rome as follows: one bishop (about this he is emphatic), 46 (*var. lect.* 36) presbyters, 7 deacons, 7 subdeacons, 42 acolytes, 52 exorcists, readers, and doorkeepers, and more than 1500 widows and persons in distress (for the minor orders see below, § 6). But in unimportant places the clergy were much fewer. In the *Apost. Ch. Ord.* (c. A.D. 300) there were: one bishop, 3 presbyters, 3 deacons (so the Syriac), one (?) reader, 3 widows. In the *Test. of our Lord* (c. A.D. 350?) we have (i. 34), besides the bishop, 12 presbyters, 7 deacons, 14 subdeacons, 13 'widows who preside' (the Greek original no doubt had *προκαθήμεναι*). Seven was a very ordinary number for the deacons, because of the Seven in Ac 6. Sozomen says (*HE* vii. 19) that even in his day (5th cent.) there were only 7 deacons in Rome, though 'in other Churches the number of deacons is a matter of indifference.' The Council of Neo-Cæsarea, appealing to Acts, says that even in the largest towns there are not to be more than 7 deacons (can. 15; c. A.D. 314, or perhaps a little later). The number twelve for the presbyters in the *Test. of our Lord* may be due to the comparison of their order to the apostles. Eutychius (10th cent.) describes Alexandria in old days as having had twelve presbyters; but his evidence is quite untrustworthy (see below, § 8 (d)).

(e) *Age of ordination*.—At Neo-Cæsarea it was enacted (can. 11) that no one was to be ordained presbyter before he was thirty years of age, because our Lord then began to teach. This became the general rule for many centuries. There was no similar rule about bishops, but the 2nd can. of Nicea says that no novice in the faith is to be ordained presbyter or bishop. The minimum age for deacons seems to have been twenty-five. The Council of Hippo (A.D. 393) says that no one is to be ordained at all under that age (can. 1); but this rule can hardly have applied to the minor orders, for the same Council (can. 18) speaks of readers who are appointed as quite young boys. So Cyprian (*Ep.* xxxviii. [xxxii.] 1) and Socrates (*HE* vii. 41) speak of very young readers. The *Gallican Statutes* (c. A.D. 500; see below, § 6 (c)) say that a bishop must be of the 'prescribed age,' but does not say what that is (§ 1).

It may be convenient to note here some later rules as to age of ordination. The Maronite rule is that a presbyter must be over 30, for the reason stated above (H. Denzinger, *Ritus Orientalium*, Würzburg, 1883-84, ii. 148), and a deacon must be over 21 (*ib.* p. 128). The East Syrian or Nestorian *Sinhādihūs*, or 'Book of Canon Law' (vi. iv. 2; Maclean and W. H. Browne, *Catholicoi of the East*, London, 1892, p. 201), says that readers must not be ordained till past boyhood, subdeacons when nearly grown up, deacons a little later, presbyters about 18, though (it adds) the ancient age was 30. The Anglican minimum age for deacons is 23, for presbyters 24, for bishops 30, and this is the usual Western custom; some relaxation of the rule has rarely been made in the case of deacons.

5. Development of the supervisory offices.—(a)

¹ The present writer can find no good instance of 'consignare' or its Greek equivalent *σφραγίζω*, or their substantives, being applied to ordination. The Greek *σφραγίς* and its Oriental equivalents usually refer to baptism or confirmation, or both, or to the sign of the cross; by analogy Tertullian (*adv. Valent.* 1) uses 'consignare' of admission to the Eusebian mysteries (see also Lightfoot, *Apost. Fathers*, pt. i., 'Clement', ii. 223, n.; Maclean, *Antient Church Orders*, p. 109). In the *Verona Latin Fragments* (ed. Hauler, p. 110) 'consignare' is used in contradistinction to ordination, for the part played by the presbyters at a presbyter's ordination (see below, § 8 (a)): 'The presbyter at the ordination (*ordinatione*) of a presbyter signs (*consignat*) when the bishop ordains (*episcopo ordinante*).' Ducauge (*Glossarium Medice et Infirmis Latinis*, Paris, 1840-50, Niot, 1883-87) gives no instance of *consignatio* meaning 'ordination,' though he gives instances of its meaning 'confirmation.' Suicer (*Thesaurus*, 3199) gives one instance from pseudo-Dionysius Areopagita (*Ecol. Hær.* v. p. 312 [PG iii. 509]) of *σφραγίς* meaning 'ordination,' but this instance is very doubtful.

² It has been suggested that 'the young men' of Ac 56.10 (note the definite article) who buried Ananias and Sapphira were prototypes of the deacons in this respect. For the *copiatae*, or 'grave-diggers' (mentioned by Epiphanius, *Exp. Fid.* 21), and the *parabolani* (visitors of the sick) see J. Wordsworth, *Ministry of Grace*, p. 185 f.

Metropolitans.—The name is first found in the 4th cent., before which there is no certain trace of provincial organization, the 'eparchy' in the *Apost. Ch. Ord.* being apparently the civil province. At Nicæa metropolitans are mentioned by that name (can. 4, 6), and the word 'eparchy' is apparently used of an ecclesiastical province, though, as the civil and ecclesiastical provinces normally coincided, this is not quite certain. At the Council of Antioch in *Encensis* (A.D. 341) metropolitans are recognized in effect, though the name is not given to them (can. 9, 19); 'the bishop presiding in the metropolis' (i.e. in the civil capital) is the phrase used, and the corresponding verb is employed in can. 19. The word 'metropolitan' is used at Laodicea (can. 12; c. A.D. 380). On the other hand, there is no mention of a metropolitan in the Church Orders, and this is a cogent argument against their being dated later than the 4th cent., and for their not being assigned to any of the great centres like Alexandria or Antioch. In these manuals the neighbouring bishops come together for the election of a bishop, and the whole assembly of bishops, clergy, and laity elect, just as they do in Cyprian (*Ep.* lvii. 5, 'To the clergy and people in Spain'); but there is no metropolitan. There is perhaps just a faint trace of a primacy in *Apost. Const.* viii. 4, which speaks of 'one of the first bishops' saying the ordination prayer of a bishop; and so in the *Arabic Didasc.* (c. A.D. 400?; § 36, 'the first bishop among them'). But this is all. A rather stronger trace is to be seen in the *Apost. Canons* (can. 35 [also numbered 34 or 33]; c. A.D. 400). After the 4th cent. metropolitans became practically universal.

Although there was no regular organization of provinces before the 4th cent., yet bishops of certain important cities, like Rome, Carthage, Alexandria, Antioch, wielded great influence over the neighbouring bishops. We see this in the case of Cyprian. At Nicæa the authority of the bishops of Alexandria and Rome is spoken of as an ancient custom, and no one is made bishop without the metropolitan (can. 6). Alexandria is to have, as before, authority over Egypt, Libya, and Pentapolis, i.e. over more than one civil province (*ib.*). The growth of this influence was promoted by the holding of synods, when external circumstances permitted. Synods would ordinarily be held in the 'metropolis' (chief town) of the civil province or eparchy, and the bishop of that city would naturally preside. So the civil metropolis tended to become the ecclesiastical metropolis. But this was not always the case with synods. At that of the bishops of Pontus held to consider the Paschal question, Palmas as the oldest [bishop] presided (*Eus. HE* v. 23). Palmas was bishop of Amastris (*ib.* 23). At the end of the 4th cent. the Council of Hippo decreed that a bishop of a principal see (*prima sedes*) was not to be called 'princeps sacerdotum' or 'summus sacerdos,' but simply 'primæ sedis episcopus' (can. 25). Thus the name 'metropolitan' was apparently not in use in the province 'Africa'; and Hefele thinks that, except at Carthage, the metropolitan rights went to the oldest bishop of the province, and that the same thing held good in Spain before Constantine's time (*Hist. of the Councils*², Eng. tr., Edinburgh, 1872, i. 162).

In spite of his position at Carthage, Cyprian affirms that all bishops are equal. Thus in *de Unitate*, 5, he says that the episcopate is one and that all bishops are full partners in it with joint and several responsibility; for this is the meaning of his phrase 'cuius a singulis in solidum pars tenetur.' So in *Ep.* lv. (li.) 21, 'ad Antonianum,' he says that every bishop disposes and directs his own acts, and will have to give an account of his purposes to the Lord. Cf. also *Epp.* lvii. (lii.) 5,

lix. (liv.) 14, both to Cornelius; Cyprian says that appeals are not to be carried outside the province in which the cause began.

The custom of giving the pallium to metropolitans hardly falls within the limits of this article (see *DCA* ii. 1174).

(b) *Patriarchs.*—The name 'patriarch' was probably borrowed from the Jews. In the LXX of 1 Ch 27²² it is used for the head of a tribe, and in 24³¹ and some MSS of 9⁹ 23²⁰ for the head of a *tribe*, or subdivision of a tribe. In the NT it is used of David (Ac 2²⁰), the sons of Jacob (7¹²), and Abraham (He 7⁴). In 4 Mac 7¹⁷ 16²² (ed. W. R. Churton, *Uncanonical and Apocryphal Scriptures*, London, 1884) it is used of Abraham, Isaac, Jacob, and others. In the early centuries of our era a Jewish 'patriarch,' or representative of the nation, is several times mentioned—e.g., by Cyril of Jerusalem (*Cat.* xii. 17; A.D. 348), who speaks of the Jews' 'recent measures relative to their patriarchs as they now call them.' The Emperor Hadrian (A.D. 134?) refers to the Jewish patriarch in his letter to the consul Servianus about religion in Alexandria (see Lightfoot, 'Dissertation,' p. 225). Hadrian visited Egypt A.D. 130. In Christian literature we find the term first applied to Christians non-officially. Basil seems to use it as equivalent to 'bishop' when he says (*Ep.* elix. 'ad Greg.') that the deacon Glycerius assumed the style and title of patriarch. An example in Gregory of Nyssa's *Funerat Oration on Meletius, bishop of Antioch* († A.D. 381), when he exclaims 'Behold these your patriarchs,' is perhaps purely oratorical; he is referring to the bishops who attended the second Ecumenical Council at Constantinople. Gregory of Nazianzus explicitly uses the term of senior bishops (*Orat.* xlii. 23): 'aged bishops or, to speak more accurately, patriarchs.' But it came to be used of the bishops of Rome, Constantinople, Alexandria, Antioch, and Jerusalem, though not by canons of councils till long after our period—not before the 9th cent.; the whole subject is treated in detail by Hatch in *DCA* ii. 1573 (art. 'Patriarch'). The growth of the authority of these sees is shown by the 6th can. of Nicæa, and the 28th of Chalcedon; the latter was rejected by the bishop of Rome. The ultimate result was the joining together of several provinces or eparchies, each of which was governed by its own metropolitan, under a single patriarch, whose jurisdiction was somewhat loosely defined, just in the same way as in civil affairs several 'eparchies' were grouped together into one *diocesis*, which was a very different thing from our 'diocese.'

(c) *Archbishops.*—This term, which in the West became the customary title of metropolitans, was not so used in the East. It was a title of honour conferred on bishops of some of the greatest sees, though its application was not always uniform. In the 4th cent. Epiphanius uses the term (*Hær.* lxi. 3) of Meletius, bishop of the Thebais, and (lxviii. 1) of the bishop of Alexandria. At Chalcedon (A.D. 451) it is applied to the bishops of Constantinople, Alexandria, and Rome (can. 28, 30; the last is not considered to be a canon proper; see Hefele, iii. 422).

(d) *Chorepiscopi.*—These 'country-bishops' were assistants to the diocesan bishops for the work of the rural districts. In the Greek-speaking Churches and in the West they were, at least normally, bishops—such is the trend of the evidence, though Morinus denies it—but in the Syriac-speaking Churches, at a later date, they were often confused with the *peripolēvrai*, or 'visitors,' and were presbyters. They somewhat resembled the assistant ('suffragan') and coadjutor bishops of the present day, in that they worked under the direction of the diocesan bishop, though their

functions were not entirely the same. They are first mentioned at Ancyra (can. 13 [see below, § 8 (b)]; A.D. 314), Neo-Cæsarea (can. 14; A.D. 314 or a little later), Nicæa (can. 8; A.D. 325). From the 10th can. of the Council of Antioch in *Encænus* (A.D. 341) we may perhaps gather that not all chorepiscopi were bishops, for it uses the expression 'even if they have received consecration as bishops.' They are also mentioned by Athanasius (*Apol. c. Arian.* 85), Basil (*Ep.* xxiv. etc.), and other 4th cent. writers. But they are not referred to in the Church Orders, and it is probable that they were to be found only in the busy centres, from which, as we have seen above (a), these manuals did not come. In the *Edessene Canons*, i.e. the *Syriac Teaching of the Apostles* (see *Ante-Nic. Chr. Lib.*, 'Syriac Documents,' p. 42 f.), a 'ruler' is to be appointed as head over the village presbyters; and these 'rulers' must have been itinerant visitors, for a reference is made to Samuel also making visits from place to place and ruling (can. 24; c. A.D. 350). The Council of Sardica in Illyricum (c. A.D. 347, or earlier) does not appear to recognize the existence of chorepiscopi. The 6th can. says that a bishop is not to be ordained in a village or small town for which one presbyter suffices, for it is not necessary there that a bishop should be made, lest the name of a bishop and his authority become cheap (the authenticity of these canons is disputed).

Among the functions of the chorepiscopus were the appointment and ordination of minor orders, but not as a rule of deacons and presbyters. To ordain these he must have the explicit consent of the diocesan bishop who had appointed him (Antioch in *Encænus*, can. 10). He could also confirm; see the 3rd can. of the Council of Riez or Regium in Provence (Hefele, iii. 157; A.D. 439). Schismatic bishops when reconciled were sometimes made chorepiscopi, as there could not be more than one diocesan bishop in each see (Nicæa, can. 8; Socrates, *HE* i. 9; Riez, can. 3). Lightfoot ('Dissertation,' p. 233, n.) looks upon chorepiscopi as a survival of the 'presbyter-bishops' which his theory of the origin of the diocesan episcopate postulates (see below, § 10); but there is absolutely no evidence for this survival, and indeed it is very unlikely that chorepiscopi existed before the 4th century.

An attempt was made towards the end of that century to abolish the office. The Council of Laodicea (can. 57; c. A.D. 380) forbids their appointment for the future, and says that there are to be only periodontæ (apparently presbyters), while chorepiscopi who had already been appointed were to act only with the consent of the diocesan bishop (this points to a certain self-assertiveness on the part of the chorepiscopi). But this canon did not put an end to the office. Chorepiscopi are found frequently in the Far East (see below), and were revived in the West for a time (Hefele, i. 18). There were some of this order present at the Council of Ephesus, A.D. 431, but not at that of Chalcedon, A.D. 451.

In the East Syrian *Sunhādūs* (vi. 1) there are three orders of the ministry, each with three subdivisions. In the second order (the presbyterate), chorepiscopi or periodontæ (both these names are transliterated into Syriac) form the first subdivision, and seem to be identical. Their duties were to visit the villages and monasteries as representatives of the bishop (Macleod-Browne, *Catholicos of the East*, p. 182). They were not specially ordained, for the *Sunhādūs* says that bishops 'ordain all readers, subdeacons, deacons, and presbyters, give a blessing to periodontæ, and say a prayer over archdeacons' (ib.).

(e) *Archdeacons*.—Neither the name nor the

office of an archdeacon is found before the end of the 4th century. The name is found in the *Pilgrimage of 'Silvia'* ('*Ethéria*'), which has usually been assigned to that date, though some place it later; but even there it is not the name of a distinct office. Neither the name nor the distinct office is found in the Church Orders, though in the *Test. of our Lord* the principal deacon has certain duties assigned to him. Some writers at the end of, or later than, the 4th cent. give to certain famous deacons the name 'archdeacon,' as when Augustine calls Laurence by that title (*Serm. de diversis*, cxi. [ed. Ben. cccii.] 8); so Theodoret (*HE* i. 25) calls Athanasius the 'leader of the chorus of deacons, though a young man.' There is no archdeacon in Cornelius's list of Roman officials (above, § 4 (d)). Jerome (*Ep.* cxlvi., 'ad Evangelum') mentions archdeacons as an order, and after his time they were common in both East and West. In the *Ordo Romanus Primus* the archdeacon plays a very important part in the eucharistic liturgy at Rome (e.g., §§ 18, 20, ed. E. G. C. F. Atchley, London, 1905). But this work is probably of the 8th cent., though founded on a similar document of the 6th (Atchley, p. 7). The archdeacon was at first a deacon, and in some cases the senior deacon succeeded automatically to the office; but Sozomen (*HE* viii. 9) speaks of Chrysostom appointing Sarapion as archdeacon, and therefore he could not have succeeded automatically. There was only one in each diocese in the time of Jerome (*loc. cit.*). For the later development of this office see *DCA* i. 136.

In the East Syrian Church the archidiaconate is the middle subdivision of the second order, i.e. of the presbyterate (see above). The office is still used in that Church as an honorary one, and an influential presbyter is appointed 'arkān,' or archdeacon. In the West the office is in frequent use, and in most Western countries each bishop has at least one archdeacon, called the 'eye of the bishop.' The archdeacon is a senior presbyter, deputed to relieve the bishop of some of his minor functions.

6. *Development of the lesser offices*.—At an early date we find the existence of some orders of the ministry lower than those of bishops, presbyters, and deacons. We read at various times of subdeacons, readers, singers, interpreters, door-keepers, acolytes, exorcists. There was also a ministry of women—widows, presbyteresses, deaconesses. It must be noted, however, that some of these offices were not always and in all places reckoned as orders; e.g., exorcists were long considered to exercise a charismatic ministry, and were reckoned as being outside the ordinary roll of the clergy.

(a) *Readers* (ἀναγνώσται, *lectores*).—This is probably the oldest of the minor orders. In Justin Martyr's description of the Eucharist (*Apol.* i. 67; c. A.D. 150) the reader of the lections plays an important part, though Justin may not mean that he was of a separate order in the ministry. In the *Apost. Ch. Ord.* (§ 19; c. A.D. 300) he comes before the deacon, and Harnack thinks (*Sources of the Apost. Canons*, Eng. tr., London, 1895, p. 71 f.) that his office was at first a charismatic one, and that he was not originally included among the clergy. Stress is laid in the manual just named on the necessity of the reader being learned. He must be 'able to instruct' or 'narrate' (διηγνητικός), and he 'fills the place of an evangelist.' This qualification is not always insisted on in the case of a bishop; this Church Order says (§ 18) that, if a bishop does not know letters, at least he is to be meek. The *Test. of our Lord* also insists that the reader must be learned, and have had much experience (i. 45). Probably he had, at first, the duty of expounding what he read; but, when he

was limited to the mere reading of the lections, his position fell, as it did at Rome in the middle of the 3rd century (see above, § 4 (d)), where the readers are classed with the exorcists and doorkeepers, below the acolytes). In the other Church Orders the reader comes, sometimes before, and sometimes after, the subdeacon. In *Sarapion's Sacramentary* (§ 25; c. A.D. 350) the minor orders are 'subdeacons, readers, and interpreters.' There are indications in some of the authorities that readers were not numerous. The *Older Didasc.* and the *Apost. Const.* (ii. 23; Funk, i. 108 f.) suggest that it is probable that a church may not have a reader at all; and in several Church Orders there is an indirect indication that there was only one in each place (Maclean, *Ancient Church Orders*, pp. 14 f., 87). Readers come below deacons in Tertullian (*de Præscr.* 41). They are frequently mentioned in Cyprian; and they often had the important duty of reading the liturgical gospel at the Eucharist: this they did from a desk, or *ambo* (*Ep.* xxxix. [xxxiii.] 4, 'About Celerinus'). In the Diocletian persecution they had the custody of the Scriptures (J. Wordsworth, *Ministry of Grace*, p. 189).

(b) *Subdeacons* (ὑποδίακονοι, ὑπηρέται, *subdiaconi, ministri*).—These officials, whose chief duty was to assist the deacons at the Eucharist and in their other functions, are mentioned in the 3rd cent. by Cornelius at Rome (above, § 4; he speaks of seven) and Cyprian in Africa (*Ep.* xxxiv. [xxvii.] 3, 'To the presbyters and deacons': he speaks of two subdeacons by name and a certain acolyte), and in the *Older Didasc.* (E. Hauler, *Verona Latin Fragments*, Leipzig, 1900, p. 40; Funk, i. 116; see below). In the 4th cent. we find them in Spain at Elvira (can. 30; c. A.D. 305; no other minor order is mentioned in these canons), in Egypt in *Sarapion's Sacramentary* (§ 25), in the Church Orders (but not in the *Apost. Ch. Ord.*), at Neo-Cæsarea in Cappadocia (can. 10; A.D. 314 or later), at Antioch in *Encaenitis* (can. 10; A.D. 341), at Laodicea (can. 20-22, 25; c. A.D. 380), and in Athanasius (*Hist. Arian. ad Monachos*, 60; A.D. 358). At Neo-Cæsarea and Laodicea, and in *Apost. Const.* iii. 11, and elsewhere the subdeacon is called ὑπηρέτης, or 'minister.' The existence of subdeacons in the East before the 4th cent. has been disputed, and it has been thought that the passage in the *Didascalia* where they are mentioned is an interpolation; yet it occurs both in the Latin and in the Syriac versions. Eusebius (*HE* viii. 6) makes their existence in most parts of the East during the Diocletian persecution uncertain. He says that a royal edict directed that the presidents (προεστῶτες) of the Church everywhere should be imprisoned, and that the prisons were filled with bishops, presbyters, deacons, readers, and exorcists; he omits any mention of subdeacons here. In the *Canons of Hippolytus* (can. xxi. [ed. Achelis, § 217]) they are mentioned together with presbyters and readers, in a passage where deacons are omitted; but this may be due to the present (4th cent.?) form of the *Canons*; the omission of deacons may be a mere clerical error.

(c) *Acolytes, or collets* (ἀκόλυθοι, *acolythi, acoliti*).—These are first mentioned by Cornelius (above, § 4), and by Cyprian (*loc. cit.*). They are also mentioned in the *Gallican Statutes* (as J. Wordsworth has conveniently named them [*Ministry of Grace*, p. 58]) or *Statuta Ecclesiae antiqua*, a collection of canons which used to be ascribed to the so-called 'Fourth Council of Carthage' (can. 6; Hefele, ii. 410; their real date is c. A.D. 500). Acolytes assisted at the Eucharist, and performed various minor functions in the services. They are found only in the West, where they became very numerous. Cornelius says that there were

42 at Rome in the 3rd century. As there were 14 regions in that city, there would be one deacon or subdeacon and three acolytes for each region (Harnack, *Sources of the Apost. Can.*, p. 95). An acolyte was sent by Cornelius as a messenger (Cyprian, *Ep.* xlix. [xlv.] 3).

(d) *Singers* (ψάλτραι, ψόδοι, ψαλτροδοί, *cantores, psaltæ*, etc.).—In the earlier Church Orders singers are mentioned, but not as a separate order. They had, however, already become such in the *Apost. Const.* (iii. 11, vi. 17; c. A.D. 375), at Laodicea (can. 23), in the *Apost. Canons* (can. 43 [42], 69 [68]; c. A.D. 400), and in the Arabic translation of the *Test. of our Lord* (i. 45), which adds a chapter to that manual about their appointment, and reduces the lesser orders in the *Test.* (see above, § 4) to 'four subdeacons and readers, three widows and singers'; the date of this Arabic translation is unknown. Singers are a separate order also in the *Gallican Statutes* (can. 10).

(e) *Interpreters* (ἐρμηνεῖς, ἐρμηνευταί, *interpretes*).—These are not mentioned in the Church Orders. They naturally are found only in bilingual countries. Eusebius mentions them in Palestine (*Mart. Palest.*, longer version, § 1, tr. A. C. McGiffert, p. 342 [*Nic. and Post-Nic. Fathers*]); he says that Procopius was a reader, interpreter, and exorcist. Sarapion (§ 25) mentions them in Egypt, Epiphanius (*Exp. Fid.* 21) in Syria and Palestine. In the *Pilgrimage of 'Silvia'* ('*Etheria*') we read (vii. 5) that at Jerusalem some spoke Greek only, and some Syriac only, and that, as the bishop, though he knew Syriac, yet spoke only in Greek, a presbyter stood by to translate the bishop's Greek into Syriac. For 1 Co 14²⁸ see above, § 1 (e).

(f) *Doorkeepers* (πυλῶποι, *ostiarii*).—These are mentioned in Cornelius's list, and in the *Apost. Const.* (ii. 57, iii. 11), and the *Ethiopic Didasc.* (§ 10), but not in the other Church Orders, which retain (as indeed do also the *Apost. Const.*, rather inconsistently) the old direction that deacons are to guard the doors. For the devolution of the deacon's functions see above, § 4 (c).

(g) *Exorcists* (ἐξορκιστῆς in the NT, Josephus, and elsewhere, but ἐρορκιστῆς in *Apost. Const.* viii. 26, and Epiphanius, *Exp. Fid.* 21, *exorcistæ*).—Jewish exorcists are mentioned in Lk 11¹⁹ (where 'your sons' can hardly mean the disciples, but must be the Jews), Ac 19¹², and Jos. *Ant.* viii. ii. 5 (he is speaking of the time of Solomon). Christian exorcists are mentioned by Cornelius, as above, and by Firmilian, who in his letter to Cyprian speaks of exorcists in Cappadocia twenty-two years before his time (Cyprian, *Ep.* lxxv. [lxxiv.] 10). But the Christian exorcizing of demons is mentioned by Justin (*Dial.* 85, *Apol.* ii. 6), Tertullian (*de Idol.* 11, *de Præscr.* 41), Origen (*c. Cels.* vii. 4). On the other hand, candidates for baptism were exorcized by the bishop before Easter (Maclean, *Ancient Church Orders*, p. 97; T. Thompson, *Offices of Baptism and Confirmation*, Cambridge, 1914, p. 28). The Council of Laodicea (can. 26) says that no one may exorcize in churches or houses unless authorized by the bishop. The office of an exorcist was at first entirely charismatic, and he was not originally one of the clergy (see below, § 3 (g)). We can well understand that unrestrained exorcism became an abuse, and that exorcists needed stringent regulations.

(h) *Ministry of women*.—It is not very easy to distinguish between the 'widows' who were on the Church roll for relief and those who were, in some sort, in the ministry. The widows in Ac 6¹ come under the former category; those of 1 Ti 5⁸⁻¹⁶ perhaps under both, for v. 15^{1a} seem to imply ministering. A deaconess, Phœbe, is mentioned in Ro 16¹, though Hort (*Christian Ecclesia*, p. 208)

thinks that *διάκονος* (fem.) is here used in a non-technical sense, and merely means that Phoebe ministered to the needs of the Church. Many think that 'women' in 1 Ti 3¹¹ (*γυναῖκας* without article) means deaconesses; note the qualifications for deacons which precede and follow.¹ We also read of Prisca (Priscilla) joining with Aquila in his evangelistic work (Ac 18²⁸); this was no doubt in private teaching, as St. Paul forbids a woman to speak in church (1 Co 14³⁴, 1 Ti 2¹¹). In the Christian literature after the NT we find frequent mention of a ministry by women. In the *Apost. Ch. Ord.* one of the 'widows' is to visit the sick, while the other two are to pray and receive spiritual revelations (see above, § 3). In the *Test. of our Lord* the 'widows who preside' (*προκαθήμεναι*) are an important order; they are also called 'presbyteresses,' as corresponding to presbyters, while deaconesses are mentioned as corresponding to deacons; deaconesses carry the Eucharist to a sick woman (ii. 20), just as a deacon does to a sick man (cf. Justin Martyr, *Apol.* i. 65). At Laodicea presbyteresses (*πρεσβυτέραι*) are identified with 'those who preside' (can. 11); and their appointment for the future seems to be forbidden, though the interpretation is not quite clear. In early times widows or deaconesses were employed especially in the baptism of women. The deaconess is sometimes called *ἡ διάκονος* (Ro 16¹), but usually *ἡ διακόνισσα* (Nicæa, can. 19; *Apost. Const.* viii. 19; Epiphanius, *Exp. Fid.* 21). For further details see Maclean, *Ancient Church Orders*, p. 83 f.; J. Wordsworth, *Ministry of Grace*, ch. v.

It may be interesting to give here Epiphanius's list of clergy and other classes of Christians in *Exp. Fid.* 21. He mentions bishops, presbyters, deacons, subdeacons, readers, virgins, monks, ascetics, widows, 'those who marry honestly,' deaconesses (especially for baptism), exorcists, interpreters, grave-diggers (or *cofrades*, see above, § 4 (c)), doorkeepers; and he adds: *καὶ ἡ πᾶσα ἐκκλησία*.

(i) *Promotion*.—It is a common, and in the West the usual, thing for a deacon and the lower officials to be in due course promoted; but it is doubtful if this was often the case in the first three centuries. The 'good step' (*βαθμὸν καλόν*; see § 8 (g)) of 1 Ti 3¹⁵ has been interpreted by Ambrose, Jerome, and some moderns, of promotion, though this is not very probable, and does not well suit the rest of the verse. The only instance of such a course in the 1st cent. is perhaps Philip, who in Ac 8 is one of the Seven, without authority to lay on hands, but in Ac 21⁵ is called 'the Evangelist,' that is (probably) one of the 'apostolic men,' like Timothy and Titus who, though not apostles, yet shared the apostolic office (above, § 1 (a)). But, at any rate from the 4th cent., perhaps earlier, promotion from the lower to the higher offices became common. Those of readers and subdeacons are referred to in the *Test. of our Lord* (i. 44 f.), *Apost. Const.* (viii. 22, readers), and are implied by Basil (*Ep. canon. tert.* cxxvii. 69). Cyprian (*Ep.* xxxix. [xxxiii.] 5, 'To the clergy and people') speaks of promoting readers to the presbyterate—this was because they had been confessors (cf. § 7 below). The promotion of deacons is mentioned in the *Apost. Ch. Ord.* 22 (to the episcopate), *Apost. Const.* viii. 17 f., *Ethiop. Ch. Ord.* 24, and probably in the *Test.* i. 38; explicitly also in the *Codex Canonum Ecclesiae Africanae* (can. 31; Hefele, ii. 470). Polycarp is said by the 4th cent. pseudo-Pionius (see above, § 2 (b)) to have been successively deacon, presbyter, and bishop (§§ 11, 17, 23); and the Council of Sardica (can. 10, if genuine) says that a bishop must have been a reader, deacon, and presbyter, some time before becoming bishop.

7. *Honorary offices*.—It appears from the Church Orders that confessors, i.e. those who had been apprehended in the persecutions and had con-

¹ Another interpretation makes these 'women' the wives of the deacons; but then we should have expected the article.

fessed their religion, but had escaped martyrdom, enjoyed an honorary presbyterate. A confessor (*ὁμολογητής*) had 'the honour of the presbyterate by his confession' (*Egypt. Ch. Ord.* 34; *Ethiop. Ch. Ord.* 25; *Canons of Hippolytus*, vi. [ed. Achelis, 43–47], *Test. of our Lord*, i. 39). It is, however, enacted in these manuals that, if a confessor is wanted for a bishop, he must receive the laying on of hands, or ordination. There is no evidence that confessors were ever allowed to minister, or to celebrate the Eucharist, without ordination. Indeed the *Canons of Hippolytus* (*loc. cit.*) say that a confessor has not got the form of the presbyterate, but he has obtained its spirit. An honorary presbyterate was possible, as there were many presbyters in each place; but an honorary episcopate was not possible, both because there was only one bishop in each see and because the bishop had the duty of ordaining others, which an unordained person could not do. It is noteworthy, and a sign of the earlier date of the Church Orders above mentioned, that the *Apost. Const.* (viii. 23; c. A.D. 375), while giving honour to confessors, yet repress their undue claims. This work says that a self-asserting confessor is to be cast out; confessors are not to be ordained unless wanted as bishops, priests, or deacons, in which case they are to be ordained. It says nothing about the honorary presbyterate.

That confessors were in some cases entitled to an honorary office is not the same thing as saying that confessors were preferred to others for the higher offices of the Church when they became vacant. Tertullian (*adv. Valent.* 4) tells us that Valentinus was indignant, when he expected to become a bishop, because another was preferred before him by reason of a claim which confessorship (*martyrium*) had given him. It is not said that the confessor who was preferred was made bishop without being ordained. Eusebius (*HE* v. 28), quoting an unnamed writer about the heresy of Artemon, mentions a confessor Natalius who was chosen by the heretics as their bishop, apparently because of his confessorship (early 3rd cent.). Hippolytus (*Hær.* ix. 7) relates how Callistus, having been imprisoned in Sardinia, succeeded Zephyrinus at Rome as bishop. Asclepiades, a confessor, became bishop of Antioch (Eus. *HE* vi. 11). But these and other instances prove nothing as to confessors becoming bishops without ordination.

8. *Transmission of the ministry*.—In this section we enter on the consideration of a series of facts whose significance is much disputed. An endeavour will be made to state the whole of the facts as far as they are relevant to the early period with which this article deals. For a description of rites used in transmitting the ministry see art. ORDINATION.

(a) In the NT we find, in the case of the Seven (Ac 6^{1–6}), that the people 'elect' (v. 5 *ἐξελέγαντο*), while the apostles 'appoint' (v. 5 *καταστήσαντες*) and set apart by prayer and imposition of hands (v. 6). In 14²³ Paul and Barnabas 'ordain' (*χειροτονήσαντες*) presbyters 'for' the people of Pisidian Antioch, Iconium, etc. The word used is a general one, and does not necessarily imply laying on of hands. It is used for election by a show of hands, or (as here) simply for appointing. In the case of the elders (presbyters) at Ephesus, Hort (*Christian Ecclesia*, p. 99) remarks that there is no indication that St. Paul appointed them. Yet the phrase 'the Holy Ghost hath made you bishops' (Ac 20²⁸) cannot be pressed to mean a direct authority of the presbyters received from God without human intervention, such as St. Paul himself had (Gal 1¹). God works through human means; and the analogy of 6², 14²³ will lead us to suppose that, though

the people probably elected their presbyters, St. Paul appointed them. St. Luke is not accustomed to repeat details of this nature. In 1 Ti 4¹⁴ the presbytery are said to have laid hands on Timothy, and in 2 Ti 1⁶ St. Paul is said to have done so; probably here we have the counterpart of the custom which is found in later ages of the presbyters and bishop joining in the ordination of a presbyter (see below). In 1 Ti 5²² Timothy lays on hands, though it is doubtful if ordination is here referred to. In Tit 1⁵ Titus 'appoints' (*καταστήσῃς*) presbyters in every city in Crete. We may notice, by way of analogy, another laying on of hands in Ac 8¹⁷ 19⁶, which is not ordination; this is reserved for the apostles in those passages, though ordinarily they did not baptize (8¹⁸ 10⁴⁸ 19⁶, 1 Co 1¹⁴⁻¹⁷).

For the sub-apostolic period we have very little evidence on the point which we are now considering. But Clement of Rome describes in general terms how the ministry was appointed.

'[The apostles] preaching everywhere in country and town, appointed their first-fruits, when they had proved them by the Spirit, to be bishops and deacons. . . . They, appointed (*κατέστησαν*) the aforesaid persons [the bishops and deacons], and afterwards they provided a continuance,¹ that if these should fall asleep, other approved men should succeed to their ministration. Those therefore who were appointed by them (the apostles), or afterward by other distinguished (*ἐλλογίμων*) men with the consent of the whole Church . . . these men we consider to be unjustly thrust out from their ministration' (Cor. 42, 44).

Here we have popular election, and 'appointment' (*κατάστασις*; for this word see art. ORDINATION) by 'distinguished men,' i.e., not by the 'bishops and deacons,' but by such *virī apostolici* as Timothy and Titus.

For the 3rd cent. we have evidence that only bishops (in the later sense) could then ordain; for Novatian had to get, by a disreputable trick, three bishops to ordain him (see below (c) and (f)). Firmilian of Cappadocia, writing to Cyprian about the re-baptism of heretics (Cyprian, *Ep.* lxxv. [lxxiv.] 7 f.), denies that heretics can baptize, and says that 'all powers and graces are established in the Church where the presbyters preside who possess the powers both of baptizing and of imposition of hands and of ordaining.' Then, referring to St. Paul's having baptized (*sic*) John Baptist's disciples again, and having laid hands on them that they might receive the Holy Ghost, Firmilian goes on to say that the 'bishops of these times' can by imposition of hands alone give the Holy Spirit (i.e. by confirmation). His argument is against admitting heretics without re-baptism, because of St. Paul's action in Ac 19; but his words necessarily mean that none in his day but bishops could receive heretics by confirmation. With regard to the words which he uses in the earlier part of the paragraph, we may remark that by 'presiding presbyters' he must, being himself a bishop in the later sense of the word, mean bishops, even if he alludes to the custom of the presbyters joining in the ordination of a presbyter (see below); and it is significant that Cyprian translates Firmilian's *πρεσβύτεροι* by 'maiores natu' and 'seniores,' not by 'presbyteri'; cf. also § 4 in the same Epistle: 'we the presbyters and prelates.' We notice here another instance, besides those mentioned above in § 4 (b), of bishops being still called *πρεσβύτεροι*.

At least from the 4th cent. onwards we find explicitly stated the rule that only a bishop can ordain; possible exceptions will be noted below. As the *Canons of Hippolytus*, though not in their present form of the 3rd cent., reproduce very faithfully the language of their source, which probably goes back to Hippolytus's time, and may even have ¹ *ἐπιμονήν*. This is a conjecture; the MSS have *ἐπινομήν*, *ἐπιδομήν*, and the Syriac versions apparently read *ἐπὶ δοκίμῃ* or *ἐπὶ δοκίμῃ* (see Lightfoot, *Apost. Fathers*, pt. I, 'Clement,' ii. 132) Gore (*Church and the Ministry*, p. 288, n.) renders 'gave an additional injunction,' retaining *ἐπινομήν* on the strength of a recently discovered Latin version, which has 'legem dederunt.'

been written by him, it seems likely that this explicit rule also goes back to Hippolytus's time at least (see iv. [ed. Achelis, § 32]: 'the power of ordaining is not given to [a presbyter]').

In and after the 4th cent. (we have no earlier evidence on the point) we find a custom which is still prevalent in the West, that at the ordination of a presbyter the presbyters should lay on hands together with the bishop, though he alone says the prayer of ordination. This is found in the *Egypt. Ch. Ord.* (§ 32), the *Ethiop. Ch. Ord.* (§ 22), the *Test. of our Lord* (i. 30), the *Gallican Statutes* (§ 3; Hefele, ii. 411), and the *Verona Latin Fragments* (Hauler, pp. 108-110). These manuals emphasize the fact that the bishop acts alone in ordaining a deacon. This (as the last manual says) is because the deacon is ordained for the service of the bishop, and does not take part in council with the clergy, while 'on a presbyter the presbyters also lay (their) hands, because of the common and like spirit of the clergy (*clero*); for a presbyter can only receive, he cannot give [this spirit], and therefore he does not ordain the clergy, but at the ordination of a presbyter he signs when the bishop ordains' (see above, § 4 (b)).

The custom of presbyters joining in the laying on of hands when a presbyter is ordained was apparently not known to the writer of the *Apost. Const.* He says (viii. 16): 'When thou ordainest a presbyter, O bishop, lay thy hand upon his head in the presence of the presbyters and deacons, and pray,' etc. He uses almost exactly the same words about the ordination of a deacon, while he does not, as the other Church Orders do, emphasize the fact that a bishop acts alone in ordaining a deacon. So in iii. 20 we read, according to the best MSS: 'A presbyter and a deacon [are to be ordained] by one bishop and [so are] the other clerks.' Three MSS here read 'by one bishop and the other clerks'; but this cannot in any case be the right reading, for deacons were never ordained by the bishop and presbyters jointly, and moreover 'clerks' must here mean the minor orders. See also above, § 4 (b).

The limitation of the power of ordaining to bishops is found in a large number of writers. For the *Canons of Hippolytus* see above. The *Apost. Const.* say that a presbyter cannot ordain even the minor orders (iii. 11, 20, viii. 28). So also the *Ethiopic Didasc.* (§ 14) limits ordination to bishops. Jerome, who energetically enunciates the closeness of relation between bishop and presbyter, yet denies that the latter can ordain: 'What does a bishop,' he writes, 'that a presbyter does not *except ordination*?' (*Ep.* cxlvi. 1, 'ad Evangelum'). The case of Ischyrras, which happened early in the 4th cent., is important in this connexion, and is related by Athanasius (*Apol. c. Arian.* 11 f., 76). Ischyrras had been ordained presbyter by Colluthus, who was, Athanasius tells us, never other than a presbyter. When after the Meletian schism in Egypt at the beginning of the 4th cent. Alexander (bishop of Alexandria, A.D. 313-326) admitted the presbyters who had been ordained by Meletius (bishop of Lycopolis, Ischyrras was not even numbered among them, and therefore he did not receive ordination in that quarter (§ 11); but he was ordained presbyter by Colluthus, and all ordained by that man were, after the schism, reduced to the rank of laymen; and, Athanasius adds, no one doubts it (§ 12). The same writer quotes (§ 76) a letter of the clergy of Mareotis (in Egypt) saying that Ischyrras was no presbyter; that he had been ordained by Colluthus who *pretended to the episcopate* [this is significant for the point of view of the clergy of Mareotis]; and that all ordained by Colluthus resumed (at the end of the schism) the same rank that they had before, and so Ischyrras proved to be a layman. Alexander himself, in a letter quoted by Theodoret (*HE* i. 3), accused Colluthus of 'making a trade of Christ for lucre,' and says that he set up his sect before Arius's separation. Colluthus was declared by the Council of Alexandria (A.D. 324) to be only a presbyter. We must notice that the refusal to

recognize Ischyra's ordination was not due to the fact that Colluthus was in schism (as also Meletius was), but to the fact that he was only a presbyter, and therefore could not ordain (on Colluthus see also Epiphanius, *Hær.* lxix. 2).

We may now consider certain possible exceptions to the above-named rule.

(b) *The 13th canon of Ancyra* (A.D. 314).—This canon, according to one reading, seems to say that under certain circumstances a presbyter was allowed in Galatia to ordain. It runs thus:

'It is not permitted to chorepiscopi to ordain presbyters and deacons, ἀλλὰ [μὴν] μὴδὲ πρεσβυτέρους (var. lect. πρεσβυτέροις) πόλεως, unless permission be given by the bishops in writing in every (var. lect. another) parish' [i.e. diocese].

The words left untranslated are uncertain both as to the reading and as to their signification. The dative πρεσβυτέροις is adopted by Lightfoot, who translates 'nor even to city presbyters, except permission be given in each parish by the bishop in writing.' This would recognize that city presbyters might, if allowed by the bishop, ordain. On the other hand, Routh, Gore, and Rackham read the accusative, and the last writer has gone into the readings with great care (in *Studia Bibl. et Eccles.*, iii. [Oxford, 1891] 139, 194). This would forbid chorepiscopi to ordain city-presbyters without leave. If so, there is still a doubt as to the meaning of ἀλλὰ μὴν μὴδὲ. Routh renders 'much less'; Gore 'no, nor'; while Rackham follows Lightfoot here and translates 'not even'—he takes the middle clause as a parenthesis, and understands the canon to say that chorepiscopi may not ordain presbyters and deacons in another parish, not even may they ordain town-presbyters (in their own parish) without the bishop's permission. On the whole, the readings of this canon are so uncertain that no argument can safely be built upon it. It is a decided objection to Lightfoot's general interpretation that, if it were the true one, this canon would stand absolutely alone in 4th cent. literature; the Alexandrian case (see below) is quite different. Another objection is that it would place the city-presbyters on a higher level as to powers of ordination (cf. 'not even') than the chorepiscopi, who at any rate were normally bishops. For detailed discussions on this canon see Lightfoot, 'Dissertation,' p. 232 f.; Gore, *Church and Ministry*⁵, note D, p. 338.

(c) *The Canons of Hippolytus* say (ii. [ed. Achelis, § 10]) with regard to the ordination of a new bishop that 'one of the bishops and presbyters, who lays his hand on his head,' is to say the ordination prayer. This canon has sometimes been quoted as if it said that 'one of the bishops or presbyters' is to do so. As we have seen, the *Canons* say that a presbyter cannot ordain, and therefore this is clearly not a permissible interpretation. But what does the canon mean? Gore (p. 132, n. 5) supposes that in the original (we have the *Canons* only in a translation of a translation) the direction was that one bishop and one presbyter were to lay on hands and to say the prayer. This would be in accordance with the close relation between these orders elsewhere hinted at in the *Canons* (see above, § 4 (b)). Yet this explanation does violence to the grammar of the text as we have it; for all the verbs are in the singular. Another explanation may therefore be preferred, that 'unus ex episcopis et presbyteris' means 'one who has both the episcopate and the presbyterate,' for we have already seen (in § 4 (b)) that a bishop was not considered to cease to be a presbyter when he became bishop. The facts of the transmission of the *Canons* make it precarious to fix certainly on any one translation of the words; but they cannot be adduced as an exception to the rule which we are considering.

(d) *The succession at Alexandria*.—Much more important than the above is a peculiarity said to have existed at Alexandria in the earliest ages. (The matter is full of difficulties and may be studied in detail in Lightfoot, 'Dissertation,' p. 230 f., and in *JThSt* ii. [1901] 612 f. [E. W. Brooks, Turner], iii. [1902] 278 [Gore].) Jerome says (*Ep.* cxlvi., 'ad Evangelum') that at Alexandria till the middle of the 3rd cent. the presbyters nominated (*nominabant*) as bishop one of their own number, and placed him in a higher grade, as if an army were to appoint (*faciat*) a general, or deacons were to choose from their own body one whom they knew to be diligent, and to call him archdeacon. He then goes on to deny that a presbyter can ordain, in the words cited above (a). Somewhat similarly, Severus, Monophysite patriarch of Antioch in the 6th cent. (we have his letter only in a Syriac translation), says that the bishop of Alexandria used in former days to be appointed (the Greek verb was doubtless καθίστασθαι) by presbyters, but 'afterwards the solemn (or mystical?) institution of their bishops has come to be performed by bishops.' The word rendered 'institution,' *metasthānūthā*, may mean either 'election' or 'ordination' (R. Payne-Smith, *Thesaurus Syriacus*, Oxford, 1879-1901, ii. 2737). Jerome may mean, as some later writers understood him to mean, that the Alexandrian presbyters elected their bishop from their own number, and that no further ordination was necessary; we should thus have, as an exceptional custom, a body of what we may call presbyter-bishops, who had been entrusted when they were ordained with the full powers of the ministry, including the ordination of others, though they delegated the function of ruling to one of their number. Or the meaning may be that, unlike other presbyters, the presbyters of Alexandria had the right of electing their own bishop without the intervention of the neighbouring bishops.

Confirmation of Jerome's statement has been found in three writers besides Severus. Ambrosiaster's testimony, however, as we have already seen in § 4 (b), is irrelevant. In the apophthegms of the Egyptian monk Poemen (*JThSt* ii. [1901] 613) it is said that certain heretics accused the archbishop of Alexandria [probably Athanasius or his successor] of having his ordination (χειροτονία) from presbyters. This was in the latter half of the 4th cent., and Jerome distinctly states that the custom which he mentions had ceased a hundred years before. Certainly Athanasius was elected by the people and the bishops, and ordained by the latter (cf. art. LAITY, § 4). Poemen, in his meekness, made no reply; but, though the accusation was doubtless a pure calumny, it may probably be an echo of some former peculiarity at Alexandria. The third writer is Eutychius, an Arab patriarch of Alexandria in the 10th cent., who says that the twelve presbyters of Alexandria, when the patriarchate was vacant, chose one of their number, and the remaining eleven laid their hands on him, and blessed him, and created him patriarch, and that this lasted till the time of Bishop Alexander (A.D. 313-326). Those who are familiar with the late ecclesiastical histories of the Eastern Churches, which are full of fables and of impossible statements, will hesitate to accept Eutychius's testimony as an independent confirmation of Jerome. He probably depends on Jerome at third or fourth hand, and it is not surprising that he flatly contradicts him.

We are, then, met with a perplexing series of contradictory statements. But they can hardly be all dismissed as entirely devoid of truth. Probably there was at Alexandria in very early times some peculiarity in the appointment or in the

ordination of bishops, whether it took the form of the presbyters electing him or of their ordaining him. A great difficulty in the way of the latter supposition is the fact that Jerome makes the change to have taken place in the time of Origen. Yet Origen, who suffered much from the autocratic authority of the bishops of Egypt, and especially of the bishop of Alexandria, and who was prompt to castigate bishops for going beyond their powers, gives no hint that in his own day a great change was taking place by which the Alexandrian presbyters were being deprived of their rights (on this point see, further, Gore, *Church and Ministry*⁵, p. 127 f.). On the whole, the remark of C. H. Turner (*JThSt* ii. 613) seems just, that 'it becomes harder than ever to discover the history and character of this exceptional system in detail.'

(c) *Some other exceptions* which have been alleged are due to a misapprehension. Thus Paphnutius, a presbyter and hermit in the Scotic desert in Egypt in the 4th cent., is said by his younger contemporary Cassian, the historian of Oriental hermits (*Conferences*, iv. 1), to have 'promoted' a certain Daniel to the diaconate and presbyterate. The meaning here must certainly be 'to nominate,' as is often the case even with the words 'constitute,' 'ordain,' and the like. We read, e.g., of kings 'ordaining' bishops and popes (see Gore, p. 341). To suppose that at the end of the 4th cent. a presbyter in Egypt laid on hands to ordain, and that Cassian, writing at Marseilles in the 5th cent., mentioned it without surprise, would indeed be an anachronism. Another instance is the statement by Cyprian that Novatus, a schismatical presbyter in Africa in the 3rd cent., appointed (*constituit*) Felicissimus deacon (*Ep.* li. [xlviii.] 2, 'ad Cornel.'). The meaning here is capable of being tested. A few lines later on Cyprian says that Novatus, who had 'made' (*fecerat*) a deacon, 'made' [Novatian] a bishop. But Cornelius tells us (*Eus. HE* vi. 43) that Novatian got three rustic bishops from a remote part of Italy to come to Rome, and when they were drunk to ordain him 'through a counterfeit and vain imposition of hands.' Thus 'making' a deacon or bishop here means 'getting him ordained.' [Eusebius calls Novatian 'Novatus'; on this see *DCB* iv. 58.] The story of Aidan lies outside our period, but it may be here briefly referred to. Bede says (*HE* iii. 5) that the seniors of Iona, A.D. 634 or 635, 'ordaining' (*ordinantes*) Aidan bishop, sent him to their friend King Oswald to preach the gospel. Here 'ordaining' can only mean 'procuring the ordination of.' We know that the Irish and Columban monks had a bishop with them for episcopal acts, though they had no system of diocesan episcopacy. But in any case it is impossible to believe that Bede, the ardent upholder of the customs of Rome, would have accepted (as in fact he did accept) Aidan as a true bishop if he had been ordained by presbyters only.

(f) *Bishops ordained by not fewer than three bishops.*—The earliest example of this rule, as a definite enactment, is at the Council of Arles in Gaul (A.D. 314), which says that ordinarily seven, but at any rate not fewer than three, bishops are to take part in the ordination of a bishop (can. 20). The 4th canon of Nicaea says that a bishop is to be appointed (*καθίστασθαι*) by all the bishops of the eparchy (province); at any rate at least three shall meet and ordain, the other bishops giving their assent in writing. The *Apost. Const.* (iii. 20) say that a bishop is to be ordained (*χειροτονεῖσθαι*) by three bishops, or at least by two, and is not to be appointed (*καθίστασθαι*) by one; so *Apost. Canons*, 1, *Ethiopic Didasc.* § 16. But this rule must have been in force long before the 4th century. Cornelius was ordained by 16 bishops (Cyprian, *Ep.* lv. [li.] 8, 24, 'ad Antonianum'). Novatian was ordained, as we have seen (e), by three; had the rule not been then in force, he would have been content with getting a single bishop to ordain him. Much stress is laid by Athanasius on the number of bishops who took part in his own election (see art. LAITY, § 4). At the third Council of Carthage (A.D. 397) it was proposed that twelve bishops should be the minimum; but this proposal was not carried (Hefele, ii. 408).

An exception to the rule is found at Rome, where, at least from the 6th cent. onwards, the pope acted alone in consecrating bishops (Duchesne, p. 361). And in the Celtic Church it was common for a bishop to be consecrated by a single bishop.

The object of the rule seems to have been to

secure the assent of the comprovincial bishops to the election. But in the ordination itself there is a variety of usage as to what part the bishops took (see art. ORDINATION).

(g) *Appointment of the minor orders.*—In the 4th cent., when minor orders were developed, there was a certain discrepancy of usage as to whether certain classes of persons were 'ordained' at all, i.e. set apart by some solemn ceremony; and also a distinction was frequently made between ordination with, and ordination without, laying on of hands. Basil distinguishes the ministers who were ordained without it from those 'in orders' (*ἐν βαθμοῖς*, *Ep. can. tert. cccvii.* 51). So the *Apost. Canons* (82 [81]) speak of the *χειροτονία βαθμοῦ*, meaning 'ordination to the higher ministry.'¹

In the *Test. of our Lord* (i. 44 f.), *Canons of Hippolytus* (vii. [ed. Achelis, § 48 f.]), *Egypt. Ch. Ord.* (35 f.), *Ethiop. Ch. Ord.* (27), subdeacons and readers are ordained without imposition of hands; so the reader in the *Const. through Hippolytus* (13); and the subdeacon in the *Gallikan Statutes* (§ 5), which take the same thing for granted in the case of the ordination of an acolyte, exorcist, reader, doorkeeper (§§ 6–9). On the other hand, the *Apost. Const.* (viii. 21 f.) press the laying on of hands, and appoint it for the ordination of both subdeacon and reader. The *Const. through Hippolytus* appoint it for a subdeacon (11), but not for a reader.

In many of these manuals persons holding charismatic offices are not ordained at all. Such are confessors, virgins and ascetics, widows, exorcists. But there are exceptions, in which some of these classes receive an ordination of some sort, though without imposition of hands. In the *Test.* widows 'who preside' are ordained (i. 41); in the *Canons of Hippolytus* (viii. [ed. Achelis, § 53 f.]) one who wishes to be ordained because he has the gift of healing is not to be ordained until it is made clear that the gift is of God (other manuals say that one who has a charisma is not to be ordained, i.e. merely for that reason); in the *Gallikan Statutes* (§ 7) an exorcist is ordained, and a book is given him in which the exorcisms are written. Virgins (ascetics) receive a blessing on their profession, not from presbyters, but only from the bishop, in *Gallikan Statutes* (§ 11) and the 3rd canon of the Council of Carthage, A.D. 390 (Hefele, ii. 390).

g. *The institution of a ministry by our Lord.*—We now enter upon the consideration of theories as to the origin and development of the ministry. There are two main trends of opinion, and an attempt will be made to summarize them, without going into questions of detail, and without going beyond general principles.

(a) It is held that our Lord founded a ministry to be a means of bestowing grace on the Church and for its government. For this purpose He founded an apostolate, and gave to it a commission apart from the Church at large. It is clear from Acts, and to a certain extent from the Epistles, that the apostles exercised an authority over the Church, and it is difficult to conceive that that authority was due to delegation from the people themselves. Of such a delegation there is no trace in the NT, and the position of the apostles after Pentecost appears to presuppose a distinct commission from our Lord Himself. The ministerial commission, whether given to the apostles or to the Church as a whole, was not bestowed till after the Resurrection; but our Lord foretells the gift in more than one passage. Whatever be the true exegesis of the promise to St. Peter after his confession of the Christ (Mt 16^{18a}), and of the phrase, 'Upon this rock I will build my Church,' the

¹ For *βαθμοῖς* in 1 Th 3¹³ see above, § 6 (i). The word is used in *Eus. HE* iii. 21 and at the Council of Ephesus (can. 1, A.D. 431) in the sense of the 'position' or 'order' of bishops.

passage about giving the keys of the kingdom of heaven carries a commission of binding and loosing, *i.e.* of government. It is not a commission then given, but a promise that it will be given; and the promise was fulfilled after the Resurrection. The commission is, however, not here promised to the Church as a whole. On the other hand, in Mt 18¹⁷ the Church (*ἐκκλησία*) is spoken of as exercising discipline, and our Lord then gives (apparently to the Twelve, but this is disputed) that promise of binding and loosing which had already been given to St. Peter. 'The supernatural authority does inhere in the Church as a body, but the Church has (not by her own but by Christ's authority) executive officers, and it is through them that her judicial power is put into effect' (Gore, *Church and Ministry*, p. 207). A distinct stewardship, however, apart from the powers promised to the whole flock, is foretold in the parable of Lk 12⁴¹⁻⁴⁸. This parable, as F. Godet remarks (*Com.*, Eng. tr., Edinburgh, 1887, ii. 108), assumes that the apostolate will be perpetuated till Christ returns, a ministry of the word established by Christ. The same writer adds that the theory which makes the pastorate emanate from the Church as its representative is not Biblical; this office is rather an emanation from the apostolate, and therefore mediately an institution of Jesus Himself. It may be added that in the parable the stewardship is appointed by the Lord (note the future: 'shall set over his household'), in order that the household may be fed, and that it will last until the Lord comes.

The ministerial commission was given after the Resurrection, but it is disputed whether it was given to the apostles or to the Church at large. The commission in Jn 20²¹⁻²³, with the gift of the Holy Ghost (*i.e.* *πνεῦμα ἁγίου* without the article) and the power of binding and loosing, was given on the evening of Easter Day, when only ten of the apostles were present, Thomas being absent (v. 24). It was distinctly a 'mission': 'As the Father hath commissioned (*ἀπέσταλκε*) me, I also send (*πέμπω*) you.' But it is uncertain whether others were present on this occasion besides the Ten. 'The disciples' are mentioned (v. 19), but this often means the apostles. In the description in Lk 24³⁸, which seems to refer to the same appearance of our Lord, we read of 'the Eleven and them that were with them.' The number 'eleven' is only a general way of speaking, for Thomas was not present; in this passage there is no word of any commission. Putting the passages together, we may conclude that it is probable that others besides the Ten were present, but the indications point to the commission having been given only to the apostles. That Thomas had the commission given to him at another time can only be conjectured. In the First Gospel the commission is given when the 'eleven disciples' are assembled on the mountain in Galilee: 'All authority hath been given unto me in heaven and on earth. Go ye therefore,' etc. It has been suggested by E. Alford (*Com. in loc.*) that others besides the Eleven were then present, because 'some doubted.' But this is against the grammar. The 'some' must have been certain of the Eleven; nor is it at all improbable that the apostles, or some of them, though they believed on Easter Day, yet allowed doubts to assail them afterwards. This hesitating faith was characteristic; it was finally confirmed only by the Pentecostal gift. We do not know what account St. Mark gave of the ministerial commission; but the author of the Appendix certainly conceived the commission as having been given to the Eleven ('Mk' 16¹⁴).

¹ This word 'marks nothing more than the immediate relation of the sender to the sent,' while the other verb denotes a delegated authority (see B. F. Westcott, *Com. in loc.*).

The more probable conclusion seems to be that the special ministerial commission was given to the apostles to hand on in perpetuity to succeeding generations, although the Church at large was given a supernatural authority to be exercised by divinely appointed ministers. For a fuller exposition of this view see Gore, *op. cit.*, ch. iv. and (in the later editions) note M.

(b) A very different view is taken by Hatch (*Organization of the Early Christian Church*) and Hort (*The Christian Ecclesia*). Hort holds that the commission was given to the Church as a whole, and that the Church as a whole appointed the apostles, whose authority was due to the spontaneous homage of the Christians in Judæa. He thinks that the apostles were not commissioned by our Lord to govern the Church, but only to be witnesses of His resurrection; that they were not, strictly speaking, officers of the Church as the Seven were (p. 231). He doubts if they had any authority outside Judæa. An indefinite authority grew up round them because they were personal witnesses. 'The Ecclesia itself, *i.e.* apparently the sum of all its male adult members, is the primary body, and, it would seem, even the primary authority' (p. 220). With regard to the commission in Jn 20, Hort thinks that others besides the apostles were probably present, and that, though perhaps the charge was 'directly and principally' spoken to the apostles, yet it was spoken to them as representing the whole community (p. 32 f.). [There is no scriptural authority for Hort's addition of 'adult male' to the narrative.]

On these various views it may be remarked that it is common ground that the apostles were given the commission as representing the Church. The point in dispute is whether they received a commission from our Lord direct, distinct from the Church, *i.e.*, whether they derived their authority from Him immediately or from the people to whom they were to minister.

10. The origin of the diocesan episcopate.—We may in conclusion state very briefly the main theories which have been advanced to account for the universal existence of the diocesan episcopate from the 2nd cent. onwards.

(a) The first view is that the diocesan episcopate is the successor to the apostolate, but localized. The old local ministry was represented by the presbyters and deacons of the later period; and the supervisory ministry of the apostles, which was formerly itinerant, by the bishops who were now settled in one place. In this view the complete commission, which was held at first by the apostles, was given to certain *virī apostolici* and then to bishops (in the later sense) only, and presbyters and deacons never from the first possessed the commission to hand on the ministry to others. This was the more usual patristic view. For an able statement of it reference may be made to Gore, *The Church and the Ministry*.

(b) The second view is that the diocesan episcopate was evolved, by apostolic direction, from the presbyterate; or, to speak more accurately, from the body of presbyter-bishops. This evolution was effected by one of the members of this body being given certain sole powers, notably that of ordaining. In this view the old presbyter-bishops had the complete ministerial commission, even as the apostles had it, but the complete commission was restricted at an early date to one of their number. This is the view of Jerome, Ambrosiaster, and some other Fathers. It may be studied in J. B. Lightfoot's 'Dissertation,' which upholds it.

It is clear that either of these views is compatible with either of those described in § 9. On

the one hand, the second view is compatible with the highest doctrine of apostolic succession, such as Jerome himself held. And, on the other hand, the first view is compatible with the belief that the apostles derived all their authority from the people.

Whatever view be taken of the matters touched on in this and the preceding section, it is important to notice a point on which all are agreed. The Christian ministry is not vicarious, but representative. The members of it do not form a class having a closer relationship to God than the laity, for every Christian holds personal communion with the divine Head of the Church (Lightfoot, pp. 181, 268; Gore, p. 76). All have direct access to God, and the minister does not perform the people's religion instead of them. He represents the people to God by acting as their mouthpiece, but the worship which he offers is the people's and not merely his own. The sacrifice of prayer and praise is offered by all, though the minister may be the only one who gives audible utterance to it. He represents God to the people, as the human instrument by whom the word is preached and the sacraments are administered. But he is not a barrier between God and the people.

LITERATURE.—The following works represent very various opinions, Anglican, Presbyterian, Roman Catholic, and others: J. Morinus, *de Sacris Ordinationibus*, Paris, 1665, 2nd ed., Antwerp, 1695; C. Gore, *The Church and the Ministry*, London, 1902 (1st ed., 1889); J. B. Lightfoot, 'Dissertation on the Christian Ministry' (in his *Commentary on Philippians*), 1st ed., 1898 (quotations from edition of 1903); see also his appended note on 'bishop' and 'presbyter', p. 95 ff.; T. M. Lindsay, *The Church and the Ministry in the Early Centuries*, London, 1902; E. Hatch, in *DCA*, art. 'Archdeacon', 'Orders, Holy', 'Ordinal', 'Ordination', 'Priest', 'Parish' (a large fund of antiquarian information will be found in these articles), also *Organization of the Early Christian Church*, London, 1881; A. V. Haddan, in *DCA*, art. 'Bishop'; B. Shaw, in *DCA*, art. 'Metropolitan'; A. J. Maclean, *The Ancient Church Order*, Cambridge, 1910; L. C. Pullan, *The Christian Tradition*, London, 1902, chs. 3, 4; E. C. Moberley, *Ministerial Priesthood*, do. 1897; F. J. A. Hort, *The Christian Ecclesia*, do. 1897 (posthumous); J. Wordsworth, *The Ministry of Grace*, do. 1901; L. Duchesne, *Christian Worship: its Origin and Evolution*, Eng. tr., do. 1912.

A. J. MACLEAN.

MINOTAUR.—1. The myth.—Minotaur (ὁ Μινώταυρος, ὁ Ταύρος ὁ Μίνω καλούμενος,¹ 'the Minos-bull' or 'bull of Minos') is in Greek myth the offspring of Queen Pasiphaë's union with a bull, and is represented as a man with a bull's head and tail. As Apollodorus tells the story,² her husband, Minos, had become king of Crete through the goodwill of Poseidon; after telling the people that the gods had chosen him and would grant whatever he asked, he prayed Poseidon to send a bull from the sea that he might sacrifice it. But he broke his vow, for, when the splendid creature came forth from the deep, he added it to his herd and offered a substitute on Poseidon's altar. To punish him the god inspired Pasiphaë with an unnatural passion, gratified through the artifice of Daedalos, who concealed her in a wooden cow. She bore a child, Asterios, surnamed 'the bull of Minos,' who had a bull's head, but was otherwise like a man. Warned by an oracle, Minos imprisoned the monster in the labyrinth built by Daedalos. Moreover, the bull from the sea was made savage by Poseidon, and it was one of the labours of Herakles to capture it and carry it to the Peloponnese; thence it wandered to Marathon in Attica, and ravaged the country. Androgeos, son of Minos, having come to Athens and beaten all opponents at the games, King Ægeus challenged him to go forth against the bull, which killed him.³ Minos, to avenge his son, made war on Athens, and exacted as a condition of peace that every year (every ninth year, according to Plutarch, *Theseus*,

14) the Athenians should send seven youths and seven maidens to be devoured by the Minotaur. On the third occasion Theseus, who had overcome many robbers and, last of all, had captured the Marathonian bull, was chosen or offered himself as one of the victims. When he landed in Crete, Ariadne, daughter of Minos, fell in love with him, and, on his promising to take her to Athens as his wife, contrived with Daedalos that he should escape from the labyrinth, giving him a clew of thread which he was to make fast at the entrance. Holding the thread, he penetrated to the Minotaur's lair and slew him with his fists. Then he made his way out and escaped by night with Ariadne and his companions.

Apollodorus omits the incident of Minos' ring and Poseidon's recognition of Theseus as his son.⁴ The story is further rounded off by Pherekydes;⁵ Theseus sacrifices the Minotaur to Poseidon, and the injured god at last gets his due.

In this form the story owes much to Attic dramatists, who depicted Minos as a cruel tyrant, while the general tradition saw in him a wise law-giver and founder of Hellenic civilization.⁶ The Attic version became an intricate romance in which Daedalos was almost as much the hero as Theseus. It credits Athens through him with the miracles of Minocan craftsmanship. It emphasizes Minos' fraud on Poseidon, because the god's son, the Attic prince Theseus, is to be the instrument of his vengeance. When, outwitted by Theseus, Minos imprisons the other Athenian hero, Daedalos makes himself wings, and his escape is the motive for Minos' futile campaign and ignominious death in Sicily.

The genuine Cretan elements in the rambling composite tale are the sea-born bull, so closely resembling the divine lover of Europa, the Minotaur and the labyrinth, both figured on coins of Knossos, and the fall of the Minoan Empire in a Sicilian expedition (cf. Herod. vii. 170). The break between pre-historic and Hellenic Crete was in many respects complete, but the coins make it probable that the legend of a bull-monster clung to the pre-historic palace at Knossos, and was adopted by the Dorian settlers. A. J. Evans, the excavator of the site, has shown how the complex of ruined walls, adorned with frescoes of bull-fights, in which boys and girls took part, and processions of tribute-bearers, must have helped to shape the story.⁷ The name of the labyrinth is explained with the help of *λάβρος*, the Lydian word for 'double-axe,'⁸ as meaning 'house (or place) of the axe,' a sacred emblem which stood in shrines within the palace and was often engraved on its walls and pillars. This may have been the ancient name of the palace, placed under the protection of a deity with whom both axe and bull were closely associated (hence the frequent juxtaposition of double-axe and horns; see art. *ÆGEAN RELIGION*, vol. i. p. 145, fig. 5). The remarkable preservation of the ruins proves that they were respected by the Greek and Roman inhabitants, perhaps as the remains of the labyrinth, which the ancients located at Knossos. Diodorus mentions 'the foundations of Rhea's house and a cypress-grove

² Frag. 106 (FHG i. 97)=schol. to Od. xi. 320 (Theseus is told how to surprise the Minotaur as he sleeps in the *μαυρός*, evidently the central point of a conventional maze; cf. § 3 below).

³ This conflict of views is discussed in the Platonic dialogue *Menos*, 318D and 320E, and in Plut. *Theos* 15. Both writers remark that Minos made a mistake when he quarrelled with a city like Athens, whose tragic poets could make or mar a reputation.

which has been hallowed since ancient times¹ as existing there in his day; the tabus attached to such a precinct go far to account for the survival of the pre-historic walls in the midst of a classical city. He denies that any trace of the labyrinth remained,² but seems to be combating an accepted belief; Philostratus,³ writing early in the 3rd cent. after Christ, mentions the labyrinth as the chief 'sight' of Knossos. Late writers⁴ transfer the tradition to the subterranean passages of a quarry above Gortyna, described by P. Belon⁵ and other travellers.

2. The Minotaur in ancient art.—In the Cretan art of the bronze age we meet with a series of hybrid monsters, combining a human body with various animal-heads, which seem to represent demons (cf. *ÆGEAN RELIGION*, vol. i. p. 145); the types may have been influenced by the animal-headed deities of Egypt or have been generated locally by ritual dances in which animal-masks were worn. Among them is a Minotaur-like figure, the most significant instance being a clay seal-impression from Knossos which shows a seated monster with calf's head and forelegs and a bearded man standing before it.⁶ Bull-headed men appear in the archaic art of Greece and Etruria, and until the reforms of Marius a figure of this kind was one of the standards of the Roman army.⁷ The earliest representation of Theseus and the Minotaur is a small gold plaque from Corinth (Berlin Museum,⁸ a work of c. 600 B.C.). In the second half of the 6th cent. the slaying of the Minotaur appears on black-figure vases, and, according to Pausanias, the Minotaur was twice figured among the mythological groups on the Amyclæan throne: (a) bound and led captive by Theseus (cf. the sacrifice to Poseidon mentioned by Pherekydes), (b) being slain by him.⁹ At first isolated, the killing of the Minotaur is associated on later black-figure and red-figure vases with other deeds of Theseus, a cycle which took shape at the beginning of the 5th cent., when the Attic hero was exalted into a second Herakles. The Minotaur is drawn as a man with a bull's head and tail; his body is often spotted or brindled, and once sprinkled with stars (in allusion to his name Asterios), once with eyes, like that of Argos.¹⁰ He is naked and unarmed, but sometimes clutches one or more stones. Theseus usually attacks him with a sword, but an interesting group of vase-paintings shows him dragging the dead monster out from a building with columns; here we may suspect the influence of stage-representations. Athene, Ariadne, and even Minos are sometimes present as spectators. Later designs treat the combat as a wrestling-match, the finest example being a bronze relief from Pergamon now in the Berlin Museum.¹¹ In sculpture we have a metope of the Theseion at Athens, fragments of a group found on the Acropolis (where Pausanias saw and described it), and fragments of two other groups in Rome, all representing the combat.¹² Campanian wall-paintings

show Theseus standing over the dead Minotaur, while the rescued boys and girls press round, and some mutilated marble groups seem to have represented the same scene.¹

Evans traces the origin of the Cretan type to certain Egyptian cylinders found in the Delta, which influenced Cretan sealstones from about the Vth dynasty onwards. These in their turn borrowed types from early Babylonian cylinders.²

3. The labyrinth in art.—On coins of Knossos the labyrinth is represented by a pattern of increasing complexity, advancing from a simple fret-pattern, through a more or less elaborate swastika, to a developed maze.³ On several vases of the 5th cent. the scene of Theseus's combat with the Minotaur is indicated by a panel of meanders and similar patterns, evidently a conventional representation of the supposed ground-plan.⁴ The labyrinth, in fact, became assimilated to the mazes which have been familiar in most parts of Europe from antiquity to the present day—a large subject which cannot be fully discussed here.⁵ In Italy, where the maze had been known as the Game of Troy (*Truia* inscribed upon a maze on an early Etruscan vase), the name 'labyrinth' took its place, and the Minotaur is figured in the centre of several Roman mosaic mazes. Similar pavements were constructed in Christian churches; they are especially common in the cathedrals of N. France—Chartres, Amiens, and others; they were known as *Domus Dedali* or *Chemin de Jerusalem*, and to tread their windings was a recognized form of penance. It seems that the original use of the maze, wherever found, was to serve as the track of a ritual dance. Plutarch tells a story which was evidently intended to establish a connexion between Greek dances of this type and the Minotaur legend; Theseus had landed at Delos on his voyage home, and with his companions danced a dance 'which is still kept up by the Delians' in imitation of the windings of the labyrinth.⁶

4. Explanations of the myth.—(a) *Rationalistic*.—According to Philochorus,⁷ the Cretans said that the Minotaur was a general named Taurus whom Theseus defeated at an athletic meeting; the tribute-children were kept prisoners in the labyrinth and given as prizes to the victors; or else he was a captain whom the Athenians beat in a sea-fight. A modern writer, E. Fabricius,⁸ who assumed that the quarry near Gortyna was the labyrinth, explained its narrow entrances as a device for the guarding of prisoners made to work in its galleries, and supposed that this gave rise to the story of the tribute-children.

(b) *The Minotaur as an old bull-god*.—W. H. Roscher⁹ equated Minotaur=Cretan bull=Minos. E. Bethe¹⁰ has argued that Minos, son of the bull-Zeus and husband of Pasiphae, who bears a bull-son, was originally the bull-god himself. The story of Theseus and the Minotaur is a doublet of the stories of Herakles vanquishing the Cretan bull and Theseus capturing the bull of Marathon; in each case the story is allegorical and represents

the overthrow of Cretan rule. Herakles, who goes to Crete to capture the bull, stands for the Dorian colonists; Theseus, who overcomes the same bull in Attica, delivers the country from a Cretan conqueror.¹ On somewhat different lines J. E. Harrison argued in a paper read before the Hellenic Society in 1914 that the slaying of the Minotaur, son of the sea-born bull, expresses the downfall of Cretan sea-power; 'the Minotaur was the primitive "point de repère" round which ultimately crystallised the complex figure of Poseidon.'

(c) *The solar interpretation.*—Pasiphae's name connects her with the moon;² her bull is often held to be the sun. Two recent writers have seen in the Minotaur a human actor impersonating the sun-god. J. G. Frazer maintains 'that Cnossus was the seat of a great worship of the sun, and that the Minotaur was a representation or embodiment of the sun-god,' and suggests that Ariadne's dance, the track of which was the labyrinth, may have been an imitation of the sun's course in the sky.³ A. B. Cook, after showing that in Cretan myth the sun was conceived as a bull and that the labyrinth was 'an orchestra of solar pattern presumably made for a mimetic dance,' goes on to suggest that the dancer who imitated the sun masqueraded in the labyrinth as a bull—the Minotaur, in fact, was the Knossian Crown Prince wearing a bull-mask, a piece of ritual borrowed perhaps from Egypt.⁴

(d) *The suspicion of human sacrifice.*—The Minotaur, like the horses of Diomedes, is a man-eater; the myth implies that it was necessary for Minos to gratify this appetite. W. Helbig⁵ saw in the story another version of Kronos devouring his children; Kronos was banished by Zeus to the under world, the Minotaur by Minos to the labyrinth. There was a tradition that in old days in Crete the Kouretes had offered human sacrifices to Kronos,⁶ and the 'feast of raw flesh'⁷ which Euripides mentions in the famous chorus from his tragedy *The Cretans*, as part of the initiation to the service of Idaian Zeus, was open to a similar suspicion; in a recently discovered fragment of this play Pasiphae taunts her husband in terms which leave no doubt as to the charge.⁸ Euripides probably had in mind the Cretan mysteries in which the votaries tore with their teeth a living bull in commemoration of the eating of the boy Zagreus by the 'Titans.'⁹ But these mysteries stand in no direct relation, so far as can be seen, to the substratum of Minoan religion; they explain the cannibal element in the Euripidean story, but not the bull-form of the man-eating demon. Frazer has conjectured that in Crete, as in other parts of the Mediterranean, children were sacrificed to a Moloch-like image with the head of a bull.¹⁰

Phoenicians and Carthaginians sacrificed children to a bronze image of Kronos (= El?), so contrived that victims laid on its outstretched hands fell into a furnace beneath.¹¹ Rabbinic writers describe Moloch's image in similar terms, and add that it had the head of a calf.¹² Now Talos, the brazen coast-guard of Crete, who killed strangers by hugging them to his red-hot breast, was by some called Tauros (Apollod. i. ix. 26), and a gloss of Hesychius makes him a by-form of the sun-god. A tradition

as old as Simonides connects him with Sardinia and with human sacrifices there;¹³ recent excavations have shown that the Sardinians of the bronze age worshipped a bull-god in subterranean temples.¹⁴ Suggestive as these combinations are, however, we have no real evidence of any cult of the Minotaur, nor of human sacrifice to a Cretan bull-god;¹⁵ at most they prove that the Greeks were familiar with the rites of adjoining countries and used them to add a touch of horror to the local legends of Knossos.

LITERATURE.—This is sufficiently cited throughout the article.

R. C. BOSANQUET.

MIRACLES.—I. Introductory.—Miracles have often been studied *in vacuo*—a method which does not tend to belief in them. It is better to have a standard of comparison, to study them in the light of those alleged of their chief worker, who, if any one can work miracles, is most likely to have done so. This is the point of view that will be taken in this article. Christ's miracles suggest unusual and striking power, presumably divine, used for beneficent ends, not to cause wonder, and this points to the essence of miracle. We therefore define miracle as an occasional evidence of direct divine power in an action striking and unusual, yet by its beneficence pointing to the goodness of God. Mere wonders, by whomsoever wrought, would have a thaumaturgic aspect and would not reveal character—e.g., spiritualistic marvels. Christ calls His miracles *ἔργα*, 'works,' or *σημεῖα*, 'signs.' *Σημεῖα* may be combined with *τέρατα*, 'wonders,' in describing what the Jews seek or the work of false Christs. His own miracles are not called by Him *τέρατα*, though He calls them *δυνάμεις*, 'powers.' But the stress is on that of which they are signs—the love of God.

All three words—'works,' 'signs,' 'powers'—are used by Christ in describing His disciples' miracles, by the Evangelists, and by friends and critics. The first two are favoured in the Fourth Gospel.¹ In Acts and Epp. *τέρατα* and *δυνάμεις* are combined with *σημεῖα* in speaking of Christ's and the apostles' miracles. In Rev 13¹⁴ the beast, in 16¹⁴ devils, in 19²⁰ the false prophet, work *σημεῖα*; cf. 2 Th 2⁹ and Mt 7²².² Rev 12¹, *σημεῖον ἐν τῷ οὐρανῷ*, throws light on the sign expected by the Pharisees (Mk 8¹¹, Lk 11¹⁶).

2. Miracles in the lower culture.—Whether the savage does or does not believe in a cosmic order is uncertain. Some savage mythologies certainly seem to suggest that he does. But he believes that the medicine-man, or shaman, has power to alter certain concrete events—e.g., to produce rain in time of drought, to allay storms, etc. In so far as he recognizes any order in nature, this action is really supposed to be *contra naturam* and thus corresponds to the popular view of miracles. Hence it is not only a religious view of the universe which suggests to the savage mind an elasticity in the order of nature, as Frazer insists.³ It is elastic to the magician, as it is elastic to the divinity. This power of altering events is the power of magic in which every savage believes. He himself may practise it to some extent by means of fetishes obtained in various ways, but in that case the power is in the fetish. But more usually he attributes magical power to the

medicine-man, to traditional culture-heroes,¹ to the gods ('white' or beneficent magic), or to sorcerers (those who practise 'black' or anti-social magic). Magic is a sort of thaumaturgic miracle, and is looked upon as something abnormal. If it were a normal thing, it would have no aspect of mystery, as it has, and the magician would not be regarded as he is by his fellows. For the savage magic is mysterious, and everything mysterious is more or less abnormal, magical, miraculous. Magic or thaumaturgic miracle, as believed in by the savage, includes power over nature—producing or stopping rain, sunshine, and wind; curing sickness, exorcizing spirits and demons, and removing barrenness; producing fertility or increasing the food-supply; causing success at hunting or fishing; causing sickness, injury, or death. Other powers are shape-shifting, invisibility, and raising the dead. Generally the power by which these things are supposed to be done comes from an exterior entity of which some persons possess a large share—the Melanesian *mana*, the Annamese *tin*, the Siouan *wakan*, etc.² It is that which 'works to effect everything beyond the ordinary powers of man, outside the common processes of nature.' It is a miraculous power, a theoretical force by which the savage accounts for magic in all its forms. Why magic should have come to be believed in, why some men should have been thought to possess magical power, is not clear, though various causes might be suggested. One of these is the unexplained phenomena of the α region—telepathy, hypnotism, cure by suggestion, clairvoyance, inspirational possession.³ These exist among savages, and would be regarded as magical, as to us they are supernormal. They would suggest other powers still more fantastic. Magic or thaumaturgic miracle belongs to a quite primitive stage of thought, but many of the actions attributed to the shaman are reproduced in the miracles ascribed to Lao-tse, Buddha, Muhammad, or to ethnic and Christian saints.

3. The miraculous in the ethnic religions.—Miracles occur plentifully in religions at a higher level than those of savagery, and are freely ascribed to the great ethnic teachers and to saintly persons or ascetics in those religions. Asceticism and austerity are, in fact, sometimes a necessity as well as a guarantee of miracle, as they are also in the case of Christian saints.

As for the great religious founders, it should be clearly noted that they themselves made no claim to work miracles. This statement is supported by their own sayings in most cases, or it may be proved from the early writings describing the origins of these religions. In the *Gāthās*, the earliest part of the Avesta, there are no miracles, and no very high place is ascribed to Zoroaster.⁴ Confucius was largely indifferent to spiritual matters and avoided anything dealing with the supernatural. He is most unlikely to have made any claim to miracles, and in fact he said:

'To search for what is mysterious, and practise marvellous [arts], in order to be mentioned with honour in future ages:—this is what I do not do.'⁵

Lao-tse was opposed to all magic, and was a man of humble mind. Buddha himself protested

against miracles, and, though he knew of miraculous acts, he was indifferent to them. When a disciple gained an almsbowl by a display of miracles, he caused it to be broken and forbade these.¹ Some sayings of his point to his dislike of miracles:

'There is no path through the air, a man is not a Samana by outward acts'—perhaps a reference to the supposed gift of walking on air. When an *arhat* flew through the air, Buddha is represented as rebuking him: 'This will not conduce either to the conversion of the unconverted, or to the increase of the converted, but rather to those who have not been converted remaining unconverted, and to the turning back of those who have been converted.' He also said: 'I command my disciples not to work miracles.'²

Muhammad also knew of miracles, but he disliked them and wrought none himself. The people demanded signs, but he disclaimed these, usually on the ground that they are powerless to convince. In earlier ages they had been regarded as lies or sorcery, not as divine acts. God's revelation to the Prophet was the true miracle, and the Qur'an contained it.³

Nor did any one of the great ethnic teachers lay claim to divinity. Yet, in spite of this and of their own utterances about miracles, miracles are freely ascribed to them, sometimes even in the actual works which contain such disclaimers. How soon this process began it is difficult to say, yet probably no very long time was necessary for the growth of miraculous legend. In many cases, however, as in similar instances in Christian hagiography, it is possible to trace the growth of a miraculous story in successive versions of the same incident.⁴ The miracles and supernatural events associated with the lives of these men are either connected with their conception and birth or acts alleged to have been performed by themselves. The miracles of the former class are invariably lacking in lives contemporary, or nearly so, where these exist. There is sometimes a semi-miraculous origin (Lao-tse, Zoroaster, Buddha), but not a virgin-birth, for both parents are concerned in the act of conception.⁵ The moment of birth is hailed by a great variety of portents on earth, in the sky, or in the lower regions. Unearthly lights are seen, mysterious music is heard. Prophecies of future greatness are made. The child himself speaks, laughs, stands, walks, or announces his intention of saving the world. Or, again, the child is miraculously saved from persecution and danger of death. There are also wonderful signs at the death of some ethnic teachers, especially at Buddha's death.⁶

For wonders associated with the birth of a *bodhisattva* or with the Dalai Lāma in Tibet, see *SBE* xi. 46; L. A. Waddell, *The Buddhism of Tibet*, London, 1895, pp. 247, 249; and for those connected with future beings in Zoroastrian belief, *SBE* xlvii. 105 f., 111 f., 115 f.

In the case of miracles of the second group beneficent actions are extremely rare, i.e. miracles performed to benefit others. As a rule, the miracles merely exalt their worker, and sometimes they are of a kind to force belief in him. Lao-tse is said to have raised the dead, and Buddha to have healed wounds; but these are occasional, and are in a minority compared with the great number of thaumaturgic acts.⁷ These largely consist of power over nature and complete control over its processes, and are often of a most

grotesque and obviously improbable kind. Buddha made floods recede, or passed miraculously from one side of the river to another. Levitation, flying through the air, and ascent to heaven are frequent miracles, or, as in the case of Buddha, treading on water, entering earth as if it were water, and passing through a wall.¹ Understanding or influencing the thoughts of others *à distance*, change of form, and invisibility occur. Frequently the miracle-worker saves himself from accident or death.

Some of these miracles are simply repetitions of the magical acts attributed to medicine-men. They are traditional stock incidents easily fitted on to the life of any person. Others are sheer inventions. Others may be exaggerations of actual events, perhaps in some cases of real supernormal powers possessed by this or that teacher, or of great shrewdness or spiritual insight. But they are generally of a most unlikely character, and have seldom a beneficent purpose, nor is there any historic evidence for them, even if they were of such a kind as would require it.

In most of these religions miracles are commonly attributed to saints, sages, and ascetics. They bear a similar character in widely distant regions and under different creeds, and often run on parallel lines. Here again these miracles bear a curious likeness to many which are ascribed to Christian saints. Taoist, Zoroastrian, Buddhist, Hindu, and Muhammadan all believe in the possibility of the miraculous in the case of gifted persons. In Taoism those who through asceticism and saintliness 'rise to the Tao' become like gods and are superior to the laws of nature.² In Buddhism the cause is profound meditation. By this the *arhat* gains transcendent faculties—the five *abhijñās* ('magical powers') and *iddhi*, saintship, but also the power of working miracles.³ Holy men in Islām possess similar powers as a result of their faith, piety, and self-denial. They are also helped to them by the *jinn* and by knowledge of the divine name.⁴ The range of these wonders in the different religions is very wide. It includes a great variety of powers over nature—the production or cessation of storms or sunshine, causing the sun to stand still, drinking up rivers, superiority to fire or water (e.g., not being wet in heavy showers, or walking or passing through water); superiority to the limitations of matter and space (a common Buddhist attribute), the power of invisibility, change of form or of sex, invulnerability, levitation and swift passage through space, penetrating walls, mountains, earth, lengthening beams of wood, opening doors without keys, swift transference from one place to another. Again, light is made to stream from the fingers or hands, or miraculous supplies of food are provided. Inanimate objects are made to act as if alive. Supernormal knowledge of distant events or of men's thoughts is asserted. The power of exorcizing and dispelling demons commonly occurs. Less rarely the cure of disease and the removal of barrenness and even the raising of the dead are found.⁵ One method of curing disease used by

Muhammadan wonder-workers is to pass the hand over the part affected—perhaps a species of mesmerism.¹ As to these miracles as a whole, there is no evidence that they ever occurred, and, as Burton says of the incredible miracles of Islām, collateral or contemporary evidence is never sought for.² The question of supernormal powers will be discussed later.

Occasionally, especially in Buddhism, Hinduism, and Islām, miracles are wrought by relics or at the graves of saints. As far as Buddhism is concerned, these are of a very dazzling kind. In Islām they are mainly, though not wholly, works of healing or the removal of barrenness.³ In the case of the latter the spirit of the dead saint begets the child—a form of primitive belief (see FAIRY, § 9, vol. v. p. 687).

Such miracles are occasionally said to cause belief. Those to be wrought in future ages on behalf of Zoroastrianism will make all mankind believe in the good religion (e.g., causing the sun to stand still). Those wrought by Buddhists also cause conversion, especially incredible marvels in the world of nature.⁴

4. Classical miracles.—This group, as it includes so largely miracles of healing, may be considered by itself. These were mainly the result of divine rather than human agency and they cluster around the practice of incubation (*g.v.*), or 'temple-sleep.' The patient, after ritual and sacrifice, slept in the temple; in the course of his sleep he dreamed that the god touched and healed, or opened his body and cured him (? an operation under hypnotic influences), or indicated a remedy either directly or by symbolic means. The actual healing was speedy or more gradual, and in some instances—e.g., that of Aristides in his *Sacred Orations*—it was prolonged over many years, yet the god was always supposed to intervene. The *stelæ* recording miraculous cures found at Epidauros are obviously fictitious—a kind of advertisement of the shrine.⁵ There is no reason, however, to doubt that cures of a more or less miraculous aspect did take place—the result of faith-healing or of a strong mental suggestion, aided by all the adjuncts of the place (the ritual, the dream, the medicaments).⁶ It is not impossible that in sleep the subconscious self may cause dreams about diseases, of the early indications of which it has become aware, or might even suggest a cure. The dream-cures may have been based on phenomena of this kind. The hero-god mainly concerned was Asklepios, who was thought once to have been a human healer and to have raised the dead, while wonderful events—e.g., brilliant light—were associated with his birth.⁷

Healing miracles were also wrought by images of gods, heroes, or famous persons. Other miracles were wrought by such images—they moved, wept, spoke, and gave advice—and there are numerous parallels to this in all religions, even in Christianity.⁸ Mythology and popular belief also ascribed

great wonders to relics of gods or heroes. Some of these were multiplied exactly as mediæval relics. They were miraculously found, and various places disputed their possession.¹ Healing also took place at tombs of heroes. Less common are miracles by human wonder-workers. Tacitus speaks of Vespasian curing blindness and lameness,² and the fictitious life of Apollonius of Tyana by Philostratus contains miracles at his birth and death, healings, and exorcizing of demons. He may have had supernormal healing gifts, but some of the stories are modelled on the NT miracles. Others are told by none but Philostratus.³ The emissaries of the impostor Alexander of Abonoteichos (*q.v.*), according to Lucian's life of him, credited him with healing and with raising the dead.

5. On the whole the miracles of ethnic religions do not possess an air of truth. They are incidents ascribed to this or that person, some of whose doings, on account of his greater insight or skill, may have seemed miraculous. Some, however, may be supernormal phenomena. As to the cases of healing, they are seldom asserted of individual teachers, but rather in connexion with shrines and relics. Suggestion or hypnotism may explain such as are genuine. Whether any influx of life or healing power from another sphere was also present is a question which must always be an open one (see §12).

6. Miracles in the OT.—Roughly speaking, the miracles of the OT fall into two groups, those connected with Moses and Joshua, and those connected with Elijah and Elisha. The documents describing these are of a date far removed from the events described, and their evidential value is thus small. Some of the miraculous events are doublets of each other, and in those of Elijah and Elisha a kind of artificial parallelism is to be observed. The narratives are in some cases composite, and a more or less non-miraculous substratum may be traced. Many of the miracles have a strong thaumaturgic aspect, and they suggest that, as in the case of ethnic religious teachers and the Christian saints, it was not enough that the outstanding character, insight, and leadership of Moses or Elijah should be recorded, but miracles should also be ascribed to them. While, in the case of Elijah and Elisha, it is not impossible that they had some gift of healing—which might then be the *point d'appui* of the miraculous legend attached to their history—it is remarkable that in the case of the greater prophets, save once with Isaiah (2 K 20¹¹), there is no thaumaturgic element. The idea of God which the miracle stories reflect is not of the loftiest kind, but rather that of men at a lower spiritual level. The spirit animating some of the miracles resembles that which animates barbarous men. There is aggressiveness, ruthlessness in dealing with human life where men do not know or worship God, and intolerance. Few of the miracles have that beneficent aspect which we find in the majority of the NT miracles. Again, there is a certain materialism in the method of describing the miracles—*e.g.*, in the idea of speaking face to face with God. Some of the miracles are magical, and are alleged to have been copied by pagan magicians (Ex 7^{11, 22} 87). Others seem to reflect the traditional beliefs of the Semites—*e.g.*, that of God's manifestation in fire—or are traditional stories rather than true histories. Some, no doubt, have a symbolic value, as when a record of spiritual revelation is told in material terms (the burning bush, the revelation to Elijah—

the latter a reminder that miracles as outward phenomena parallel to thunder, fire, etc., are a lower kind of testimony to God). Some of the miracles—*e.g.*, the ten plagues—are regarded as direct divine interpositions. It is possible, doubtless, to suppose that God made use of existing phenomena to effect His purposes. It is equally possible that phenomena coincidental with a crisis in the nation's history may have been regarded as direct Providential interpositions. Especially would this be the case if prayer for deliverance had preceded them. Such answers to prayer must not be ruled out, and all such answers have a miraculous aspect. They show the superiority of spirit to matter (see below, §16). This is also true of the event on Carmel, when Jahweh's superiority to Baal was clearly seen in answer to Elijah's prayer. There was some divine intervention, even if that is explained thaumaturgically or associated with rather ruthless methods. Again, we need not doubt that God led His people 'with a mighty hand, and with an outstretched arm, . . . and with signs, and with wonders' (Dt 26⁸). We need not doubt that in the movements of history He does 'make a way to His indignation' (Ps 78⁵¹) against the unrighteous. But whether the leading and interpositions were in the manner depicted is open to question. A strong belief in divine deliverance might easily lead to the formation of legendary accounts of it. The real miracle in the OT is the growth of the idea of God, the strong sense of the divine presence in the world, divine guidance in the affairs of the universe and of men. The real religion of the OT lies elsewhere than in the accounts of separate miracles. It is found in the growth of a spiritual religion, in such documents as that which tells of creation, in the records of spiritual experience and aspiration, in the phenomenon of propheticism.

7. The miracles of Christ.—(a) When the documents composing the Gospels are examined, it is found that even in the earliest there is no non-miraculous substratum; all alike contain miracles. By every one Christ's teaching is admitted to be marvellous, yet authentic. This raises a presumption that the marvellous deeds are also authentic. The date of the documents is sufficiently near to the events recorded to admit of authenticity, and the evidence is as good as anything short of signed scientific evidence is likely to be. The writers were men who knew themselves to be witnesses, and had regard for truth.

(b) Christ ascribes His miraculous power to God, as He does His teaching (Jn 14¹⁰). There is a real divine work being done (Lk 11²⁰, Mk 5¹⁹, Lk 8²⁹; cf. Jn 9³ 11⁴ 40. 42 14¹⁰). So also the witnesses of the miracles regard them (Mk 2¹², Mt 9³ 15²¹, Lk 7¹⁸ 9⁴³ 18⁴³). Yet power is inherent in Christ, as the method of the miracles shows, or the definite 'I will' (Mk 14¹). Here also the people recognize this inherent power (Mk 7²⁷). All power is delegated from God, as Christ taught. Hence the power to work miracles is not necessarily confined to Christ (Mt 12²⁷), though He has that power in a supreme degree.

(c) Christ as sinless is a moral miracle without *a priori* likelihood, therefore there need be no *a priori* objection to His miracles, which generally tend to rectify an unnatural, disordered state in the world. Unlike Buddha, Christ had not to grope His way to perfection—an instructive contrast. The sinless Christ was in unison with the forces of the divine will. Hence power to cure disease flowed from Him who was untouched by disease.¹ So, also, in whatever way He was divine

¹ Cf. D. W. Forrest, *The Christ of History and of Experience*, Edinburgh, 1897, pp. 117 f., 157; A. Morris Stewart, *The Crown of Science*, London, 1902, pp. 74, 80.

He was certainly more than man. His powers would thus be greater than those of ordinary men, and might therefore be miraculous.

(d) Christ's miracles are in harmony with His personality and teaching. There is an air of naturalness and ease about the miracles not found elsewhere. He never doubts His own power to work them, never falters in exercising it. His method, unlike that of other healers or exorcists, causes amazement, showing that it was not similar to theirs. He casts out demons with a word, or *à distance*, and no mere faith-healing or magical exorcism accounts for these cures. Yet there is an economy in the use of miracles which we do not find in ethnic narratives, while, again, Christ never works miracles for Himself.

(e) But, if miracles are so easily ascribed to great ethnic teachers, why should they not have been ascribed to Christ? This is certainly a possibility, nor need we deny that there was time enough for a miraculous legend to grow. But all the facts must be faced. The greater part of the Gospels is from eye-witnesses who had no wish to deceive. No miracles are recorded of John the Baptist. The basis of the narrative is true, and it contains miracles as well as the wonderful teaching. In several cases the teaching is intimately connected with the miracles, indeed springs out of them.¹ If Christ wrought miracles at all, it is not impossible that there would be a tendency in a biographer to exaggerate the miraculous. But, again, the miracles as a whole are very different from those ascribed to ethnic teachers, as may be seen by comparison. We have every reason to believe that Christ wrought miracles, even if the truth of any given miracle cannot be asserted or demands investigation. The miracles are in keeping with Christ's personality, and *vice versa*, and the impression made by them on the people, on inquirers (Jn 3²), and on hostile critics who admitted their truth is of great importance.

(f) Comparing Christ with ethnic teachers or Christian saints, we find that they never claimed to work miracles, and disliked them, while Christ made such a claim. If He refused to work a sign from heaven (Mk 8¹¹), this is really a proof of His power to work signs of a kind,² but not of the kind so liberally allowed to ethnic teachers. Christ's miracles are beneficent, never egotistical like Buddha's or even those of Christian saints; their setting is different from those of the ethnic religions; they are harmonious with the character of the worker; they have invariably a moral and spiritual quality not found elsewhere.

(g) Miracles, properly regarded, assist faith. But was this the primary purpose of Christ's miracles? Were they mere credentials of His mission? This is doubtful. Beneficence was primary, and often forestalled the faith of the person concerned (Mk 3¹, Lk 7¹¹, Jn 5²⁴), as it did in the case of demoniacs. Crowds of people were doubtless influenced by the miracles, especially by their unique character, for they produced fear or amazement even if that was followed by praise to God (Lk 7¹⁶, Mt 15³¹). The result was that crowds of people flocked to Christ and forced on Him a popularity which He disliked and from which He sometimes withdrew (Mk 1⁴⁶, Lk 5¹⁵). One whose credentials were miracles would have acted otherwise. The multitude connected the miracles with Christ's Messiahship (Mt 12²³, Jn 16⁴⁴)—a belief which He did not at first encourage (cf. Lk 4⁴¹, Mk 1²⁸ 3¹¹). When John sends to know if He is Messiah, He points to His works of mercy (Mt

11²⁹); the stress is on these, rather than on Messiahship. Miracles are not wrought to cause belief in it; miracles are works of mercy, and their merciful rather than their miraculous character is important. They are part of a spiritual mission rather than proofs of it. Disbelief in the worker's power shows hardness of heart, for the mercy and love displayed, rather than the miraculous power, are spurned (cf. Mk 3²¹, 5¹⁷ 6⁴³, Mt 11²¹⁻²³, Lk 10¹³⁻¹⁵). Mere popularity was distasteful, and silence about a cure is often enjoined.

The exception in Mk 5¹⁹ is explainable because Christ was unknown in Gadara and was leaving it. What the man was to tell of was the divine mercy.

True, Christ's compassion often overcame His dislike of mere popularity, while this popularity might sometimes indicate a genuine faith and love. But, if Christ works miracles at all to evince faith, it is not the faith of a fickle crowd, but the faith of the individual. Such an individual or those who intervened for him would already have faith, and that faith would be augmented (Jn 4³⁸, Lk 17¹⁴). Yet even here it is an existing confidence that is rewarded rather than a divine mission that is proved.

Christ does not appear to rank His 'works' very high, as the phrasing of Jn 5³⁶ shows. Works are of less importance than the personal appeal of Christ (Jn 10³⁷; cf. 14¹⁰). Christ's personality and His words are witnesses far more than His works (Jn 5⁴⁰, 6³³; cf. 8⁵¹). This lower position corresponds to the refusal to work a sign to sceptics; cf. also Jn 20²⁹.

The disciples followed Christ first as a result of the impression which His personality had made on them. Later the effect of His miracles—those only of the non-healing group—on them is sometimes noted. In spite of the comment in Jn 2¹¹, the disciples must already have believed. In other cases new thoughts are suggested to them, or a confession of belief is made (Mk 4⁴¹ 6⁵¹; cf. Mt 14³³). The miracles, however, were not wrought primarily for these purposes, but to quell fears or to confirm existing confidence. Even the lesson of the withered fig-tree is not that of the power of Christ, but of faith in God and of what faith can do (Mt 21³⁰). The true attitude is seen in Jn 21⁷, when recognition follows the miracle. The act is consonant with a personality already known and loved. The cumulative effect of miracles was no doubt to quicken understanding of Christ, and we remember that the great miracle of the Resurrection was what finally convinced the disciples of Christ's true nature.¹ Still, on the whole, the miracles were not meant to force belief or to act as credentials. They were part of a divine mission, and had their value, but it was rather that of contributing to a better understanding of a personality, not as a proof of it, and that because they were signs (*σημεία*) of a divine compassion. As for the people, their amazement was at the authority, ease, and naturalness of Christ's method, seen also in His teaching (Mk 1²², 27; cf. Mt 7²⁸). Signs are part of a revelation which confirms itself, for, when as thaumaturgic displays they are sought,² refusal follows, or a symbolic answer, or some piece of spiritual teaching.³

There is no real contradiction in Jn 15²⁴, for elsewhere the works are a witness to divine love (3²⁴ 7⁸¹ 9³³ 10³²⁻³⁷), not as a mere proof of it, but because they are done out of love. Men who do not see such love are spiritually blind, and to that degree in sin (cf. Mt 11²⁰, Mk 10²⁰). In the miracle on the paralytic, which is said to witness to divine authority, Christ's authority had been derided, and proof was necessary (Mk 2¹⁰). In the case of the raising of Lazarus, this is done that 'they [disciples and bystanders] may believe' (Jn 11¹⁶, 42). Many bystanders did believe; others did not. Yet Martha's existing faith is the condition of this miracle (cf. v. 26^{ff} with v. 40).

¹ Even by the apostles miracles are seldom referred to as having an evidential character. Cf. A. T. Lyttleton, *The Place of Miracles in Religion*, London, 1899, p. 53 f.

² Lk 11¹⁶ 16³¹, Mk 8¹¹. Such a sign from heaven is seen in Rev 12¹⁻³.

³ Mk 8¹¹, Mt 12²⁸ 16¹¹; cf. Jn 21⁸ 4⁴⁸ 6³⁰, Lk 11⁸ 29.

¹ Cf. F. Godet, *Lectures in Defence of the Christian Faith*, Edinburgh, 1895, p. 114 f.; A. B. Bruce, *The Miraculous Element in the Gospels*, do. 1888, p. 104.

² Pace F. W. Schmiedel, *EBR*, col. 1881; cf. J. R. Seeley, *Ecce Homo*, London, 1896, Preface, p. viii.

Here and elsewhere in this Gospel a theory of its author that miracles cause belief is at work (211 93 114). In this miracle belief of a specific kind—in Christ's power over death—is to be taught to those who believed in Him already.

Generally healing is the reward of faith, Christ's power working with the person's faith. There is thus more than subjective faith-healing, for with Christ there is 'power to heal,' obvious enough where the faith of the person healed is not in question. Where there was no faith, but *conscious* opposition, miracle was naturally impossible (Mk 6⁶). Christ could have forced a miracle, but this was against His method, though even here He did heal 'a few' who believed. A writer who recorded this was not one who was likely to invent or imagine miracles. Christ also Himself had faith in God, as His words show (Mk 9²³, 29 11²²; cf. Mt 14²¹).

The miracle in Mk 5^{28f.} shows in a crude way that power to heal was in Christ, and was made effective by the patient's faith. In Mt 9^{20f.} the woman thought that by merely touching His garment healing would follow (cf. Mk 3¹⁰ 6⁵⁶, Mt 14³⁶, Lk 6¹⁹). Christ was somehow aware of this, and, rewarding her faith, healed her. Mark and Luke suggest that He was aware of the woman's touch by power going out of Him. This would seem to reduce the miracle to magic.

(h) *Possession*.—Not all but only certain kinds of sickness were regarded by the Jews scientifically or colloquially as possession. Only once does Mark connect bodily disease with possession (9¹⁷); Matthew and Luke do so on three occasions. In Mk 9¹⁷ a dumb spirit is mentioned; Luke (8³³) makes it a case of possession, Matthew (17¹⁵) of epilepsy (*σεληνιάζειν*, 'epileptic'), though later the demon is said to be cast out. Epilepsy was a kind of intermittent possession (cf. Mt 4²⁴), as also was lunacy (Mk 5¹⁴; cf. Jn 10²⁰), or any apparent eccentricity.¹ The recorded cases are eight in number, with a few general instances. Whatever be the explanation of possession, the fact of the cure is not in question. Christ's healing of it was thorough, masterly, immediate, probably permanent,² and sometimes *à distance*. His method was not that of mere exorcism, as has been insisted.³ Both the manner of the cure and its result show that it differed in degree, if not in kind, from that of the exorcist. Yet Christ taught that others might or did use it, if they had faith (Mt 17¹⁷, Mk 11²³). Serious cases are healed by a word, and the superlative nature of the cure is recognized even by hostile witnesses (Mk 3²²; cf. 6¹⁹).⁴ It had thus a miraculous quality: 'he was the 'finger' or the 'spirit' of God (Lk 11²⁰, Mt 12²⁸).

Possession by a demon is a world-wide savage explanation of sickness, and, as a survival at higher levels, of certain diseases, where the symptoms seemed to suggest the demon's movements or his speech in a voice different from that of the patient. But was the disease more than epilepsy, lunacy, hysteria, *clounisme*, or such a psycho-pathological state as that of alternating personality, 'temporary control of the organism by a widely divergent fragment of the personality, self-suggested in some dream-like manner into hostility to the main mass of the personality'?⁵ In such cases the person may believe himself possessed by the devil, or he may speak in another voice, simulate another personality, or develop automatic writing.⁶ As to epilepsy,

¹ Mt 11¹⁸, Jn 7¹⁹ 10²⁰; cf. Mk 3²¹.

² This is implied in Mk 5¹⁵; cf. 9²⁶ and 16⁹. Cf. Bruce, p. 191. W. Bousset, *Jesus*, Eng. tr., London, 1906, p. 60, regards the cures as temporary, appealing curiously to Mt 12⁴³.

³ As by J. M. Thompson, *Miracles in the NT*, London, 1911, p. 37. For the Jewish method see Josephus, *Ant.* viii. ii. 5.

⁴ Cf. Mk 12²⁷, Mt 8¹⁹ 9³³, Lk 4³⁶, Jn 11³⁷.

⁵ F. W. H. Myers, *Human Personality*, London, 1908, i. 200; cf. B. Sids, *The Psychology of Suggestion*, New York, 1910, p. 288 f.; B. Sids and S. P. Goodhart, *Multiple Personality*, New York, 1905.

⁶ Cf. Lang, *Making of Religion*, p. 189 f.; O. Lodge, *The Survival of Man*, London, 1909, p. 111, and *passim*; Myers, *passim*.

⁷ 'No demon could by possibility produce more fearful results by entering into a man than I have often seen resulting from epilepsy.'¹

Supernormal knowledge is often a characteristic of those believed to be possessed, knowledge of which the ordinary self could not be aware. This is ascribed to the demon; rightly it should be ascribed to the subconscious self or the fragmentary personality. In the NT the demoniacs show knowledge of Christ which He wishes to be kept secret, or they assume that He has power over them.² The fragmentary or subconscious self, identifying itself with a demon, speaks in accordance with the belief that Messiah would destroy demoniac power and asserts that Jesus is Messiah. Yet these men, in lucid intervals, may have heard that He was so regarded. Thus their knowledge would not be supernormal. Lunatics often dread one particular person.

A man's belief in his possession by a demon is paralleled by the belief that he is a wolf. Both are pathological states, and where the belief in transformation disappears lycanthropy is apt also to disappear. This is more or less true of the belief in demons and the supposition of possession (see LYCANTHROPY).³

Demon-possession as a belief continued long after, as it had existed long before, Christ's time. It is not explained, therefore, by saying that demons were allowed to torment men while He lived, so that His power might be seen. If Christ then accommodated Himself to an existing belief, yet He did not accept it in all its current forms, and some at least of what is ascribed to Him may be the thoughts of His reporters.⁴ Christ could hardly have cured the patients save by sympathetically accepting their point of view. So also for the sake of refuting an argument He accepts the point of view of the Pharisees, without categorically saying that He actually casts out demons (Mt 12²⁷, Lk 11¹⁹; cf. Mt 12²⁸, Lk 10^{17a}). An accurate explanation would not have been understood, and might even have gone beyond present-day science. Or, with power to heal, was Christ's knowledge here limited? Did He believe in possession? In any case there is no doubt about His healing this strange disease instantly and permanently, and differently from exorcists, or from modern physicians in the cases of apparent possession. Of course it is a large assumption to say that there are no existences which might not take possession of a human personality and act through it.⁵ Psychical research tends to admit that there are such existences in the case of disembodied human spirits, but has no evidence of diabolical or hostile possession.⁶ This, of course, does not exclude such possession—e.g., by some alien power at the centre of man's being where consciousness and will reside. Yet an unexplained mental disease is not necessarily possession. In a sense, it is true, there was possession if disease was caused by sin or vice, disease being objectively regarded as evil. But there is no clear proof that the cases cured were directly the result of sin.

For alleged demon-possession in modern China and elsewhere see J. L. Nevius, *Demon Possession and Allied Themes* (London, 1897), though it is doubtful whether the cases are not explainable on other grounds. Much of the evidence comes from Christian natives, whose earlier belief in demons was still strong. Healthful and life-giving influences of Christianity may explain the cures where pagan methods failed, as Justin long before asserted (*Apol.* ii. 6) and also H. A. Junod, of Thonga cases (*The Life of a South African Tribe*, Neuchâtel, 1912-13, ii. 480). On Nevius's theory see W. R. Newbold, *Proc. of Soc. for Psychical Research*, xiii. [1897] 602.

(i) *Healing*.—Christ's miracles of healing are not explainable by M. Arnold's 'moral therapeutics,' i.e. the cure of neurotic diseases by mental influ-

¹ T. S. Clouston, *Unsoundness of Mind*, London, 1911, p. 237.

² Cf. Ac 16¹⁶.

³ Cf. Bruce, p. 187.

⁴ John does not appear to accept the theory of demon-possession, though he refers to the Jewish belief.

⁵ The demons, if they existed, were not necessarily like the horrible figures of later imagination.

⁶ Myers, ii. 198.

ences. Many of these diseases were not neurotic, and were such as do not yield to mental treatment, while the evidence for their cure is as good as that for neurotic cases.¹ Occasional miracles at Lourdes are also wrought on more than neurotic diseases, and they suggest an influx of healing power from without. But Christ's miracles of this kind are more than occasional. Here surely some healing power—'the power of the Lord' (Lk 5¹⁷)—wrought through Him. It was neither variable nor uncertain, and it enabled the patient to throw off disease immediately. It was communicated to the sick by an act of will, a word, a touch, or sometimes *à distance*, perhaps by telepathy. To this use of such a power there is no authentic parallel. If it be said that Christ had merely superior access to an α region, to which others might have access, yet His access was so superior as to be miraculous. His faith in the power awakened faith in the patient, so that in a sense there was suggestion both from without and from within. There was more than mere 'faith-healing,' a word which is apt to be used loosely. If it is used as mere auto-suggestion, there was obviously more than that. Diseases which apart from scientific diagnosis were plainly most serious were cured without difficulty. If Christ merely did what one day may be more generally possible,² at least He did act perfectly in a way as yet undiscovered.

(j) *Raising the dead.*—The instances of this are so few in number as to raise a presumption of their truth, for here is exactly where miracles would probably be exaggerated in a fictitious narrative.³ The possibility of catalepsy or trance cannot be excluded, yet we may assume that Christ would know the truth. To Him, indeed, death was no more than a sleep (Mk 5⁴⁰, Jn 11¹¹⁻¹⁴), from which the sleeper might be roused in the presence of the Lord of life, who could command the return of the principle of life to the lifeless body, whenever He was beside the dead.⁴

(k) *The nature group.*—The evidence for these miracles is as good as for those of healing. Here again their small number—six (or, admitting duplicates, five)—suggests genuineness, as do also generally the narratives which relate them, as well as the manner of the relation. The attempts to interpret them as symbolic teaching related as miraculous action do not command respect any more than the various rationalistic methods of explaining them away. The real questions are concerned with their adequacy to the occasion, with the power involved—was it one accessible to others?—with the method of its use—to excite wonder or to minister beneficence. Was there again a real breach of the order of nature?—a statement which no one is competent to assert (§ 15). For, though it is easy to assume a 'reversal of the natural physical order,'⁵ some of the miracles of healing are just as contrary to our experience. If Christ's was a unique personality, we must take account of what may be proper to Him either in or out of nature. Such a one on occasion may as easily walk on the sea as on dry land. These miracles suggest the superiority of the spiritual and moral order to the material. They, with one possible exception, are in keeping with the personality and character of the worker. The question of adequacy⁶ to the occasion may be safely answered

in the affirmative as regards stilling the tempest, walking on the sea, and feeding the multitudes. In the first two, lessons of faith were immediately taught, but they also have a permanent value in this direction as well as in showing the supremacy of spirit to matter. In the third the adequacy is seen in the beneficence of the action involved. It is more difficult to prove adequacy in the case of the change of water to wine. Was it probable that such a great miracle would be wrought to enhance the joy of a wedding-feast? Yet the narrative has an air of genuineness, though, if it were performed for symbolic reasons also, these are not hinted at. As to the power involved, it is certainly beyond that of men in the cases of stilling the tempest, changing water to wine, and multiplying food. Yet, in a universe ruled by divine will, was it impossible for one in whom that will was supreme to use it to still a storm, or to perform such probably creative acts as the other miracles involve? No breach of the order of nature is involved, for in the first two there is but a quickening of natural processes—the storm would sooner or later have ceased; a change is slowly effected in the moisture taken up by the growing vine. In the third, though the act is incomprehensible to us, can it be said that there was any breach of nature involved? While it is not impossible that a miraculous aspect has been here given to a non-miraculous action, the narratives have a genuine air, and the numerous different rationalistic explanations suggest that there is an inexplicable fact. In the case of walking on the sea a supernatural power which might be open to others might be suggested, if the story of D. D. Home's¹ floating in the air be accepted, or if there is genuine fact behind the numerous stories of levitation. The difference, however, is that Christ used such a power consciously and purposively; this is not observable in the other cases.²

The withering of the fig-tree presents difficulties as to adequacy, and because it is contrary to the principle that Christ never wrought miracles for Himself. The tree was destroyed because it had no fruit for Him. Is He likely to have acted thus? There is no hint in the story or its context that it is an acted parable. While we need not question Christ's power, it is open to us to seek explanations of the origin of such a story, and these are much easier to find, and have much more verisimilitude, than those offered for the other nature miracles.

(l) The story of the stater and those of the draught of fishes need not be interpreted miraculously. The first appears to involve supernatural knowledge and directive purpose in bringing the fish to the spot, and this is again contrary to the principle of economy in the miraculous observed elsewhere, for the money might easily have been obtained otherwise. Probably an ordinary incident has been given a miraculous aspect. As to the others, there is no note pointing to the miraculous (as, e.g., in Mk 4⁴¹ 6⁵¹, Jn 2¹¹), and it is perhaps not necessary to assert it here.

(m) *Incarnation and virgin-birth.*—The idea of incarnation involves no breach of an order of nature, for we have no evidence that such an event was necessarily contrary to any existing order. It begins a new order, and it is a superlative instance of what all are familiar with already—the influence of spirit on matter. To such an event virgin-birth may have been necessary and consonant, since no ordinary child was concerned. Sinlessness is as much a miracle in the moral as virgin-birth in the physical sphere, but it need not be said that the latter was necessary to the former. This is a theological speculation, not found in early writers who speak of the Virgin-birth,³ nor in the NT itself.

¹ H. H. L. Carrington, *The Physical Basis of Spiritualism*, London, n.d., p. 378.

² Evidential value is also found in the fact that this is the sole instance of such a miracle in Christ's life, unlike those of miraculously crossing a river so often told of Buddha.

³ E.g., Ignatius, *ad Ephes.* 19; cf. *Asc. of Isaiah* x. 8-xi. 19.

¹ See R. J. Ryle, 'The Neurotic Theory of the Miracles of Healing,' *HJ* v. [1907] 572 ff.

² See a suggestive passage in Stewart, p. 182 ff.

³ Contrast the large number of raisings from death by the relics of St. Stephen alleged by St. Augustine, *de Civ. Dei*, xii. 8.

⁴ Little touches of exaggeration in the story of Lazarus need not detract from the essential fact.

⁵ W. Sanday, *Bishop Gore's Challenge to Criticism*, pp. 19, 23 f.

⁶ There is no question of working these miracles in answer to any demand for a sign.

Parallels to incarnation and virgin-birth have been alleged from pagan sources, but there is no real analogy. The idea of divinity becoming really incarnate in human flesh was alien to Jewish thought, and probably also to pagan. Hence it is really impossible to assert that the story was invented in Jewish-Christian circles at the early date involved. That it is an early story is undoubted, and the evidence for the two versions of it in Matthew and Luke must go back to Joseph and Mary.¹ There is some evidence that it was known even in Christ's lifetime that He was not Joseph's son—a knowledge apt to be perverted by hostile critics. As to the story itself, it has only to be compared with the versions of it in the Apocryphal Gospels to see how an existing story could be exaggerated without being recast. The lack of such exaggeration in Matthew and Luke points to genuineness. Comparative mythology is often relied on to show that virgin-birth is a universal myth, but examination of the instances shows no real parallel. A human or divine father regarded in a material sense, or some material means, is always involved. This is true even of the late miraculous stories of the birth of Buddha, whose human father appears all through, and also of the birth of the future saviour Saoshyant in Zoroastrianism.² Yet, even if such stories were more nearly parallel, the question should be faced—Do myths never come true?

(n) *The Resurrection*.—Arguments against the Resurrection usually make much of the discrepancies in the narratives. Are these more than may be looked for regarding such an event? Or do they really discredit the central fact to which all bear witness? Without discussing them in detail, it may be said that they offer evidence as good as that for the Crucifixion, and, if they do not prove a real resurrection, do they prove anything at all about Christ? Certain facts are important: the empty tomb, the definite date never varied from, as well as the personality involved—no ordinary man whose resuscitation to a normal human life might be rejected, as Huxley would have rejected that of the hypothetical ordinary man³—and the vast change effected in the apostles' characters and methods of action. We may here consider the main modern explanations.

(1) Visions, subjective or objective, or telepathic impressions are really inadequate to account for the story. No such experiences have ever produced such a result, and they could not have given rise to the story of the Resurrection or of the empty tomb, or have so changed the disciples. A phantom would only have made them afraid (Lk 24³⁷). The disciples already knew of the existence of Christ's spirit, for this was the common Jewish belief, and as Jews they also looked forward to a future resurrection. How then could such alleged communications from such a spirit have so altered them or originated such a belief in the Resurrection with the definite meaning which the word had to any Jew? If it be said that it was precisely this Jewish belief in a future resurrection that made the disciples imagine that their experience of a phantasm was really that of a Risen Christ, this is in effect to make them the most credulous and untrustworthy of men—which no one really believes of them.

(2) Equally inadequate is the theory which would derive the story from myths and cults of slain and risen gods. It is claiming too much to

assert that the apostles were influenced by these, supposing they knew of them, which is unlikely. Was there anywhere a myth of a god who had died and risen again on earth? The revival even of Osiris took place in the Other-world. No such myth had ever been applied to the history of any man, as the theory supposes it to have been to that of Jesus. Such myths were sensuous, and had sprung out of nature-cults. How could they originate a whole new world of ethical and spiritual ideas? The theory produces the greater out of the less with a vengeance, and sets aside every shred of historical evidence, while it has never explained why Christianity supplanted such myths and cults as it is alleged to have sprung from.⁴

On neither theory is the Resurrection or its vast results explainable, and each postulates a miracle as great as the miracle of the Resurrection itself. The change involved in the Resurrection is beyond our ken; yet there was a change, not merely the resuscitation of a dead body. We know too little of the laws of the universe to assert that such a change is impossible, or that there is no law of resurrection of whose working Christ's resurrection is the first instance. The new theories of matter seem to make the change conceivable, if the 'basis' of matter is to be found in a strain in the ether giving rise to the electrons of which the atom is composed. Ether is described as sub-material, while electrons might conceivably be resolved into ether again. Matter would thus be destroyed.⁵ Others regard matter as a complex of energies.⁶ If these theories be true, might not Christ's body be resolvable without corruption into the ultimate constituents of matter and then re-formed as a new ethereal body, since ether is sub-material, the indwelling spirit moulding it as if it were a material body, yet not subject to the limitations of such a body? At all events these new theories lessen the difficulties in the way of accepting the Resurrection.

(o) *The Ascension* was probably a final vanishing (Lk 24⁵¹) from the sight of the apostles, interpreted conventionally and symbolically as ascension, and, as far as the vision of angels is concerned, objectively. Heaven being regarded as a place above, this was inevitable, and was in keeping with the symbolism of up and down, high and low. Christ vanished out of space conditions into a higher state, and this is the essential truth behind the descriptions, while it is the natural corollary of the Resurrection.

8. *Miracle in the Apostolic Age*.—The miraculous powers included in the apostolic commission may have received additions—e.g., raising the dead (Mt 10⁸)—while some are allegorical (Lk 10¹³). Mk 16¹⁷ probably is an addition mingling the authority with the record in Acts and this passage in Luke. Certain it is that some miraculous power was transmitted to the apostles or made accessible by their faith. In Acts we see it at work. Faith on the part of the recipients of cure is also clearly in evidence, sometimes of a superstitious kind (5¹⁵ 9¹¹) perhaps resulting in cures by auto-suggestion. St. Paul both appeals to these powers of healing and refers to them (Ro 15¹⁹, 1 Co 12²⁸, 28¹, Gal 3⁵). They are regarded as credentials of the apostolic mission—perhaps not a sound theory. Those who believed because they saw signs and wonders had not the highest faith,

¹ Pagan sceptics never tried to derive the Resurrection story from their own mythology. See, further, J. A. MacCulloch, in *Religion and the Modern World*, p. 137 ff.

unless the signs were accepted as tokens of divine love. It is obvious that St. Paul meant more than mere faith-healing, some actual miraculous gift, by his *χαρίσματα λαδίων* or *ἐνεργήματα δυνάμεων* (1 Co 12²⁶). There was, in some cases at least, the influx of divine power into the diseased. In the case of Eutychus it is doubtful if a miraculous return to life is intended. In that of Dorcas it is so, though some unusual recovery from apparent death may have been locally exaggerated into a miracle.

The account of Pentecost and its marvels describes an incursion of the spiritual audibly and visibly into the material world. Such an incursion would be difficult to describe, but it is no more than what might be expected on such an occasion. A distant analogy may be found in the phenomenon of light or of a cold breeze accompanying phantasmal appearances.¹ As to speaking with tongues, the phenomenon is perhaps no more than ecstatic utterance, and it is one which is apt to be degraded. The kindred phenomena of trance-utterance and inspirational address studied in our day have little value. Whatever might be the value of the tongues at Pentecost or at other times, St. Paul came to have a low opinion of the gift. The effect of a spiritual invasion would vary with the nature of the person invaded. The real miracle of Pentecost was the power shown by St. Peter and his fellows, and the spiritual results following.

The stories of release by means of an angel have been regarded as symbolic accounts of connivance or friendly interposition interpreted as divine aid. Yet, if other orders of beings exist, they might so intervene, and might have power over matter. The real question is one of adequacy to the occasion, and we find no such intervention in the case of James (Ac 12³).

St. Paul's experience on the way to Damascus is really similar to that of the Resurrection appearances, though there is more splendour, so that he is blind for a season. If these appearances are accepted, St. Paul's 'vision' at once falls into place, even if the accounts vary. That he himself should cause blindness is perhaps no more wonderful than that he should heal. Did his words cause a temporary auto-suggestion of blindness to Elymas? The incident of the viper (25³⁴), though viewed as miraculous, is not necessarily so. This is also true of the death of Ananias and Sapphira. Emotional shock might account for the deaths, and this would lend itself to a miraculous interpretation.

9. Ecclesiastical miracles.—The question as to the time when miracles ceased, if at all, used to be much debated. Some supposed that they continued down to the 3rd, 4th, or 5th cent.; others, like Middleton, made them end with the age of the apostles and characterized all later records of them as stupid and untrue.² The evidence alleged for miracles is continuous to the present time; how far it is based on fact is an open question if miracles are possible at all. The miracles of some individuals in the early Church are far more amazing and numerous than those of Christ. They were wrought not only on the sick or the dead, but on nature. Miracles of the last class are of a most stupendous character, incredible on the face of them and quite beyond all adequacy to the occasion. The age was doubtless one of considerable credulity, when miracles had to be forthcoming to rival those of paganism, in which the ecclesiastical writers believed, though attributing them to demons. Many accounts of miracles are too rhetorical to be taken seriously—e.g., the Benedictine editors of Chrysostom's account of the miracles of St. Babylas say that it is rhetorical and for the most part destitute of truth.³ In some cases, again, natural

³ *Opera*, Paris, 1718-88, ii. 530 (= PG i. 527 L).

or perhaps supernormal events have been interpreted miraculously. Many are wrought to support some doctrine or practice not always of the essence of Christianity—e.g., the use of relics, at bottom a species of fetishism. Some concern the Eucharist, but many of these are magical rather than miraculous.

Some miracles copy those of the Bible. Others are such as are found in ethnic sources—e.g., changing the course of a river, drying up a lake, causing a staff to become a tree.⁴

The healing of the sick and the possessed is referred to from the time of Justin² onwards. The evidence for many of these miracles is of a very slender kind; credulity accepted them, sometimes pious fraud suggested them; but their possibility need not be denied. Gifts of healing may have existed with certain persons who had faith to use spiritual power or to aid the faith of others. In 'an age of spiritual exaltation and spaciousness, of enlarged consciousness and deepened faith and more buoyant hope'⁵ such miracles might be expected. On the other hand, there are few instances of such cures as our Lord performed. Most are wrought in connexion with relics or the Eucharist. That cures should thus occur need not be doubted. Where the power of these was believed in or the patient's faith was strong, suggestion might heal, even if there was no power to heal in these media themselves.⁶ There may also have been an influx of power from another sphere, as a reward of faith or an answer to prayer, and this would be a miraculous cure (§ 12). So in the case of exorcism, while, here again, the use of relics or the Eucharist is found quite as much as prayer, it need not be doubted that the patient might respond to the treatment, which was really a form of suggestion. Indeed, where the resources of a spiritual religion were called upon, why should not these have brought calm and order to the disturbed mind? (see § 7 (h)). There is, however, no such evidence for cures as exists for Christ's healing method. Patients continued to be afflicted at intervals in many cases. Exorcism tended to become a business, and the 'cure' was often of a very drastic kind.⁵

The most circumstantial accounts of raising the dead come from St. Augustine.⁶ These are all connected with the shrine or relics of St. Stephen. The evidence is perhaps no more than hearsay, and there is no real proof that the persons were really dead. Elsewhere Augustine describes what was really a case of trance as the return from death.

10. Mediæval miracles.—During the Middle Ages nothing seemed too incredible to be related or believed. Every saint was expected to work miracles, and miracles freely adorned the popular Lives of the saints. It was said of St. Vincent Ferrer that it was a miracle when he performed no miracle. Any saint in whom a particular district, monastery, or church was interested was apt to have many miracles attributed to him. The people seemed incapable of being content with his spiritual victories; these had to take material form, to be symbolized as miracles. As in the earlier period, many miracles were alleged in support of particular doctrines or practices—the cult of the Virgin and saints, of relics, the Eucharist, the use of images. Protests were made from time to time by theologians, but in vain.⁷

¹ Some of these are accepted by J. H. Newman, *Two Essays on Biblical and on Eccles. Miracles*², London, 1870.

⁶ *De Civ. Dei*, xxii. 8. Prayer was also used, but the relics are mainly in evidence.

⁷ See passages in J. A. W. Neander, *General History of the Christian Religion and Church*, Eng. tr., London, 1851-58, vii. 433 f.

The folk expected miracles, and miracles were freely provided for them. Many of the miracle stories are repeated in countless Lives of saints; one biographer plagiarized freely from another, and later Lives are often more full of miracles than the earlier Lives of the same saint. Biblical miracles were freely imitated; only in any given case they were multiplied a hundredfold. Other miracles belong to a floating tradition, and repeat those already found in ethnic sources or in classical writings. Some are versions of folk-tale incidents. Frequently the quite ordinary or the particular gifts of a saint were exaggerated into miracles. Others can be traced to a misunderstanding of Christian artistic motifs—e.g., the stories of saints carrying their heads in their hands can be traced to pictures where they were thus represented to symbolize their death by decapitation—or to the visions or hallucinations of hysterical devotees, though these were supposed to belong to the highest state of ecstasy, in which reason played no part. All these miracles may be divided into four classes: (a) miracles wrought on nature, often of a most extravagant type—arresting the sun's course, hanging a cloak on a sunbeam; (b) miracles wrought by or upon inanimate objects—the numerous moving, talking, smiling images, already met with in paganism, or the opening of locked doors at the touch of a saint's finger; (c) miracles occurring to a saint—e.g., light streaming from his fingers, talking at birth, carrying fire, bilocation, levitation; and (d) miracles of healing, exorcism, and raising the dead.

The practice of incubation passed over to the Christian Church and was mainly associated with St. Cosmas and St. Damian, but the cures were often of a prolonged character. The methods were much the same as in pagan temples, *mutatis mutandis*.¹ As to healing miracles in general, what has already been said of these applies here also (cf. also § 12).²

Possibly some miracles were actual instances of supernormal phenomena of the α region, so long scoffed at, but now more or less investigated by science. There are incidents corresponding to cases of hypnotism, telepathy, clairvoyance and clairaudience, telekinesis—the movement of objects without being touched—appearances of phantasms of the living or dying (perhaps that which underlies cases of bilocation), and the occasional superiority of the senses to outward effects (carrying fire). Of these as well as of levitation there has been a constant tradition through the ages, and in the mass of alleged occurrences there may have been some genuine instances. Such phenomena are not necessarily miraculous or even evidence of saintliness. On the other hand, if mind can communicate with mind, communications from another sphere may be made to minds on this earth, and these would have a miraculous quality—e.g., the voices and visions of Jeanne d'Arc or those which prefaced the healing of Dorothy Kerin.³ The communication may be coloured by the preconceptions of the percipient—a divine message may appear as a voice or vision of Virgin or saint, or a case of real spiritual healing may be associated with belief in a relic. Divine power might also be manifested from time to time through the supernormal phenomena referred to, making them miraculous. There should, in fact, be no cleavage between normal and supernormal and supernatural in our appreciation of the divine working.

11. Modern miracles.—These are mainly con-

³ On this see E. L. Ash, *Faith and Suggestion*, London, 1912.

nected with healing, though supernormal phenomena in connexion with spiritualism have been claimed as miraculous.¹ Typical cases are associated with shrines and relics—e.g., the cures at the tomb of the Abbé Paris or by the Holy Thorn related by Pascal²—or are accomplished by various personages representing every form of Christianity, or by mind-cures, faith-healing (q.v.), and Christian Science (q.v.).

The cures at Lourdes (q.v.) are associated with the vision of the Virgin seen by Bernadette Soubirous in 1858, though nothing was said to her about these. The number of pilgrims amounts to some 600,000 yearly, but no more than 2 per cent of the cures are regarded as 'miraculous.' Some vouched for are of an almost instantaneous nature.³ Christian Science is associated with a theory of the unreality of matter and of pain. Disease is the result of false thinking. The Divine Spirit heals by casting out 'mortal-mind.'⁴

All these various methods of healing are traced to the spiritual value and truth of the creed or theory or practice with which they are associated. Yet some of them flatly contradict each other. They are rather means by which a cure is mediated, quite apart from their truth or value. A key to the problem is perhaps found in 'spontaneous cures' occurring in medical practice, which may be traced to suggestion. This is probably the main factor behind the cures effected by these various methods. It is the power of the unconscious as well as of the conscious self over the body, when once an idea has been accepted.⁵ Existing beliefs are strengthened; new hopes are initiated; fears and inhibitions are removed; and the physical processes by which pathological conditions are removed begin to be affected. Thus in all the various methods 'the differences are subjective rather than objective, differences in the mind of the sufferers, rather than in any scientific evidence as to the nature of the healing agency.'⁶ Susceptibility to suggestion may vary, and it should not be forgotten that there may be evil as well as healthful suggestions. But that it is a real psychic process is undoubted.⁷ The suggestion may come from belief in a relic, a saint, or from the 'mystic theism' of Christian Science. The main fact is that it often works, even if the cures are seldom instantaneous, though they may occur in a quicker manner than in ordinary physical therapeutics. We are still left to inquire, however, whether any other exterior force works in connexion with the vital healing force inherent in the organism, and set in motion by suggestion. If so, we should be in presence of the miraculous. This possibility must now be considered.

12. Mental and spiritual healing in relation to Christ's miracles of healing.—Psychic forces affect the body in normal life, and of these suggestion is one. But is there also at times, with the healing suggestion or as an answer to prayer, an influx of exterior, divine, spiritual power to heal? This would correspond to the exaltation of mind by spiritual influences in inspiration. It would be a particular and outstanding instance of what we find everywhere, if all life is dependent for its energy on some all-environmenting Life. It might not be regarded as miraculous or supernatural, for, if miracle is part of the process of the universe, in a sense it is natural. But in so far as the result testifies clearly to processes outside our ken, to the power of a divine person thus making Himself

known, the current of whose energy is entering our life for a particular purpose, this is a sign, or miracle. The spirit has let loose 'life-giving forces which sweep before them the evils of sickness and disease.'¹ There is more than mind-cure; faith has tapped a divine source, and it has aided the unconscious mind. That this has never taken place cannot be affirmed, though a leader of the movement for applying the spiritual powers of the Church to disease² in conjunction with medical treatment is still seeking for an authentic instance. The appeal to spirit in one form or another has been made in all religions where healing was practised, and doubtless the divine spirit has not confined His work to any one of them, if thus He works at all. But, while uncertainty attaches to all mental therapeutics, our Lord's healing methods were never uncertain. He always set free the healing power, the divine life which healed, whether His own or acting through Him as a perfect channel, unsusceptible to disease. This is seen by His words, 'I will, be thou clean.' The result was swift and certain cure. Thus Christ as healer differs in degree and kind from all media of occasional cures. That He cannot effect such cures where perfect faith exists is not credible.³

13. Hostile criticism of miracles.—Though the Schoolmen were probably refuting current objections to miracles, no serious criticism appeared until the 17th cent. with *Spinoza's* attack. The laws of nature are the decrees of God. Miracles cannot happen because they violate the order of nature, and thus God would be contradicting Himself, for nature is fixed and changeless. Miracles could tell us nothing of God, since they surpass our powers of comprehension.⁴

Spinoza's view is mechanical and takes no account of the interaction of existing 'laws,' their interference with each other without violating the order of nature. This may also be true of miraculous action. The material universe may be subject to the spiritual order. God may bring in new forces from time to time, or combine existing forces for a definite end, and His guidance exists through all. Moreover, even if miracles are incomprehensible, they do tell us certain definite things about God, as Christ's miracles did. *Spinoza's* pantheistic doctrine of God deprived God of all real freedom.

The *Deists* opposed miracles on the ground of a fixed order of nature. God, having made the world, never interfered with it, and to assert miracle was a kind of treason to Him. Hence the Gospel miracles were explained away or allegorized. Miracle was a possibility, but it never occurred. This also was the position of *David Hume*, whose argument, aimed at Roman Catholic miracles primarily, was regarded by him as invulnerable. Miracle was a violation of the laws of nature by a particular volition of deity, of whose attributes or actions, however, we could know nothing otherwise than from our experience of them in the ordinary course of nature. No testimony could establish a miracle, unless its falsehood would be more miraculous than the alleged miracle itself. The belief in miracles arises from the pleasing sensations which they arouse, and they are common adjuncts of religious enthusiasm. A miracle could never be proved so as to be the foundation of a system of religion.⁵

Huxley criticizes Hume's argument on the ground that every event is a part of nature and proof to the contrary is impossible. 'Calling our often verified experience a law of nature adds nothing to its value,' since we cannot affirm that the experience will be verified again. Any seeming violation of the laws of nature would be investigated by science, and its

existence would simply extend our view of nature. Miracle is conceivable, and involves no contradiction, yet evidence for it must be complete.¹ It may be added that Hume's 'experience' is such as he only would admit. His own criterion of evidence, even when fulfilled, is at once rejected by him,² and some of his admissions—e.g., as to the hypothetical eight days' darkness—tell against his own argument. A particular volition of deity may reveal a world transcending ours without violating laws of nature, which are also volitions of deity. Christ's signs are part of our experience of the working of God. As to miracles establishing a doctrine, the argument has little force now. Miracles of healing, e.g., need not prove the truth of the system in which they are found (§ 11), and it is questionable whether any ethnic system was founded on a miraculous basis. Christ, not His miracles, established Christianity, but His miracles are inherent in His religion in a way that those alleged of ethnic teachers are not.

German rationalism, represented by *H. S. Reimarus*, opposed miracles as impostures effected by Christ. *H. E. G. Paulus*, however, regarded them as ordinary or perhaps unusual events interpreted by readers as miracles—a thing which the authors of the Gospels never intended, though they sometimes had mistaken ordinary action for miracle. *D. F. Strauss* started, like Paulus, from the Spinozan principle, and regarded miracles as legendary accretions—a halo of wonder placed round Christ's head by the early Church, because the Messiah had been expected to work miracles. Yet, mythical as they are, the miracles are symbols of metaphysical ideas.

Literary criticism in the persons of *E. Renan*, *M. Arnold*, and *W. E. H. Lecky* set aside miracle altogether. 'Miracles do not happen,' was Arnold's catchword. Renan maintained that Jesus had to either renounce His mission or become a thaumaturgist. Miracles were a violence done to Him by His age—a statement incompatible with Lk 13³²—and yet He believed in miracles, and had no idea of an order of nature. Arnold, while opposed to explaining miracles in detail, thought it a mistake to rest Christianity on miracle, for, when that was discredited, as he believed it had been, Christianity was apt to go with it. Both Renan and he admitted some truth in the miracles of healing, but Renan's description of these comes short of what is said of their thoroughness and ease, and is, in fact, grotesque.³ Arnold's idea of 'moral therapeutics' assumes that illness was due to sin, while Christ, as bringer of happiness and calm, addressed the moral cause of disease. Such a method might be used extensively in the healing art.⁴

The assumption that illness was due to sin is not proved, and some healing miracles are not explainable by moral therapeutics. In any case Christ had a power which has not been imitated, and the other miracles are quite as well attested as those of healing.

The literary pantheism favoured by *R. W. Emerson* (*q.v.*) saw miracle everywhere, therefore definite miracles nowhere. Miracle as taught by the churches was a monster.⁵ Christ's miracles are explained by saying that He felt man's life and doings to be a miracle—an insufficient account of *συνεχία*.⁶ There is some truth, however, in the saying that 'to aim to convert a man by miracles, is a profanation of the soul.'⁷ Not dissimilar is *Carlyle's* 'natural supernaturalism,' though he admitted that such an event as the raising of one from the dead would violate no law, but prove the entrance of some deeper law.⁸

Materialism rejects miracle altogether and refuses to investigate individual miracles—too often the attitude of science. Agnosticism, as represented by *Huxley*, admitted the possibility of miracle, but, in the event of such 'wonderful

events' happening, would widen its view of nature. All that would thus be shown would be that all experience, however long or uniform, is apt to be incomplete. There would be no necessary divine power behind such a wonderful event.

But, while science might investigate any 'wonderful event,' has it yet explained even an ordinary event? Christianity regards all events as expressions of divine will, direct or indirect, and such as are miraculous are more striking evidence of that, not just because they arouse wonder, but because of their appeal to what is ethical or spiritual in us. They witness to the supremacy of spirit over matter (§ 15).

On the whole, the scientific attitude to miracle is less hostile now than it once was. Many scientific men are also religious men, and the new vistas open to science have made a spiritual interpretation of the universe more possible.

14. The defence of miracles.—The *Apologists* generally connected miracles with prophecy, and showed that they fulfilled predictions of such deeds made long ago. They are by no means the sole evidence for Christianity, though, as the Greek Fathers maintained, they might help those who through sin could not see God in His works. Origen pointed out that Christ's miracles were not done for show, like a juggler's wonders, and that, unlike a juggler, He demanded a new way of life.¹ The Fathers commonly appealed to the miracles done in their day, and *Arnobius* devotes much attention to miracles as proving Christ's divinity. *Augustine* first gives a philosophy of the miraculous. God's will is the ultimate source of all things, and nothing can be *contra naturam* which happens by God's will. Everything is natural, not to us, but to God. Miracles are part of an established order. They are not *contra naturam*, but may be contrary to what is known to us of nature.² The *Schoolmen* start from this idea of uniformity, forestalling the ideas of science, but not on experimental grounds. There is a higher and a lower order of nature, the former at once natural and supernatural, God's ideal plan. In it are *causales rationes et primordiales* of miracles. In the actual order, known to us, with its chain of causes and effects, miracles could not originate, but these have the capacity for higher powers being inserted in them—all parts of God's original plan. Miracles are not such to God, who can interfere with the *ordo secundarum causarum* which is subject to Him. Miracles are *præter hanc ordinem*—the order known to us—but not *contra naturam*.³ Again, as the course of things can be changed by creaturely power, so God's power may bring an event to pass otherwise than in the usual course, so that men may know His power. This is equivalent to the view that there may be guidance of forces in nature to a particular result which may appear miraculous to us (§ 15). Later the idea came generally to be held that miracles were a real suspension or violation of the laws of nature, the view attacked by Spinoza and Hume, both sides arguing as if all nature's 'laws' were known to them. *Bishop Butler* wisely points out that, while we see nature carried on by general laws, God's miraculous interpositions may have also been by general laws of wisdom. Nature is plastic to Him, and these laws are unknown to us. There may be beings to whom the miraculous is as natural as ordinary nature is to us. Butler was arguing against the Deists, but he sometimes forestalls Hume's objections, as when he says that miracles should be compared not with ordinary but with extraordinary events in nature. With the *Schoolmen* he tends to regard miracles as part of the original plan of things. He again forestalls Hume when he argues that fraudulent miracles do not

disprove those of Christianity, but he is on less sure ground when he says that Christianity was offered and received on the ground of miracles publicly wrought to attest its truth. *J. B. Mozley* continued Butler's position that miracles are necessary to a revelation,⁴ but argued, with him, that no miracle could make us accept anything contrary to moral or true religion. There is order, cosmos, in nature, but the mechanical expectation of recurrence which would keep out miracle cannot be proved true. Anything contradictory to experience might be either some event in accordance with an order of nature or a direct divine interposition, spirit prevailing over matter. Such a miraculous event, as the act of a Personal Being, would show moral will and intention and be evidence of a higher world. The order of nature might be suspended, if there was use in suspending it. But the laws of nature would be suspended, not the laws of the universe, which would be a contradiction. Suspension of the laws of nature is possible, and it happens—e.g., where the laws of matter are suspended by the laws of life. If spirit be regarded as above matter and capable of moving it, miracle becomes possible.

In opposition to German rationalism *Schleiermacher*, in his *Der christliche Glaube* (Amsterdam, 1830–31), maintained that nature admitted of new elements, consonant as it was to God's will and work, even if conditioned by it. Nature may contain the cause of the miracle, but it appears only when God calls it forth. Christ had a supernatural origin and, as sinless, was a moral miracle. Yet the Virgin-birth, Resurrection, and Ascension were set aside along with many of the miracles, though miracle was admitted, since God has complete power over nature. Our belief in Christ, according to him, does not depend on miracles. Thus, though Schleiermacher still opposes certain miracles, he offers a constructive theory of miracle. Later *A. Ritschl* refused to regard miracles as contrary to natural law, and held that they were akin to Providential action. *J. Kaftan* argues from the same side that 'laws of nature' are unreal, a mere formula allowing us to grasp the course of nature. Miracle is such an unusual event as will awaken us in a special manner to God's living government of the world. He works in all things, but can use special means to enable faith to trace His presence.⁵ *Hermann Lotze* also refuses to regard miracle as setting aside laws of nature. The miracle-working power, by virtue of its internal connexion with the inner states of things, can alter these and so modify the result of the laws. Law is thus turned to account. Even if there be mechanical necessity, this change in the internal state of things subject to it causes it to produce an external miraculous phenomenon. The elements of the universe are not 'selfless and void points of attachment for unalterable forces,' but living parts of the living One. No law is altered when miracle occurs, but the bearers of the forces obedient to these laws are altered. The conditioning cause of miracles is in God and nature both, hence there is no arbitrariness in miracles. Yet Lotze sets aside Christ's miracles, partly because the change in man's conceptions of nature has made them dubious.⁶

On the whole, modern theology tends to regard the universe as plastic to God and miracles as the evidence of will. Even man can produce effects in nature not producible by nature itself. Such a view is elaborated by *H. Bushnell*.⁷ Again, as by

J. R. Illingworth, divine immanence is made the ground of miracle. There is unity rather than uniformity in nature; it is due to spirit which uses matter for its purposes. The moral aspect of miracles is also emphasized by him and by other writers. Christ's miracles do not interfere with law, but restore laws which were broken. Disease is here regarded as due to sin. As to the Resurrection, there is no reason why a sinless soul should not resume at will a sinless body.¹ The supremacy to an extraordinary degree of spiritual force over the mere material is also emphasized by *A. C. Headlam* in his recent book on miracles.²

From a spiritualistic point of view *A. R. Wallace* argues for miracles on the ground that intelligent beings, unperceived by us, have power over matter, producing supernatural phenomena, the occurrence of which has been noted in all ages. By this view he claims that Christ's miracles as well as answer to prayer find new support.³

15. The question of the miraculous.—Miracles are not fortuitous events, breaking in upon a fixed order of nature. Both they and that order are evidences of divine will. The more the nature of the universe is revealed to us, the more impossible is it to believe that it all merely happened, that there was no guidance or control to produce such a vast and complex result. This impossibility is only the more increased by recent discoveries in science. If there is an infinite number of ultimate elements all of precisely the same form, it is most unlikely that all these should have happened upon the same form. Neither matter nor energy possesses the power of automatic guidance and control. Hence some form of guidance is essential, some directing mind and will. Life is outside the categories of matter and energy, yet it can use both, guiding and controlling them in accordance with the laws which govern them. Such guidance should not be denied to a supreme will and source of all life. But, if such guidance is granted, then miracles—particular instances of that guidance—become possible. A fixed order of nature does not necessarily mean that nature is self-contained and self-sufficing or subject to unalterable mechanical necessity. We do not know all of that order, nor is it likely that it is the only possible order. We cannot assert that a limit has been set to every combination of matter and energy, to every method of guiding these, to every possible result. If so, a miracle is not a breach of the order of nature, which, modifying St. Augustine's formula of known and unknown, may be regarded as one of which we do not know everything. As to the 'laws of the universe,' all that this means is governance of the universe according to law. If things always happen in an unvarying sequence, this does not exclude guidance, nor does it mean that the ultimate cause of the sequence has been discovered. Nor, if some phenomenon happened but once, would it be outside law or happen apart from guidance. Man can interfere with nature, utilizing its forces to produce new results, without breaking any single law of nature. What man can do is possible for the mind and will behind the universe. Law, again, if it exist in the material, must also exist in the super-material universe which interacts with the former. By its laws those of the material universe may be suspended, and in so far as any such action is purposive and beneficent it reveals a law of love, a universe governed all through according to law by a competent and good will. A miracle would thus be a beneficent and intelligent control and guidance of existing forces in accordance with law by a supreme spiritual power, and this is precisely what we find in the miracles of Christ. They were natural actions

to Him, either because of what He was or because He was in perfect harmony with that supreme spiritual power.

It is easy to hold a wrong idea of the uniformity of nature or, rather, its unity, to adopt Illingworth's *dictum*. Theology has been apt to insist upon miracle as a sort of catastrophic gap in an existing uniformity. Science has tended to forget the possibility or, rather, the fact of endless variety in that uniformity. Such variety is only the more in evidence with the new discoveries of science, which now postulates either an energy as the only physical reality or a sub-material basis of matter with a psychical significance. But, apart from that, how endless is the diversity even in a uniform nature, not even two blades of grass precisely the same! Nor is life explainable in terms of mechanical uniformity. It uses and controls matter and energy, and may exist apart from them.¹ Unity, with endless variety, is a better description of the universe than mere mechanical uniformity. In the interaction of the forces of the universe a slight increase of one force will produce a different result. And, if the forces, the interaction, the result, are guided and controlled, this would not detract from, but only augment, the theory of science that this is an orderly universe. Such guidance and control are not occasional but continuous, for a true theology can never postulate a God outside the universe, interfering with it on occasion. He always does what is best for it, and all that the universe contains—not merely its physical contents—is utilized for definite ends. Thus, if a slight increase of one force in any combination of forces—a re-arrangement of forces—will produce a different result from what is generally produced, miracle becomes possible. The result would show more definitely will and beneficence in the guiding process. Science might investigate this result, might even conceivably reproduce it. Could it explain the process? Could it tell how Christ could do such things in a pre-scientific age? There must have been some influence working with Him or in Him to produce such purposive, intelligent results. Science might create life, say, out of certain chemical combinations of dead matter. But could it explain why precisely that combination, that arrangement of forces or conditions, produced life? There would not be an act of creation, but the setting in motion of certain forces already possessing the potency of life. Why or how they possessed this would remain unexplained.

As there are physical so there are moral and spiritual facts, not explainable in terms of the former, though they interpenetrate. Miracles, as such, are not isolated physical phenomena or prodigies. They are not unrelated to any moral or spiritual sequence. They have a moral and spiritual purpose, a clear relation to surrounding circumstances. Unlike the vast majority of ethnic miracles, Christ's miracles have that moral and spiritual quality which differentiates them from physical prodigies. They are distinct revelations of God or of God's nature in relation to the universe and man. As in a less degree in all His miracles, so in a higher degree in the Resurrection, there is a union of physical and spiritual, such as is seen also wherever mind and life control matter and energy. Matter is here completely controlled, spiritualized, and such an event could scarcely have been imagined or invented. All miracles imagined or invented would have been little else than wonders. But Christ's miracles, with their spiritual and moral quality, are continuous with the

system of the universe as a whole. So again many alleged supernormal phenomena are not miracles; they do not show a direct moral, purposive action on the part of a divine power, but reveal unsuspected and unexplained human powers. If God directs the whole universe, miracles are in no sense a rectifying of His own mistakes. They are instances of the overcoming of evil and disorder in a universe where these exist and where evil may have been necessary to the world-process, a stage on the way to perfection. Yet that perfection is being brought about, and miracles are an instance of this, since they clearly show God's purpose, more clearly perhaps than the more quietly-working process. They show, as Lotze says, that God is so related to matter that it cannot resist Him at all. So Christ's healing miracles show that spirit and will are superior to the causes which produce disease. Thus in no sense is miracle *contra naturam*; rather is it an expression of divine action in ways which may contradict our ordinary experience, i.e. our real ignorance of the universe.

The unchanging nature of radium might have been regarded as an unalterable law; yet the lapse of time (it takes 2500 years for an atom of radium to change) would show that this was a mistaken view, a parable of our knowledge of the laws of the universe.

The divine will, acting normally in certain ways, may act in different ways, perhaps in our limited view contrary to these. One set of laws is put aside for the moment, just as man can transcend the physical order by his will. Yet order is not interrupted, for the whole order of nature—all that happens—is just the divine will to which, e.g., a swift 'miraculous' process of healing may be as natural as a slower process, or the turning of water to wine as natural as the slower growth of the vine. In either case there is a quickening of a natural process, and yet to God that quickening may be perfectly normal. Does this take away the miraculous from what we call 'miracle'? In a sense it does, for we tend to draw too straight a line between natural and supernatural. All events, inasmuch as they express the divine will, are natural, yet they are supernatural in so far as they all end for us in mystery. What constitutes a miracle is its quality, its instant suggestion of divine power and goodness. Man's spiritual vision is clouded, and he does not always see these in the ordinary event, nor is that always the fullest revelation of God. All things speak of God, but some speak more clearly. Yet these are by no means abnormal; they do not occur on inadequate occasions, nor do they contradict the fundamental laws of experience. The reign of law is not set aside, for the ways in which miracle is brought about are still in accordance with law, even if the miracle happen but once.

Certain persons, for no very obvious reason, seem to possess supernormal powers, or these are manifested through them; others have genius; others, men of God, have spiritual gifts. What powers may not be open to one like Christ, in whom divine power existed and whose sinless will was in perfect harmony with God's? He claimed to possess divine power, and He said that He came to do the Father's will. Things were therefore natural to Him which might have been unnatural to another. Yet His miracles were in subordination to the moral miracle of His sinless personality, and therefore in harmony with it. Divine power and goodness overflowed, as it were, from Him upon nature and man. His miracles are perfect examples of the control of the material by the spiritual, and they prove that all force, all guidance, are in the last resort spiritual. Yet the real reason for following Him was Himself, not His signs. The power by which He wrought these

was in Him because of what He was. It might be open to all who live upon the same plane, as He pointed out.

As has already been said, there is no evidence in Christ's miracles of the lawless breaking of a 'law of nature.' Rather is it as if existing forces were being directly influenced, whether neutralized or quickened, or as if a new force was working with a natural force to produce a result different from what the latter could produce. In the case of healing disease a slow process gives place to a swifter process. So in the calming of the sea a natural process is heightened. In either case there is the power of will. When walking on the sea, Christ must have exerted a power which witnessed to some law quite as much as the law which for the moment it displaced. When water was changed into wine, was this more marvellous for Christ than the transmutation of one element into another as proved possible by science?

In the case of feeding the multitudes analogy is more difficult to find. Were bodily needs forgotten through a miraculous mental exaltation, so that a sacramental partaking of a small portion of food sufficed? This does not account for the fragments that remained. We cannot trace the method, but our limited vision need not detract from its miraculous aspect. Those most concerned believed that a miracle had occurred, unless the texts are wholly fictitious.

In Christ it is not a question of divinity breaking through a humanity in acts which are superhuman, but of a constant superiority to humanity in one who is its perfect type. It is therefore no stranger that His actions should be more wonderful than those of other men than that His teaching or His sinless life should surpass theirs.

Apart from the general control or guidance of the universe, divine will may work through normal or supernormal actions, or may act directly in specific cases, for what are to us miraculous purposes. Speaking is a normal action, but where a man speaks under the influence of the Spirit there is inspiration. Healing by suggestion is supernormal, but, if the suggestion is aided by spiritual influences, there is a miraculous cure. Again, as in some of Christ's miracles, we trace more direct action upon material things. Such action may be regarded as supernatural because mysterious; yet to God it is natural. All action, human or divine, is part of an ascending series; we cannot say where the natural ends and the supernatural begins; what we can assert is that Christ's confidence in His power or in God's power working through Him never faltered. He intimates that, if men had faith enough, they could do even greater works. Have we yet sounded 'the abyssal depths of personality,' or used to the full the power of the divine spirit working with us?

16. **Prayer.**—The relation of miracle to prayer may be briefly touched on. If miracle is a special instance of divine control, then answer to prayer has a miraculous aspect. Human mind and will can control existing physical forces or overcome the laws which govern them. There is readjustment without catastrophe. To every single fact there are countless antecedents, and a little less or more will produce a new result, as is seen, e.g., by the different chemical products obtainable by even the slightest increase in the number of similar atoms combining with others to produce these. Man himself can produce new effects in the physical world. Must we deny this power to God? He can surely guide, deflect, or neutralize one force by another, or act directly upon matter and energy so that a new result will follow, subject, of course, to every limitation of reason and order. How little exercise of power on God's part would be necessary to cause rain in answer to prayer! Since man and man's actions and thoughts, hence also his prayers, are a part of the forces of the universe, when we do not pray, the result, even in

the physical world, may be different from what it would have been had we prayed. Prayer is energy, and earnest prayer cannot be useless, even if its result is not just what man wants. If God's plan for the universe is so far conditioned by man's misuse of free will, how speedily will that plan be accomplished when man's will is at one with God's! It is His will that we pray, and every answer to prayer, as a direct manifestation of His will, is so far miraculous, and yet, like all miracle, quite natural. God foresees all that will happen in the universe; therefore He foresees whether we shall pray, and whether any particular prayer will be answered in one way or another. If the occurrence of certain things in God's plan depends on prayer, then we must pray. Are we then not free? Still we have the feeling of acting as free agents, and feeling is perhaps here truer than reason.

LITERATURE—The following works for the most part deal exclusively with miracles. For others, patristic, scholastic, and modern, see references in the article. J. MIRACLE-PLAYS, MYSTERIES, MORALITIES.—I. Introduction.—As was indicated in the introduction to the art. **DRAMA**, the origin of the mediæval drama, like that of the Greek, is to be found in religious observances. It is true that from the earliest reigns of Norman kings in England secular pageants were common features of any day of special rejoicing; but these were not strictly dramatic in their nature, nor did they contribute to the essential development of the form. The true beginning of the long course which leads up to Shakespeare and Racine is found in the Churches; the most striking fact in the history of the mediæval drama is its evolution from the simplest germs in the responses of the liturgy into an elaborate new form without the influence of either antecedent or contemporary dramatic material. Though many steps and many dates in the history of the Miracles and Moralities are still to be discovered, and their due place to be assigned to many influences, it is possible to write a clear history of the drama in the Middle Ages from its origin in

the antiphonal tropes of the liturgy to its final expression in the great Passion-plays, 'Mystères,' and 'Miracle-cycles.'

The probability of some survival of classical influence in the mediæval drama has led some writers to trace all possible ancient dramatic and mimetic traditions in the period between the closing of the theatres and circuses in the 6th cent. to the establishment of a developed liturgical drama in the 10th and 11th; but, notwithstanding the efforts of the modern Greek scholar K. N. Sathas (*Ἱστορικὸν δοκίμιον περὶ τοῦ θεάτρον καὶ τῆς μουσικῆς τῶν Βυζαντινῶν*, Venice, 1878) and his followers to found the mediæval religious drama on the ruins of the ancient Greek, preserved in Byzantium and carried to the west by the returning crusaders, it is the opinion of most scholars that no more can be said than that there was possibly a continuance of the mimetic tradition, kept alive by wandering, outlawed entertainers—a tradition that may have helped the development of the drama by aiding the survival of some feeling for dramatic form, and may later have had a part in the secularization of the religious drama. (For the Byzantine stage see K. Krumbacher, *Geschichte der byzantinischen Literatur*,² Munich, 1897, pp. 644-648, 746-749; for the views of Sathas, J. S. Tunison, *Dramatic Traditions of the Dark Ages*, Chicago, 1907; for the subject in general, Chambers, *The Mediæval Stage*, i. ch. i.)

2. The liturgical drama.—The antiphon, of Eastern origin, introduced into Italy by St. Ambrose, was the germ from which the mediæval drama developed. Certain antiphonal services had many dramatic possibilities, which more or less unconsciously began to take form in the tropes, or interpolations in the liturgical text for certain feast-days. The most important from the standpoint of dramatic history were the tropes of the Easter mass, the earliest dramatized form of which is the 'Quem queritis.' This, assigned to about the year 900 and ascribed to the trope-writer Tutilo of St. Gall (Karl Young, 'The Origin of the Easter-Play,' in *Publications of the Modern Language Assoc. of America*, March 1914), seems to have developed into a considerable play as a trope of the introit for the day, and to have sent out branches which, combining with other ceremonies, such as the 'Visitatio sepulchri,' and other dramatic forms, such as the 'Prophete,' grew into the great Passion-plays and Miracle-cycles.

This earliest form is:

'Interrogatio.

Quem quaeritis in sepulchro, Christicolae?

Responsio.

Jesum Nazarenum crucifixum, o caelicolae.

Non est hic, surrexit sicut praedixerat;

ite, nuntiate quia surrexit de sepulchro.

Resurrexi'

The last word, 'Resurrexi,' is the first word of the Easter introit. By textual accretions, partly by additions from the Vulgate, but more often by 'free composition,' and by the development of a dramatic setting (the 'sepulchrum') and truly dramatic personalities (the three Marys, the angel at the tomb, etc.), this trope grew into a well-developed though brief liturgical play (MS Brescia, 15th cent., quoted by Young), and attained a much larger development as a 'Visitatio sepulchri' at the end of Easter matins.

The altar served as the setting for the 'Quem quaeritis' plays, as was natural, for it symbolized the tomb of Christ (Young, p. 45). This made easy the transition to the use of the 'Quem quaeritis' as part of the 'Sepulchrum' ceremony at Easter matins (the 'Elevatio crucis' following the 'Adoratio crucis' and 'Depositiō crucis' on Good Friday; the ceremonies were symbolical of the burial and resurrection of Christ). This second

and dramatically more fruitful use of the 'Quem queritis' grew by textual additions, such as the sequence 'Victimæ paschali,' and by additions of incident—first, details of the Biblical story (e.g., the visit of the three Marys to the tomb, and of Peter and John); secondly, secular imaginative details (e.g., the visit of the Marys to the 'unguentarius,' or dealer from whom they bought the necessary spices, a character who later became popular in the vernacular Passion-plays).

Though there was a considerable dramatic development of the 'Quem queritis,' it remained strictly a liturgical drama; it was chanted, the parts were taken by churchmen, there was little real dialogue, and the setting was of the simplest. In certain late forms there are introduced motives that do not belong to the events of Easter morning, such as the kiss of peace accompanying the greeting 'Surrexit Christus,' or the 'Tollite portas' ceremony prescribed by the ritual for the dedication of a church. These point to the possibility of a development of the Easter play which, however, was not to take place in the 'Quem queritis' proper. This matter will be considered in speaking of the Passion-play.

But the 'Quem queritis' was not the only drama of Easter-week. The 'Peregrini,' attached to the vespers of Easter Monday, established in the 12th cent., was known in England, France, and Germany. The simplest form tells of the journey to Emmaus and the supper there (Petit de Julleville, *Les Mystères*, i. 67; Chambers, ii. 37). In others Mary Magdalene appears, or the Virgin and the other Marys greet the risen Christ; or a new scene is added of the incredulity of Thomas; or there is even a merging of a developed form of the 'Quem queritis,' the 'Peregrini,' and the Easter morning ceremony of the 'Elevatio crucis.'

Parallel with the plays of the Resurrection, other liturgical plays developed as parts of the office of other feasts. The Christmas season was the most productive; but there were plays for Epiphany and certain saints' days, particularly that of St. Nicholas. Though evidence of their existence has been found, the plays for many occasions have entirely disappeared. A Christmas drama, the 'Pastores,' commemorating the visit of the shepherds, grew out of a Christmas introit-trope, modelled on the Easter 'Quem queritis.' It begins 'Quem queritis in praesepe, pastores, dicite.' It is purely liturgical, very simple in form, and of infrequent occurrence in the MSS, but is of interest for its connexion with the ancient and still popular representations of the crib, or *crèche*, of the infant Christ (see BAMBINO), and for its influence on the more fruitful dramatic forms into which it was absorbed. The essence of the play is the visit of the shepherds, a crib with images of the Virgin and Child, the announcement of the birth of Christ by a boy 'in similitudine angeli,' the singing of the 'Gloria in excelsis' by the angels and a hymn by the shepherds, a dialogue between the shepherds and two priests 'quasi obstetrices,' the adoration of the shepherds, and a final hymn.

A more common form of Christmas drama was the 'Stella,' a play of the visit of the Magi, originally consisting of antiphons and simple prose dialogue, representing the following of the star, the visit to the Infant, the offering of gifts, and the warning to the Magi (Creizenach, *Geschichte des neueren Dramas*, i. 60; Chambers, ii. 45; Petit de Julleville, i. 51; texts in du Ménil, *Origines latines*, and in Coussemaker, *Drames liturgiques*). The simplest and probably the earliest examples are from Rouen and Limoges. This form of liturgical play developed early. Dates are uncertain, but MSS of the late 11th cent. have the play in a well-

developed form. As the Easter 'Quem queritis' centred about the 'Sepulchrum' and that of Christmas about the 'Praesepe,' the 'Stella' had as its starting-point the star. A gilt star, the points sometimes holding candles, was lowered from a hole in the ceiling or held up by an assistant. Like the Nativity plays, the 'Stella' developed partly from dumb show, and the simpler forms continued parallel with the expanded forms and outlived them.

The dozen or so complete extant versions of the play vary considerably. The drama developed by the representation, in action instead of narrative, of the visit to Jerusalem, by the addition of various scenes in which Herod plays a part, as, e.g., his anger at the escape of the Magi and his order for the massacre of the innocents, and even the actual representation of the massacre, and finally the lament of Rachel, which had received independent dramatic treatment. As Chambers puts it, 'the absorption of the motives proper to other feasts of the Twelve Nights into the Epiphany play has clearly begun' (ii. 48). This absorption was to result in certain larger and more complex plays made up by the joining of the 'Pastores,' the 'Stella,' and the 'Rachel.' It is only in view of the result from this fusion and of the expansion of certain parts that the 'Stella' is of great importance for the later history of the drama. The part of Herod grew by expansion and emphasis even to take the first place in the English Corpus Christi cycles.

More important for the future of the mediæval drama than any of the forms thus far considered was the 'Prophetæ,' which had a curious origin, first studied by Sepet (*Les Prophètes du Christ*). It was based on the apocryphal *Sermo contra Judæos* attributed in the Middle Ages to St. Augustine, but really of later origin, and used in many churches as a lesson in the Christmas offices. In the passage so employed, the author invokes thirteen witnesses to the divine mission of Christ and calls upon them to predict His coming. The prophets invoked are Isaiah, Jeremiah, Daniel, Moses, David, Habakkuk, Simeon, Zacharias, Elisabeth, John the Baptist, Vergil, Nebuchadrezzar, and the Sibyl. The dramatic growth of this sermon had certainly begun by the 11th century. In the earliest forms the play follows the sermon closely, but is written in verse. Classical language and even direct quotations from the *Eclogues* appear in the prophecies of Vergil and the Sibyl. In later examples from Laon and Rouen the dialogue is expanded, the 'precentor' is replaced by two 'appellatores' or 'vocatores,' and Balaam is added to the prophets. More remarkable is the little added drama of Balaam and his ass, which has been considered by many writers the origin of the notorious Feast of the Ass, but which is perhaps more probably a reaction from the disturbing festival. In the Rouen text the part of Nebuchadrezzar is also expanded into a miniature play: Shadrach, Meshach, and Abed-nego refuse to worship the image, are cast into the fiery furnace, and escape all harm, whereupon the king testifies to the might of the coming Saviour.

It will be seen that at this stage of development the 'Prophetæ' necessitated a much more complex setting than was usual with liturgical drama—the throne of the precentor, the fiery furnace, distinct costumes (described in the rubrics), Balaam's ass. This was a beginning of the complexity that was to characterize the great Miracles.

This complexity and the fusion alluded to above may be seen in a Latin play preserved in a 13th cent. MS (Royal Library, Munich; text in du Ménil). It is a combination of most of the Christmas dramatic forms. St. Augustine sits with the

prophets at his right, the chief of the synagogue and the Jews at his left. The prophets foretell the Messiah; the head of the synagogue is angered at their blasphemies. A new character, the 'bishop of the children,' interposes the suggestion that St. Augustine shall be questioned. The Rabbi in anachronistic and pedantic words argues the impossibility of the Virgin-birth, and St. Augustine answers. The argument is taken up by the choirs of prophets and Jews, the one singing 'Res miranda,' the other 'Res neganda.' So far the play is an expanded 'Prophetæ,' still mostly liturgical in feeling and form. The prophets take their places in the church, and a play of the Annunciation begins abruptly. This part is brief. The Scriptural dialogue between the Virgin and the angel is followed by the visit of Elisabeth. The next direction is that Mary 'vadit in lectum suum . . . et pariat filium.' The choir hails His coming, and immediately the 'Stella' begins. A star shines forth, the three kings follow it, and appear before Herod; an angel announces the coming of Christ to the shepherds (the 'Pastores' element). The devil hints that the angel has deceived them, but they are convinced by the chanting of the 'Gloria in excelsis' by a heavenly choir; they seek the cradle and worship Christ; they meet the Magi bearing gifts. The Magi are warned not to return to Herod, who orders the killing of the innocents. The mothers lament their lost children (the 'Rachel' element); Herod falls dead, and is seized by demons. An angel sends Joseph into Egypt. The king of Egypt advances, accompanied by a choir singing 'choses fortprofanes.' The Holy Family arrives in Egypt; the idols fall, and the priests, unable to restore them, are converted. Finally the choir chants a malediction against Herod and the Jews. The last part is free and individual in composition. Petit de Julleville thinks it unlikely that it was played in church (because of the 'episcopus puerorum'), and that more likely it was given in a monastery school.

As this play well represents the form attained by the liturgical drama through the combination of types and free composition, certain plays founded on the stories of Daniel and Lazarus represent another development—the expansion of single scenes in the older plays into independent dramas. Most interesting, because the first liturgical play attributed to a definite author, is the 'Daniel' of Hilarius, a cosmopolitan Goliardic scholar, disciple of Abelard, who flourished in the first half of the 12th cent. (text in J. J. Champollion-Figeac, *Hilarii versus et ludî*, Paris, 1838, and in du Méril). The 'Historia de Daniel representanda' opens with the feast of Belshazzar; the mystic words appear, and Daniel interprets them; Darius enters Babylon with his army and kills Belshazzar; Daniel appears at court, refuses to worship the king, and is thrown to the lions; the angel brings Habakkuk to him; Daniel is again in favour. The play is expanded by choruses in honour of the various personages, 'conductus Danielis,' 'conductus regine,' etc. The chant to Daniel (as also in the similar play from Beauvais) is a hymn in honour of the birth of Christ. This, as well as the rubrics, indicates the connexion of the play with the liturgy; but the note at the end, 'This done, if the play has been given at matins, let Daniel sing the Te Deum, if at vespers the Magnificat,' indicates that it was not a regular part of the office. In this partial detachment from the liturgy we see the beginnings of that development which was to take the drama entirely out of the hands of the clergy.

3. The secularization of the drama.—The indications of a tendency to make the liturgical drama

more popular than we have seen in the expansion of certain themes in the 'Prophetæ,' in the freer and more poetical composition of many of the later liturgical plays, in their comparatively independent position in relation to the Church offices, are emphasized by the gradual change in the language, spirit, and setting of the plays, as they progressed towards that final and almost complete secularization which should take them out of the Church and out of the control of the clergy, and make them great popular spectacles rather than expositions of Christian faith. The degrees of popularization were innumerable. In the 15th cent., even when the purpose was edification, whole scenes were often frankly amusing and vulgar, with no religious significance whatever—e.g., in the scene or playlet of Mak and the shepherds in the Towneley cycle, and in the comic scenes of the German Passion-plays.

The vernacular came by slow degrees to replace Latin. At first the two languages appear side by side; in the earliest examples the local speech appears only in refrains or in the lines of a few minor characters, or in the less impressive passages. But there is no discoverable rule; the same character may speak Latin in one passage, French in another. One of the earliest cases of the two languages used together is the 'Sponsus,' a 12th cent. play of the wise and foolish virgins from Limoges (text in *Romania*, xxii. [1893]; du Méril). Here a considerable part is in the 'langue d'oc'; the angel who announces the coming of the bridegroom speaks only French, the virgins both languages. The refrains are in French. The final words in which Christ condemns the foolish virgins are first Latin and then French, ending thus, perhaps to make the lesson clear and impressive to the congregation:

'Amen dico
Vos ignosco,
Nam caretis lumine;
Quod qui perdunt [MS pergunt]
Procul pergunt
Hujus aulae limine.
Alet, chaitivas! alet, malaureas!
A tot jors mais vos penas hvreas;
En efern ora seret meneias.'

Occasionally, as in the 'St. Nicholas' of Hilarius, the vernacular is found only in the refrains. In other plays it is a translation of the preceding Latin lines—an indication of the reason for the use of the common tongue—as in the 12th cent. 'Adam' (text from Tours, first ed. by V. Luzarche, Tours, 1854; K. Bartsch, *Chrestomathie de l'ancien français*, Leipzig, 1880), and in many German plays. Latin and the vernacular were even mingled in the lines, as in the Beauvais 'Daniel' (text in Coussemaker, no. iv.):

'Vir propheta Dei, Daniel, vien al Roi,
Veni, desiderat parler à toi,' etc.

Some late dramas are wholly in the vernacular, except for refrains or certain impressive passages.

In France particularly the development of the drama was marked by the adoption of a more varied versification. The earliest liturgical plays were entirely in prose, the later ones mostly in verse.

In these later forms 'the versification is rather complicated, very varied; almost all are written in stanzas. But these stanzas differ in the number of lines and in metre; the lines are syllabic, but vary in length from four syllables to ten' (Petit de Julleville, i. 23).

Dactylic hexameters also are used, sometimes leonine, as in the lament of Rachel in the Fleury 'Interfectio puerorum' (cf. Petit de Julleville, i. 49; text in du Méril; MS in Orléans Library):

'O dolor! O patrum mutataque gaudia matrum!'

Occasionally lines are quoted or imitated from the classics; e.g.,

'Quae rerum novitas aut quae vos causa subegit
Ignotas temptare vias? Quo tenditis ergo?
Quod genus? Unde domo? Pacemne huc fertis, an arma?'
(cf. *Æn.* viii. 112-114)

As important as this change in language is the

gradual secularization of the spirit of the plays. The last part of the composite Munich play referred to above will illustrate this point. Though written in Latin, one part is an original secular poem in praise of spring, filled with pagan allusions and with no liturgical or Biblical connotation. The introduction of the comic element and of the melodramatic in the passages relating to Balaam's ass and Herod points to an equally strong secular influence, one that was to lead to some of the most striking and unfortunate developments of the great Miracles and even of the Passion-plays of the 15th century. We must not make the mistake of ascribing all the crude humour and vulgarity of Miracles to a naive and simple taste for such things; as Petit de Julleville points out, even in plays as early as those of Hilarius a conscious vulgarization has begun, a conscious appeal to an audience rather than a congregation, and the author's intention is even satirical.

The secular tendency which perhaps had most to do with the final almost complete secularization of the mediæval drama was the elaboration of the setting required by the constantly increasing length and complexity of the plays; for this development brought about the transference of the plays to the open (first the churchyard or square in front of the church, then the main square of the town, or several places at once), and, still more important, gradually brought the plays under the control of the laity. It is a long way from the simple 'sepulchrum' or 'præsepe,' the two chanted parts, the lack of appropriate costume, of the 'Quem queritis' to the varied setting, the many characters, the costumes of the 'Conversio Pauli' (Petit de Julleville, i. 89; text from Fleury MS, mentioned above, in du Ménil, and in Coussemaker, no. xiii.) with its several 'sedes' for Saul, Judas, etc., its two scenes, Jerusalem and Damascus, its armed men, and its 'lectus' for Ananias, or the Munich 'Prophetæ' described above, with its 'sedes' for the prophets, its 'lectus' for the Virgin, its shining star, its mouth of hell, its many characters. Henceforth the change in setting was one of degree rather than of kind; the elaboration merely followed the increasing complexity of the plays as they added one incident after another. Within the church, the crucifix, the altar, the 'sepulchrum,' the rood-loft (representing heaven), and the crypt furnished the chief accessories of the play. To these, which were in the sanctuary and choir, were probably added in the more elaborate plays 'sedes,' 'domus,' and 'loca' extending down the nave. This natural arrangement was apparently followed when the drama left the church, as in the 12th cent. Norman 'Resurrectio.' Chambers (ii. 83) suggests such an arrangement of the 'lius,' 'mansions,' and 'estals' required by the prologue, following the analogy of a Donaueschingen Passion-play of the 16th cent., the plan of which is extant (given in Froning, *Das Drama des Mittelalters*, p. 277). The prologue gives the order of the required sets: the crucifix, the monument ('sepulchrum'), the gaol, heaven, hell, Emmaus, Galilee, and six 'estals' or 'sedes.' The only other extant French religious play of the same period, the 'Adam,' shows even better how far the drama had outgrown the simplicity of the 'Quem queritis.' The Latin rubrics indicate not only a complex setting, but great care in stage management, even extending to the gestures and voice of the actors.

For instance: 'Let there be built a paradise in a higher place; around it let there be draperies of silk. . . . There shall be sweet flowers and foliage; various trees from which shall hang fruits. . . . Then the Saviour shall arrive, clothed in a dalmatic; before him shall be placed Adam and Eve, Adam in a red tunic, Eve in a woman's white robe and a veil of white silk' (Chambers, ii. 80).

The rubrics mention not only the costumes for all the characters, and the localities—paradise, hell, a cultivated field—but also 'properties'—a spade, a rake, chains for the devils to use, cauldrons for them to beat upon, flames.

The development of the liturgical drama was practically complete by the 13th century. Thereafter the growth was mainly outside the church, secular and more vernacular, much more rapid and national. The liturgical drama was much the same in different countries, but the vernacular religious plays took on national characteristics in the 14th cent.; so that thenceforth, to be understood with any clearness, the special literary types that developed must be studied by countries. Furthermore, the influence of particular authors and of particular methods of representation makes itself felt.

4. England.—The early dramatic history of England is difficult to trace, for much the larger number of plays have been destroyed. The development of the liturgical drama in England must be partly guessed at from that of France. Only the slightest indications of what it originally was are extant. The earliest dramatic piece is the 'Quem queritis' from the Winchester troper dating probably from about 979 (text in W. H. Frere, *The Winchester Troper*, London, 1894). This is not nearly so simple as the St. Gall 'Quem queritis' mentioned above. More interesting is the very full account of the 'Quem queritis' ceremony in Bishop Ethelwold of Winchester's *Concordia regularis*, which probably dates from 965 to 975 (Chambers, ii. 14, 306; text in *Anglia*, xiii. [1891] 365). This includes a simple trope not much more elaborate than the St. Gall one. Of it, however, Chambers (ii. 15) says:

'The liberal scenario of the *Concordia regularis* makes plain the change which has come about in the "Quem queritis" since it was first sung by alternating half-choirs as an introit-trope. Dialogued chant and mimetic action have come together, and the first liturgical drama is, in all its essentials, complete.'

The only other extant English text of the liturgical period is a 14th cent. 'Quem queritis' from Dublin. But church inventories, account-books, and statutes indicate the existence of the 'Pastores,' 'Peregrini,' 'Resurrectio,' 'Stella,' 'Prophetæ,' etc., at a number of places, including York, Lichfield, Salisbury, and Lincoln; and William Fitzstephen, writing of the late 12th cent. in London, records

'repræsentationes miraculorum quæ sancti confessores operati sunt, seu repræsentationes passionum quibus clauit constantia martyrum' (*Vita S. Thomæ*, quoted by J. P. Collier, *History of English Dramatic Poetry*², London, 1879, i. 11).

Of a Beverley 'Resurrectio' (c. 1220) the (bilingual) text of only one actor's part remains. So little do we know of this early period that it cannot be decided whether the liturgical drama passed directly from Latin to English, or whether there intervened a Norman-French period.

The full development of the English Miracle-play came in the 14th cent., and during the next two centuries and more it can be studied more clearly from extant texts. Whether or not the English drama received a special impulse from the establishment of the Corpus Christi festival in 1311, the most characteristic English dramatic form, the Corpus Christi processional cycles, were founded soon after that date. The Chester plays were probably given first in 1328. The dates of the establishment of the other cycles are not known, but references to them are found as follows: Beverley, 1377; York, 1378; Coventry, 1392. In 1350 there is a reference to a 'Iudus filiorum Israelis' at Cambridge. From this time on there was the greatest activity throughout the country.

It will be impossible to analyze at all adequately even the chief monuments of the period under consideration; the four great Corpus Christi cycles

and the minor instances of dramatic activity can hardly be mentioned. Generally the English Miracle-plays were represented in separate scenes, each by a different trade-gild, on its own 'pageant'—

'a high scafold with two rowmes, a higher and a lower, upon four wheeles. In the lower they apperelled them selves, and in the higher rowme they played. . . . They begane first at the abay gates, and when the firste pageante was played it was wheeled to the highe crosse before the mayor, and so to every streete . . . to se which playes was greates resorts, and also scafoldes and stages made in the streetes in those places where they determined to playe there pageantes' (Archdeacon Rogers' description of a play at Chester, 1594, quoted by Pollard, *English Miracle Plays*, p. xxv).

Though the plays were given by the gilds, they were under the direction of the town council, which made the strictest rules concerning the manner, thoroughness, and promptness of the performance—e.g., at York (1415):

'And all maner of craftsmen yat bringeth furthe ther pageantze in order and course by good players, well arrayed and openly spekyng, upon payn of leysing of 5s, to be paid to the chambre without any pardon' (*York Plays*, ed. Lucy Toulmin Smith, p. xxxiv).

The plays of the cycle were not the work of one author, but an 'organic growth.' The number of gilds acting varied; hence there was also a variety in the number of plays or scenes. The play for each gild was often slight in subject—e.g., 'Adam and Eve, an angel with a spade and a distaff assigning them to work,' played by the armourers at York. An outline of the subjects of the York cycle (probably composed towards the middle of the 14th cent.) will give an idea of the wide range of the plays:

the Creation, the Temptation, the Fall, Noah and the Ark, the Sacrifice of Isaac, Moses in the Wilderness, the Prophecies of Christ, the Annunciation, the Birth of Christ, the Shepherds, the Magi, the Slaughter of the Innocents, Christ in the Temple, the Temptation, the Woman taken in Adultery, the Raising of Lazarus, Judas, the Last Supper, the Crucifixion, the Harrowing of Hell, the Resurrection.

Although this list is incomplete, we can see in it all the elements that we have found in the Continental liturgical plays, and may be permitted to suppose that the Miracle-cycles developed by the extension and amalgamation of liturgical forms such as the 'Prophetæ,' the 'Stella,' the 'Pastores.' Though, like their French and German contemporaries, the authors allowed themselves considerable freedom in expanding the Biblical text (as, e.g., in the part of Herod), yet the characters most freely drawn are almost exclusively those of persons to whom neither Scripture nor legend ascribes either name or individuality. Such personages as Cain's 'garcio,' or servant, Noah's wife, the shepherds, are introduced for the sake of relief—often inappropriately, it seems to us, as in the Crucifixion scene.

'It is to this desire for dramatic relief that we owe the story of Mak and his sheep-stealing in the Coventry cycle—our first English comedy' (Pollard, p. xli).

In the Coventry cycle there are various characters that link the Miracle with the Morality, the dramatic form more characteristic of the later years of the pre-Elizabethan drama. Such characters appear as Death, Veritas, Misericordia, Pax. The earliest known English Morality is lost. It was a 14th cent. play,

'setting forth the goodness of the Lord's Prayer . . . in which play all manner of vices and sins were held up to scorn, and the virtues were held up to praise' (J. Toulmin Smith, *English Gilds*, London, 1870, p. 187).

The earliest Morality that has survived is 'The Castle of Perseverance.'

Its purpose was 'to trace the spiritual history of *Humanum Genus* . . . from the day of his birth to his appearance at the Judgment Seat of God, to personify the foes by whom his pathway is beset, the Guardian Angel by whose help he resists them, and the ordinances of Confession and Penance by which he is strengthened in his conflict' (Pollard, p. xlv).

The play is wordy but impressive; it has logical development and unity of purpose. The stage directions show that it was elaborately presented.

The most famous morality is 'Everyman,' composed in the 15th cent.; it is thoroughly dramatic in language and treatment.

The great Moralities were followed by shorter ones dealing with narrower subjects—'didactic interludes,' Pollard calls them. From these are derived most of the common notions regarding Moralities. One of the earliest is 'Hycke Scornor.' Some are written in praise of religion, others in praise of learning (e.g., the 'Interlude of the Four Elements'). Some of the later interludes are real plays, in the modern sense—e.g., 'A New and Pleasant Enterlude; intituled the Marriage of Witte and Science,' licensed 1569-70. The amusing lines, the act-division, and the characterization make the play modern rather than mediæval. John Heywood's plays illustrate still better the change that was taking place in dramatic art—a change which was to lead rapidly to the splendid Elizabethan drama.

5. France.—The development of the liturgical drama outlined above carried us into the 12th century. In France there are few plays known of the 12th and 13th centuries, the period when the drama became thoroughly secularized. Of the 12th cent. two plays are known, Jean Bodel's 'Jeu de Saint Nicolas' and Rutebeuf's 'Miracle de Théophile.' In the 14th cent. the French drama first acquired its national character. Petit de Julleville says that forty-three plays of the period are extant, all except one being 'Miracles de Notre Dame.' Here we have a form not found generally in other countries. That there must have been other forms of plays in this century is certain; the derivation of the dramas of the 15th cent. from those of the 12th and 13th makes this clear. Forty of the plays of the Virgin are in one MS in the Bibliothèque Nationale. These plays, however they vary in story and in source, all have as a central theme a miraculous event brought about by the intervention of the Virgin—always a mechanical and unexpected intervention. In other respects—in style, stage-management, songs—the plays are so similar as to make them seem, if not the work of one author, at least the répertoire of one company; and this is the more likely as such plays were performed by societies, called 'Puis,' formed for the purpose.

In the 15th cent. for the first time the word 'Mystère' appears as a dramatic term, and in this century it meant a representation of either Biblical story or the lives of saints. The NT was more used than the OT, for, as we have seen, the interest of the Middle Ages in the OT was chiefly in the foreshadowing of the redemption of mankind. This view accounts for the inequality and lack of dramatic feeling in the use of OT story. Furthermore, the mediæval drama was not original; it did not build up a play from a situation as did Corneille or Racine, but transcribed Scriptural narrative regardless of dramatic effect.

Though the French 'Mystères' seldom approach the completeness of the English cycles, they are often cyclical in form and extremely long. The famous 'Passion' of Arnoud Gretan is about 65,000 lines, a length attained not merely by proximity but by following the career of each of the apostles after the Crucifixion. The French Passion-plays, the most notable of the 'Mystères,' centred, of course, around the Passion, which they developed in a painfully realistic manner; but they were extended at the pleasure of the author by the addition of any scenes preceding or following the main event. The Mysteries based on the legends of the saints, also popular in this period, had often a local interest.

'Many were composed for a certain province, city, or brotherhood, in order to celebrate a patron saint, to commend a relic, or to give sanction to a pilgrimage' (Petit de Julleville, i. 230).

6. Germany.—The early texts are scarce in Germany, but from those that are extant it appears that the liturgical play had much the same history as in other countries, and that the transition from the Latin to the vernacular took place in the same manner. As early as the 12th cent. the Tegernsee 'Anti-christus' (text in Froning, p. 206), though written in Latin, has several secular characteristics: an ambitious plan, allegorical figures, and particularly a political motive, for it is 'a subtle vindication, on the one hand, of the Empire against the Papacy, on the other of the "rex Teutonicorum" against the "rex Francorum"' (Chambers, ii. 64). In the 14th and 15th centuries the religious drama flourished in Germany, its most characteristic form being the Passion-play, of which numerous texts survive. There were also some cycles, such as those for Corpus Christi from Swabia (15th cent.). The Passion, which came in the 14th and 15th centuries to be the chief theme of the religious drama in France and Germany, had seldom been represented in the liturgical drama. The nearest approach to a Passion-play was found in the dialogued versions of the 'Planctus Mariae.' The earliest Passions seem to have been in Italy (Siena, c. 1200; Padua, 1244). The earliest text is German from Benediktbeuern. Like other mediæval dramatic forms, the Passion-play grew by additions and by amalgamation with other forms, either 'prefigurations' of Christ or events following His Passion. By the 14th cent. the form was well developed, but its main period in Germany was from 1400 to 1515. Great 'Passions' were played at Frankfurt, Alsfeld, Friedberg, and other towns. Some, as at Eger and Donaueschingen, were cyclical in extent.

7. Modern survivals.—Traces of mediæval dramatic custom can be found here and there in Europe to the present day. In general the survivals are no more than dumbshow like the popular *crèche*, or representation of the infant Christ at Christmas, which is, however, rather a reversion to the ceremony from which the Christmas play was derived than a survival of the play. Most notable in this way are the representations of the Passion-play that have been either kept alive in out-of-the-way places or revived, most famous among them being that of Oberammergau. The first mention of it is in 1633, and the oldest text, dating from about 1600, contains traces of two earlier texts (K. Trautmann, *Oberammergau und sein Passionsspiel*, Bamberg, 1890). In 1662 the text was altered by the weaving into it of the version of Sebastian Wild, the Augsburg Meister-singer, and parts of that of Johann Aelbel. In the middle of the 18th cent. it was further remodelled by the Benedictine Rosner after the model of the Jesuit drama, and in 1780 Rosner's bombastic version was simplified by Knipfelberger. Its present simple and dignified form is the work of two authors, P. O. Weiss and M. Daisenberger. The play is given every ten years, in pursuance of the original vow on deliverance from pestilence. Other versions of the Passion-play have been performed in recent times at Brixlegg and Vorderthiersee in the Tyrol and at Hörtitz in southern Bohemia (A. Hauffen, *Ueber das Hörtitzer Passionsspiel*, Prague, 1894). Representations of this kind occur to this day in southern Italy (T. Trede, *Das geistliche Schauspiel in Süditalien*, Berlin, 1885).

MIRROR.—The invention of the mirror¹ seems to coincide with the beginnings of the higher civilization, following upon the institution of metallurgy. It is clearly an instance of adaptation of the polished reflecting surface of metals. The Egyptian mirror apparently set the mode for all subsequent developments of the instrument, at least in the Western world.

1. Mirrors of the ancients.—These were almost invariably hand-mirrors for ladies' toilette purposes. The Egyptian were made of bronze (not brass, as often stated), or similar mixed metal. From six to eight inches in diameter, they were elliptical in shape, with the long axis at right angles to the handle, which also served as a stand. The polish was extraordinarily fine, and in some cases still remains.²

Mirrors are not mentioned in Homer, but were used in classical Greek times, and borrowed by Rome. Few Greek mirrors are extant, but their shape suggests derivation from Egypt, as does that of the Roman mirror from Greece. Both Greek and Roman artificers preferred the absolutely circular form, with the handle as in the Egyptian original. They were usually made of bronze, with 20 to 30 per cent of tin; some specimens are silver or silver-plated. The Romans developed the box-mirror, consisting of two circular disks joined by a hinge. At the back of Greek and Roman mirrors embossed work was usual.³ The most numerous collections are from Etruria. The Etruscans were sedulous imitators of Greek art, and much of their work on mirror-backs is interesting and intelligent, though lacking the fineness of Greek technique. Pliny notes the manufacture of glass mirrors backed with tinfoil at Sidon,⁴ but the invention did not succeed, and had to be repeated in the Middle Ages. The Romans made large mirrors also, similar to the modern cheval-glasses, but fixed in the walls of rooms, and working up and down like a window-sash.⁵ The mirror-case was especially developed

¹ The word is derived from Lat. *mirratorium* (*mirrari*) (OED, s.v.). Similar formations are found in Skr. *darpāna*, 'mirror'; Gr. *δρῶνάζω*, *δρῶνται*, 'see'; Pers. *āytnāh*, Baluchi *ādēnk*, 'mirror'; Av. *dī*, 'see'; O.H. Germ. *spīagal*, Germ. *Spiegel*, 'mirror'; Lat. *speculum*; O. Ch. Slav. *zrūcalo*, 'mirror', *pozrūcati*, 'see.' The mirror is also connected with the shadow.—O.H. Germ. *scākar*, 'mirror', *scā*, 'shadow'; O. Ir. *scathán*, 'mirror', *scáth*, 'shadow'; O. Ir. *scáthar*, 'mirror', for 'scáth-derc', 'shadow-seeing' (O. C. Uhlenbeck, *Kurzgefasstes etymol. Wörterb. der altind. Sprache*, Amsterdam, 1899, p. 122; W. Geiger, *ABAW*, 1 Cl. xix. i. [1890] 113; O. Schrader, *Reallex. der indogerm. Altertumskunde*, Strassburg, 1901, p. 784). Here also belong Heb. *מִרְיָן*, 'mirror', *מָרַן*, 'see.'

² J. G. Wilkinson, *Manners and Customs of the Ancient Egyptians*, London, 1878, ii. 350.

³ W. Wroth, in Smith's *Dict. of Gr. and Rom. Antiquities*, s.v. 'Speculum' (*κάρωντρον* [class], *ἐκαστρον*, *ἐκαστρον*).

⁴ HN xxxvi. 26 (193); one was found at San Remo.

⁵ J. H. Freese, in *RE* xii, s.v.

by artists. Metal mirrors were known in northern India by the Christian era,¹ and they were used to some extent by the Central American peoples,² while the Hebrews were familiar with them at an early period for women's use.³ In Greek art Aphrodite is sometimes represented as holding a mirror; and in the Indian marriage ritual a mirror is placed in the left hand of the bride to enable her to dress her hair.⁴ A mirror and a comb are not infrequently found on Scottish sepulchral monuments of the early mediæval period, but their precise signification is still uncertain.⁵

2. Mediæval mirrors.—The mirror-case continued to be popular among the rich, but the mirror itself became smaller, and was usually carried on the person.

¹ Probably the largest mirror known in the Middle Ages did not exceed the size of a plate.⁶

The circular shape was retained.

² The reflecting surface was usually of polished steel or other metal, and steel mirrors were still in use in the sixteenth century.⁷ There is a reference to a 'round "looking-glass" of Catherine of Aragon, which was probably a polished metal surface with a sheet of glass over it. An arrangement of this sort had been employed since the thirteenth century, and in the inventories of the Dukes of Burgundy, dating from the fifteenth century, we hear of the *Verre à mirer*, evidently a looking-glass.⁸

This method is a noteworthy, but futile, attempt at a combination of metal and glass.

³ Considering the great quantity of glass manufactured for windows from the thirteenth century onward, it would have been curious if the idea of employing a substance admitting of so high a polish had not suggested itself to the mirror-makers of the day. But until a really satisfactory metallic backing was discovered, the advantage of a looking-glass over a steel mirror would be slight, and this fact may account for the persistence of the latter for domestic use down to so late a period. The amalgam of mercury and tin which gives the modern looking-glass its efficiency was not known before the sixteenth century.⁹

A final improvement was effected in the middle of the 19th cent. by the French invention of plate-glass. Backing for glass was known in the 13th cent., and in the 14th there was a guild of glass-mirror-makers in Nuremberg, but it was first in Venice that mirror-making acquired commercial importance.⁹

The mirror naturally has lent itself to the production of curiosities, mostly the result of experimentation. The effects of concave and convex surfaces seem to have been known at an early time in both the East and the West. The 'magic mirror' of China and Japan reflects on a screen an image of its back.¹⁰ In mediæval Europe small spherical glass-mirrors were known as *Ochsenaugen*. The use of reflectors to produce light and heat was early discovered, as by the Greeks and Central Americans.¹¹ Mirror-writing is often practised by ambidextrous persons, as by Leonardo, and it also occurs pathologically in forms of aphasia.

3. Superstitions connected with the mirror.—The property of reflecting images naturally inspires wonder, and thus tends to produce superstitious beliefs and practices. Most of these are connected with the common idea that the reflexion of a person is his soul.

⁴ A savage who had been made to look into a mirror exclaimed, "I gaze into the world of spirits!" One of Darwin's children, at nine months old, turned to the looking-glass on hearing his name called.¹²

These two cases illustrate the connexion between

soul, self, and consciousness. The philosophy of Hinduism was fond of mirror-analogies when discussing this connexion.

¹ The person . . . that is seen in the eye, that is the Self. . . This is *Brahman*.¹ 'The person that is in the mirror, on him I meditate.' 'I meditate on him as the likeness. Whoso meditates on him thus, to him a son is born in his family who is his likeness, not one who is not his likeness.'²

In the simpler thought of uncultured peoples, however, the reflexion is a spiritually real soul.

The Andamanese 'do not regard their shadows, but their reflexions (in any mirror) as their souls,'³ and in one account of the Fijians a man's likeness 'in water or a looking-glass' was regarded as his soul.⁴ Savages of New Guinea when first looking into a mirror thought their reflexions were their souls,⁵ while the New Caledonians believed that their reflexions in mirrors or water were their souls,⁶ and the Macusis of Guiana held the same belief about the reflexion in the eye of another.⁷ Many terms for the soul point to the same notion. The Melanesian *atar* ('soul') means 'reflexion,'⁸ and the same meaning belongs to many terms among the Indonesians.⁹

Hence the frequent notion that there is something uncanny about a mirror, a belief which culminates in the idea that the reflecting surface has abstracted and retains the soul.

There is a pool in a Saddle Island river (Melanesia) into which any one who looks dies; the malignant spirit takes hold of his life by means of his reflexion in the water.¹⁰ The Zulus have a similar terror of looking into any dark pool; a beast therein will take away their reflexions.¹¹ The Aztecs supposed that to see one's reflexion in water wherein a knife had been placed meant a stab to the soul,¹² and the Galelasee forbid their children to look in mirrors, which will take away their beauty.¹³ Manu said (in rules for a *śrāta*): 'Let him not look at his own image in water.'¹⁴ The old Greeks had the same maxim; to dream of seeing one's self reflected foreboded death, and Frazer explains the story of Narcissus on these lines.¹⁵ The Rabbis laid it down that one must not look into a mirror on the Sabbath, unless it were fixed on a wall. Later they forbade men generally to use mirrors, as being effeminate, reserving, however, the privilege to their own relatives, as being 'close to the government.'¹⁶ The Rabbinical idea was doubtless merely puritanical.

With these notions is connected the custom of covering mirrors or turning them to the wall after a death.

¹ It is feared that the soul, projected out of the person in the shape of his reflexion in the mirror, may be carried off by the ghost of the departed, which is commonly supposed to linger about the house till the burial.¹⁷

This practice is widely spread over Europe, and occurs in Islām.¹⁸ Similarly, sick persons should avoid looking into a mirror, and it is advisable for a bride to refrain from using a mirror in modern Greece.¹⁹ Since the mirror holds the soul, it is said to be extremely unlucky to break a looking-glass.²⁰

² A mirror, say the sectarian Russian Rascolniks generally, 'is an accursed thing.'²¹

On the other hand, a mirror, as when set in a ring, may be used to repel demons.¹

Divination by means of a reflecting surface is an ancient and world-wide practice, its principle being that figures representing the souls of persons at the moment or in future actions may be seen. A pool of ink is a common substitute for the mirror (cf. art. CRYSTAL-GAZING), and a combination of mirror and pool of water was used at Demeter's sanctuary at Patrae, where was a sacred spring, but its use was permitted only in cases of sickness.

'They tie a mirror to a fine cord, and let it down so far that it shall not plunge into the spring, but merely graze the surface of the water with its rim . . . they look into the mirror, and it shows them the sick person either living or dead.'²

It is also used, especially in German and Slavic lands, to discover one's future husband or wife.³

Divination by mirrors is a variety of a widespread method of 'seeing,' the most frequent instrument being the crystal ball.⁴ A magic mirror possessed of the power of speech is not uncommon in folk-tales;⁵ and in Shintoism actual worship is rendered to mirrors which, originally presented to deities, have come to stand for the divine beings themselves.⁶

The supernatural associations of mirrors are chiefly the foregoing, but one or two of a miscellaneous order may be noted, as illustrating the general subject.

Pausanias describes a temple near Megalopolis, within which was a mirror fixed on the wall. 'Any one who looks into this mirror will see himself either very dimly or not at all, but the images of the gods and the throne are clearly visible.'⁷ The Greeks kindled sacred fires by means of the mirror or crystal, and the same was the case in China and Siam, while in the Inca kingdom the new fire was kindled at the summer solstice by means of a concave mirror turned to the sun.⁸

4. **The mirror in metaphor.**—The optical properties of the mirror are so important and impressive that all civilized thought is permeated by ideas derived thence. One or two only can be cited. The Hebrew paromigrapher says: 'As in water face answereth to face, so the heart of man to man,'⁹ while the Buddhist *suttas* speak of 'a way of truth, called the Mirror of Truth.'¹⁰ Mirror was a favourite component of titles of books in Elizabethan literature, in its meaning of 'true description,' and its meaning of 'pattern, exemplar, model' is similar. Shakespeare writes 'the mirror of all Christian kings,' 'To hold as 'twere the mirror up to Nature' uses the simplest connotation of the term. An interesting metaphor is used of psychic processes; 'the mirror of the mind' occurs both in Chaucer and in Shakespeare. Among new sources of metaphor are the two remarkable biological and chemico-physical analogies to the optical fact of mirror-image (in which right becomes left and *vice versa*). All vertebrate animals, many invertebrate, and the leaf and other systems of plants are bilateral, one side being the mirror-image of the other, while the formation of right-handed and left-handed crystals is connected with the division of acids into right and left according to the effect produced in relation to polarized light.

LITERATURE.—With the exception of the well-known archaeological works on antique mirrors and popular folklore collections, the relevant literature is included in the article.

ranges on the northern frontier of Assam, which shut in the eastern end of the Brahmaputra valley, between that river and the Dihang, a region practically unexplored, consisting of steep ridges, covered as a rule with tree forest, and including some peaks 15,000 ft. in height (JGI xvii. [1908] 377 f.). They are divided into four tribes, speaking three distinct but probably connected languages. The most western tribe is known as Midu, Midhi, Nedu, or Chulikaṭā, 'hair-cropped'; they inhabit the Dihang valley with the adjoining hills. To their east are the Mithun, or Bebijiya, 'outcasts,' who speak practically the same language. East of the Bebijiya are the Taying or Digaru Mishmis, beyond the Digaru river. The Mijus are still further east, towards the Lama valley of Dzayul, a sub-prefecture of Lhasa. Most of these live beyond the British frontier. The numbers counted at the last three Censuses in Assam were 217, 98, and 271 (*Census Rep. Assam*, 1891, i. 203; 1901, i. 139; 1911, i. 134).

1. **Ethnology.**—The Mishmis have been identified by some authorities with the Miaotzu or Hmeng, the aborigines of Yunnan, whose name has been interpreted to mean 'children of the soil,' 'roots,' or as a contemptuous reference to their 'simple dirt' (J. G. Scott and J. P. Hardiman, *Gaz. Upper Burma*, pt. i. vol. i. [Rangoon, 1900] p. 597 ff.).

'So far as the means at our disposal permit us to draw conclusions, it seems most probable that these four tribes belong neither to the Tibeto-Himalayan nor to the Assam-Burmese branch of the Tibeto-Burman languages. They seem to be descendants of clans which, when the parting of the ways between the two branches took place, accompanied neither, but made their own way at different periods into the hills overlooking the Assam valley from the north' (G. A. Grierson, *Census Rep. India*, 1901, i. 203).

2. **Relations with the British Government.**—The British first came in contact with the Mishmis in 1825, when Lieut. Burlton reported that the 'Mishmah' were inhabited by tribes 'who were very averse to receive strangers.' Other officers visited them between that time and 1851, when M. Krick, a French missionary, was murdered by them. Then followed a succession of outrages. In 1885 one of their headmen was taken to visit the Calcutta Exhibition. Soon after his return he died, and the tribe, holding the British Government responsible for his loss, decided that the head of a British subject should be buried with him, in order to propitiate his spirit. So they slew a British subject and carried off his head. An expedition in 1899-1900 reduced them to submission, and since that time they have given little trouble. But they are keen tappers of rubber, and it has been found expedient to prevent them from crossing the Brahmaputra into British territory for that purpose (B. C. Allen, *Gaz. Lakhimpur*, 1905, p. 55 ff.).

3. **Religious beliefs.**—The best account of their religious beliefs is that by E. T. Dalton, *Descriptive Ethnology of Bengal*, Calcutta, 1872, p. 16 f.:

'The religion of the Mishmis is confined to the propitiation of demons whenever illness or misfortune visits them. On these occasions the sprig of a plant is placed at the door to intimate to strangers that the house is for the time under *tabu*. They appear to have no notion of a supreme or benevolent deity. They worship Mujidagrah as a god of destruction, Damipao as god of the chase and knowledge, and Tabla as a god of wealth and disease, and a great many others without name. It appears both from Lieutenant Rowlatt and the Abbé Krick's notes that the Mishmis have priests, but they are few in number and have to be brought from a distance when required. M. Krick describes one that he saw at a funeral ceremony. . . . For several days previous to the arrival of a priest, an attendant was employed in singing a devotional chant to the accompaniment of a small bell. There was also a preliminary sacrifice of a red cock and hen, the blood of which was received in a vessel containing some other fluid, and the mixture carefully examined, as it is supposed to indicate if the result will be fortunate or otherwise. At last the priest arrived, dressed like an ordinary chief, but he wore a rosary of shells, and, attached

to the front of his headdress, two appendages like horns. For two days, at intervals, the priest and his son employed themselves in singing chants, marking the time by waving a fan and ringing a bell; on the third day he put on his chief's Tibetan robe, and assumed what may be regarded as his pontifical dress—a tight-fitting coat of colored cotton, a small apron, a deer skin as a mantle; from his right shoulder descended a fringe of long goats' hair dyed bright red, and over his left shoulder he wore a broad belt embossed with four rows of tigers' teeth, and having attached to it fourteen small bells. On his head he placed a bandeau ornamented with shells, and round the knot of hair at the top of his head a movable plume which turned like a weathercock. This was followed by a wild demoniacal dance; but whether a *pas seul* by the priest, or one in which the people generally joined, we are not informed. The object was, however, to make as much noise as possible to frighten the devils. After this, lights were all extinguished, till a man suspended from the roof obtained a fresh light from a flint. He was to be careful not to touch the ground as he produced it, as the light thus obtained was supposed to be fresh from heaven (cf. GP³, pt. i., *The Magic Art*, London, 1911, ii. 234 ff., pt. vii., *Balder the Beautiful*, do. 1913, i. 2 ff.). When the burial is of a person of note, animals are slain, and the skulls arranged round the tomb (cf. ZRE¹ i. 499; PR² ii. 225; L. A. Waddell, *The Buddhism of Tibet*, London, 1895, p. 484 n. 1), and under the shed built over the grave, raw and cooked flesh with grain and spirits are placed (the share of the dead), and all the arms, clothes, and implements he was in the habit of using when living. The poor, it is said, bury the dead without much ceremony, or throw the bodies into the river.

About 1872—the writer gives no clear dates—T. T. Cooper (*The Mishmee Hills*, London, 1873) visited the tribe, and gives some account of their appearance, dress, manners, and customs (p. 180 ff.).

An earthquake occurred, and they told the chief, Chowsam, 'that the devil residing in a neighbouring mountain had been angry, and rent the side of the mountain' (p. 193).

'The Mishmees being polytheists, though of the lowest order, it was not difficult to make Poso [another chief] understand the existence of one Great Spirit above all' (p. 197). 'The Mishmees,' he said, 'are very unfortunate. We are everywhere surrounded by demons; they live in the rivers, mountains, and trees; they walk about in the dark and live in the winds; we are constantly suffering from them. . . . In answer to a question as to which demon he thought the strongest, after some hesitation he said that the demon of fire was the strongest and most dangerous, as he dried up the water and burnt the mountains; he was also good-natured, as he warmed them and cooked their food' (p. 198).

'As to religion, their notions are very vague. Polytheism, enumbered with all the rites and ceremonies of fetishism, is their true creed. The yearly sacrifice and feast in honour of their deceased parents shows that they have some idea of a future state, but I could not find out their particular ideas, as death is a disagreeable subject of conversation among them, and Chowsam always declined to interpret questions relating to it' (p. 233). 'The two most important ceremonies of the Mishmees are undoubtedly those attending deaths and marriages. In the case of sickness a soothsayer is called in, and he generally prescribes the sacrifice of fowls or pigs, according to the state of the patient. These sacrifices he orders as a propitiation of the demon who is supposed to be instrumental in causing sickness. When death ensues, particularly in the case of a chief, mithtons [*mithan*, also called *gayal*, *bo frontal* (W. T. Blanford, *Palms of British India*, *Mammalia*, London, 1890-91, p. 487 ff.)], pigs and fowls are killed without stint, and all the old men and women feast to their heart's content, hospitality being considered a great virtue. They eat in honour of the departed, talking the while of his great and good qualities. The body is burnt after two days, and the ashes are collected and placed in a miniature house, erected close to the family residence. This unique tomb is then surrounded by some of the skulls collected by the chief during his lifetime, which serve as a monument of his past hospitality, while the rest of his treasures are divided amongst his sons, the son-and-heir taking the lion's share. When there are no sons the skulls go to the nearest male relations. The eldest son takes the title of *gam*, or chief, and holds a yearly feast in honour of his deceased father, which is considered one of the most sacred observances among them' (p. 237).

When Cooper suffered from an abscess in his ankle, a soothsayer or exorcist was called in. He was dressed like the other Mishmis, but allowed his hair to fall in long, unkempt masses over his shoulders. After inspecting the patient's foot, he stripped himself naked except for a small loin-cloth, and produced a handful of rushes from his waistbelt. These he began to plait and unplait, accompanying the operation with a buzzing noise, as though he were counting. Occasionally he would place his hand on the painful spot, and then shake the rushes over it, keeping his eyes shut the whole time. After nearly an hour he announced

that two fowls must be killed, which would ensure recovery. He declined to answer what devil had been at work, and what effect the rushes had on him (p. 252).

LITERATURE.—The chief authorities are quoted in the article W. CROOKE.

MISHNA.—See TALMUD.

MISSALS.—See RITUAL.

MISSION (Inner).—*Die innere Mission* is the name used in Germany to describe the sum-total of those efforts which are made by the Protestant Churches to ameliorate the conditions of the suffering of the poor and to bring the institutions and usages of society into harmony with the will of God. It is to be distinguished from *Die aussere Mission* ('foreign missions') in that it confines its activities to Germany and Germans resident or sojourning in foreign lands. It is an endeavour to overcome the heathenism found within the borders of a country professedly Christian. It is to be distinguished from mere humanitarian effort in that it definitely makes temporal and material aid a means to spiritual redemption, and from the official activity of the pastors and paid officers of the Church in that it works through the voluntary agency of individual Christians or groups of Christians, the pastor's office being to arouse the spirit of willingness and marshal its powers for the purpose of redeeming love. It aims at realizing in sacrificial service the universal priesthood of believers.

The movement originated after the close of the Napoleonic Wars when orphan homes were established for children whose parents had lost their lives in the war (Johannes Falk, Graf Adalbert von der Kieke, C. Heinrich Zeller). A number of societies and institutions arose organized on a large scale for the care of the poor, the nursing of the sick, and the saving of destitute children. This grew out of the pietistic movement (see PIETISM), and was largely inspired by the efforts of Great Britain in the foreign missionary field, the foundation of the Bible Society, the work of Mrs. Elizabeth Fry, and the City Missions. Conspicuous among the leaders were Johann Hinrich Wichern (1808-81), who in 1833 founded at Hamburg the *Rauhe Haus* (a reformatory institution built upon the household system with a training home for lay-workers), and Theodor Fliedner (1800-64), who in 1826 founded at Kaiserwerth the first society for prison-visiting in Germany, in 1833 the first refuge for discharged female prisoners, and in 1836 the famous *Diakonisseninstitut* for the training of nurses and infant teachers.

The name 'Innere Mission' was first employed in a narrower sense by Friedrich Lücke, of Göttingen, in *Die zweifache, innere und aussere Mission der evangelischen Kirche* (Hamburg, 1843), to mean work among the lapsed members of the different Christian communities and the fortifying of a weak church with the help of a strong, while Wichern broadened out the meaning of the term to include all practical Christian work in the homeland and among Germans in foreign lands (*Diaspora*).

It was Wichern who first organized the movement on a comprehensive scale in 1848. The revolution of that year roused the Church from its apathy, and opened its eyes to the glaring evils of heathendom which had grown up in the midst of the nation. A Church Diet was summoned at Wittenberg, where 500 representatives of Protestant German Churches assembled. Standing on Luther's grave, Wichern delivered a memorable address, picturing the wide-spread power of the paganism which had arisen in their midst and the fruits which it had produced, and calling upon the

Churches to join hands in remedying these evils. He sketched on large and statesmanlike lines the programme of the remedial activities needed, and proposed the formation of a central committee (*Centrallausschuss*), consisting of ministers and laymen, to make a survey of the fields of work, place the various societies already at work in touch with one another so as to save overlapping, point out the need of new effort and help such effort to succeed, guide the movement as a whole, and, above all, make it clear that all the several ministries, of whatever kind, were animated by the one divine spirit of redeeming love in Christ. Thus was established a free confederation of all the activities of the Protestant Churches, so far as these were extra-official. The object of the Innere Mission, as defined in the first report of the *Centrallausschuss*, is 'that the Christian Church with all its resources, and through all its agencies, may fill and quicken the whole life of the people in all ranks of society, inspire all social arrangements and institutions with the might of a love energizing heart and life—and through all its living members labour to save the neglected and the poor.' The Innere Mission was to be 'the practising doctor in the great hospital of the people.' Its programme and policy are set forth in full in *Die innere Mission der deutschen evangelischen Kirche, eine Denkschrift an die deutsche Nation*, written by Wichern at the instance of the Central Committee and published in April 1849. This book sets out the scope of the work and the relations of that work to the activities of the State on the one hand, and of the Church on the other. For twenty years Wichern remained practically the directing spirit. Pamphlets (*Fliegende Blätter*) were published annually at the *Rauhe Haus* giving reports of the various agencies carried on.

The most comprehensive survey of the work is given in two Jubilee publications of the *Centrallausschuss* in 1899 (*Statistik, Fünfzig Jahre*). These contain reports by different authoritative writers on the work done in each of the following departments:

- (1) The care of children, crèches, infant schools, care of cripples, Sunday schools and children's services, refugees and orphanages, country holidays for city children.
- (2) The care of adolescents, associations and homes for apprentices and journeymen, schools of domestic economy, Rescue homes, *Jugendbund für unterschiedenes Christentum* (analogous to Christian Endeavour Societies).
- (3) The care of tramps and the homeless, colonies for unemployed, homes for girls, railway-station missions, Girls' Friendly Societies and Lodges, missions to soldiers and sailors, river and canal boat population, railwaymen, navvies, brickyard-workers, waiters.
- (4) The quickening of the Christian spirit, city missions, men's brotherhoods, support of weaker Churches, Christian art associations, lectures.
- (5) Work among emigrants and Germans in foreign lands (*Diaspora*), pastorates at holiday resorts.
- (6) Care of the poor, sick, and infirm, district nursing associations, Red-cross work in war, homes for imbeciles, epileptics, inebriates, blind, deaf and dumb.
- (7) Combating of social evils, Sunday observance, housing reform, prison missions, temperance work, savings banks, anti-gambling work, friendly societies, building societies, Christian education.
- (8) Christian literature, dissemination of Bibles, tracts, and sermons, periodicals, libraries, colportage.
- (9) Organization of Inner Mission according to province and district, conferences.
- (10) Training of workers for prisons, asylums, unemployed colonies, nursing, etc., courses of instruction for social workers.

As the result of the Innere Mission the whole of Germany has been covered with a network of philanthropic agencies, imbued with the Christian spirit; the social conscience has been quickened and enlightened, and the efforts of the Churches have been co-ordinated and wisely directed. The State has co-operated. In 1852 the brothers of the *Rauhe Haus* were allowed to act as warders in

Prussian prisons, and Wichern was commissioned to visit the prisons, investigate their conditions, and suggest reforms. Later, Wichern was appointed Councillor of the Ministry of the Interior and made a member of the *Evangelischer Oberkirchenrat*. The work of the Innere Mission paved the way for the social legislation which followed the Franco-German War. The most notable results of the Innere Mission are the mobilization of women for Christian work, especially in sick-nursing, the Elberfeld system of poor-relief and its extension to other German towns, and the work of Pastor F. v. Bodelschwingh (b. 1831), who founded at Bielefeld a colony for epileptics and unemployed, and organized, with the help of the Government, the national scheme of relief-stations for tramps.

In the Church the Innere Mission has given the laity, and especially women, their sphere of service; it led to the official institution of the diaconate in the Evangelical Church in 1856, and gives material expression to the universal priesthood of believers. It has filled a place in the educational system by caring for orphans and infants, and counteracting the movement for the secularization of schools.

The movement has affected other countries, especially Switzerland (J. A. Bost), Denmark (Wilhelm Beck), Norway (P. Hare), and Holland (O. G. Heldring). Florence Nightingale received her first training at Kaiserwerth. The work of Thomas Guthrie (Ragged Schools), William Pennefather (Mildmay Conference), and John Brown Paton (Lingfield Homes for epileptics, training colony for unemployed at Wallingford, National Home Reading Union, Social Institutes, Boys' Life Brigade, Girls' Life League, Civic Leagues of Help) was consciously influenced by the Innere Mission. In 1873 J. B. Paton and Francis Morse summoned a conference at Nottingham 'to consider the practical relations of Christianity to the social wants and evils of our time,' at which Paton expounded the Innere Mission of Germany, and a union of all existing Christian charities and societies working for social ends was formed at Nottingham. W. T. Stead took up the same idea in his agitation for a Civic Church. The nearest approach in England has been the organization of Civic Leagues (or Gilds) of Help (beginning 1906), which represent an attempt to adapt the Elberfeld system to the conditions of English city life and bring all the social activities of the civic community into touch with each other.

MISSIONS (Buddhist).—i. In China.—Buddhist missionary enterprises outside of India were started by King Asoka in the latter half of the 3rd cent. B.C. On the other hand, a later Chinese record informs us that in 217 B.C. (in the reign of Shih-Huangti of the Tsin dynasty) eighteen Buddhist monks were brought to the capital of the empire. The authenticity of the information may be questioned, but, when we take into account the facts that Chinese Buddhists used to ascribe the 7th cent. B.C. to Asoka's reign, and that, in spite of that, the date of the story almost agrees with the historical date of Asoka, the tradition seems not to be a mere forgery. About one hundred years after that event, as stated in an official record, another contact of Buddhism with the Chinese took place. An expedition sent to the Western regions by the Emperor Wu, the most ambitious sovereign of the former Hān dynasty, in 121 B.C. brought a golden statue and prisoners; and in 2 B.C. the Yuechi ambassadors are said to have brought some Buddhist scriptures. These stories point to the spread of the Buddhist missions in Central Asia in the centuries immediately after Asoka's missionary enterprises.

Historical records agree in assigning to A.D. 67 the first official introduction of Buddhism into China. The Emperor Ming, stimulated by a dream, sent an expedition in search of the golden man of whom he had dreamt (A.D. 64), and, when the expedition returned in 67, it brought not only Buddhist statues and scriptures, but also two monks, both Indians, Kāśyapa Mātanga and Dharmarakṣa by name. The first Chinese Buddhist book, containing the forty-two sayings of Buddha, was written by Kāśyapa, and translations of several texts are said to have followed it. The Pai-ma, or White Horse Temple, was built in Loyāng, the capital, and soon after the emperor's brother built another temple. Conversions *en masse* are said to have taken place in 71, many nobles and Taoist priests being among the converts. The new religion was received with open arms and heart; the way must have long been prepared for it.

There is a gap of about eighty years between the mention of the first missionaries and the advent of two other monks, one of whom was Shih-kāo of Parthia, who came to China in 148 and worked till 170. He is said to have been of royal blood and to have left his country because of the fall or decline of his own royal family. This is one of the evidences that Buddhism had a strong foothold in Parthia and Central Asia. It is quite conceivable that Chinese Buddhism had its source close to China's western borders at that time. Shih-kāo's works are mostly texts from *Āgamas*,¹ the counterparts of the Pali *Nikāyas*, and some of them treat of hygienic matters, connected with the practice of counting the respirations, or *ānāpāna*. Perhaps we may see here the first of the medical works of the missionaries.

For a century after the great Parthian translator we have only scanty records of missionaries, yet we have reason to suppose that missions were going on slowly. The Buddhist propaganda in

this period consisted chiefly in translations of the scriptures and in miracle-working. Certainly the works of art and architecture in a new style, aided by elaborate rituals and music, were great attractions; the Pai-ma temple is said to have been decorated with mural paintings representing Buddha and his saints; but the worship of Buddha's relics and the miracles worked by them are mentioned oftener than the works of art. The relics (*śarīra*, Chin. *shōlī*) were represented by pearls of mysterious origin, and the miracles ascribed to them were mostly the rising of variegated mists from them. Little is heard of works of charity, though they are sometimes mentioned later than the 4th century. That the translations played a great part in the Buddhist missions is proved by the work done during the five centuries after the first undertaking. This was quite natural, because the Chinese already had rich literatures, both Confucianist and Taoist, when Buddhism came to China, and the new religion found it urgent to confront them with scriptures of its own.

Besides the translations, the first apologetic writing is ascribed to A.D. 195, and a series of apologetics and polemics followed.¹ This literature continued throughout the whole history of Chinese Buddhism. Its most flourishing period was in the 4th and the 5th centuries, during which Taoism was a powerful rival of Buddhism. These polemics were mostly carried on by native teachers, while foreign missionaries were occupied with translations.

Though polemics do not belong properly to missionary works, we may here consider one instance, in order to throw a side-light on our subject. In 195 Mou-tzu, a Confucianist convert, wrote 37 sets of questions and answers in defence of his new faith. These questions may be divided into two groups: (1) those from the Confucianist side, asserting that Buddha's ascetic religion was against humanity, and (2) those from the Taoist side, asserting that immortality (or, rather, physical longevity) was attainable only by Taoist practices, not by Buddhist teaching. Mou-tzu defended his religion with abundant quotations from Confucius and Lao-tse, but the doctrines with which he confronted the attacks were really Buddhist. The transcendental idealism of supreme enlightenment was the position which he assumed against Confucianist positivism, and the teaching of impermanency of physical life was his standing-ground against Taoist mysticism.² This may be taken as a typical example of the apologetic writings of the period.

The fall of the Hān dynasty in 220 and the subsequent division of the country into the Three Kingdoms were of great significance for the history of the nation, both politically and religiously. From this time down to the close of the 6th cent. the country was divided into many contending dynasties and kingdoms, and in a country like China, where the ruler's will determines everything, the fate of the Buddhist mission was always influenced by the vicissitudes of the ruling dynasties. Centres of missions were identical with the residences of dynasties, and the missionaries worked under their patronage, or were expelled by rulers who preferred Taoism to Buddhism. Under these circumstances three important centres of the mission grew up:

¹ There are collections of these writings; see Nanjio, nos. 1471, 1472, 1479, 1480, 1481.

² The question begins with 'Who is Buddha?' The answer to it shows that the author was acquainted with Buddha's life through information which is very similar to the *Lalitavistara*. Some critics doubt even the existence of this person, on the ground that the polemic literature flourished not earlier than the 4th cent., but we omit discussion of the question and follow the legend.

¹ Cf. B. Nanjio, *Catalogue*, p. 382; Anesaki, 'The Four Buddhist Āgamas in Chinese,' in *TASJ* xxxv. 3 (1908), pp. 171, 28-34.

(1) Chāng-ān (the modern Sing-ān), (2) Lo-yāng (on the Hoang-ho) in the north, and (3) Chien-yeh (the modern Nanking) in the south. During the first half of the 3rd cent. the last two were the respective capitals of two of the Three Kingdoms, while the third was situated far in the west, beyond the reach of Buddhist influence. After a short interval of unity (280-302) these three places remained as the three centres of China in all the vicissitudes of rulers and States. Thus the missionaries who came to China by land routes worked mostly in the north, deriving their sources from Central Asia or the north-west of India, though some went further to the south.

The 4th cent. was a period of confusion in China, caused by a hopeless division of the country and by intrusion of invaders from the north. Yet Buddhist missions proceeded to cover the greater part of the land, and many of the contending rulers welcomed missionaries from Central Asia. One of these men, Fo-t'u-cheng, who came in 310 to Lo-yāng from a 'western country,' laboured not as a translator but as a social worker. It is said that he was 'well versed in magic formulæ and saved many people from diseases and sufferings by his supernatural attainment.' No fewer than 893 monasteries and sanctuaries were established by him, and his 'disciples' numbered 10,000. But his significance in Chinese Buddhism lay perhaps more in his having educated one of the most powerful thinkers, Tao-ān, than in his actual works; though he laboured mostly in the north, his influence was later propagated to the south by his disciples.

The demarcation between north and south became more conspicuous when, at the beginning of the 5th cent., two comparatively powerful dynasties divided the country into two. While the northern, the Wei dynasty, patronized those who came from or through Central Asia, the southern, the Sung dynasty, invited missionaries from S. India, who came by the sea route. Moreover, the repeated persecutions of Buddhists by Taoist rulers of the northern dynasties drove many missionaries and Chinese monks to the south, and it was through them that a start was made in establishing groups of men of similar tendencies, which became the origin of sectarian division in Chinese Buddhism.

Among those who worked in the north the most prominent was Kumārajīva, a native of Karachar. He came to Chāng-ān in 401, having been invited by the prince of the Tsin dynasty, and, being highly patronized by the latter, he worked there with great success for more than ten years. His lectures were attended by crowds from various classes of people, and his work of translation was assisted by the best scholars and men of letters. It is no wonder that the translations ascribed to him are ranked as classical Chinese, and that his translation of the *Lotus of the True Law* ([*q.v.*] *Saddharmapundarikā*) remains the most valued and revered of the Chinese Buddhist scriptures.¹ Kumārajīva was apparently a monk, but his conduct was very irregular, for he lived with many concubines; yet his talent was so appreciated and his fame so high that his patron and the people honoured him, despite his neglect of Buddhist discipline and in spite of attacks heaped upon him.

A powerful rival, however, appeared in the person of Buddhahadra, who was invited to Chāng-ān in 398. He is believed to have arrived at the coast of Shantung by the sea route, having once failed to come by land. In contrast to Kumārajīva, he observed austere rules of monastic

life, and instructed his followers in discipline and in meditation. At last a critical rupture between the two great men broke out, and Buddhahadra took refuge in the south, where Tao-ān's disciples were living secluded in a monastery on Mount Lu-shan, in the modern province of Chiang-hsi. The leader of the group was Hui-yūan († 416), and its members were monks, poets, and philosophers who were disgusted with the troubles of the world and devoted themselves to meditation and conversation with one another. Here Buddhahadra found men more congenial than the Buddhists of the north, and instructed them further in the secrets of Buddhist mental training. In this group of thinkers we see Chinese Buddhism quite acclimatized to the native soil, especially to the poetic and transcendental mood of the southern Chinese, and preparing for further union of Buddhist meditation with Chinese quietism. It was on this ground that a definite school of meditation, known as Shan-no (Skr. *dhyanā*), later established itself and further impressed Buddhism with the poetry of the valley of the Yang-tzu. Although the followers of the Shan-no school trace their origin to Bodhidharma, who is believed to have come to China by sea in 520, the further source is to be found in the group of recluses at Lu-shan who welcomed Buddhahadra. After all, we can assign the foundation of Chinese Buddhism, relatively apart from foreign missionaries, to Tao-ān and Hui-yūan. Yet, parallel with this native movement, missionary work was proceeding, both in the north and in the south.

As we have mentioned, the south welcomed Indian missionaries, many of whom came by sea, and we find a sudden growth of sea-communication with India from the dawn of the 5th century. The pioneer of the sea-voyage from Ceylon to China was the famous pilgrim Fa-hian, who arrived at Shantung in 414, and who was followed by a series of Buddhists who sailed to China and worked mostly under the patronage of the southern dynasties. The most eminent of these was Gunavarman, who came to Canton from Ceylon, *via* Java, in 424. He laid the foundations of two monasteries called Chao-ti (Chetiya) and Ch'i-yan (Jetavana) in Nanking. Here he instructed his followers in the strict discipline of the Vinaya and instituted the system of ordination, as an initiation into Buddhist mysteries, by establishing a special centre for the purpose, after the model of the *Śīmā* of Nālandā (*q.v.*). The arrival of a number of Sinhalese nuns in 434 under the leadership of a certain Tissara (?) was probably connected with his institutions and intended for starting nunneries after the model of Sinhalese Buddhism. Another group of nuns came from Ceylon in 438. Among those who followed the footsteps of Gunavarman are to be mentioned Kālayāsa and Dharmamitra, both translators of Mahāyāna texts; Gunabhadra, the translator of the *Samyukta-āgama*; and Saṅghabhadra, the translator of the Pāli *Samanta-pāsādikā*, a commentary on the Vinaya written by the famous Buddhaghosa. The last of these is said to have come together with his master, a Tripiṭakā-ācārya.¹

In the 6th cent. we have two notable instances of sea-journeys. One was the journey of Bodhidharma, mentioned above, who is said to have remained silent for nine years after his arrival in China, but who yet succeeded in impressing his spiritual influence and in opening a powerful stream of meditative naturalism in China and Japan.

¹ See J. Takakusu, *Pāli Chrestomathy*, Tokyo, 1900, pp. lxxiv-lxxvi, and *JRAS*, 1896, pp. 416-430. Takakusu's conjecture that this 'master of the Three Baskets' might have been Buddhaghosa himself is plausible, but requires further confirmation. The translation of the *Samanta-pāsādikā* is dated 480.

¹ Later in the 6th cent., the Indians Bodhiruchi and Jñānagupta, the famous translators of many Mahāyāna texts, worked in the north.

The next instance was the voyage of Paramārtha, who arrived in China in 546 and was invited to Nanjing in 548. To him we owe the translations of many of Asanga's and Vasubandhu's works and some other books. He was the first propagator of the Yogācāra Buddhism in China, even before Yuan-chwang, the great translator of the 7th century.

Thus the Buddhist missionaries came to the Middle Kingdom from two sides by two routes, one *via* Central Asia and the other *via* Ceylon.¹ Their works of translation laid the foundation for the further development of their religion in the East, and have given us a rich store of information. On the other hand, we must not forget the pious zeal of the Chinese pilgrims who went to the West in search of truth and scriptures, the most prominent of whom was Fa-hian. It is related that the missionaries coming eastward and the pilgrims going westward met one another everywhere in the 5th and 6th centuries. By the conjoint labour of these men were completed the translations of the four *Āgamas*, together with several of their single parts; the Vinaya texts in various versions, belonging to different schools;² and the important Mahāyāna texts, such as the *Lotus*, the *Flower-garland* (*Avatamsaka*), etc. From these works we can see how Buddhist ideas and expressions were naturalized in the Chinese language, which is totally of different structure from the originals. These books and expressions now form an integral part of the Chinese language and literature.

Up to the 5th cent. Buddhist missions in China consisted chiefly in the work of translation, though we may suppose that popular propaganda was not neglected. Besides these, the monastic institutions were an integral part of the Buddhist religion. The first translation of the *Pratimokṣa* (Pāli *Pāṭimokkha*) and the regular monastic discipline based on it were carried out by Dharmakāla, an Indian, who came to Lo-yang in 250. In the 5th cent. we see a further establishment of the regular method of ordination under the government's patronage and supervision, carried out by Guṇavarman in the south, as mentioned above. The sustenance of these ordained monks and nuns was eagerly patronized as a deed of great merit by rulers as well as private persons. We hear that, when, in 446, Emperor T'ai-wu of the northern Wei dynasty persecuted Buddhists, there were 3,000,000 of these monks and nuns in his territory alone. This may be an exaggeration; but it is quite conceivable that there were 83,000 ordained patronized by the Emperor Wu (reigned 502-549) of the Liang (southern) dynasty, the great protector of Buddhism, and himself an ordained monk. Besides these regular monks many ascetics were revered as saints by the people, and they contributed much to the propagation of the religion, but as much to the dissemination of superstitions. They formed an eclectic element in Buddhism by adopting Taoistic and Indian ways of living and practices, but there were some who were really saintly, or at least beyond the world. Their lives are described in the *Book of Saints and Miracles* (Nanjio, no. 1484), and many of them are hardly to be distinguished from the Taoist 'men of mountains.' The people accustomed to look upon

the Taoist miracle-workers as holy men were also attracted to these Buddhist 'saints.'

We can mention only one instance of a definite record of charitable work. That was a method of famine relief, called *Seng-chi-su*, or 'Church grain' (*Seng-chi*=Pāli *Saṅghika*), which was inaugurated by Thān-yao, a man of unknown origin, in the southern kingdom in 469; a certain percentage of the crops was stored in monasteries and distributed in cases of famine.

While missionary work was advancing, the foundations of doctrinal division, based on the schools prevalent in India, began to arise. The man who stood foremost in systematic treatises on doctrines was Tao-an, mentioned above, who wrote commentaries and essays and emphasized the vacuity of the phenomenal world. In his time a translation of an *Abhidharma* text (Nanjio, no. 1273) was produced, and prepared for the promulgation of Vasubandhu's philosophy by Paramārtha sixty years later. The group of Lu-shan, already mentioned, was another sign of sectarian division, and these men opened the way for the later growth of the meditative Shan-shan school and of the pietistic religion of the Buddha Amitābha. These were, however, only precursory movements for real sectarian division and dogmatic systematization; a really independent growth of Chinese Buddhism and formation of branches date from the latter half of the 6th cent., and then we pass from the missionary stage.

The unity of China achieved by 580 and the rise of the glorious T'ang dynasty in the beginning of the 7th cent. mark a new era of Chinese history, political as well as religious; and we may close our survey of the Buddhist missions with this time. It remains to be added that, in the 8th cent., the mystic Buddhism, known as the Mantra sect, was introduced by two foreign missionaries, Śubhakarasiṃha and Amoghavajra. This form of Buddhism became influential in Japan after the 9th century. Towards the close of the 10th cent. there was again an influx of Indian missionaries, but they are of no great significance.

2. In Tibet.—As in the case of China, the early history of Buddhism in Tibet is shrouded in nebulous legends. The missionaries dispatched by King Aśoka touched the Tibetan borders, probably along the western parts of the Himalayas; but it is more than a hundred years after his time that legend tells us of the establishment of a Buddhist temple on the Tibetan side of the mountain range. This legend and the story of the miraculous descent of four caskets containing Buddhist treasures, in the 4th cent. A.D., may be taken as indications of Tibet's contact with Buddhist missions. Dismissing these legends, the first date that can be assigned with certainty for Buddhism in Tibet is the 7th century. The reigning king was Srong-btsan Gam-po († 698), and Buddhism was introduced into Tibet by his marriage with a Chinese princess and also with a Nepālese princess. The former marriage is confirmed by Chinese history; the name of the princess was Wen-ch'eng, and the marriage took place in A.D. 641. She brought with her Buddhist statues and books, and probably some priests, and established a firm footing for Buddhism in that country, which had gradually been coming into contact with the religion through its eastern and southern borders. The Nepālese princess was the agent in introducing the occult worship of the Buddhico-Hindu goddess Tārā, the event which determined to a great degree the nature of Buddhism destined to prevail in Tibet.

The legends concerning this introduction of Buddhism into Tibet and the succeeding events throw little light on the nature of the missionary labours undertaken by the Buddhists; we are

¹ According to Nanjio, App. ii., among 72 translators who worked between 47 and 420, there were 15 Indians, 7 Yuechia, 6 Parthians, 7 Kubhans, 21 from the western countries and 17 Chinese; among them 22 worked in the south, of whom 5 were Chinese. Among 43 workers who worked between 420 and 550, 14 were Indians, 10 from Kubha and other western countries, 4 Sinhalese and Indo-Chinese, and 4 uncertain. Among them 27 worked in the south.

² For the whole extent of the work done up to 520 see Nanjio, pp. xlii-xvii; for the *Āgama* texts see Anesaki, *op. cit.*

told only of the actions taken by the rulers and their ministers. Certainly the propaganda proceeded among the people by supplying them with new objects of worship and new methods of cult, but the most important factor in determining the fate of the new religion was in the hands of the rulers. The stimuli given by the Buddhist consorts of Srong-btsan Gam-po caused him to send his able minister Thummi Sambhota to India, where he performed a great service for Buddhism and for Tibet by inaugurating a Tibetan alphabet after the model of the Skr. Devanāgarī. Translation of Buddhist books, partly from Chinese, but much more from Sanskrit, was made possible by this system of Tibetan letters. A decisive step in the work of translating Buddhist books into Tibetan was taken more than a century later, in the reign of Khri-Srong De-btsan (reigned 740-786), who was a successful conqueror of borderlands. It was he who invited learned Buddhists from India and gave a decided turn to the nature of Tibetan Buddhism, because those Indians mostly advocated occult mysticism based on the belief in the efficacy of *dhāraṇī*, or mystic formulae, and magic practices. Among these agents of mystic Buddhism we mention two names: Padmasambhava (or 'Lotus Growth,' with an allusion to the lotus as the womb of the cosmos), who introduced many writings, and his disciple, Pagur Vairochana, the 'Great Translator.'

The 9th cent. was a period of confusion in Tibet, and the fate of Buddhism passed through various vicissitudes in association with the inclination of the rulers and with their rise and fall. From the latter part of the 10th cent. we see fresh streams of N. Indian Buddhists and a firmer establishment of mystic Buddhism. Besides the translations, many original writings, historical and doctrinal, were composed in Tibetan; and the missionary stage may thus be closed in this period. After all, accessible material concerning Buddhist missions in Tibet is scarce, and what is known relates only to political support by the government, and to translations produced by foreigners and Tibetans.

The 13th cent. was an epoch-making period in the history of Tibetan Buddhism, in connexion with the conquest of Asia by the Mongol Kublai Khān. Buddhist missions seem to have been active before this time in Mongolia, and the Mongol conquerors were partly converted to Tibetan Buddhism, though all of them were eclectics of promiscuous nature. Tibetan Buddhism was definitely established as a theocracy by the energy and ability of Phagspa, the ally of Kublai Khān, and its influence was extended to the northern countries and even to China. The definitely independent, and totally isolated, growth of Tibetan Buddhism is to be dated from the latter part of the 14th cent., when the Mongol dynasty in China fell and the Tibetan reformer Tsong-Kha-pa arose.

3. In Korea.—When, in the 4th cent., Buddhism was being naturalized in Chinese culture, its propagation further eastwards began. At that time Korea was divided into three kingdoms and several minor States. Of these three Koryō (or Kokuryō) was situated in the north, and first came into contact with Buddhism. In 374 two monks, Atao and Shuntao, both of whom are said to have been foreigners, were invited from N. China to the capital of Koryō (the modern Pien-yang), and in the next year two temples¹ were built for them, while in 384 a certain Mālānanda was welcomed by the court of Paikch'yōi, which was situated in the middle of the country. Historical records tell of

the construction of temples and of the arrival of missionaries, both Indian and Chinese, from China, but little information is given of how they worked in their propaganda, this fact being partly due to the circumstance that these records were compiled by the Confucianists of the anti-Buddhist dynasty of the 15th century.

The Buddhist propaganda advanced to the southern extremity of the peninsula in the middle of the 5th century. An ascetic, nicknamed the 'Black Foreigner,' preached the Three Jewels in the south and is said to have cured a princess of the Silla kingdom by means of incense and spells. He was followed by some missionaries who came to the south and gained hold of the people's minds. The worship of Buddha was received officially by the king of Silla in 528, and this monarch and his successors were not less zealous in the Buddhist cause than the rulers of the north. The construction of temples and organization of Buddhist rites came into vogue. A king who ruled in 540-576 became a monk, and his consort became a nun; and the propaganda advanced so far in his reign that a Korean priest was appointed archbishop of the realm of Silla.

4. In Japan.—In nearly a century and a half Buddhism had converted the whole of Korea, and it was quite natural that the tide of the mission should also reach Japan, which had a close communication with the peninsular States and had introduced Chinese learning in the beginning of the 5th century. The religion was first advocated by the Korean immigrants, and then by some natives. After these preparations, it was presented officially by the king of Paikch'yōi to the Japanese court as a sign of homage and friendship in 538 (the date is usually, but erroneously, given as 552). The presents consisted of a gilt statue of Buddha, scriptures, banners, and other ritual instruments,¹ and the message which accompanied these presents said:

'This teaching (*dharma*) is the most excellent of all teachings. It brings infinite and immeasurable fruits to its believers, even to the final enlightenment (*bodhi*). Just as the *Chintāmanī*² jewel is said to give inexhaustible wealth to its possessor, so the jewel of this glorious Law never ceases to give response to those who seek for it. Moreover, it has come to Korea from India, far distant, and the peoples of the countries lying between these two are now all adherents of it; etc.

These words, accompanied with a fine image and works of art, were a marvellous revelation to a people who knew only how to invoke spirits supposed to be little superior to men. The court, on the other hand, was divided into two parties, one favourable to the new worship, and the other hostile, the point of their dispute being whether the newly-offered deity was more powerful than the national deities or not. The hidden motive of the difference, however, was the political clan strife, intermingled with the difference of progressive and conservative policies. During fifty years of strife the fate of the new religion seemed always wavering. But the presents were followed by an incessant influx of priests, monks, artisans, and physicians, as the rearguards of the religion. It was natural that elaborate rites and the practice of medicine should be most effectual means in the conversion of a rather primitive people like the Japanese at that time. Though the religion was not yet accepted officially by the court, some sovereigns cherished it as their faith, and the Soga family, the head of the progressionists, became its zealous advocates. They built topes and temples, and we hear of a nunnery founded by the family in 584. The fall of the conservative party in 587 marked a decisive step in the progress of Buddhism, and to commemorate this event a temple was built,

¹ Cf. W. G. Aston, *Nihongi*, II. 65 f.

² The *chintāmanī* is a mythical jewel; Aston's translation, 'to his heart's content,' is not accurate.

¹ The names of these temples, Syo-mun and I-pul-lan, sound neither Chinese nor Korean.

for the first time at State expense. The erection of these and other Buddhist buildings caused constant importations of Buddhist statues, utensils, etc., accompanied by missionaries and artisans, and these displays of art were associated with works of charity. Three institutions—an asylum, a hospital, and a dispensary—were attached to a temple built in 593, and similar institutions were founded here and there in the subsequent centuries.

In the regency of Prince Shōtoku, the Constantine of Japan (reigned 593-622), the new religion became the State Church. Not only were missionaries and learned monks invited from Korea, but direct communication with Chinese Buddhism was opened (605), and Japanese monks were sent to China for study. The number of the Korean missionaries who worked in this period was considerable, and their achievements in preaching religion, in teaching science, especially astronomy, and in other matters, were a great credit to them; but the new religion found native teachers in less than a hundred years after its introduction. The prince himself gave lectures on Buddhist scriptures and organized various institutions. In short, the Buddhist propaganda in this century consisted first in the display of forms, then in works of charity, chiefly medical practices, and lastly in teaching. The mission, however, did not extend very far from the capital in Yamato. The acceptance of Buddhism was closely connected with the diplomatic relations with the Korean States and China, on the one side, and with the efforts to centralize the government and to unite the divided clans by religion, on the other. The development of religious institutions and the management of State affairs assisted each other.

After the decisive step of the adoption of the Buddhist faith had been once taken, the progress of the religion was sure and steady. Its influence was propagated gradually from the capital to the provinces. Many Korean immigrants, some of whom were usually monks and nuns, were offered homes in various provinces, and the number of native workers increased, some of whom studied in China or Korea. The donations given not only to large monasteries and to clergy of higher ranks, but also to the poor and aged monks and nuns, show how numerous were the ordained natives and immigrants. Besides these Korean and Japanese priests, a certain number of Chinese, Indians, and other foreigners carried on the Buddhist propaganda, the most famous of whom were Kanjin, a Chinese, and Bodhisena, an Indian. The former founded the central institution for ordination and monastic discipline, and was appointed archbishop (754-763 in Japan).¹ He was also an organizer of medical practice and founded a botanical garden. The Indian was of the Brāhman family Bhāradvāja. He came to Japan in 736 with his Annamese and Chinese followers, some of whom were musicians, and worked as a bishop till his death in 760, being known as the 'Brāhman bishop.' These missionaries brought many useful arts and things Indian, which contributed to the influence of the religion, such as musical instruments, Indian harps, and the bas-relief in the Græco-Bactrian style, preserved in the Imperial treasury, dating from the 8th century. Among the native workers there were some learned men, who laboured mostly in the capital as teachers and bishops; others were practical men who worked in the provinces in bridging rivers, constructing roads, canals, harbours, and ponds, opening mountain passages, planting avenues, etc. We do not know how or where these men learned their arts and crafts, but their works were so wonderful to the people that many miraculous stories are told of them even to this

¹ *Travels of Kanjin*, tr. J. Takakusu (in preparation).

day. The mention of some Ainu monks, whom the court favoured with gifts in 689, shows the advance of the propaganda to the far north-east.

The elaborate system of ritual, medical work, etc., which had been the chief means of the propaganda, remained in vogue for a long time. The distribution of medical stores and the dispatch of combined bands of monks and physicians into the provinces are constantly mentioned in the 8th century. In addition to these methods, religious ceremonies for the welfare of the ruling families and for the tranquillity of the country became the order of the day in the court as well as in the temples, and were patronized by the government and by the nobles. These pious deeds were extended to the provinces, and scriptures were distributed wherever there were any priests. The founding of provincial cathedrals (*kōkubun-ji*) was followed by the founding, near the capital, of the central cathedral, which was dedicated to the great statue of Lochana Buddha, now known as the Daibutsu in Nara, and was completed in 754. These works and dedications converted the whole of Japan into a Buddhdom before the close of the 8th century. There are many remains of these works to this day, and Japan owes the sculptures, which have never been excelled by later works, to the same period.

It is obvious that the methods of the religious mission contributed to the unification of the country. Charitable works were regarded in the provinces as the boons not only of the Church but also of the State; splendid religious buildings were held to be signs of the power of the court. It was not merely by the mysterious efficacy of the worship and ceremonies that the security of the throne and the tranquillity of the country were maintained and increased; the Buddhist mission in the provinces during these two centuries was at the same time a political mission.

By the 9th cent. the unity and centralization of the national government were complete. From that time Japanese Buddhism began to stand on its own feet, even though the Japanese Buddhists were still indebted to their co-religionists on the continent. The two brightest stars of the Buddhist history of Japan, Dengyō († 822) and Kōbō († 835), were once students in China, but these two men opened the way for the development of Japan's own Buddhism. Thus the beginning of the 9th cent. may be taken as the end of the Buddhist mission in Japan.

One thing remains to be added, viz. a new influx of Chinese influence in the latter half of the 13th century. The introduction of the Zen (*dhyanā*) Buddhism, which was produced by Bodhidharma in China, as mentioned above, necessitated a fresh influx of monks and artists, whose great influence upon Japanese art, literature, and social life in the 14th and 15th centuries must be recognized. Tea, fans, kakemono, and similar things, now known in the West as 'things Japanese,' Japan owes to these communications with Chinese Buddhism.

Taking a general survey, we see a remarkable contrast between the Buddhist missions in China and those in Japan. In China works of charity seem to have played rather an insignificant part and translations of scriptures an important part; the opposite was the case in Japan; no Japanese translation of the Buddhist scriptures was made till quite recent times. Chinese has remained the sacred language of Japanese Buddhism almost throughout, though there have been some original writings in Japanese. This antithesis is due to the different levels of civilization on which China and Japan stood at the time of the introduction of Buddhism.

MISSIONS (Christian, Early and Mediæval).

—I. From the close of the Apostolic Age to the conversion of the Empire (c. A.D. 100-323).—Missions were the main external activity of the Christian community in the earliest time. Before the middle of the 2nd cent. (c. 140) Justin Martyr claims for them a very wide field of operations—not merely over the Hellenic-Roman world, but beyond.

'There exists not a people, whether Greek or barbarian, or any other race, by whatever title or manners they may be marked out, however ignorant of arts or of agriculture, whether they dwell under tents or wander in covered waggons, among whom prayers are not offered in the name of a crucified Jesus to the Father of all things' (*Dial. c. Tryph.* 117).

Much to the same effect, but more guardedly, Irenæus tells us (c. 180) that even then many barbarous nations held the Christian faith, written not with pen and ink, in books or papers, but by the Holy Spirit in their hearts (*adv. Hæc.* III. iv. 2). Tertullian likewise (c. 200) boasts of the rapid spread of the Church:

'We are a people of yesterday, and yet we have filled every place belonging to you . . . your very camp, palace, . . . forum . . . we leave you your temples only. We can count your armies; our number in a single province will be greater' (*Apol.* 87).

Britons beyond the Roman pale, Sarmatians, Germans, and Scythians are among the more distant races that he reckons as already touched by Christianity (*adv. Judæos*, 7). Origen (c. 230-240) declares the gospel not merely to have won myriads of converts among 'all nations,' but, more precisely, to have penetrated into many parts of the barbarian world (*c. Cels.* i. 27, ii. 13); while Arnobius (c. 304) denies that any nation of the barbarians was then without some Christian influence (*adv. Gentes*, i. 16, ii. 5). From Eusebius (c. 320-330) we hear of the ex-Stoic Pantænus of Alexandria undertaking a missionary journey to India about 180 (*HE* v. 10); here Pantænus is said to have found a Gospel of St. Matthew in Hebrew which had been left there by the apostle Bartholomew. Even if by this 'India' is understood the 'Lesser' or 'Third India' of some early geographers, including parts of the S. Arabian shore-lands and of Abyssinia, this is a noteworthy journey. Origen again, about 215, was invited to teach the Gospel in Arabia, and accepted the invitation (*Eus. HE* vi. 19). From Edessa in N. Mesopotamia, where the Church was firmly settled by 150, Christianity was propagated in the Persian kingdom, even to Bactria. Bishop John, 'of Persia and Great India,' attended the Nicene Council in 325. Armenia, which may, however, be reckoned as usually within the Roman Empire, or at least within its sphere of influence, till the disasters of the later 4th cent., was won by the Church, shortly before the winning of the Empire, at the end of the 3rd century. Gregory the Illuminator was the leading person of this mission (c. 302), and Armenia was the first country in which Christianity was adopted as the national religion. In the early days of Constantine (c. 311) Bishop Hermon of Jerusalem sent missionaries (Ephraim and Basil) to 'Scythia' and to the Crimea, part of which at least may be considered Roman. About A.D. 100 St. Clement, the fourth bishop of Rome, had been martyred at Kherson, representing the modern Sevastopol.

2. From the conversion of the Empire to the rise of Islâm (c. 323-632).—Important extensions of Christianity followed the conversion of Constantine.

(a) *Africa*.—Among these one is African. The Abyssinian Church was founded, or at least Christ-

ianity became the religion of the nation, from about 330, through the work of missionaries from Alexandria. Frumentius, a follower of Athanasius, who consecrated him as bishop of Ethiopia, or Nearer India, was the leader of this mission. From 356, again, the Arian emperor Constantius entered on a far-reaching scheme of Arian proselytism in Abyssinia, Southern and South-Western Arabia, and the coast lands of Persia and India, as far as the Indus, and perhaps beyond. Even before 250, perhaps by 200, Christianity had begun to spread among the native African tribes, on the fringe of the Roman Empire, in modern Tunis and Tripoli. In the 6th cent., in the reign of Justinian, and largely through the influence of the empress Theodora, Christianity was planted among the Nubians (from c. 548). Till the 14th cent. a Nubian Church maintained itself, though cut short by Muhammadan conquest, when, less fortunate, if not less heroic, than the Abyssinian (protected by its highlands, and saved, at a critical moment, by Portuguese aid), it succumbed to Islâm.

(b) *Asia*.—In Asia, beyond the limits of the Empire, Christianity, Orthodox or Nestorian, went far afield, before the outbreak of Muhammadan conquest in the 7th century. Bishop John, 'of Persia and Great India,' as we saw, attended the Nicene Council in 325; in 334 we hear of a bishop of Merv; the line of the metropolitans of 'Babylon' (*i.e.* Ktesiphon and Seleukeia [Σελεύκεια ἢ ἐν Βαβυλῶνι]) likewise began in the 4th cent.; and in the same period the Persian Christians suffered fierce persecutions from the government, largely at Magian instigation. In the 4th cent. a Syrian mission went to Malabar. Arnobius even speaks vaguely of Christianity having been preached among the 'Seres,' or Chinese of the interior—'China as approached by land'—before the conversion of Constantine, but this is unsupported and in itself doubtful.

In the 5th cent. Nestorius and his followers were cast out of the Church (431); a Nestorian communion was rapidly organized; and a wonderful missionary energy was shown by this 'Protestantism of the East.' In 498 the Nestorian patriarchate of Babylon or Ktesiphon was set up; this in 762 followed the Abbâsid khalifs to their new capital of Baghdâd. About 505 Christianity reached China in Nestorian form. In 551 Nestorian monks brought the eggs of the mulberry silkworm from China to Constantinople. Before 540 Nestorian bishops appeared at Samargand and Herat, and from the same time we have sepulchral evidences of Nestorian Christianity as far as the Semirychensk, or 'Seven Rivers,' district of the Balkhash basin, close to the Russo-Chinese frontier of to-day. These funeral monuments extend from A.D. 547 to 1027, but are mostly of the 10th and early 11th centuries; they commemorate clergy, laymen, and women. One refers to a priest 'sent round to visit the churches,' perhaps something of a missionary. Gregory of Tours in the 6th cent. collected some information about Indian Christianity, partly from an Indian Christian who had come to Western Europe from the 'Thomas Country' near Madras. Nestorian missions had now penetrated to India, and were transforming the native Christianity.

Cosmas Indicopleustes of Alexandria, the author of the *Christian Topography*, who in his earlier life was probably a Nestorian himself, describes the vast extent of an Eastern Christianity, beyond the Imperial limits, which must have been largely Nestorian, about 550. Churches were then to be found, he declares, in Ceylon, Malabar, and Socotra, with 'a bishop and clergy ordained and sent from Persia'; in Bactria and among the Huns; in Mesopotamia, Scythia, Hyrcania, and

other lands east of the Euxine (see bks. iii. and xi., esp. p. 178 f. of B. de Montfaucon's ed. [*Coll. nova Patr. et Script. Græc.*, Paris, 1706, ii. 113 ff.] = *PG* lxxxviii. 168 f.). At no time, perhaps, till the Russian colonization of North Asia was Christianity more strongly supported in Eastern lands than at this time.

(c) *Europe*.—St. Patrick's conversion of Ireland (from c. 430) opened to Christendom a land that had never been Roman, and was practically unknown to Continental Europe, after Honorius withdrew the legions from Britain. The full discovery of Ireland was the work of Christian missionaries. Within a century of St. Patrick's death the Irish took up a great mission-work of their own. From about 550 to 800 the Irish Church showed its greatest energy abroad, and perhaps reached its highest prosperity at home. Its followers preached with remarkable success among the English who had overrun Eastern Britain. They carried the gospel further into Caledonia than Agricola had ever carried Roman conquest. Some of their pioneers reached the Orkneys, the Faroes, the outermost Hebrides, and even Iceland (of the last Irish monks were the first discoverers, in 795).

Despite the fictions with which the early history of Scotland is overlaid, it need not be questioned that some progress was made by Christian missions beyond the Firth of Forth even in the 5th century. St. Ninian, the founder of 'Candida Casa' in Galloway, who was apparently working in the south-western centre of modern Scotland about 390-430, is specially associated with these enterprises.

The Roman mission dispatched by Pope Gregory I. to England in 597 was concerned with a country lying within the Old Empire, and so outside the proper field of this article. It was, however, the commencement of a movement which in course of time penetrated to non-Roman lands—Scotland, Ireland, Central Germany, the Scandinavian kingdoms—and played a great part in winning them to Christianity, or in turning them from their native Church to Roman allegiance.

3. *From the rise of Islām to the Crusades (632-1096)*.—The vigour, or at least the extent, of Nestorian missions in South Asia in the first age of Islām is evident from a letter of bitter complaint from the Nestorian patriarch to the bishop of Fārs (or 'Persia' proper) about 650. It was owing to his neglect, the patriarch declares, that the people of Khorāsān had lapsed from the faith, and that India, 'from Fārs to Colon' (Kulam, or Quilon, near Cape Comorin), was now being deprived of a regular ministry. We find the same patriarch writing to the Christians of Socotra and of Balkh, and undertaking to provide a fresh supply of bishops for his spiritual subjects of the Upper Oxus. His successor, in order to appease an old quarrel between the Christians of Bactria and the metropolitan of Persia, visited Balkh about 661.

But the crowning achievements of early Nestorian enterprises were in China, and of these we have an account in the famous monument of Si-gan Fu. In 635-636 a missionary, who appears in the Chinese Record as 'Olopan' (Rabban), entered the 'Flowery Land,' and reached Si-gan Fu, the capital of the Tang dynasty. He had come, we are told, from 'Great China' (the Roman Empire); he was received with favour; his teaching was examined and approved; his Scriptures were translated for the Imperial library; and within three years an Imperial edict declared Christianity a tolerated religion. With the speculative fairness of his race (and of one of the greatest of Chinese rulers) T'ai-tung welcomed any religion whose spirit was 'virtuous, mysterious, and pacific.'

The radical principle of the new faith, he thought, 'gave birth to perfection and fixed the will.' It 'was exempt from verbosity, and considered only good results.' Therefore it was 'useful to man, and should be published under the whole extent of the Heavens. . . . And I command the magistrates to erect a temple of this religion in the Imperial city, and twenty-one religious men shall be installed therein.'

T'ai-tung's successor was no less friendly.

'He fertilized the truth, and raised luminous temples [Christian Churches] in all the provinces, till they 'filled a hundred cities. . . . The households were enriched with marvellous joy.'

'Olopan' himself became a 'Guardian of the Empire,' and 'lord of the Great Law.'

Then followed, from about A.D. 683, a time of disfavour and oppression. Chinese conservatism rallied against the new worship.

'The children of Che [Buddhists] resorted to violence, and spread their calumnies; low-class men of letters put forth jests. . . .'

But after a time the Nestorian Church in China, as in India (and about the same time), revived. Fresh missionary enterprise was one cause of this, in both fields.

In A.D. 744 'there was a religious man of Great China named Kihō, who travelled for the conversion of men'; on his arrival in the Middle Kingdom, illustrious persons united 'to restore the fallen Law.' In 747 the emperor brought back 'the venerable images' to the Temple of Felicity, and firmly raised its altars; with his own hand he 'wrote a tablet' (probably for the great church of the capital). His three successors all 'honoured the luminous multitude.' One observed Christmas by burning incense; another 'instituted nine rules for the propagation of the doctrine'; various high officials of the court, a member of the council of war, and several governors of provinces 'rendered perpetual service to the luminous gate.' The inscription closes with words of thankfulness; never had the mission been more prosperous than when 'in the year of the Greeks 1092 (A.D. 781). In the days of the Father of Fathers, the Patriarch Hanan-Yeshuah, this marble tablet was set up with the history of the . . . preaching of our fathers before the kings of the Chinese.' Hanan-Yeshuah died in 778, but news of his death would naturally take a considerable time to travel from Baghdād to Si-gan Fu.

The general truthfulness of this record (the most remarkable witness that we possess of Christian activity in the Further East before the 13th cent.) is supported by what we know of the Chinese mission from other sources.

Between 714 and 728 the Nestorian patriarch appointed the first metropolitan for China; in 745 the Chinese emperor decreed the name of 'Roman temples' to the Christian churches of his empire; about 790 the patriarch of Baghdād sent a new metropolitan to Si-gan Fu, and after his murder at the hands of robbers a successor was dispatched, with six other bishops and a party of monks.

Like the Chinese mission, the Indian was revived in the middle of the 8th century. About 745 a party from Baghdād, Nineveh, and Jerusalem, under orders from the arch-priest at Edessa, arrived in India, with the merchant Thomas—the 'Armenian merchant' of Gibbon (*Decline and Fall of the Roman Empire*, ed. J. B. Bury, London, 1896-1900, v. 150).

In 774 the Hindu ruler of the Malabar coast granted a charter, graven on copper, to the Christians of his dominions. A famous inscription discovered in 1547, on St. Thomas Mount near Madras, probably of the 8th cent., but perhaps even earlier, another charter of 824, to the Malabar Christians, the journey of Bishop Abraham about 800 from Basra to China, and the Arab references to the strength of Christianity at this time and down to the Far Eastern revolution of 878, may also be cited. Finally, the continuance of the lines of metropolitans in China, India, and the Merv region, and the permission granted them, about 850, to be absent from the central councils of the Nestorian Church (at or near Baghdād, every four years), are other fragments of evidence to the vigour of Nestorian missions at a time (c. 750-850) which perhaps marked the close of their greatest development.

From the end of the 9th cent., however, this Nestorian expansion began to be seriously checked. The Nestorians had been in high favour, not only with the Chinese emperors, but also with the Muhammadan khalifs, as guides to the Greek treasures of letters, science, and medicine. But, as Arabic learning progressed, the Nestorian position became less important and privileged; the spread of Islām tended more and more to contract the area still left open for Nestorian activity in many regions; and in China the old conservatism revived. The disorders of 878 and the years following produced another Chinese reaction against alien importations. The baleful effects of civil war were attributed to foreign devilry, and in the next century Chinese Christianity much declined. Thus a Muslim writer of the later 10th cent. (c. A.D. 987) reports a conversation in Baghdād with a monk who had been sent to China seven years before, and had returned in despair on finding but one person of his faith still extant there. This was probably pessimism. Nestorianism, even to the 14th cent., maintained a certain position in the Far East; it was the only form of Christianity that the Polos found (and in many a city they found it) scattered, however thinly, throughout the Chinese Orient; in the 11th cent. it had won fresh triumphs in Central Asia. About 1007-08 the Khān of the Keraites (one of the four main branches of the Mongol Tatars, living in the basin of Lake Baikal) was converted to Nestorian Christianity. With him doubtless went many, perhaps the bulk, of his tribe; and in this event is apparently the ultimate source of the tradition of 'Prester,' Presbyter, or Priest, 'John.' In all its earliest forms this tradition is not African, but Asiatic; it refers to a Christian potentate in the 'extremity of the East' or the heart of Asia, supposed to unite in himself royal and sacerdotal power and office, to have great military and political importance, to rule extensive dominions, and to uphold the faith of the Cross, though surrounded by unbelievers, and cut off by vast distance from the main body of the Church. This is the story, as it takes shape in the 12th cent., and as it is referred to by the great European travellers of the 13th; not till the 14th (from c. 1330) do we find it transferred to Africa and associated with the 'Emperor of the Ethiopians' or Negush of Abyssinia.

In Northern Europe, beyond the limits of the Old Empire, the Roman missions advanced rapidly in the 8th cent., after success in England had once been achieved, and largely as a result of the reflex action of that English mission. The movement that Gregory had started flowed back upon the Continent with new force from the converted island. In Frisia, Thuringia, and Bavaria the tribes beyond the Rhine were gradually converted by Frankish, Irish, and English missionaries in the obedience of Rome; chief among these was the church-statesman and martyr St. Boniface or Winfrith of Crediton (680-755), who became the 'apostle of the Germans,' the first bishop of Mainz and primate of Germany, the reformer of the Frankish Church.

Charles the Great's very forcible conversion of the Old Saxons, between the Ems and the Elbe, again advanced the borders of Christendom on the North (772-804). The same emperor compelled the prince of the Slav Czechs of Moravia to receive baptism (801); but the real conversion of this people, as well as of the neighbouring sister-race of Bohemia, was begun by the Byzantines Cyril and Methodius of Thessalonica, the 'apostles of the Slavs,' from about 863. Cyril had already worked with great success among the (Turkish?) Khazars of S. Russia. Like Ulfilas with the Gothic script,

Cyril and his brother formed a Slav alphabet still prevailing in Russia, Serbia, and Bulgaria, and in Moravia down to the 16th century. Greek formed the basis of the 'Cyrillic' letters in most cases; but some were entirely new—either invented by the missionaries or adapted from various Oriental writings. By the diplomacy of Pope Nicholas I. Cyril and Methodius were brought into close relations with, and obedience to, Rome, and all their Central European work was turned to the profit of the Roman Church. By the end of the 9th cent. the victory of Latin Christianity among most branches of the Czechs may be accepted as complete.

The conquests of Charles the Great brought Frankish Christendom into close proximity to the Scandinavian peoples and the Slavs of the North European plains, and soon after the death of Charles the conversion of these races was seriously commenced. Ansgar or Anskar, the 'apostle of the North,' was born about 801, and about 826 left the monastery of Corbie for the 'Northern mission.' First he worked (with his helpers) in Nordalbingia (or Holstein) on the Danish border, and in Schleswig; obliged to quit this field by a pagan reaction, he made his way even to Sweden in 829, preached before the king, won a great measure of success, and in 831 was consecrated the first archbishop of Hamburg. He was driven hence by a Scandinavian invasion about 845; but in 848 he was appointed to the vacant see of Bremen, with which the missionary diocese of Hamburg was now united. He resumed his work in Denmark (848-853), won the favour of the Danish king, converted a large part of the people, and again opened his campaign in Sweden (c. 853). At his death in 865 Danish, Swedish, and perhaps even Norse Christianity had been securely founded, though complete triumph was not reached for more than a century.

The Bulgarians of the Balkans, settled within the limits of the Old Empire, received Christianity from Constantinople about 845-865, largely by means of the patriarch Photius. This gain was fiercely disputed between Rome and the East, for the Bulgarian Czar, instructed and probably baptized by Photius, also turned his inquiring mind to Pope Nicholas I., and received from him a further supply of Christian teaching and practical advice. The struggle over Bulgaria was one of the chief surface-causes for that schism of Eastern and Western Christianity which now became decisive, and was never really healed again. But the Orthodox Church remained in possession of her Bulgarian gains—in spite of the appeal of Nicholas to listen first to Rome amidst the claims of conflicting teachers, and to cleave to that Church 'which had always been without spot, or wrinkle, or any such thing.'

In the 9th cent., after the sack of Iona by the Northmen (806), the relics of St. Columba seem to have been translated to Dunkeld, which became for a time the centre of Scottish Christianity—till St. Andrews, from about 905, took its place.

Poland perhaps received its first knowledge of Christianity from Bohemia and Moravia. From about 967 the court and ruling classes accepted the new faith in its Roman form, and before 1000 the establishment of Latin Christianity was completed, under the great conqueror Boleslav, who first raised Poland to the position of an important European State.

The earliest mission among the heathen Prussians was probably undertaken by Adalbert (or Voytyech), second bishop of Prague, who travelled into Prussia in 996, and was martyred on the shores of the Frische Haff in April 997. Boleslav 'the Great' of Poland, who had encouraged this mission, placed the martyr's relics at the court-town of Gnesen, which now became an Archbishopric.

The Hungarians, whose attacks on Germanic and Italian Europe were finally ended by the defeat on the Lechfeld in 955, at the hands of Otto the Great, were rapidly won to the Western Church by mission enterprise. By about 975 considerable progress had been made; the reigning Hungarian prince Geisa (972-997) was a nominal, if semi-pagan, Christian; but the complete victory of Christianity was gained by the first king, Stephen 'the Saint,' baptized by Adalbert of Prague about 983. Stephen was called to succeed his father Geisa in 997; he took the royal title in 1000; he put down the pagan opposition; and before his death in 1038 he had completed the establishment of the Latin Church in his kingdom, had organized that kingdom with remarkable success, and had given it a first impression of civilization. He founded colleges, hospitals, and monasteries for Hungarians in Rome, Ravenna, Constantinople, and Jerusalem, and his hospitality to pilgrims was so generous that the overland route through the Hungarian plain came to be generally preferred by the mass of those travelling from Western Europe to Constantinople and Syria.

Roman Christianity, as introduced by Ansgar, won the allegiance of the king, court, and ruling classes of Denmark in the days of Harold Blaatand, or 'Blue Tooth,' a century after Ansgar, from about 966. Yet even after this there was a pagan reaction, accompanied by some persecution (1000-04), under Svend, or Swegen, 'Forkbeard,' the conqueror of England, who vacillated between the old heathendom and the new faith, but finally embraced the latter, after his triumph in the West. Cnut the Great, Svend's son and successor (1014-35), was almost a Danish Clovis, and identified his policy with the work of the Christian Church in all ways.

Christianity in Sweden, likewise founded by Ansgar, did not become the faith of the court and the governing classes till the end of the first millennium, under Olaf the 'Lap-King' (955-1022). Pagan reactions still occurred till far on in the 11th cent., a final one on the eve of the First Crusade—but the battle was really won by 1020.

The first faint beginnings of (Latin) Christianity in Norway may also be traced back to Ansgar's time. Under Haakon I. (935-961) it began to struggle for predominance; the king for a long time endeavoured to promote it, but in his later years, for political and other reasons, he yielded much to the wishes of the pagan party. Heathen and Christian struggled for ascendancy till the short and brilliant reign of Olaf Tryggvason (995-1000), who forced the gospel on the bulk of his subjects with every kind of violence and every art of persuasion. The work was completed by Olaf the Saint, the godchild and third successor of Tryggvason (1015-30).

From Norway Christianity was carried to the Norse colonies of Iceland and Greenland. The German priest Thangbrand, a truly militant missionary, who killed opponents in single combat, was sent to Iceland by Olaf Tryggvason in 997; in 1000 the new faith was accepted (with some important concessions to heathenism) in a National Assembly; and at the same time the gospel reached Greenland, where it soon won the allegiance of the colonists.

Leif Ericson, probably the first discoverer of America, was commissioned by Olaf Tryggvason in 1000 to proselytize his countrymen, on his return from the court of Norway to his home in Eric's Fiord, but the missionary journey was interrupted by storms, which drove Leif to Vinland (Nova Scotia?).

Russia was not really won till the time of Vladimir the Great ('St. Vladimir,' 986-1015).

The patriarch Photius, it is true, claims (c. 867) that the fierce and barbarous Russians had already been converted by the missions of the Eastern Church, but even a century later the mass of the people were thoroughly heathen. Decisive Christian success began with the conversion of Olga, the princess-regent of Kieff, and widow of the grand-prince Igor, who visited Constantinople in 955, and was there baptized into the Greek Church. The full triumph of the faith was delayed for a generation by the refusal of Olga's son Svyatoslav to abandon his heathenism. The work was finished by Vladimir, son and successor of Svyatoslav, and the most effective and powerful head of the Russian people that had yet appeared, under whom Russia gave premature and deceptive promise of playing a first-class part in the world, in the 10th and 11th centuries. After his capture of the Imperial (Byzantine) dependency of Kherson in the Crimea (on the site of the later Sevastopol), and his marriage with an Imperial princess in 988, he accepted the Christianity of the Eastern Church; and his court and the mass of his people followed the example of the grand-prince of Kieff. The progress of the faith was both rapid and deep; no part of Europe became more intensely attached to its Christianity, and no nation perhaps has done more to spread the Christian faith, as it has understood the same. Vladimir died in 1015, but under Yaroslav the Lawgiver (1019-54), who with his father must rank as the chief Russian statesman of the earlier and freer age—before the Tatars—the establishment of the Church was completed.

4. From the First Crusade to the end of the mediæval time (1096-1453).—Thus, before the close of the 11th cent., nearly all Europe had been won to Christianity of the Roman or the Greek allegiance, and the borders of Christendom had been extended, to North and East, far beyond the limits of the Old Empire—to Greenland and Iceland, to Norway, Sweden, and Denmark, to the shores of the Baltic, the plains of Poland, the Carpathian highlands, and the western regions of Modern Russia—Kieff, Smolensk, Novgorod. Novgorod enterprise, it is probable, had by 1096 carried the religion as well as the trade of that great Republic into some of the regions and among some of the tribes of the furthest North and North-East—in the White Sea basin and in the valleys of the Dvina and Pechora.

A little later, in 1121, the bishop of Greenland undertook what was probably a missionary journey to America—he 'seeks Vinland'—but we hear no more of him.

Christendom, as thus constituted, included some pagan *enclaves*, mainly along the South and East of the Baltic, such as the countries of the Lithuanians, the Finns of Finland (and N. Russia), the Old Prussians, and the Wends and other Slavs of Pomerania and other lands afterwards included in Eastern Germany. In the 12th cent. much of this land began to be won. The Finns of Finland were conquered by the Swedes in a war which had something of a crusading character (c. 1157-58), and the profession of the Roman Catholic faith was gradually enforced. Russian Christianity meanwhile appears expanding in the far North and East by its foundation of the St. Michael's monastery, on the site of Archangel (in the 12th cent.), and of the important Novgorod colony of Vyatka, north of Kazan (1174). Latin Christianity accompanied the early victories of Germanism beyond the Elbe in the 10th century. The pagan and anti-German reaction which set in about 983 was equally injurious to Teutonic Christendom and Empire, and much of the new mission ground was lost. Polish and German attempts to convert the Pomeranians led to small result till well on in the

12th cent., when Otto of Bamberg (in 1124-28) became the 'apostle' of this country. From the time when the main German advance beyond the Elbe was permanently resumed, about 1130, the progress of Christianity was rapid between the Elbe and the Oder; and the extension of the bishoprics of Magdeburg, Oldenburg, and Ratzeburg witnessed to this. German colonization followed German conquest, and, as the colonists were at least nominal Christians, the Church grew steadily stronger.

German Christianity (accompanying German colonization) was planted as far east as the Dvina or Western Dvina (the river of Riga) in the later 12th cent.; some Bremen merchants formed a settlement on or near the site of Riga about 1158, and about 1168 Meinhard, an Augustinian canon of Holstein, headed a mission to Livonia. The work was difficult, for the Livonians were a faithless race who professed the proper sentiments when advantage was to be gained from them, but turned upon the mission with mockery and insult when they no longer needed its help (Meinhard built them not only churches, but fortifications). An eclipse brought the missionaries into peril—they were accused of swallowing the sun. Their danger was hardly less when they were justly suspected of a more successful cultivation of the land than was then usual in Livonia. Baptisms were constantly 'washed off' in the Dvina by lapsed converts. Meinhard, consecrated bishop of Livonia in 1170, died in 1196, without having achieved much success. His second successor, Albert of Apeldern and Riga, had superior fortune, tact, and abilities. He organized a Livonian Crusade (permitted by Innocent III. to rank as a fulfilment of the vow for the Holy War in Syria); he enlisted considerable forces of warriors and missionaries; in 1200 he founded, or re-founded, the city of Riga as a new base for conquest and proselytism, and as the seat of the bishopric; and in 1202 he started the *Fratres Militiæ Christi*, the 'Knights' or 'Brethren of Christ,' or 'of the Sword,' the *Schwertträger* or *Port-glaives* of German and French historians, an important element in the Teutonic Order and a main source of its dominion on the Baltic. Pope Innocent gave the 'Sword-Brethren' the statutes of the Templars. Albert's mission-crusade had rapid success, and most of Livonia was baptized before the close of 1206.

A mission in Esthonia was commenced a little earlier than this by Bishop Fulk, formerly a monk of La Celle; and Dietrich, Meinhard's chief lieutenant in Livonia, became bishop of Esthonia in 1213. He was killed in 1218, and the next bishop transferred the headquarters of the mission (now thoroughly German) to Yuryev, Derpt, or Dorpat, in 1224. A Danish mission in Esthonia, at this time largely in Danish hands, was organized from Reval, which became a bishopric in 1218. Even in Lithuania a Roman mission appears to have started in the first half of the 13th cent., but its progress was slow, and general or definite success was not attained till the first Union of Poland and 'Litva' in 1386.

In 1236-37 the 'Sword-Brethren' united with the Teutonic Knights, founded at Acre in 1190, and summoned to help in the conquest and conversion of Old Prussia in 1226. They had much in common—an origin from Bremen, a constitution on the model of the Templars, the patronage of the Virgin, the protection of the emperors, the 'duty of fighting for the Cross,' the championship of the German race and German interests against all other.

This brings us to the Prussian crusade and mission. The early unsuccessful attempts at proselytism in Old Prussia, mainly under Polish patronage, have been noticed. In 1207 the Poles began

again, with better appearance of success. In 1215 a Prussian bishop was consecrated. But a violent heathen reaction soon followed, accompanied by massacre, and by the destruction, it is said, of 250 churches. The supporters of the mission now fell back on the idea of a holy war, and in 1218 Pope Honorius III. allowed a Prussian Crusade as a substitute for the Syrian. In 1226 the Teutonic Order, already despairing of much permanent effect in the Levant, though its nominal headquarters remained at Acre till 1291, was invited to help, and terms were made between the grandmaster, Hermann of Salza, and the Poles, mainly represented by duke Conrad of Mazovia. The emperor Frederick II., the intimate friend and patron of Hermann, gave the fullest support in his power, bestowing on the Order the sovereignty of all such territories as they had acquired by gift or should win by conquest. A long, bloody, and desperate struggle of over fifty years brought about (by 1283) the complete submission of the Prussians, the partial extermination of the race, the enforced conversion of the remainder, and the German colonization of a great province which was to become one of the most Teutonic of lands, and to give name, by union with Brandenburg, to the chief German State of modern times, the creator and core of the present German Empire.

The opening of intercourse in 1245 between Western Europe and the new Mongol masters of Asia, through the embassies sent by Pope Innocent IV. to the Tatar courts, proved to be the beginning of an important and romantic chapter of mission history. Among the distant enterprises of the Christian Church, or the forgotten incidents of past intercourse between remote civilizations, there are few more interesting than the early Roman missions in Further and Central Asia, and in the border-lands of Eastern Europe. We have seen how, in the earlier Middle Ages, Nestorian missionaries carried the gospel to China, Turkestan, and the Indies. Almost to the close of the crusading period, their creed was practically the sole representative of the Nazarene faith in Asia, outside the narrow limits of the shrunken Byzantine Empire and the crusading principalities. But in the 13th cent. the Church of Rome began to be heard of in the depths of 'Tartary,' and between 1245 and 1255 the great overland travellers of the first generation, the Friars John de Plano Carpini, William de Rubruquis or Rubrouck, and Andrew of Longumeau, appeared in the Mongol courts, on the Volga, or in the Baikal or Balkhash basins. Yet their work was primarily that of diplomatists, of envoys from the pope or the king of France, in their capacity as Christian leaders; the missionary was not prominent in their work; Rubruquis alone, of this famous group, seems to have spent time or energy in doctrinal discussions or proselytizing efforts, and even he does not claim in any way to have founded a mission church in Asia or in Russia.

The Polos, again, who represented Roman Christendom among the Mongols from 1260 to 1295, and gave us our first good account of the Chinese and Indian worlds and of so much of Central Asia, cannot be considered active propagandists. Kublai Khān expressed a desire for official Christian instructors; but his wish remained unfulfilled. Marco Polo and his relatives were primarily merchants, adventurers, men of the world. No mission work can be credited to them.

But, while the Polos were still in China, the founder of the Latin churches both in Cathay and in India started on his way. Friar John de Monte Corvino, a Franciscan like Carpini and Rubruquis, and a man of untiring energy, courage, and patience, began his life-work in Asia about 1275, and

in 1289 was sent by Pope Nicolas IV. with letters to the great men of the Tatar empire and of neighbouring lands—the supreme Khān in Cathay, the Ilkhān in Persia, the ‘emperor of Ethiopia,’ and others. Corvino reached Cathay in 1292 or 1293, apparently by the South Asiatic sea-route from Ormuz, making a long halt upon the way in the Madras region (or ‘St. Thomas’s country’). He achieved conspicuous success in the Far East; he was repeatedly reinforced from home; and his work led to the creation of a regular Roman hierarchy, with at least two bishoprics, in the ‘Middle Kingdom.’ He was even credited, by one tradition, with the conversion of a Mongol-Chinese emperor. To him is due not only the first planting of Western Christianity in China and in the Indies, but the earliest noteworthy Christian account of South Indian climate, people, manners, and customs, and some valuable evidence upon the overland and overseas routes which connected the Levant and the Far East, as well as upon the association of Western traders and Western missionaries in the European penetration of Asia.

Corvino seems to have made his way into Persia by much the same route—through Sivas, Erzerum, and Kars—as merchants then took between the Gulf of Scanderoon and Tabriz. At Tabriz, however, he was joined by a ‘great merchant and faithful Christian,’ Peter of Lucolongo, and with this companion he turned aside from the continental main track and made his way south into India, with the view of there taking ship for Cathay (1291). Some time, however, was yet to elapse before the friar committed himself to the frail barks of the Indian seas—‘flimsy and uncouth, without nails or iron of any sort, sewn together with twine like clothes, without caulking, having but one mast, one sail of matting, and some ropes of husk’ (cf. *Münchener gelehrte Anzeigen*, xxii. [1855] 175).

In the sacred region of St. Thomas’s shrine, near Madras, he remained eighteen months, and here died his comrade, Nicolas of Pistoia, ‘on his way to the Court of the Lord of all India.’ He was buried in the Church of St. Thomas, while Corvino transmitted to Europe (22nd Dec. 1292) a quaint and memorable sketch of the Deccan and its people from his own observation—one of the earliest pictures of Indian life drawn by a Roman Christian or Western European—which seems to have awakened the papacy to the possibilities of Hindu conversion. Meantime, while Friar John was writing, the Polos were off the Coromandel coast—on their return to Europe—and here Messer Marco Millione may have met the man who was to represent Christendom in the ‘Middle Kingdom’ during the next thirty years, as the Venetian merchants had done for the past thirty.

We next meet with Corvino in China itself—at the Imperial city. His second letter (of 8th Jan. 1305) is dated from Peking, or ‘Cambalec,’ and tells how for eleven years, from 1293, he had laboured in Cathay; how he had struggled against prejudice and calumny; how brilliant successes had followed dismal failures; and how, in 1304, he had at last been joined by a colleague, Friar Arnold of Cologne. Probably he landed at the great port of ‘Zayton,’ or Amoy, in Fo-kien; apparently he made his way immediately to Peking. In any case, he failed to convert the emperor, Timūr Oljāitū, son and successor of Kublai, and a great favourer of the Buddhist lamas—‘nmis inveteratus in idolatria,’ as Corvino puts it. But he was not long without a triumph. In his first year at Cambalec he won the Nestorian Prince George, ‘of the family of the great King Prester John of India’ (Wadding, *Annales Minorum*, vi. 69). George died in 1299, but before his death he found

time to build a fine church for his new allegiance, ‘called the Roman Church,’ at a place twenty days’ journey from Peking—perhaps at Tating in Shan-si, just east of the great Ho-ang-ho elbow, where Friar Odoric seems also to fix ‘the capital of Prester John’ (*ib.* vi. 70). The ‘Prester John’ and Prince George here referred to are probably of the royal house of the Kerait Tatars, of the Baikal basin, apparently converted to Nestorian Christianity in the 11th century (cf. above, p. 707*). Nor was this all. Prince George’s heir was named after the missionary; a translation of all the Roman service-books was ordered and begun; many Nestorians embraced Corvino’s faith.

With the death of King George, however, the sky was again overcast; apostasy succeeded conversion; there was no more translation of the Latin ritual; and Corvino was left alone to endure the slanders of the Nestorians—a community ‘professing the Christian name, but deviating from the Christian faith,’ and now so powerful in Cathay that they would tolerate no Christian rivals (*ib.* vi. 69).

At last the prospect brightened; a leading enemy confessed; in 1303 the friar was at last permitted to live at court; in 1304 Brother Arnold joined him; with a little more aid the emperor himself, ‘Imperator Cham,’ might be gained. The writer was now old and grey, more with toil than with years, for he was but fifty-eight; yet he was now building a second church in Peking; New Testament and Psalms he had just done into the ‘language most used among the Tatars.’ For one thing he still yearned—news of Europe, of the Church, of his Order. Twelve years had passed in silence; and now a farrago of incredible blasphemies about the court of Rome, the Order of St. Francis, and other matters of the Western world had been spread abroad by a Lombard surgeon newly come to Cathay—‘ante duos annos,’ otherwise in 1302 or 1303. Brother John, therefore, on every account was anxious for fresh help; but, warned by his own troublous sea-voyage, he laid down the best route for subsequent travellers—by the Crimea, the Volga, and the Steppes. By this overland path, travelling along with the Imperial messengers, a man might get through to Peking in six months.

Corvino’s third letter is also from Peking, and was written on Quinquagesima Sunday, 13th Feb. 1306. Its tone is hopeful; its record is one of steady progress. In 1305 a new church and adjoining mission buildings had been commenced in ‘Cambalec’; the emperor honoured the friar above all other ‘prelates’ at his court; and, like Kublai, his great ancestor, he desired earnestly to see envoys from the see of Rome and the nations of Western Christendom. With such a soil to work upon, the writer joyfully anticipated the harvest that might reward the friars who had lately arrived in Persia and the Crimea.

In a postscript Corvino tells of yet another triumph. Some time previously, either during his stay in India or after his arrival in the Flowery Land, an embassy from Ethiopia had waited on him with entreaties to come over and help them, to visit their country himself, or to send good preachers there. Since the days of St. Matthew and his disciples, they declared, they had never seen a Christian teacher. It is with Nubian Christianity that tradition especially associated St. Matthew; the local Church, though long doomed, was not everywhere extinct; and the earlier 14th cent. saw more than one effort of the Roman see to win this difficult and dangerous country.

Corvino addressed these letters to the Brethren of the Franciscan and Dominican missions in Persia and the Steppe lands of Southern Russia. His

appeal was not unheeded; and the authorities of the Church, fired with his own enthusiasm, took up the mission that he had begun with something of the spirit that he desired.

New conquests seemed now to open before the Church of Rome. Friar John was created archbishop of Cambalec (with exceptional powers) in the spring of 1307, and seven bishops (of whom three only persevered) were dispatched to consecrate and help the new primate of Cathay. In 1308 these three suffragans—Gerard, Peregrine, and Andrew—reached China, and carried out the consecration of Corvino. Each of them appears successively in the history of the mission as bishop of 'Zayton' in Fo-kien, where a powerful Latin mission was gradually established, and where some Genoese traders appear to have settled in the early years of the 14th century. A Franciscan tradition maintained that the emperor Khaishan Kuluk (1307–11), third of the Yuen, or Mongol, dynasty in China, and grandson of the great Kublai, was converted by Monte Corvino; and it may have been the news or legend of this success that led Clement V. in 1312 to send three more suffragans to the aid of Archbishop John; in any case, we find one of these later bishops, Peter of Florence, becoming head of a monastery in this harbour-town of 'Zayton.'

The remaining fragments of our knowledge of Corvino are soon told. In 1322 he appoints Andrew of Perugia, one of his first group of suffragans, to the see of 'Zayton'; in 1326 Andrew, writing home, refers to the Archbishop, without naming him; and about 1350 the Franciscan chronicler, John of Winterthur, makes a confused allusion to what is evidently Corvino's first Peking letter, supposed by the annalist to be the work of a nameless Franciscan of Lower Germany, possibly the very Arnold of Cologne who joined the mission in 1304. Lastly, in 1328, we hear of the death of that aged missionary who first carried Roman Christianity as an active faith to India and China, who perhaps converted the 'Emperor of Emperors,' and who was the first and last effective European bishop in the Peking of the Middle Ages.

The best days and brightest hopes of the Chinese mission nearly closed with the life of its founder; but the Church at home showed no consciousness of failing energy. A certain Brother Nicolas, apparently a Franciscan like Corvino, was nominated to succeed him, and, with twenty friars and six laymen, set out for Cathay. We are not sure, however, that he ever reached the Middle Kingdom. All that we do know of his journey is that he arrived at Almalig, the modern Kulja, now on the Central Asian frontier of China and Russia, that he received good treatment there, and that in 1338 Pope Benedict XII. wrote to the Chagatai Khān (June 13), thanking him for his kindness to Nicolas.

Meanwhile, a little earlier (in 1338), an embassy from the Great Khān then reigning—Timūr Ukhagatu—had appeared before Benedict XII.; and with this embassy letters had arrived from certain Christian princes of the Alan nation in the Khān's service, begging for a bishop and legate worthy to replace Corvino. In reply to these communications, four Franciscan envoys and a large company of less important representatives carried the papal briefs from Avignon, by way of Naples, Constantinople, Kaffa in the Crimea, and Almalig-Kulja, to Peking, which they reached in 1342. After four years in China they returned, like the Polos, by the southern waterway from Amoy to Ormuz, making a lengthy stay in Southern India, and finally re-appearing at Avignon in 1353. The historian of this embassy, John de Marignolli, draws a glowing picture of the prosperity of the Roman

Catholic mission in the Far East; but of the mission history after this time we know almost nothing. Of one thing we may be certain: the Chinese national reaction which broke out in 1368 set the Ming dynasty upon the throne, and expelled the Mongol Yuen, put an end for centuries to Western Christianity and to European trade within the Middle Kingdom. When this calamity befell, it is said that the friars, flying across Asia from Peking to Sarai and the Volga, carried with them the relics of the Grand Khān converted by Corvino.

In Persian, Mesopotamian, Armenian, and Caucasian lands the religious explorations of the Western Church began about the middle of the 13th century. The Dominicans penetrated to Tiflis about 1240; in 1255 Rubruquis found several friar-preachers in Armenian towns, and tells us of their travels to Tabriz as well as to Tiflis. Yet it was only with the Tatar conquest of Baghdad, and with the overthrow of the khalifate, in 1258, that Roman Catholic influence assumed real importance in Persia. From this time to the early years of the 14th cent., Latin missions and Latin trade played an important part in the empire of the Ilkhāns; several of Hulagu's successors seem to have been 'almost persuaded' to accept some form of Nazarene faith; not till about 1304 did they definitely end their religious hesitation by embracing Islām. Even then, for more than half a century, Rome struggled bravely against the current; though her cause might be declining, she continued to maintain the airs of a conqueror—founding bishoprics, creating provinces, vaunting the submission of heretical patriarchs. In 1318 we hear of the inauguration of a complete Persian hierarchy, with a metropolitan at the Ilkhāns' capital of Sultāniyah (a little south of the Caspian), whose jurisdiction included not merely Persia, but also Central Asia, India, and 'Ethiopia.'

Yet after the death of Abū Sa'īd, the last true Ilkhān, in 1336, Roman proselytism seems to have completely lost touch of the governing classes among the Mongols of South-West Asia; in the age of Timūr (1380–1405) the Islāmizing of the latter was fairly complete. The Middle, like the Farther East, though less completely, shut its door on Christian enterprise before the age of Henry the Navigator.

The first trace of a Roman Catholic mission in India is the visit of Monte Corvino to the Madras region in 1291–92, an incident of deep significance in the history of mankind, not only as evidencing a fresh opening of intercourse between India and Europe, but also as bearing upon the Persian and Chinese enterprises of the Roman Church, and as representing the first joint effort of the Franciscan and Dominican Orders, under papal direction, upon the remoter heathendom of Southern and Eastern Asia. The chief incident in this chapter of European enterprise is the foundation of a Roman mission in the Bombay region and in Malabar, and the establishment of a Roman bishopric near Cape Comorin a generation later (1321–30). In the *Letters and Marvels* of Bishop Jordanus, the first and apparently the only occupant of this see in the Middle Ages, in the *Recollections* of John de Marignolli, in the *Travel Record* of Friar Odoric, and in the official *Annals* of the Franciscan Order and of the Roman Church, we learn a little about this remarkable undertaking. Its history cannot be traced below the middle of the 14th cent. (c. 1349–50); but its leader's references to Latin intercourse with Nubia and Abyssinia, and plans for a European fleet upon the Indian Ocean—like his repetition of Indian prophecies of a coming European domination, and his personal conviction of the ease with which such domination could

be established—are among the curious things of mediæval literature.

We have seen something of the vigour with which the Latin missions and Western commerce of this time fought to win and maintain a position in China, in India, and in Persia. During the same period (c. 1245–1370) the fates of Christianity and of Islâm were decided in Higher Asia, and Latin missionaries and traders fought no less keenly, no less vainly, than in Cathay and Persia for the victory of their creed and commerce in Turkestan, in the Volga basin, and in the Crimea. But of the latter enterprises we have a slenderer record, and what we know of them is frequently incidental to the larger story of Roman Catholic proselytism in the Celestial empire or in Irân.

Before the great Tatar invasion of Eastern Europe, in 1237–43, Dominican missionaries had penetrated into the countries lying east of the Middle Volga, even if the expeditions of Carpini and Rubruquis in 1245–55 had not to any large extent the character of proselytizing ventures. It was apparently in the early part of the 14th cent., and especially under Uzbeg Khân (1321–40), that Rome exerted herself most strenuously for the winning of the North-Western Mongols, and that the mission stations at Astrakhan on the Lower, and at Kazan on the Upper, Volga, at Torki, and other places on the west shore of the Caspian, at Khiva, near the Lower Oxus, at Samargand, and at Kulja in the Balkhash basin, by the Russo-Chinese frontier of to-day, came into being. Even more, perhaps, than in China or India, these Latin outposts, from the Caspian to the Kama, from the Caucasus to the Altai, represent the exploring spirit of the European at this time in its most daring form. For where could the enmity of nature and men be defied more recklessly? Where in all the known world could distance, barbarism, sterility, and fanaticism present a more formidable combination of obstacles?

Even as late as 1362 we find traces of Roman Catholic effort in Northern Tartary. But about this year the Latin missions in Central Asia may be supposed to have ended in a final storm of persecution; and before Timûr's death, in 1405, European missionary activity had really withered away in other Western Mongol lands.

In Europe the later 14th cent. witnessed the conversion of the last considerable people which still professed heathenism. The 'Litva,' or Lithuanians, whose central region is the Vilna country, had become an important power by conquest from the Russian nation, now lying, for the most part, helpless and crushed beneath the heel of the Mongol Tatars. Most of Western Russia had fallen into their hands (some valuable districts had become Polish), and the Lithuanian dukes aspired to a great position in the world. In 1382 the Polish throne was left to a woman, the daughter of Lewis 'the Great'; and Yagiello (or 'Jagellon'), the 'Litva' prince, hoped that by marriage with this heiress (in spite of her strong distaste for his person) he might become one of the chief European sovereigns. His hopes were realized; and a Roman Catholic Polish-Lithuanian State was thus founded by the marriage- and conversion-treaties of 1386. This State gradually became a Polish empire under one faith and one sovereign, with one (terribly defective) constitution and administration (1501; 1569). With Vitovt, or Vitold, the last great 'Litva' conqueror, ended the brief hope that Lithuanian conversion might after all turn to the profit of the Eastern Church.

For 'Prince Vitovt,' the Russian annalists lament, 'had previously been a Christian . . . but he renounced the Orthodox faith, and adopted the Polish, and perverted the holy churches to service hateful to God' (*Chronicle of Novgorod*, A.D. 1399).

In the 14th cent. we also hear of the progress of Russian missions, the pioneer or attendant of Russian colonization, in the most distant regions of North-Eastern Europe. About 1376 the monk Stephen, afterwards canonized as the apostle of Perm ('Stephan Permsky'), founded the earliest Christian church on the Upper Kama. It was a venture of some risk, for a former missionary in this country had been flayed by the natives, 'while they were yet but infants in the faith.' Before his death (in 1396), however, Stephen had confounded the heathen priests and sorcerers of the Kama, overthrown the idols of the *Voipel* and the 'Golden Old Woman,' stopped the sacrifice of reindeer, secured the triumph of Christianity, and founded Moscovite influence in a region from which, two centuries later, Moscow overthrew the Siberian Khânate. Under Stephen's successors, Andrew, Isaac, and Pitirim (1397–1445), the Russian Church took root in the Pechora country, just as it did on the White Sea during the same period, through the foundation of the most famous monastery of the Far North in the island of Solovki, or Solovetsky (1429). The Solovetsky monastery began with the hermitage of the monk Savvaty, or Savvatii, in 1429; after this, Zosima, with the sanction of Archbishop Jonas of Novgorod, joined in founding the community which became so celebrated. On the neighbouring mainland Christian enterprise appears much earlier: the St. Michael monastery, the germ of Archangel city, was established in the 12th cent. by Archbishop Ivan of Novgorod. In Lapland, again, religious enterprise accompanied political and commercial. Like Stephen in the Kama, and Isaac in the Pechora, Iliya of Novgorod and Theodorite of Solovetsky appear as apostles of faith and culture to Kola and the Lapps.

The Portuguese, in their great oversea expansion of the 15th cent., especially from 1445, undertook mission-work with enthusiasm, perseverance, and at least considerable temporary success. Even from the beginning of his enterprise (c. 1415) Prince Henry 'the Navigator' did not entirely forget the duty of proselytism, though at first more absorbed by the idea of Crusade. His biographers, even in his earlier years, emphasize his purpose of 'extending the Catholic religion,' of 'showing the natives the way of the holy faith,' of 'making increase in the faith of Christ.' The new slave-trade was used to help to create a native African Church. From 1445 a policy of friendly intercourse with the Negroes of the Sûdan and the Moors of the Sahara was adopted, as leading to conversion, as well as trade, in place of the raiding and kidnapping of earlier time. For the prince's purpose was 'to make Christians of them.' Professed missionaries were soon (before 1453) sent out to Negroland. But the history of this development, and most of the Portuguese success in the mission-field, belong to times after the close of the mediæval period.

C. RAYMOND BEAZLEY.

MISSIONS (Christian, Roman Catholic).—When Jesus Christ, the Son of God and the Redeemer of mankind, had fulfilled His divine mission in the world, had sealed it with His death, and endorsed it by His resurrection, He empowered His apostles, and through them His Church, to continue the same in His name and by His authority. That apostolate of salvation was to be catholic, or universal in space, doctrine, and time, to teach all nations all things at all times (Mt 28¹⁸⁻²⁰). Mindful of the Last Will and Testament of Christ, the Church has always looked upon missionary work as an essential and solemn obligation, and upon its progress as an unfailing gauge of her vitality. Since the day of Pentecost, when she received her baptism by the Holy Spirit, the Church has carried on the apostolate with more or less success in the midst of constant persecutions from within and from without, and in spite of unfavourable political conditions and anti-Christian legislation. The missionary character which she displayed in apostolic and sub-apostolic times equally manifested itself in the Celtic, Germanic, and Frankish missionaries, till the Benedictine missionaries SS. Gregory, Augustine, Wilfrid, Boniface, Ansgar, and Adalbert gave to the missionary movement its definite shape. When in subsequent ages new countries were discovered or opened up, the Orders of St. Francis and St. Dominic became important factors in the missions among the followers of Islām and the Mongols, in Morocco and Egypt, in Syria and Palestine, India and China. In 1252 a special missionary congregation was formed out of members of the two orders known as *Societas peregrinantium propter Christum*. A new impetus to the Roman Catholic apostolate was given when, in the 14th, 15th, and 16th centuries, Spain and Portugal took the lead in exploration, conquest, and commerce in the East and the West. They gave freely of the wealth that they had won in their respective colonies to found missions, schools, and colleges for the propagation of the faith, and their fleets never set forth without having on board missionaries—Augustinians, Dominicans, Franciscans, or Jesuits—destined for the peaceful conquest of souls. To avoid political troubles and to further the cause of Christianity, Pope Alexander VI. in 1496, by the famous line of demarcation, assigned the East to the Portuguese and the West to the Spaniards, and with a remarkable zeal they devoted their protection for nearly three centuries to the spread of the gospel, though this Protectorate had its serious disadvantages for a healthy development. Franciscan missionaries accompanied Columbus in 1493, and they were followed by others to the Antilles (1500), Mexico or New Spain (1519), Yucatan, Guatemala, and Honduras, Nicaragua and Costa Rica. In S. America the Franciscans had missions in Colombia and Venezuela, in Peru and Ecuador. At the request of the king of Spain Franciscans went to Chile and Bolivia, to the Indians in the Pampas of Argentina and in Gran

Chaco, and in 1538 they landed in Southern Brazil. When in 1664 Narváez undertook an expedition into Florida, five Franciscans went with him, and from there they extended their work to New Biscaya, New Mexico, Arizona, Texas, and California. French Franciscans were the first missionaries in Canada (1615) and Nova Scotia, while in Africa they continued their work in Morocco, Tunis, Tripoli, Egypt, and Abyssinia.

The Society of Jesus, founded by St. Ignatius Loyola (†1556) in 1534, placed itself from the very beginning at the disposal of the Church for missionary work. St. Francis Xavier inaugurated in 1542 the Roman Catholic apostolate in India, Ceylon, Malacca, and Japan. Under Francis Borgia (1565-72) Jesuit missionaries were sent to Florida, Mexico, Peru; under Acquaviva (1581-1615) to Canada, Chile, Paraguay, the Philippines, and China; under Vitelleschi (1615-40) to Tibet, Tongking, Maranhão, etc. What the suppression of the Society of Jesus (1773) meant for the Roman Catholic apostolate may be best realized by the fact that by one stroke of the pen the Church was deprived of 3300 Jesuit missionaries alone in that year.

Besides the Franciscans and Jesuits, other missionaries belonging to various religious orders were engaged in the mission field of the Roman Catholic Church, although not to so large an extent. Among these may be mentioned the Theatines (1524), Capuchins (1528), Barnabites (1533), Oratorians (1575), Carmelites (1565), Augustinians (1588), Lazarists (1624), the missionary seminaries of Rome (1608) and of St. Sulpice (1642), and, lastly, La Société des Missions Étrangères of Paris (1663). For the sake of unity and conformity all these various missionary organizations were finally centralized from Pope Gregory XIII. (1572-85) to Gregory XV. (1621-23). By the brief of 22nd June 1622 (*Inscrutabili*) the latter, with the help of the Carmelite Thomas a Jesu and the Capuchin Girolamo da Narni, instituted the Congregatio de propaganda fide, or Propaganda, whose sphere of jurisdiction has recently been circumscribed by Pius X. (29th June 1908). The Congregation consists of 25 cardinals with a cardinal-prefect, 4 secretaries, 10 minutanti, and some 50 consultants. Their chief work is to establish and circumscribe the boundaries of the missionary jurisdictions or districts, i.e. mission, prefecture, vicariate, diocese, etc., to entrust the particular field to the various missionary societies, to appoint the missionary superiors, etc.

Thus from the beginning of the 16th cent. the Roman Catholic Church carried on her apostolate throughout the world in N. and S. America, in Africa and the adjacent islands, in Asia, China, India, etc. On the other hand, the struggles and the storms which she had to endure in the 18th cent. from the tyrannical absolutism of European rulers, from the crippling tutelage of the State, from a false philosophy, the Encyclopedists (*q.v.*), and finally from the French Revolution and the subsequent suppression of almost all the religious orders and missionary societies, brought her apostolate to a temporary standstill, till it was revived between 1820 and 1830.

The 19th and so far the 20th centuries are witnesses of the unswerving fidelity of the Church to the command of Christ and a pledge of her vitality and energy in the mission field. Unsupported by emperors and kings as her protectors and promoters, nay, hampered in her efforts by Roman Catholic governments and anti-Christian legislation, she has carried on the work of reconstruction and reorganization, has recovered her ground, and, finally, has carried her propaganda into every corner of heathen lands. The ancient orders have

taken up their work in the field, new missionary societies have been founded during the course of the century, training colleges have been established, and religious orders of women, formerly almost excluded from the missions, are now to be found everywhere, about 20,000 taking their share in the educational, charitable, and industrial work. To support the missionaries and the missions materially, the Association for the Propagation of the Faith (1822) and the Society of the Holy Childhood have done good work, while Popes Gregory XVI., Pius IX., Leo XIII., and Pius X., as well as the Roman Catholic hierarchy throughout the world, have given their support to promote the revival of missionary work among the heathen.

According to H. A. Krose (*Katholische Missionsstatistik*, Freiburg, 1908), the total result of missionary work on the part of the Roman Catholic Church in the 19th cent. amounted to 8,321,963 converts from paganism. This flock is attended by 12,305 missionary priests, of whom 5369 are natives, 4863 brothers, and 17,284 sisters, with 30,414 stations, 22,736 churches, 17,834 schools with 791,878 pupils. When we add the results of the Roman Catholic missions since the time of the Reformation, we have in the Roman Catholic mission field 30,000,000 native converts.

According to Karl Streit (*Katholischer Missionsatlas*, Leipzig, 1906) there were: 7983 European and 5837 native priests, 5270 brothers, 21,820 sisters, 24,524 catechists, 42,968 stations, 28,470 churches, 7,441,215 native members, 1,517,000 catechumens, 24,083 schools with 840,974 pupils, etc. The *Atlas Hierarchicus*, by the same author, published at Paderborn in 1913, does not give a summary of the apostolate.

The review of missionary societies and their respective missions given on the opposite page will help the reader to understand the position of the Roman Catholic missions in our own days.

I. *ASIA*.—As far as missionary work in its strictest sense is concerned, Asia may be divided into: (1) India Proper, or the British Empire of India with Ceylon, Burma, and Malay Peninsula, (2) the Chinese Empire, including Mongolia, Manchuria, and Tibet, (3) Indo-China, with Siam and Laos, and (4) the Japanese Empire, with Korea. The early history of missions in this continent has been outlined in the 'Early and Mediæval' section, above.

1. *British India*.—British India and Ceylon, with an area of 1,800,000 sq. miles and a population of some 800,000,000 souls, is one of the most important and probably one of the most difficult mission fields of the Roman Catholic Church owing to the babel-tongued tribes (120), the many non-Christian religions (Hindu, Brāhman, Buddhist, Muhammadan, pagan) and Christian denominations (40), and the prejudices of the highly developed caste system.

In 1498 Vasco de Gama landed in Calicut, the capital of Malabar, accompanied by the Trinitarian Pedro de Covillham, who in 1500 became the proto-martyr of the missions in India. In the same year eight secular priests and eight Franciscans arrived with Pedro Alvarez Cabral, three of whom were put to death by the Muhammadans. Yet, in spite of persecution and death, the Franciscans, and after 1503 the Dominicans, went forth to India as the pioneer missionaries, to sow the seed of Christianity in Cochin (1503) and Goa (1510), and gradually extended their work to Bombay, Madras, Damão, Bengal, Agra, Ceylon, Mailapur, etc., under Fathers Antonio do Lazal (1530), do Porto, and Padrão. To establish the Church on a firm footing Pope Paul III. erected the bishopric of Goa (1534) with Bishop John of Albuquerque as its first occupant; the see was raised to an archbishopric by Paul IV. (1557) with three suffragans at Cochin (1557), Cranganore (1600; archbishopric 1605), and Mailapur (1606). Two Franciscans,

James of Borbas and Vincent of Lagos, founded the college of St. Paul at Goa for the purpose of training a native clergy.

In 1541 the Jesuits entered the mission field of India and, at the request of John III. of Portugal, St. Francis Xavier, accompanied by Paul of Camerino and Francis Mansilhaes, set out to inaugurate a new period of missionary labours. From Goa he extended the faith to the Fishery Coast, Travancore (1544), Cochin, Quilon, and Ceylon. His Jesuit successors took up and carried on his work: de Nobili among the Brāhmins of Madura (1605-48), Tanjore, and Mysore (30-100,000 converts), Criminalis on the Fishery Coast (90-130,000 converts) (1602), de Britto among the Maravas (1693), Acquaviva at the court of Akbar the Great; Father Goes penetrated from India into China, and Andrada crossed the Himalayas and went to Tibet. They were followed by other members of the Society such as da Costa, Martinez, Laynez, Bouchet, Martin, Calmette, Cœurdox, and Constantine Breschi (1700-40). Franciscans in Agra and Delhi, Capuchins in Madras (1642), Barnabites and Augustinians (Archbishop Menezes of Goa [1594-1610]) in Hyderabad and Bengal, Theatines and Oratorians (Father Vaz, apostle of Ceylon [†1711]) shared with them in this new harvest of souls in India, whilst, after 1656, the Carmelites worked for the return of the Syrian Christians of Malabar to Roman Catholic unity.

With so many missionary labourers in the Indian mission field, hopes of a speedy conversion of India were entertained, and, no doubt, would have been realized to some extent, had Portugal remained faithful to the duties and sacred obligations that she had promised in connexion with the Padroado—the right of patronage—which the Holy See from Leo X. to Paul V. (1514-1616) had granted to her kings. When, however, the power and the influence of Portugal began to decline and the Dutch and the English took her field in the East, the supply of missionaries became limited, the missionaries themselves were put to death or expelled, the churches were destroyed, and the native Christians were cruelly persecuted. The Sultan Tipu Sahib of Mysore between 1782 and 1799 put 100,000 Christians to death, forced 40,000 into apostasy, and sold 30,000 as slaves to Muhammadan dealers. The dispute regarding concessions to Hindu usages or Malabar rites, commencing with de' Nobili in 1606 and ending in 1744 with the bull of Benedict XIV., *Omnium sollicitudinum*, greatly divided the missionaries to the disadvantage of their work, which suffered a heavy blow by the suppression of the Society of Jesus in the Portuguese dominions in 1755, in the French possessions in 1762, and throughout the world in 1773. There were at this time 150 Jesuits in Goa, 47 in Malabar, and 22 in Pondicherry. True, their places were partly filled by Capuchins, by the Missionary Seminary of Paris (1776), and by some native priests, who were ordained without a vocation or an adequate education. Thus the missions in India, which in 1700 numbered some 1,500,000 or even 2,500,000 Roman Catholics, were only ruins and wreckage (500,000 or even less) in 1800. The archbishopric of Goa, with its three suffragans of Cranganore, Cochin, and Mailapur, numbered 340,000 members with 400 priests, and outside the Goanese jurisdiction there were four missions—Agra, with 5000 converts under the care of 10 Capuchins, Pondicherry, with 42,000 and 6 priests, the Carmelite missions of Malabar, with 88,000 converts and 5 priests, and Ceylon, with 1 missionary and 20 native priests for 50,000 members. All this was due to the anti-Christian policy of Pombal and the neglected obligations of Portugal's right of the Padroado. The Holy See,

ROMAN CATHOLIC RELIGIOUS ORDERS AND MISSIONARY SOCIETIES,
AND THEIR FIELDS OF WORK.

Name.	Abbreviation.	Founded.	Mission-fields (A D. = Archdiocese, D. = Diocese, Prel. = Prelature, V. = Vicariate, P. = Prefecture, M. = Mission).

Nagpur; Oblates of St. Francis of Sales, Great Namaqualand, Orange River.

recognizing the inadequacy and the unwillingness of Portugal, began to provide for the neglected field of India. Hitherto only missionaries of Portuguese origin had been admitted, and this by way of Lisbon and Goa. For years Portugal left the bishoprics vacant and in 1827 withdrew all material subvention. The misery was too evident, and Gregory XVI. took matters into his own hands without consulting the interests of Portugal. India was opened to all Roman Catholic missionaries irrespective of nationality or religious orders. In 1837 the French Jesuits entered Madura, and they were followed by the Germans (Bombay and Poona 1854, 1857), the Belgians (Calcutta 1859, Galle 1895), and the Italians (Mangalore 1878). The Missionaries of Paris took up their work in Malacca (1840) and Burma (1857), those of Milan in Krishnagar (1855), Hyderabad (1863), and E. Burma (1866), the Oblates in Jaffna (1847) and Colombo (1883), etc. In 1832 the Propaganda asked Portugal either to fill the vacant sees or to renounce the Padroado. As no answer arrived for two years, Gregory XVI. began to institute vicars-apostolic in Bengal and Madras (1834), in Ceylon and Pondicherry (1836), etc. But new trials and difficulties commenced. The Portuguese Government protested against sending missionaries into India and against the establishment of new vicariates without the consent and the co-operation of the kings of Portugal, and the patriarch of Goa placed himself at the head of a schism in India—the Goanese schism—which was maintained under the patriarchs of Goa, Joseph de Silva y Torres and Joseph de Matta. Pius IX. tried in 1857 to come to a settlement, but this was accomplished only by Leo XIII. on 23rd June 1886. A million and a half of native Christians were again under the allegiance of the Holy See when on 1st Sept. 1886 Leo XIII. established the hierarchy in India—8 archbishoprics: Goa, Verapoly, Colombo, Pondicherry, Madras, Calcutta, Agra, and Bombay, to which Simla was added in 1910, the patriarch of Goa holding the dignity of primate, and twenty-five dioceses, etc. For the furthering of the mission work Leo XIII. also established a papal delegation for India in 1884, which since then has been administered by the titular archbishops Agliardi (1884–87), Ajuti (1887–92), and Zaleski.

The first thirty years of the Indian missions after the reorganization under Gregory XVI. was a period of reconstruction in gathering together and strengthening in the faith the remnants of the old Roman Catholic congregations. With the decline of the Goanese schism and establishment of the hierarchy a steady flow of conversions began, and since then remarkable progress has been made, more conspicuously among the Tamil races in S. India and Ceylon, less so in the Aryan lands of the north. In 1887 the numbers of Roman Catholics in India were:

India	989,881	} 1,224,427
Ceylon	207,692	
Three vicariates of Burma	27,854	
According to the Census of 1911 (including Burma):		
Native Roman Catholics of the Latin Rite	1,394,000	
Native Roman Catholics of the Syrian Rite	418,142	
Eurasian and European Roman Catholics	97,144	
Total	1,909,286	
Ceylon (native Roman Catholics)	322,163	
Total for India and Ceylon	2,226,449	

To complete the survey of the Roman Catholic missions in British India, we subjoin the general statistics taken from the *Atlas Hierarchicus* (1913): the hierarchy consists of 9 archbishoprics, 32 dioceses, 8 vicariates, and 4 prefectures, with 1268 foreign and 1230 native priests, 638 brothers, 3592 sisters, 2776 catechists, 4920 native teachers, 2,215,632 Catholics, 1103 principal and 7208 secondary stations, 5801 churches, 27 theological seminaries with 1121 students of theology, 2343 elementary schools with 163,696 pupils, 519 higher schools with 32,616 boys and 15,275 girls, 290 orphanages with 14,708 orphans, 48 hospitals, 175 dispensaries, 18 printing presses, etc.

2. China.—The revival of Roman Catholic missionary activity in China after the close of the mediæval period dates from the time when the Jesuit Father Ricci was allowed to settle there (1583). Science was to pave the way for religion and missionary work. In 1600 Ricci went to Peking and with the help of his Jesuit brethren started missions at Canton, Nanking, and Kian-si, receiving converts from the highest to the lowest classes of the population, till his death in 1610. The persecution which broke out in 1617 was brought to a speedy end by the invasion of the Manchu Tatars. In 1628 the Jesuit Adam Schall arrived in Peking, gained great influence by his learning, and turned it to the advantage of religion. In the meantime the Dominicans, who in 1625 had established themselves on the island of Formosa, had also opened missions in Fu-kien. One of these Dominican missionaries, the native priest Gregory Lopez, or A-Lo, known as the Chinese Bishop, the first and the only Chinaman who has been raised to the episcopate, rendered the greatest services to the Roman Catholic Church in his native land (1654).

At the request of Bishop Fallu, Clement X. divided China, which had hitherto been under the jurisdiction of the bishop of Macao, into two vicariates and entrusted the northern part to Gregory Lopez, consecrated bishop at Canton in 1685.

About this time the emperor K'ang-hi, a pupil of Father Schall, repealed all the edicts against the Christians, and the missionaries who had been imprisoned were released and resumed their work. Like Fathers Ricci and Schall, Father Verbiest, another learned Jesuit, who arrived in China in 1660, became the favourite of the Mandarins, and K'ang-hi appointed him president of the faculty of mathematics and gave the missionaries permission to preach the gospel throughout China.

Through the influence of Verbiest and his learned successors Christianity made great progress within a century, and when he died the Roman Catholic Church was in a flourishing condition, honoured at Court, professed by the highest mandarins, and numbering about 300,000 members. Since, however, the Roman Catholic religion was not officially recognized, and the natives were forbidden by law to embrace the faith, the local mandarins put many obstacles in the way and caused many a local persecution, till Father Gerbillon, in 1692, obtained an edict from the emperor giving full liberty to all his subjects to embrace and practise the Roman Catholic religion.

But, whilst the Church was enjoying peace from without, she was sadly disturbed from within by a controversy about the Chinese rites, i.e. the lawfulness of taking part in the Chinese ceremonies in honour of Confucius and of using the word *T'ien* ('heaven') to express the idea of God, and whether the prostrations and sacrifices in honour of Confucius and of the ancestors were merely civil ceremonies or connected with idolatry and superstition. Instead of preaching the gospel, converting the infidels, and applying their abilities to other clamant duties, missionaries of the first class wasted their talents, time, and work in useless and fruitless discussions, for Jesuits and Dominicans were divided in their opinions. Father Ricci, as well as the Chinese bishop, Gregory Lopez, and most of the Jesuit missionaries, considered the Chinese rites as merely civil ceremonies, while the Dominicans strongly objected to this view. In 1693, however, the controversy became acute by the action of Bishop Maigrot, vicar-apostolic of Fu-kien, who condemned the rites and threatened with interdict all the missionaries who refused to conform to his command. To settle the dispute, a papal legate was sent to China in 1705, who, owing to lack of tact, only offended the emperor.

In 1706 K'ang-hi made all the priests in China promise that they would teach nothing contrary to the received usages in China, and in the following year issued an edict threatening death to all who should preach against the rites. Alarmed lest the Government should be provoked to harsher measures, the Jesuits appealed to Rome, asking for instructions. A new papal legate arrived in China in 1721 with letters to K'ang-hi, assuring him that the Holy See would ask nothing more than that the Christians should be allowed to pay their respects to the dead in a manner not prejudicial to their religion. In spite of this decision the controversy continued till 1742, when Benedict XIV. condemned the rites and forbade the Christians to take part in them. After peace was restored, Jesuits and Dominicans, Franciscans and Augustinians, priests of the Society for Foreign Missions of Paris and Lazarists worked hand in hand for the evangelization of China. Some shed their blood, while others, such as Gerbillon, Bouvet, and Parenin, became the scientific advisers to the Court or wrote learned books and treatises or published works of piety for their converts. The emperor K'ang-hi, during his long reign of sixty years, treated the Christians with justice, revoked all the edicts against them, raised them to the highest offices in the empire, and made the ministers of the Christian religion his companions, friends, and advisers. He died in 1721 without embracing Christianity, although he desired to be baptized in his last illness.

After the death of K'ang-hi, a reaction took place. His son and successor, Yung-chin (1722-35), drove the missionaries from the Court, and ordered them to leave the country, with the exception of Father Parenin and three of his colleagues. A general edict of persecution was issued in 1724, the missionaries were seized and banished, and 300 churches were destroyed or turned into pagan temples, while 37 Manchu princes who had become Christians, with 300 of their servants, were sent into exile (1724). The accession of K'ien-lung (1735) to the throne of China mitigated for a time the severity of the anti-Christian laws, but in 1745 a new persecution broke out in Fu-kien, where, in the following year, Bishop Sanz and four Dominicans were tortured and beheaded, and soon the flame spread to other provinces. All the hatred was turned against the priests, who were obliged to seek refuge in flight.

Scarcely had the Church recovered from her trials when a new misfortune overtook her. The Jesuits, who from 1583 to 1773 had worked in China as elsewhere, were suppressed. At the request of the Propaganda, the Lazarists took charge of the Jesuit missions in China—i.e. four large churches in Peking and the missions in 13 out of 18 provinces—in 1783. For many years, however, the Lazarists were unable to send a sufficient number of missionaries to continue the work of the Jesuits; seven missionaries seem to be all that were sent from 1773 to 1793. Finally the French Revolution cut off the supply of missionaries from France, and for over thirty years the Lazarists were unable to send a single priest to China. The Roman Catholic Church in China, which in the reign of the emperor K'ang-hi is said to have numbered 800,000 members, was reduced at the beginning of the 19th cent. to 220,000, divided among the Lazarists at Peking and Nanking, the Franciscans in Shan-si, the Dominicans in Fu-kien, the Missionaries of Paris in Sze-ch'uen, and the Portuguese secular priests at Macao and Canton.

Yet, in spite of bloodshed and persecution, of cruel edicts issued by the emperors, and the anti-Christian hatred of provincial and local mandarins, and notwithstanding anti-foreign policy fostered

by the literati and carried into effect by members of secret societies, the Taiping and Boxers, the Roman Catholic Church has made good progress during the course of the 19th and specially since the beginning of the 20th century. The Franciscans and Dominicans, the Jesuits and Augustinians, the Lazarists and the Missionaries of Paris who had been in the Chinese missions for the last two centuries, have strengthened their ranks and extended their work, while new missionary societies founded in the 19th cent., such as the Scheutveld and the Steyl missionaries, and the missionary seminaries of Milan, Rome, and Parma, have opened up new fields, and all the European missionaries engaged in China have strengthened their ranks with a large number of native priests.

True, the opening of the 19th cent. did not promise a bright future, for Kia-king (1795-1820) proved to be one of the greatest persecutors, having revived the old anti-Christian laws. Bishop Dufresse was beheaded in 1825, Father Clet in 1820, and Father Perboys in 1840. But China was shaken to her very foundations when in 1842 Britain declared war on her and compelled her to open certain ports, while France demanded religious liberty for the Roman Catholic missionaries in 1844. The Chinese Government acceded, and in 1844-45 two edicts were issued by which Christianity received legal recognition in the empire, and in 1846 a third ordered the restoration to Roman Catholics of all the churches which they had lost since the reign of the emperor K'ang-hi. The eighty missionaries who at this period were at work in China were strengthened in 1841 by the arrival of the first missionaries of the Society of Jesus, who were once more entrusted with one of their former fields of labour, the vicariate of Kiang-nan.

Though religious liberty was granted by the edicts of 1844, 1845, and 1846, they remained a dead letter in many of the provinces in the interior. In 1851 the emperor Hien-feng revoked them, and renewed those against the Christians. The murder of Father Chapdelaine (1856) brought matters to a crisis. France joined Britain in a war against China, and the result was the Treaty of Tientsin (1858) and the Convention of Peking (1860); the churches were restored as well as the religious and charitable institutions, the missionaries obtained free passports throughout the empire, the faithful were guaranteed unrestricted exercise of their religion, and all the edicts against the Christians were abrogated. Yet the Christians were not safeguarded from local persecutions, which broke out in Kiang-si, Kwang-tung, Sze-ch'uan, Hu-nan, and finally in Tientsin in 1870. After the accession of Kwang-su in 1875 the Roman Catholic Church enjoyed a long period of peace, and, though the empress Tsz'e Hsi was not favourable to Christianity, yet she did nothing against its progress and development. In 1895 and 1899 the French minister in Peking obtained new concessions for the Christians, among them the privilege that the Roman Catholic missionaries were put on an equality with the Chinese local authorities—a privilege which was cancelled a few years later.

The political plunders of Europe in China, by taking Kiaochow (Germany, 1897), Talienwan (Russia, 1898), Wei-hai-wei (Britain, 1898), and Kwang-chou-wan (France, 1898), resulted in the Boxer riots, which brought sad days for the missions. Bishops, priests, and sisters lost their lives; churches, schools, and hospitals were levelled to the ground; and native Christians were slaughtered. Peace was restored only when a strong international army entered Peking on 14th Aug. 1900 and ten foreign Powers dictated their terms in the Chinese Capital on 7th Sept. 1901. A movement towards the Roman Catholic Church then began, a great

number of Chinese entering the list of the catechumens, and it has steadily advanced since the Boxer rising. The overthrow of the Manchu dynasty in China and the proclamation of a Chinese republic have not interfered with missionary work. Yuan-Shi-Kai, the first president of the new republic, promised absolute religious liberty, mandarins and governors eulogized the tact of the Roman Catholic missionaries, and Christian and non-Christian sects look up with admiration to the spiritual power of the Church whose missionaries are living examples of the poverty, zeal, and heroism of apostolic times.

During the flourishing period of the Roman Catholic Church in China, from 1583 to 1773, the hierarchy was not developed, though the Propaganda had resolved in 1651 to appoint a patriarch, two or three archbishops, and twelve bishops. In 1577 Gregory XIII. created the diocese of Macao for China and Japan, which was divided into two, viz. Macao and Funay (Japan) in 1587. In 1659 Alexander VII. erected within the diocese of Macao two vicariates for China, and to satisfy Portugal Alexander VIII. created the dioceses of Peking and Nanking under the jurisdiction of Goa, to which were added three vicariates, viz. Shan-si, Fu-kien, and Sze-ch'uan. In 1800 there were in China five missionary districts divided between the Franciscans (Shan-si), the Dominicans (Fu-kien), the Missionary Society of Paris (Sze-ch'uan), the Lazarists (Peking, Nanking, Hu-nan, Hu-peh, Kiang-si), and the secular priests (Macao) with 200,000 members. Fifty years later the number had increased to 18 districts with 330,000 members, in 1890 to 40 ecclesiastical jurisdictions with 601,000 members; in 1905 we find 43 vicariates with 931,000 members, and in 1911-12, 48 vicariates and prefectures with 1,345,376 members (1913=1,431,000; 1914=1,605,107) and 493,912 catechumens.

According to the *Atlas Hierarchicus*, we find for China and her dependencies, Mongolia and Manchuria, the following statistics: 49 missionary dioceses or vicariates and prefectures, 1865 European and 721 native priests, 247 European and 86 native brothers, 743 European and 1429 native sisters, 4327 male and 2762 female catechists, 7191 native teachers, 1,406,659 native Christians and 613,002 catechumens, 1442 principal and 18,808 secondary stations, 9214 churches and chapels, 54 theological seminaries with 1638 students, 6974 elementary schools with 129,320 (?) pupils, 157 higher schools with 4439 (?) boys and 906 (?) girls, 392 orphanages with 29,198 inmates, 97 hospitals, 427 dispensaries, and 21 printing presses.

3. Indo-China.—Indo-China, the bridge between India and China, the most easterly of the three peninsulas of S. Asia, is politically divided into Upper and Lower Burma (British), the Malay Peninsula (British and Siamese), Siam (independent), French Indo-China, which consists of Cochín China, Annam and Tongking, Cambodia and Laos, covering a total area of some 735,000 sq. miles with a population of 35,000,000 or 40,000,000 souls. As Burma and the Malay Peninsula are—ecclesiastically—included in British India, we have to deal here only with French Indo-China, Cambodia, Laos, and Siam.

The area of French Indo-China has been estimated at 262,000 or 309,000 sq. miles with a population of 16,000,000 or 21,000,000 inhabitants. The first attempts to preach the gospel in French Indo-China were made in the 16th cent. by a French Franciscan, Bonfer (1554), and two Portuguese Dominicans, Gaspard of the Cross, who penetrated into Cambodia, and Sebastian de Cantu; both were put to death in Siam in 1569. These were followed by Lopez Cordoso, Sylvester Azevedo, and John Madeira, who preached in Siam and Cambodia, while Louis Fonseca and Diego Advarte (martyred in 1600) went to Cochín China in 1596. These early missionaries, however, had little success. When the Jesuits engaged in the missions of Japan were expelled in 1614, they made their

way to Indo-China; such were Francis Buzoni, Diego Carvalho, and Francis del Pina, who in 1615 entered Cochín-China and Cambodia in 1617, and they were followed by Alexander of Rhodes, the pioneer missionary of Indo-China, in 1624. From Cochín-China Father Julian Baldinoti extended the work to Tongking in 1626. In a short period of time the Church made such rapid progress that, in spite of repeated persecutions, the number of Christians amounted to 108,000 in 1641, while Father Tissanier on his arrival in 1658 found 300,000 converts under the charge of only 6 Jesuit priests and 30 lay catechists. To plead the cause of the Church in Indo-China and the insufficient number of workers, Father Rhodes returned to Europe to appeal for help. In the meantime persecutions raged against the native Christians in 1644, 1645, and 1647; but, on the other hand, a new missionary society was founded in Paris (*Les Missions Étrangères*), whose members were to become the instruments for a rich harvest in the East. Among the first missionaries of the Society of Paris we find Fathers Chevreuil, Haingues, Brindeau, Mahot, and Vachet. To strengthen the work Pope Alexander VII. appointed in 1659 two members—the actual founders of *Les Missions Étrangères*—viz. Francis Pallu and Pierre de la Motte Lambert, as vicars-apostolic of Tongking and Cochín China. Under their administration parishes were established, schools and seminaries were opened for the training of a native clergy, and de la Motte founded a congregation of native sisters called '*Les Amantes de la Croix*.' A persecution which broke out in 1664, during which the Jesuits were temporarily expelled till 1669, greatly reduced the number of native Christians, partly by martyrdom, partly by apostasy, so that on the arrival of the Missionaries of Paris there were only 100,000 Christians left, but this number was increased to 200,000 in 1681. To strengthen the position of the missionaries Pallu in 1672 urged Colbert, the French minister, to establish commercial relations between France and Indo-China, and persuaded Louis XIV. to use his influence on King Le-hi-tong to allow the freedom of Christian worship. In 1678 the vicariate of Tongking was divided into Eastern and Western Tongking; the former, since then divided into Northern and Central, was entrusted to Spanish Dominicans, and the latter to the '*Missions Étrangères*' of Paris.

The rapidly growing religious influence exercised by both bishops and priests led to renewed persecutions, which have scarcely been interrupted till our own day. Yet in 1737 we find there 250,000 Christians, i.e. 120,000 under the care of the Jesuits, 80,000 under the Missionaries of Paris, 30,000 under the Augustinians, who in 1676 had entered the field, and 20,000 under the Dominicans. This number was not only maintained but increased in spite of civil wars and uninterrupted persecutions during the 18th cent., and notwithstanding the suppression of the Society of Jesus and the consequent decrease of European missionaries. In 1800 we find the following table of statistics:

Cochín China: 1 vicar-apostolic, 5 missionary and 15 native priests, 60,000 native Christians (*Missionaries of Paris*).
Tongking W.: 1 vicar-apostolic, 6 missionary and 63 native priests, 120,000 native Christians (*Missionaries of Paris*).
Tongking E.: 1 vicar-apostolic, 4 missionary and 41 native priests, 140,000 native Christians (*Dominicans*).
8 bishops, 15 missionary and 119 native priests, 810,000 Christians.

In the meantime a political movement had taken place in Indo-China which at first seemed very favourable to the spread of Christianity, but which in reality became the cause of serious hindrances, obstacles, and persecutions. During the civil war which commenced in 1777, Nguyen-anh, the ruler of Cochín China, implored the help of the European

Powers against the rebellious Tai-Shans. Britain, Holland, and Portugal willingly offered their help, but Pierre-Joseph Pigneaux de Béhaine, since 1771 vicar-apostolic of Cochin China, offered to enlist the help of France, and Nguyen-anh accepted the proposal. Accompanied by Prince Canh, the king's son, Pigneaux set out for France, and, as plenipotentiary of the Annamese king, signed a convention on 28th Nov. 1787, according to which France was to assist Nguyen-anh to recover his throne. But to his dismay the bishop, on his return to the East, found that France had abandoned the project, and, therefore, he persuaded 20 officers and 500 men of Pondicherry to come to the rescue of the king, who defeated his enemies and in 1802 proclaimed himself as emperor of Indo-China and Annam under the name of Gialong.

Owing to this success Gialong was favourable to Christianity, which made splendid progress throughout the Annamese empire. This period of peace (1802-20), however, was only a preparation for future trials. In 1819 the Christian community included 4 bishops, 25 European and 180 native priests, 1000 catechists, and 1500 sisters. Gialong was succeeded by his son, Minh-mang (1821-41), a cruel and profligate tyrant and a bitter enemy of Christianity and foreigners. He dismissed his father's trusted friends, summoned all the missionaries to appear at court, and resolved to obliterate the very name of Christianity within his realm. Though his object was defeated for a time, he issued a new edict in Jan. 1833, ordering all Christians to renounce their faith, to trample the crucifix under foot, to raze all churches and religious houses to the ground, and to punish all the missionaries with the utmost rigour. Hundreds of Christians, 20 native and 9 European priests, and 4 bishops fell as victims to this tyrant—Fathers Gagalin (1833), Marchand (1835), Cornay (1837), de la Motte (1840), Mgr. Borie (1838), and Mgr. Delgado (1838), 84 years old. The persecution abated under Minh-mang's successor, Thieu-tri (1841-47), who did not possess the energy of his predecessor, and was afraid of Britain's successes in China and of a threatened interference of France. Instead of being annihilated, the Church's missionaries and converts increased year after year in spite of all the edicts and tortures of Minh-mang. In 1840 we find:

Cochin China: 1 vicar-apostolic, 1 coadjutor, 10 missionary and 27 native priests, 80,000 Roman Catholics.

Tongking W.: 1 vicar-apostolic, 8 missionary and 76 native priests, 180,000 Roman Catholics.

Tongking E.: 1 vicar-apostolic, 1 coadjutor, 6 missionary and 41 native priests, 160,000 Roman Catholics.

3 bishops, 2 coadjutors, 24 missionary and 144 native priests, 420,000 Roman Catholics.

To facilitate the work of the missions in the Annamese empire, Gregory XVI. in 1844 divided Cochin China into two vicariates, Eastern and Western, and W. Tongking into Western and Southern in 1848, while in 1850 Cambodia and N. Cochin China were also raised to vicariates.

Though King Thieu-tri did not shed the blood of the priests, yet they did not escape imprisonment; such were Fathers Gali, Berneux, Charrier, Mische, and Duolos, who were set free by Captain Levêque of the *Héroïne* in 1843. This and similar interferences by the French in 1847 and 1856 provoked the resentment of King Tu-duc (1847-83), whose reign of 36 years is one uninterrupted period of persecution of the bishops, priests, and Christians. In 1848 he issued an edict setting a price on the heads of the missionaries, and in 1851 he ordered the European priests to be cast into the sea and the native priests to be cut in two; Fathers Schäffler (1851), Bonnard, and Minh (1852) were martyred. In 1855 a universal proscription of Christians followed, and in 1857 Bishop Pellerin, vicar-apostolic

of N. Cochin China, appealed to Napoleon III. to intervene. In August 1858 France and Spain, roused by the slaughter of their countrymen, took joint action, and seized Touran (1858) and Saigon (1859). The persecution meanwhile raged with unabated vigour. Bishops Diaz, Hermosilla, Garcia, Cuenot, etc.—altogether 5 bishops, 28 Dominicans, 3 Missionaries of Paris, 116 native priests, over 100 native sisters, and 5000 Christians—were put to death, 100 towns, all centres of Christian communities, were razed to the ground, 40,000 Christians died of ill-treatment, and all the possessions of the remainder were confiscated. Peace was restored in 1862, when Annam ceded to France the southern provinces of Cochin China and guaranteed freedom of religious worship. That peace, however, did not last long; it was broken by the interference of the French freebooters Dupuis, Dupré-Garnier, and Philastre, and Mgr. Puginier, vicar-apostolic of W. Tongking, became involved to the detriment of the missions. A new treaty was signed between France and Annam on 15th March 1874, which again guaranteed religious freedom and the safety of the missionaries, and from 1874 to 1882 the Christians enjoyed a period of relative peace, till the Annamese mandarins disregarded the treaty and compelled France to interfere. Hue was captured on 25th Aug. 1883, the Annamese were defeated, and on the same day the new treaty was signed, and on its ratification, 23rd Feb. 1886, Annam became a French protectorate. Yet, before this was accomplished, the Christians, who were considered as friends of France and enemies of Annam, had to suffer severely. At the close of the year 1886 Tongking, Cochin China, and Laos had to mourn the loss of 20 European and 30 native priests, and 50,000 Christians; E. Cochin-China alone lost 8 European and 7 native priests, 60 catechists, 270 sisters, 24,000 Christians, 17 orphanages, 10 convents, and 225 chapels, etc. Yet the blood of the martyrs has been here as elsewhere the seed of Christianity, and surely during the 28 years of peace the Roman Catholic Church has made marvellous progress in Indo-China, and has never been in so flourishing a condition as she is to-day. Of this the statistics given below are ample proof.

Siam.—The first Roman Catholic missionary who entered Siam was the French Franciscan, Bonfer, who preached the gospel there from 1550 to 1554, but without result. He was succeeded by two Dominicans, Jerome of the Cross and Sebastian de Cantu, who converted some 1500 Siamese from 1554 to 1569, when they were put to death. The Dominicans were replaced by Jesuits in 1606 and 1624, and in consequence of a persecution the field was abandoned till 1662, when Alexander VII. made it a vicariate and in 1669 entrusted it to the Missionary Society of Paris with Mgr. Laneau as its first bishop. The Siamese king, Phra Narai, in 1687 signed the treaty of Louvo with Louis XIV. of France, by which the Roman Catholic missionaries obtained permission to preach the gospel throughout Siam. This was done till 1727, when a serious persecution broke out which lasted without interruption for the rest of the century. After the Burmese inroads and wars were over, the 12,000 Siamese Christians were reduced to 1000 with Bishop Florent and 7 native priests in charge. In 1826 and 1830 fresh European missionaries arrived, among them Fathers Bouhot, Barbe, Pallegoix, and Courveyz. In 1834 Courveyz was appointed bishop, and under his administration Siam had 6590 Roman Catholics with 11 European and 7 native priests. His successor, Bishop Pallegoix (1840-62), the best Siamese scholar and the most successful missionary among the Laos, induced Napoleon III. to renew the French alliance with

King Mongkut of Siam (1856). Thanks to the broadmindedness of Mongkut (1851-68) and Chulalongkorn (1868-1910), the Roman Catholic missions in Siam enjoyed peace under Pallegoix's successors, Bishops Dupont (1862-72) and Vey (1875-1909). In 1875 there were in Siam 11,000 Roman Catholics, 17 European and 7 native priests, with 30 churches; in 1913 we find 24,000 Roman Catholics, 45 European and 21 native priests, 35 European and 87 native sisters, 23 principal and 33 secondary stations, 56 churches, 76 elementary schools with 3740 pupils, and 4 high schools with 858 students under Bishop M. J. Perros.

The missions in Laos, which were commenced in 1876 and formally opened in 1883, were separated from Siam as a vicariate in 1899. In 1913 we find there 32 European and 4 native priests, 8 European and 14 native sisters, 12,500 Roman Catholics with 23 principal and 56 secondary stations, and 64 churches and chapels with 53 elementary schools.

4. Japan.—The existence of the island empire of Nippon, or Ji-pen, 'the Land of the Rising Sun,' was first revealed to the Western world by the Venetian traveller Marco Polo (1295-98), under the name of Cim-pang-u, but was not visited by Europeans until three centuries later. Famous among these was the Portuguese Mendez Pinto, who, on 23rd Sept. 1543, landed on Tanegashima and became instrumental in the conversion of three shipwrecked Japanese, Anjiro and his servants. In 1549 St. Francis Xavier, accompanied by the Jesuit Cosmo de Torres and by Brother Fernandez, set out for Japan and landed at Kagoshima, whence he extended his work to Hirado, Hakata, Yamaguchi, Meako, and Bungo, forming everywhere nuclei of promising Christian centres. Before his departure to China in 1551, St. Francis had obtained new helpers from Goa, such as Fathers Balthasar Gago, Gaspar Berse, Edward da Silva, and Peter de Alcavera, who were later on joined by Gaspar Coelho, Vilela, Louis Froes, Melchior, and Antonio Diaz. For forty years the Jesuits remained in sole charge of the missions in Japan, and their work progressed under the protection of Nobunaga, then actual ruler of Japan (1573-82). Torres is said to have baptized 30,000 converts and built 50 churches from 1549 to 1570. Thirty years after the death of St. Francis, we learn from Coelho's annual report for 1582 that at that time 'the number of all Christians in Japan amounts to 150,000 with churches great and small 200 in number.' Down to the year 1583 there had never been more than 9, down to 1577 only 18, and to 1582, 72 members of the Society engaged in the Japanese mission-field. In 1582 a Japanese embassy, consisting of four Japanese princes and a Japanese Jesuit, went to Rome and were received in audience by Gregory XIII. In the meantime Nobunaga had died that same year, and his successor, Hideyoshi Taikosama, became a fierce persecutor of the Christians, ordering the destruction of all the churches and the immediate expulsion of all the Roman Catholic priests (1587). The return of the Japanese embassy from Rome in 1590 and the arrival of Father Valignani with new European Jesuits effected a change, however, and the Japanese Christians began to breathe more freely. In 1593 the Japanese missions numbered 56 European Jesuit priests, 11 European scholastics, 87 Japanese Jesuit brothers, 5 Japanese and 3 Portuguese novices with 23 residences, and about 300,000 or even 600,000 members. Pius v. had appointed the Jesuit Antonio Oviedo bishop of Japan with Melchior Carnero as his coadjutor, but the latter died at Macao, and his successor, Sebastian Morales, who was appointed by Sixtus v., came only as far as Mozambique. Bishop

Pedro Martinez, also a Jesuit, appointed in 1591 and consecrated at Goa in 1595, arrived in Japan in the following year. In 1593 four Spanish Franciscans—Peter Baptist of San Estevan, Bartholomew Ruiz, Francis de Parilla, and Gonsalvus—arrived in Japan and started work at Meako, Nagasaki, and Osaka, thus trespassing upon the privilege granted by Gregory XIII. in 1585 to the Jesuits. The progress of Christianity roused the Bonzes, who accused the Roman Catholic missionaries of being only political agents of Spain and Portugal, and Hideyoshi gave the signal for a cruel persecution, during which 6 Franciscans, 15 Japanese Tertiaries, 3 Japanese Jesuits, and 2 servants, known as the '26 martyrs of Nagasaki,' were put to death on 5th Feb. 1597. Instead of destroying Christianity, however, the persecution only helped to make it known. Hideyoshi died in 1598, and his successor, Jeyasu Daifusama (1605-15), left the Church in peace, which was then governed by the Jesuit Bishop Luiz Serqueyra. In 1602 the Jesuits were reinforced by Franciscans, Dominicans, and Augustinians, and by the year 1613 we find in Japan 130 Jesuits and some 30 priests belonging to the other missionary societies. The actual number of native Christians, however, is doubtful. Between 1549 and 1598, 500,000, between 1598 and 1614, 152,000, and between 1614 and 1630, 25,000 adults were baptized, and we are told that the actual number of native Christians in 1614 amounted to 1,800,000. But the peace and prosperity were the prelude to one of the most terrible persecutions begun by Jeyasu for some unknown reason. In 1614 Bishop Serqueyra died and was succeeded by the Franciscan martyr, Bishop Louis Sotelo, who was burned alive in 1624. In order to weaken the Christians the Shogun arrested 117 Jesuits and 27 other missionaries, together with the Roman Catholic leaders, and transported them to the Philippines (1614); but many of them returned.

Jeyasu died in 1615 and was succeeded by Hidetada, who renewed the edicts of his father, and from 1617 to 1640 the persecution went on without interruption. The 'Great Martyrdom' took place at Nagasaki on 2nd Sept. 1622, when 10 Jesuits, 6 Dominicans, 4 Franciscans, and 32 Japanese nobles were put to death. Jemitsu, the following Shogun, is said to have killed about 20,000 every year from 1623. Over 200 of the missionaries, some 800 native catechists, and 200,000 Christians suffered actual martyrdom. From the year 1638 Christianity appeared to be extinct in Japan; though sporadic efforts were made by Jesuits in 1642 and later, all these failed. Father John Sidotti was the last Roman Catholic priest who entered Japan (1708), and he was put to death on 15th Dec. 1715.

The blood of so many martyrs, however, was not destined to be shed in vain. When in 1832 Gregory XVI. erected the vicariate of Korea, Japan was included. In 1844 Father Forcade and Ko, a catechist, landed on Liu-Kiu Island, and they were joined by Father Letardu in 1846. In the same year the vicariate of Japan was erected with Father Forcade as vicar-apostolic. But Japan was still a forbidden land till, in 1853, the United States broke down the barriers by a treaty, which was followed by others with Great Britain, Russia, etc., and Father Petitjean was able to build a Roman Catholic church at Nagasaki, which, on 17th March 1865, became instrumental in finding that there were in Japan still 25 Christian villages with several thousand Christians who for 200 years had kept the faith. In 1866 Petitjean was appointed vicar-apostolic. Though some minor persecutions broke out, the Church made progress, and in 1873 the laws and edicts against Christianity

were abolished. In 1876 Japan was divided into two vicariates, and under Leo XIII. two more were added in 1888 and 1891, till on 15th June 1891 Leo XIII. re-established the Roman Catholic hierarchy, i.e. the archdiocese of Tokyo with three suffragan sees of Nagasaki, Osaka, and Hakodate, which were placed under the care of the Missionaries of Paris, to which have since been added the prefectures of Shikoku (1904) and of Niigata (1912) under the care of the Dominicans and the Missionaries of Steyl. The number of Roman Catholics, which in 1870 amounted to 10,000 with 13 priests, reached 23,000 in 1880, 44,000 in 1891 with 82 European and 15 native priests, 63,000 in 1910 with 150 European and 33 native priests, and 69,755 in 1913.

Korea.—From 1636 to 1876 Chosen, 'the Land of the Morning Calm,' was known only under the name of the 'Hermit Kingdom of the Far East' on account of the rigorous enforcement of her policy of isolation against all foreigners. Yet Roman Catholic missionaries made their way and found their faithful children in Korea, whose very name became known in Europe as the symbol of persecution and martyrdom. When, in 1592-94, Taiko Sama of Japan sent his soldiers to Korea, the Jesuit Gregorio de Cespedez accompanied the troops as chaplain to the numerous Roman Catholics in the army, and in his spare time instructed the Koreans also, baptizing, on his return to Japan in 1593, some 300 Korean prisoners of war. Nothing, however, is known of the fate of his converts in Korea, as in the beginning of the 17th cent. all traces of Christianity had disappeared from the land. In 1783 Seng-hun-i, one of the Korean *literati*, joined the annual embassy to Peking and interviewed there Alexander de Govea, the Franciscan bishop, who baptized him by the name of Peter. On his return he was joined by two friends, Pielki and Il-sini, who became the pioneers of Christianity in Korea. From 1784 to 1794 they received some 4000 neophytes into the Church, who were persecuted by the Bonzes from 1785 to 1791. An attempt made by de Remedios in 1791 to penetrate into Korea failed. In 1794 Father Jacob Tsiu (*alias* Padre Jayme Vellozo), a Chinese priest, succeeded in entering, and for six years continued the apostolate, during which time he baptized 6000 converts and thus increased the flock from 4000 to 10,000 souls. In 1801 new edicts were published against the 'new religion'; among the martyrs were Peter Seng-hun-i, Father Tsiu, and 300 of his flock. For thirty years the Christians in Korea remained without a pastor in spite of repeated requests both to Peking and to Rome, owing to persecutions in China. In 1827 the mission field of Korea was entrusted to the Société des Missions Étrangères of Paris, and on 9th Sept. 1831 Korea was made a vicariate with Bruguière as its first bishop, Fathers Chastan and Maubant being his only assistants. The bishop died in the sight of Korea, while Fathers Maubant and Chastan reached Seoul in 1836 and 1837 respectively. At the end of the year the newly-appointed bishop, Imbert, arrived and found the flock reduced from 10,000 to 6000, which was increased to 9000 two years later, when the bishop and the two priests were put to death (1839). In 1845 Bishop Ferréol, accompanied by Fathers Daveluy and Kim, the first native Korean priest, took over the field, but the latter died the death of a martyr in the following year. From 1846 to 1866 the Church in Korea enjoyed comparative peace, during which numerous converts were made both under Ferréol and under his successor, Bishop Berneux—from 11,000 to 25,000. This was the most flourishing period in the annals of the Church in Korea, which then possessed 2 bishops (Berneux

and Daveluy) and 10 priests. In 1866 the persecution raged again, and during it the 2 bishops with 7 priests were put to death and 3 priests had to leave the country. In 1867 attempts were made to reopen the mission, but failed. In 1869 Ridel was appointed bishop, but was not able to enter Korea until 1874, was expelled in 1877, and died in 1884. The treaties of Korea with Japan, the United States, Britain, France, and Austria again opened the gates of the Hermit Kingdom. Bishop Blanc found on his arrival in 1883 only 13,000 Roman Catholics out of 25,000 in 1866, but the flock numbered 16,500 at his death in 1890. During the long reign of Bishop Mutel (since 1890) the missions in Korea, which was declared an independent kingdom in 1895, a Japanese protectorate in 1905, and a Japanese general residency in 1910, have enjoyed freedom. In 1897 we find 32 European and 3 native priests with 32,217 members in 497 stations, in 1909, 46 European and 10 native priests with 68,016 members. At the request of Bishop Mutel, Korea was divided in 1910 into the two vicariates of Seoul and Taiku, and numbered, in 1913, 58 European and 17 native priests with 59 principal and 978 out-stations, and 150 churches with 80,500 members.

II. *AFRICA*.—There is hardly a more glorious chapter to be found in the annals of the Roman Catholic Church than that of Africa. After the decay of early Christianity there, except for a few sadly corrupted remnants surviving in Kabylia, and among the Copts and the Abyssinians, Africa remained for many centuries a closed continent to Christianity, though the Franciscans and Dominicans, the Trinitarians and the Order of Our Lady of Mercy tried their best in the 13th, 14th, and 15th centuries to alleviate the lot of Christian captives and to instil the lessons of Christianity into the hearts of the Muhammadans of Morocco, Tunis, and the Barbary States. When in the 15th cent. the Portuguese, under the leadership of Henry the Navigator, son of King John I. of Portugal, began their discoveries and expeditions along the west coast of Africa, passed Cape Bojador (1433), reached the Rio de Ouro (1442), and doubled Cape Verde (1444), they unfurled the banner of the Cross. In 1471 they crossed the equator, Diego Cam discovered the Congo (1484), Bartholomew Diaz doubled the Cape of Good Hope (1487), while Vasco da Gama came as far as Mozambique, Malindi, and Mombasa (1497). Pope Alexander VI. in 1494 assigned to Spain all the lands discovered and still to be discovered 370 miles west of Cape Verde Islands, and to Portugal all the land to the east, with the one obligation to further the propagation of Christianity and to support mission work in the east and west. Dominicans and Franciscans, Augustinians and Jesuits, Capuchins and Carmelites, supported by secular priests, vied with one another in carrying into effect the command of Christ 'to teach all nations.' Bishopsrics were founded on the adjacent islands of the Dark Continent, viz. Las Palmas in the Canary Islands, Funchal in Madeira (1514), São Thiago do Cabo Verde (1532), São Thomé (1534), etc. King Emmanuel of Portugal took a special interest in the evangelization of the Congo, and from 1505 to 1512 sent annually some missionaries of different religious orders (Dominicans, Franciscans, and Augustinians), who, supported by the native King Alphonso, made good progress. The bishop of St. Thomas (Gulf of Guinea), to whose jurisdiction the Congo belonged, adopted the title of bishop of the Congo, transferred his see to San Salvador, and erected a chapter consisting of 28 canons. As the missionaries already engaged in the Congo did not suffice for the growing demands, St. Ignatius, at the request of the king of Portugal, sent some Jesuits—among them

Fathers Vaz, Ribera, Diaz, Soveral, Noguera, Gomez, etc.—who founded a college at San Salvador. From 1554 to 1592, 8 bishops occupied the see of San Salvador, and, when in 1592 the bishopric of Angola was united with that of the Congo, the see of San Salvador was transferred to St. Paul de Loanda. With the growth and expansion of Portuguese power in the E. and W. Indies, however, Portugal neglected to supply the Congo with a sufficient number of missionaries, so that in 1587 we find only 12 priests for thousands of Christian villages. King Alvaro II. therefore applied to Rome for help in 1608; but it was only in 1640 that 6 Italian Capuchins under Francis of Pamplona were sent, and these were strengthened between 1648 and 1683 by Italians and Portuguese, such as Dionysius Mareschi, Bonaventure Carriglio, Joseph of Antiquera, Jerome of Puebla, Francis of Monteleone, and Anthony Zuchelli, as well as by Carmelites who arrived in the Congo in 1659. It seems that these earlier missionaries extended their work as far as Stanley Pool and to the valley of the Kassai. Carmelites, Franciscans, Jesuits, and secular priests also started missionary work in Senegambia, Sierra Leone, the Gold Coast, Benin, Angola, and Upper and Lower Guinea. Among these pioneers we may mention the Jesuits Barreira (? 1612), Fernandez, Barros, Almeida, Netto, and Alvarez, and the Capuchins Bernardine Renard and Angelus of Valencia. On the east coast missionary work was commenced soon after its discovery—in Mozambique by the Jesuits Sylveira (martyred 11th Aug. 1561), Acosta, and Fernandez; at Sofala by the Dominicans (1586) John dos Santos, John de Pietate, and Nicholas de Rosario; in Madagascar by the Lazarists (1648) Nacquart de Champmartin, Gondren, and Bourdais (1657). In Egypt the Franciscans continued their work among the Copts, and the Jesuits among the Ethiopians (Bernudez, John Nuñez, Andrew Oviedo, Melchior Carneiro, etc.).

The various wars waged between the Dutch and the Portuguese, the slave-trade which was encouraged by the Christian European Powers, the civil feuds among the natives, the more promising colonies in the east and in the west, and the decrease of Portuguese power in Africa soon made the Portuguese forget their solemn obligation, and, instead of furthering the welfare of Christian civilization, they only became a standing obstacle to the work of evangelization, since they would not allow any missionaries but Portuguese in their colonies. Unable—or, rather, unwilling—to support the missionary work, the flourishing churches on the west and east coasts of Africa became weaker and weaker, and social, political, and religious disturbances, such as the sectarian policy of Pombal, the anti-Roman Catholic attitude of Holland and England, and, finally, the French Revolution, brought every missionary enterprise in Africa to a standstill. According to Louvet (*Les Missions catholiques au XIX^{ème} siècle*), the total number of Roman Catholics of continental Africa at the beginning of the 19th cent., including Uniate Copts and Abyssinians, amounted to 47,000.

With the formation of the Society for the Propagation of the Faith in 1822 we perceive the first signs of a change for the better. The conquest of Algiers by France in 1830, which broke down the ramparts of Muhammadan fanaticism, and the reopening of the missions among the Copts in Egypt and their kindred in Abyssinia by de Jacobis in 1839 were the preludes to the Christian awakening of the Dark Continent. The son of a Jewish Rabbi was destined to take up anew the Roman Catholic missions in Africa and to inaugurate the magnificent apostolic movement, for Liebermann became the founder of the Missionary Society of the Holy

Heart of Mary and the Holy Ghost, usually called the Congregation of the Holy Ghost, whose members (since 1843) have devoted themselves to the evangelization of the Negroes in Senegambia and Gabun (1844), Sierra Leone (1864), the Portuguese Congo (1873), French Guinea (1878), Cimbébasia (1879), Kunene (1882), Loango (1883), Lower Nigeria (1885), Ubanghi (1887), Zanzibar (1863), Bagamoyo (1891), N. Madagascar, etc. When Mgr. Marion de Breillac returned from the depth of India to France in 1858, his feelings were drawn to the Dark Continent, and he founded the African Missionary Society of Lyons, whose fields principally lie in the districts known as the 'White Man's Grave'—Dahomey (1861), Benin (1868), Gold Coast (1881), Ivory Coast (1895), Liberia (1906), E. and W. Nigeria, Korhogo (1912), and the Nile Delta. Ten years later another missionary society came into existence, viz. the Missionaries of Our Lady of Africa, or the White Fathers, whose field of action extended rapidly from Algeria to Kabylia, from Tunis to the Sahara and the Sūdān, till the bold hand of its founder, Cardinal Lavigerie, came to drive it, in spite of all obstacles, right to the heart of the African continent. To-day they have charge of 11 missionary districts—Kabylia, Gardaia, W. Sūdān, Nyasa, Bangweolo, Upper Congo, Tanganyika, Unjanjembe, S. and N. Nyanza, and Kivu, with 187,129 members, 196,000 catechumens, 138 principal stations, 502 priests, 52 brothers, 244 sisters, 2289 catechists, 85 native sisters, 2 native priests, 30 students in minor orders, 378 aspirants, 1974 schools with 79,521 pupils, and 341 charitable institutions.

Besides these three African Missionary Societies *par excellence*, work is also carried on by the orders which in days gone by laboured as pioneers in Africa, such as the Franciscans (Egypt, Tripoli, Morocco), the Capuchins (Erythraea, Galla, Somaliland, Seychelles), the Trinitarians (Benadir), the Lazarists (Abyssinia, S. Madagascar), the Jesuits (C. Madagascar, Kwango, Zambesi), and the Missionary Seminary of Verona (C. Africa), the Benedictines of St. Ottilien (Dar-es-Salam, Lindi), the Trappists (Natal, Congo), the Belgian, English, and German missionary societies of Scheut (Congo Free State), of Mill Hill (Upper Nile), of Steyl (Togo), the Oblates of Mary Immaculate (Natal, Transvaal, Orange, Kimberley, Lower Cimbébasia, Basuto), etc.

The missionaries, if they do not precede the explorers or conquerors, accompany them; nowhere are they wanting. From the valleys of the Atlas to the highland plains of Abyssinia, from the Sūdān to the Cape, on the great rivers and lakes, in the desert plains and in the equatorial forests, in the heart of the continent and in the islands, the Cross of Calvary is found to-day set up as the sign of redemption. Where the missionaries have been able to labour they have laboured, and where they could only die they have died. According to the *Katholische Missionen*, Oct. 1912, Africa, as far as it is a missionary country, consists of 6 dioceses, 44 vicariates, and 28 prefectures apostolic, 1 prelate nullius, and 7 independent missions, with 1,100,000 native members and some 600,000 catechumens. When we add the dioceses of Africa and her islands which are not under the jurisdiction of the Propaganda, and, therefore, do not fall under the heading of the African mission field strictly speaking, we find the total number of Roman Catholics amounting to 3,742,000—insignificant when compared with the number of inhabitants, which is said to amount to 165,000,000 or 180,000,000 or even 200,000,000 souls.

III. *N. AND S. AMERICA*.—When, in 1492, Columbus landed on the island of San Salvador, he found a brown-skinned people whose physical

appearance confirmed him in his opinion that he had at last reached India, and he called the inhabitants, therefore, 'Indios,' or 'Indians.' Subsequent navigators and explorers found that the same race was spread over the whole continent from the Arctic shores to Cape Horn, and that the people were more or less everywhere alike in their main physical characteristics, whence they extended the name 'Indians' to these aborigines in both S. and N. America with the exception of the Eskimos in the extreme north. Much has been written about the atrocities and cruelties of the white invaders—Spanish, French, Portuguese, Dutch, and English—committed against the Red Men, the original inhabitants and owners of the soil. The Roman Catholic Church, from the very outset of the political conquest of S., C., and N. America, has acted as the protectress of the down-trodden Indians, and her missionaries—Franciscans, Dominicans, Jesuits, and Hieronymites such as Las Casas, Montesino, Nobrega, and Anchieta—have taken up their cause of liberty and religion. Lopez de Vega, one of the greatest Spanish poets, unfolds the whole aim and purpose of the Spanish conquerors in S. America in two lines:

'Al rey infinitas tierras
Y a Dios infinitas almas,'

i.e. 'to extend the boundaries of the Spanish empire over the vast territories of the new world and thereby to gain an infinite number of souls to God.' Religion was her great end and aim, her all-pervading motive. The soothing influence of the Roman Catholic missionaries in S. America is still to be seen in the splendid churches and colleges and the thousands and millions of devoted converts; and, as long as Spain remained faithful to her solemn obligations, she was successful and prosperous. The destruction of the Indian missions, in which the Roman Catholic missionaries had worked for two hundred years, was due to the anti-Roman Catholic policy and legislation of Spain and Portugal; the revival is to be ascribed to the efforts of Pius IX., Leo XIII., and Pius X., who worked in harmony with the rulers of the different States and republics through their apostolic delegates. To describe the Roman Catholic missionary work among the Indians in S. and C. America would mean to write the history of the Roman Catholic Church in the colonial period of these countries from 1520 to 1820. It may suffice to note the work of the Franciscans and the Jesuits during this period.

Franciscan missionaries accompanied Columbus in 1493, and they were followed by others to the Antilles in 1500, to Mexico or Nova Hispania (Peter of Ghent, Martin of Valencia, Molina, Ribeira, the famous Zummaraga [1548], the first archbishop of Mexico, and Martin of Coruña), to Yucatan (Didacus of Landa [1579]), Guatemala and Honduras (Peter of Betancour and Maldonado), Nicaragua and Costa Rica. In S. America the Franciscans had missions in Colombia and Venezuela (John a S. Philiberto [1527], Louis Zapata, and Ferdinand Larrea) with some 200,000 baptized Indians, in Peru (Mark of Nizza and Jodokus Ryke), in Ecuador and Ucayali (Philip Luyando, Dominic Garcia, and Francis Alvarez [1686]). At the request of the king of Spain, Franciscans went to Chile (1553) (Martin of Robleda and Angelus of Espineira [1778]), to Bolivia (Andrea Herrero [1888] and Antonio Comajuncosa [1814]), and into the Pampas of Argentine and to Tucuman (Francis Solanus [1610]). In 1538 they landed in S. Brazil (Bernard Armenta, John de los Barrios [1547], Bernardine of Cardenas, and Louis Bolaños [1629]).

Between 1565 and 1572 Jesuit missionaries went to Florida, Mexico, and Peru, and, under Claudius Acquaviva (1581-1615), the second successor of St.

Ignatius, to Chile and Paraguay, and later on to Maranhão. Names such as Nuñez, Correa, Nobrega, and Anchieta have become household words among the Indians in S. America, while the name of Azevedo, who, with 39 of his fellow-missionaries, suffered martyrdom in Brazil (1570), stands for loyalty to duty. At the time of the suppression of the Society of Jesus the Jesuits were represented in Brazil by 445, in Maranhão by 146, in Paraguay by 564, in Mexico and California by 572, and in New Grenada, Chile, Peru, and Ecuador by 192, 242, 526, and 209 members respectively.

Equally famous among the defenders of the Indians are the Dominicans Las Casas, Louis Bertrand, Antonio Montesino, Dominicus de Betanzos, Dominicus Ortiz, the Augustinian Francis John de Medina, etc. With the suppression of the religious orders and the downfall of the Spanish supremacy in S. and C. America came also the destruction of the flourishing missions. The Christian Indians and Negroes were allowed to drift, nay, were often driven back into paganism, were slaughtered by their cruel white taskmasters, their plantations were destroyed or ruined, their schools and churches were reduced to ashes, and the missionary work which had been accomplished among them by the self-sacrificing heroes of Christian charity during two hundred years with the greatest outlay of money and valuable lives was destroyed. The political upheaval and the masonic influence in the beginning of the 19th cent., with the subsequent scarcity of priests in the S. American Republics, scarcely allowed the missionaries to resume their work among the remaining Indians and Negroes. In recent years the Propaganda has once more appealed to willing workers among the various religious orders and missionary societies for help to establish missionary work among the Indians; yet it remains a difficult task to obtain a precise record of their work, since most of them are at the same time engaged among the numerous European colonists in the S. American Republics. In the following we give only the names of the vicariates, prefectures, and missions in the various States, the dates of their erection, and the missionaries engaged.

Colombia: V. Goajira (Capuchins), 1905; V. Casanare (Augustinians), 1898; V. Llanos de S. Martin (Society of Mary), 1903; P. Caquetá (Capuchins), 1904; P. Chocó (Immaculate Heart of Mary), 1908.
 Guiana: V. Demerara (Brit. Guiana) (Jesuits), 1837; V. Surinam (Dutch Guiana) (Redemptorists), 1825 (1852); Cayenne (French Guiana) (Congregation of the Holy Ghost), 1643 (?).
 Ecuador: V. Canelos y Macas (Dominicans), 1893; V. Mendez y Gualaquiza (Salesians), 1893; V. Napo (Jesuits), 1893; V. Zamora (Franciscans), 1898.
 Peru: P. Amazonas (S. Leon) (Augustinians), 1900; P. Ucayali (Franciscans), 1900; P. Urubamba (Dominicans), 1900; M. Putumayo (Franciscans), 1912.
 Brazil: Prel. Santarem (Franciscans), 1808; M. Rio Branco (Benedictines), 1907; Prel. Araguaia, 1911; P. Rio Negro, 1910; P. Solimões (Capuchins), 1910; F. Tefé (Congregation of the Holy Ghost), 1910.
 Argentine-Paraguay: V. Patagonia N. (Salesians), 1884; P. Patagonia S. (Salesians), 1888; Gran Chaco and Pampas (Franciscans).
 Chile: V. Antofagasta (secular priests), 1895; V. Tarapaca (secular priests), 1894; P. Arica (Capuchins), 1901.
 Mexico: V. California, 1874.
 Central America: V. British Honduras (Jesuits), 1888 (1893).
 Antilles: V. Curaçao, 1842; V. Jamaica (Jesuits), 1837.
 Krose (*op. cit.*) reckons the number of the uncivilized Indians in America at 1,500,000 or 1,750,000, i.e. Brazil, 800,000; Paraguay, 100,000; Argentine, 30,000; Chile, 50,000; Peru, 350,000; Bolivia, 250,000; Ecuador, 200,000; Colombia, 150,000; Venezuela, 60,000. To these must be added some 200,000 or 250,000 Cochetes, Negroes, and Chinese. In these missions European colonists live side by side with the Indians, etc. According to Krose, some 401,000 are Roman Catholics, and, allowing some 150,000 as being Europeans, there remains a Roman Catholic Indian and Negro population of 250,000 souls. In the whole mission field there were 476 priests, 230 brothers, 485 sisters, 418 stations, and 340 churches. In C. America and the W. Indies there are still 500,000 or 600,000 pagans, among whom Jesuits, Dominicans, Redemptorists, and Lazarists are at work, some 180 missionaries among 830,000 native Roman Catholics.

The United States of America are composed of former British, Spanish, and French colonies, and their population—91,972,266 (Census of 1910)—consists of a small remnant of the original American Indians (270,000, according to some, 330,000 or 444,000, according to other writers), of imported Negro slaves and their descendants (9,827,763), of yellow or Asiatic immigrants (146,863), and of white or European settlers and their descendants. In the former Spanish (Florida, Texas, New Mexico) and French (Louisiana) colonies the Roman Catholic missionaries have worked for the conversion and Christian civilization of the Indians from the beginning of the colonial epoch. Dominicans entered Florida in 1560, and they were supported in 1568 by the arrival of 12 Franciscans, 5 secular priests, and 8 Jesuits, among whom we may mention Fathers Martinez, Segura, de Quiros, and de Solis. In Texas and New Mexico Spanish Franciscans—Marcos of Nizza, John of Padilla, and Louis of Escalon—had commenced in 1539, but made little progress. In Arizona Francis of Porras (1683) and in California Juniper Serra (1784) commenced missionary work among the Indians, and along the Mississippi we find Father Marquette. The conquest of N. America by the white immigrants drove the Indians further and further, and 'spoliation, outrage, and murder' were the orders for almost one hundred years. According to H. G. Ganss ('The Indian Mission Problem, Past and Present,' in *The Catholic Mind*, no. 13 [New York, 1904]), there remain in the United States some 270,000 Indians, of whom 100,000 are Roman Catholics, 40,000 Protestants (74,000?), 110,000 'follow the old ways,' and 20,000 have no Church affiliation. According to Streit (*Atlas Hierarchicus*, 1914), there are in the United States 440,931 Indians, of whom 64,741 (67,255) are Roman Catholics. These are scattered in 33 dioceses, possess 306 churches, and are attended by 163 priests (Benedictines, Franciscans, Jesuits, etc.) and 391 sisters; 100 schools are attended by 7359 children. Famous among the Indian missionaries in the 19th cent. are Father de Smet and Bishop Marty.

The Negro population in the United States (one-ninth of the whole population), descendants of the slaves who for two hundred and fifty years had been imported into America, have for the last fifty years been emancipated, but are still treated as outcasts. Owing to hostile legislation, the Roman Catholic Church had for many decades a poor chance of alleviating the miserable conditions of the Negroes, since baptism was considered inconsistent with the state of slavery. After the emancipation of the Negroes (1863) and the second Plenary Council of Baltimore (1866), Archbishop Spalding raised his voice for their conversion. The same course was pursued at the third council (1884) by Archbishop (Cardinal) Gibbons, who established a commission for Roman Catholic missionary work among the Negroes and the 'Catholic Board for Mission Work among the Colored People.' It is difficult to obtain the exact number of Negroes professing the Roman Catholic religion in the United States, since some live in coloured parishes while others are mingled with the white population, and of the latter a report is hardly ever made. The *Catholic Encyclopedia* (xii. [1911] 629) gives the number as amounting to 200,000 or 225,000, while, according to the *Atlas Hierarchicus*, there are only 103,436 scattered in 33 dioceses, with 109 churches, 162 priests (Josephites, Missionary Society of Lyons, Congregation of the Holy Ghost, and Mission of Steyl), and 173 schools with 14,181 pupils.

The 'Catholic Board for Mission Work among the Colored People,' in its semi-annual publication, *Our Colored Missions*, 1912, gives the following statistics: churches, 72; priests work-

ing exclusively for Negroes, 99; schools, 128 with 11,270 pupils; charitable institutions, 27 with 2520 inmates; Roman Catholics, 280,000. Two religious orders of priests devote themselves exclusively to coloured missions, namely the Josephite Fathers and the Fathers of the African Missions (Lyons). Besides these two there are eight other orders of men in the field: the Jesuits, Franciscans, Dominicans, Marists, Lazarists, Fathers of the Holy Ghost, Fathers of the Divine Word, and the Capuchins (see also *Our Negro Missions*, by the Fathers of the Divine Word, Techny, Ill., U.S.A., 1914).

In Canada the descendants of the aborigines are divided into four families: (1) the Huron Iroquois, (2) the Innuits or Eskimos, (3) the Dénés, (4) the Algonquins. In 1905 their total number amounted to 107,637, of whom 85,553 lived inside, the others outside the reservations. In the earliest days of the French colonial period Franciscans in 1615, Jesuits in 1625, and Sulpicians in 1657 devoted themselves to the conversion of the Algonquins and the Huron Iroquois—some 100,000 souls. Famous among these missionaries are d'Olbeau, Le Caron, Viel, Sagard (Franciscans), Brébeuf, Lallemand, Lejeune, Garnier, Chabanel, Daniel, Jogues, Jolliet, and Marquette (Jesuits). In 1659 the ecclesiastical hierarchy was established in Canada, and the Church entered from the missionary to the colonial period among the immigrants.

Of the 107,637 Indians to-day 35,060 are Roman Catholics; the remainder, with the exception of 10,906 who are still pagans, belong to various Protestant denominations, who are scattered in 33 dioceses. The Roman Catholics are attended by some 160 priests in over 110 stations, with 104 schools, and 200 sisters.

IV. OCEANIA.—The southern realm of islands which stud the Pacific Ocean has been named Oceania, and for convenience of reference has been divided into four districts, viz.

Australasia with Tasmania.

Melanesia (New Guinea, New Pomerania, Bismarck Archipelago, Solomon Islands, New Hebrides, Loyalty Islands, New Zealand).

Micronesia (Marianne, Caroline, Marshall, and Gilbert Islands).

Polynesia, comprising all the smaller islands between Hawaii in the north and Easter Island in the east.

Discovered in the 16th and 17th centuries by Spanish and Portuguese admirals, such as Balboa, Magellan, Mendana, Quiros, and de Torres, who were followed by Dutch, French, English, and German explorers—Roggeveen and Tasman, La Pérouse and d'Urville, Cook and von Humboldt—they remained more or less in obscurity till the beginning of the 18th and even the 19th century. That Roman Catholic missionaries set their foot on the islands soon after their discovery, although only occasionally, is certain. Padre Pigafetta accompanied Magellan to the Ladrone Islands in 1521, another priest landed on the Marquesas in 1595, two Spanish missionaries visited Tahiti in 1774, and Abbé de Quelen converted a few natives in the Hawaiian group in 1819. As Spanish and Portuguese supremacy declined, the discoveries were of little consequence to Christianity, and, owing to the political and religious revolution in Europe, the suppression of religious orders, and the scarcity of missionary vocations and pecuniary support, the Roman Catholic missions were to a large extent neglected in the Pacific. The Marianne and Caroline groups were the only ones where progress was made. The former was visited by the Jesuit Diego de San Vittore, who landed with four other Jesuits on Guam in 1668, and these were followed by five more in 1670; but nearly all the Spanish missionaries were killed in 1670, 1672, and 1684. From 1700 to 1766 the Marianne missions were entrusted to German Jesuits, who in 1731 extended their work to the Carolines. After the suppression of the Jesuits the Marianne

Archipelago was handed over to Spanish Augustinians in 1786, and the latter were replaced by German Capuchins in 1907.

Several attempts were made by the Jesuits on the Philippines to open a mission in the Caroline Islands in 1700, 1708, 1709, and 1721, but all of them failed, till Father Cantova succeeded in 1731. Owing to the serious loss of lives, however, the Jesuits abandoned the field, and it was only in 1886 that twelve Spanish Capuchins were able to resume missionary work once more in the Carolines; they remained in charge till 1904. In 1911 the German Marianne and the Carolines were united into one vicariate-apostolic with Walleiser as its first bishop, while the United States possession of Guam was made an independent vicariate in charge of Spanish Capuchins. The vicariate of Guam numbered, in 1913, 12,000 Roman Catholics, and that of Marianne-Caroline had 5395 in 1914. With the exception of these two island groups, the beginning and development of Roman Catholic missionary enterprise in the Pacific belong to the 19th and 20th centuries. It was on 7th July 1827 that Alexis Bachelot, accompanied by Abraham Armand, Patrick Short, and Robert Walsh of the Picpus Society, landed in Honolulu (Hawaii) to resume the apostolate in Oceania, the whole of which was placed under the ecclesiastical jurisdiction of Solages, then prefect-apostolic of Mauritius (1830). Three years later the vicariate of Oceania was established, and in quick succession the Roman Catholic missions were extended to the various island groups and entrusted to the two pioneer missionary societies in the Pacific, viz. the Missionaries of the Sacred Heart (Picpus) and the Society of Mary (Marists). From 1827 to 1845, under Cardinal Prefect Capellari of the Propaganda and under his pontificate as Gregory XVI., the Society of Picpus sent its missionaries to Hawaii (1827), the Gambier Islands (1834), the Marquesas (1838), and Tahiti (1841), while the Marists went to Wallis, Tonga, New Zealand (1837), New Caledonia (1843), Fiji (1844), and Samoa (1845). Gregory XVI. divided Oceania into two distinct vicariates: Eastern (1833-44) and Western Oceania (1836-48), from which Central Oceania was separated in 1842. These three vicariates form, so to speak, the roots of the ecclesiastical jurisdictions in the Pacific. From the Eastern vicariate were separated those of Hawaii, Marquesas, and Tahiti (1844 and 1848), and from the Central those of New Caledonia (1847), Samoa (1851), and Fiji (1863 [1887]), while W. Oceania was divided into the vicariates of Melanesia (1844-89) and Micronesia (1844-97). From Melanesia were separated New Guinea and New Pomerania (1889), and from Micronesia the Gilbert (1897) and the Carolines (1886). Some of the groups were again divided and subdivided, such as New Guinea and New Pomerania, from which were separated the Solomon (1897-98) and the Marshall Islands (1905). The Marianne group depended upon the diocese of Cebu (Philippines) till it was made an independent vicariate. The divisions demanded new helpers in the ever-expanding field, and during the colonial period of Oceania (1882-1903) three other missionary societies were asked to help: to the Capuchins were entrusted the Caroline (1886 and 1904) and the Marianne Islands (1907), to the Picpus Society the Cook or Hervey Archipelago and Kaiser Wilhelmsland W. (1913), to the Society of the Divine Word (Steyl) Kaiser Wilhelmsland E. (1896), to the Marists the New Hebrides (1887) and the Solomon Islands (1898), and, finally, to the Congregation of the Sacred Heart (Issoudun) New Pomerania (1882), New Guinea, British and Dutch (1884 and 1903), the Gilbert (1888) and the Ellice

* According to *Katholische Missionen*, July 1914, the Roman Catholic population of the Marianne-Carolines is 5395, that of Guam, 12,400.

Islands (1897), and, lastly, the Marshall Islands (1899).

Where eighty years ago there were—with the exception of the Marianne group—scarcely any Roman Catholics, and no priest or bishop, we find to-day an established hierarchy, with 14 bishoprics, 4 prefectures-apostolic, and 1 mission with 131,000 native and 63,000 European members, 427 priests (8 native priests), 227 brothers, 418 sisters, 1000 stations, 990 churches and chapels, and 700 schools with 30,000 pupils. The population of Oceania proper (without Australia and Tasmania) amounts to 2,650,000 or (without New Zealand, no longer a missionary country) 2,000,000, or, according to others, 1,340,000 souls. The Roman Catholic population is, therefore, comparatively small, and the work, especially in New Guinea, the Solomon group, and other islands, is little advanced. But, bearing in mind the social, moral, religious, political, ethnological, and linguistic problems of the various groups and their natives, the unhealthy climate, in many cases absolutely unsuitable for Europeans, the variety of dialects even among the inhabitants of the same islands, and, lastly, the

the Gilbert and Castanié of the Cook Islands, and, lastly, Brother Eugene Eyraud, the lay apostle of Easter Island.

As space does not allow of a detailed history of the interesting work of Roman Catholic missionary enterprise in the Pacific, we give on p. 726 a table of statistics which will tell the story of the heroic work which the missionaries have achieved within the years 1830-1913 under very trying circumstances of persecution, hunger, poverty, and death.

In the following table of statistics we give the summary of missionary work during the 19th cent. and the results of previous centuries since the Reformation. These statistics we borrow from Krose (*op. cit.* p. 123).

hostile attitude of some of the European Powers that have divided the islands among themselves towards every Christian enterprise, and the fierce opposition displayed against the Roman Catholic missionaries from 1830 to 1880, the Roman Catholic Church has made slow but sure progress. She has become a Christianizing and civilizing factor in the Pacific, and as such she is now acknowledged by the various European governments and their representatives, by explorers and tourists, and by missionaries of every denomination, whatever their attitude towards the tenets of the Roman Catholic Church may be.

Famous among the Roman Catholic missionaries in the Pacific are the two pioneer missionaries (later bishops), Bataillon (1843-77) of C. Oceania, the founder of the missions in New Caledonia, Fiji, Samoa, and Rotuma, and his fellow-worker, Pompallier of W. Oceania, Bishop Epalle, who was murdered in 1845, Bishop Rouhouze of E. Oceania, etc. Nor must we forget Father Chanel, the proto-martyr of the Pacific and the apostle of Futuna (1841), Father Damian Deveuster, the leper apostle of Molokai, or Fathers Bontemps of

M. SPITZ.

MISSIONS (Christian, Protestant).—I. INTRODUCTION.—The missions of the Reformed Churches of Christendom seem at first sight to be discontinuous from those of the mediæval Church and from the post-Reformation missions of the Roman Church. While the Roman Church carried on

extensive missions from the 16th to the 18th cent., the Reformed Churches during the same period were doing practically nothing. Indeed, their divines, when they touched the subject of the Christian obligation to evangelize the world, were mainly occupied in elaborating arguments to show that the command of Christ to do this had lapsed in their day. The causes of this inaction are complex.

After the great crisis of the Reformation the Protestant countries of Europe had not only to adapt their religious life to new conditions, but also to maintain their political existence against powerful hostile combinations. Meanwhile it was to Spain and Portugal, the great representatives of the old creed, that the discovery of America and of the Cape route to India had fallen. To them, accordingly, the pope had committed authority over the newly-found regions of America and Africa as well as the E. Indies, and this dominion they were able, to a considerable extent, to make effective. The revival of the Roman Church which followed the Reformation naturally threw much of its best force into these national undertakings, sanctioned by 'holy Church.' With the armies and administrators of Spain and Portugal went the priests and friars, whose task it was to bring these new territories into the Roman obedience.

With the 17th cent. began the colonial expansion of England, which resulted in the Christianization of N. America, not by the labour of missionaries, but by the migration of Christian peoples. A little later the Netherlands, freed from the rule of Spain, began to take over the dominions of Portugal in the East, and eventually founded a great empire in the Malay Archipelago; they also colonized the extremity of S. Africa and thereby founded a white nation in yet another temperate clime. To the Dutch also largely belongs the credit of opening commercial relations with China and Japan. Meanwhile, in the course of the 18th cent., the great Indian empire of Britain came into existence, and, following on this, relations with the Further East developed during the 19th century. The same period saw the penetration of Africa from south, east, and west, and its partition between Western Powers, among whom Britain and, latterly, Germany represented the Reformed faiths. It was through these political developments that the missionary sphere of the Protestant nations was opened up, so that, when their religious life was effectually revived towards the close of the 18th cent., the missionary call of an open world for which they were specially responsible came to Reformed Christendom with irresistible force.

When we have indicated the main features of the expansion of Protestant nations, we have indicated also the main lines of their missionary development as compared with that of the primitive and the mediæval Church. At first Christianity was conscious in principle of its universal destiny, but was practically confined by a limited world-outlook and the lack of communication between East and West. In the Middle Ages the Church on the one side was straitened by Islām, and on the other was grappling with the unfinished task of absorbing and training the barbarian nations of Europe. In both these periods the evangelist and the evangelized were, on the whole, of similar races and of cultures not radically different. In the modern period the world-outlook has become complete and practical, while, with the facility of intercourse, the immensely greater progress in arts and sciences since the 15th cent. by the Christianized nations has made the intellectual and social difference between the Christian and the non-Christian far greater than at any earlier time. This is at

once the advantage and the impediment of modern missions as compared with ancient.

Modern missions generally are continuous with the primitive expansion of Christianity, and in the case of Protestant missions in particular we must go back to the primitive records of the faith and to its early history in order to estimate their work. But in so doing we are at once struck by certain outstanding contrasts connected with the historical situation. Since in primitive times the missionary and his hearers belonged broadly to the same level of culture and to the same sphere of thought and language, and were members of the same or similar communities, the whole range of problems connoted by the terms 'home base' and 'foreign field' was for them non-existent, and the economic problem of modern missions was present only in germ, or even in an inverted form, financial help being sent by the daughter Churches to the mother. Not unconnected with this feature of early conditions is another fact. The propagation of the faith was the work of the Church in each place, whether through its officers or through its ordinary members, for the Church itself was the evangelizing body. Hence in the early records of expansion the professional missionary, as distinguished from the ordinary minister or layman, is conspicuous by his absence. There were great leaders in the work of evangelization among the bishops and others, but for associations distinct from the Church, set apart for evangelism, there was no place. Finally, the political relation of the missionary to his hearers was either simply that of a fellow-subject of the same great empire or that of a stranger from a land of no very different conditions.

Following on the adoption of Christianity as the religion of the Roman State, the irruption of the barbarians, and the rise of monasticism, these conditions were modified. The missionary trained and set apart for the work appears on the scene, more often as a member of an order than as an isolated evangelist. The conversion and control of virile and turbulent barbarians seemed to demand a sterner discipline than the Church alone could exercise; repeatedly the arm of the State was vigorously used, and orders came into existence that were half-monk, half-warrior, such as the Knights of St. John and the Order of Teutonic Knights. The Christianization of the West was largely accomplished through monastic and military agencies, though the individual missionary was not absent. In Asia the wide-spread missionary work of the Nestorians had little of the political element, but it went down before the great onrush of Asiatic migrations—either under the military impact of Islām or under the unified forces of Buddhism. On both sides of the world the faith spread or receded amid the reciprocal contact and strife of nations whose land-frontiers were contiguous. The more stringent organization of missionary work and the training of the worker had made progress, but the political factor had deteriorated its texture.

The doctrine of the Reformation insisted on the liberty of the individual conscience and the freedom of individual access to God, together with the absolute sovereignty of His grace in the work of salvation. The result of this in principle, although slowly realized in practice, was the elimination of the political factor from the spiritual activity of the Church, more especially in missionary work. The missions of the counter-Reformation were still closely linked with political conquest and administration, but so also were the earlier Dutch Protestant missions in the East. Both were in reality survivals of the mediæval method. The modern missionary method, both in the Roman and in the Reformed communions, is substantially that

of free associations, working on a basis of voluntary co-operation. The missionary orders of the Roman Church have indeed retained continuously their historical organization, adding new orders, as needed, on a similar basis; but the missionary societies of Protestant Christendom are, in effect, an expression of the same principle, only that in them the exercise of individual freedom has been combined with obedience to superimposed organization and discipline for a common purpose. It would not be correct to say that Protestant missions are differentiated from Roman by a lack of direct subordination to Church authority, for many of them are directly administered by the governing bodies of their Churches. There is, however, this obvious difference, that the missions of the Roman Church are all co-ordinated and guided by a single central authority which is conspicuously lacking in Protestant Christendom. On the other hand, the Protestant organizations are now systematically endeavouring to gain the benefits of unity, together with those of freedom, by voluntary co-operation and co-ordination in missionary work, not only as between Churches but also as between nations.

II. HISTORY.—1. Formation and development of societies.—Up to the 18th cent. the missionary societies in Britain and on the Continent were closely connected. The Dutch East India Company, founded in 1602, was enjoined by its charter to care for the conversion of the heathen in the newly-won possessions of the Republic, and it appointed preachers for the purpose; but the work was carried on mechanically under government pressure. After a century the number of registered Christians in Ceylon was 350,000, in Java 100,000, and in Amboyna 40,000, but few were left of these myriads in Ceylon after English rule came in, and only a small minority in Java under Dutch rule. In New England the Pilgrim Fathers at first had to defend life and property against the Indian tribes who surrounded them, but in 1646 John Eliot, pastor of Roxbury, gave himself to work among the aborigines, learning their language, carefully teaching them, and gathering them into organized churches—the first real Protestant missionary enterprise. In 1649 the Corporation for the Propagation of the Gospel in New England was formed, and it is still extant, but its activities have consisted chiefly in the collection of funds. In 1698 the efforts of Thomas Bray, Rector of Sheldon, Warwickshire, resulted in the formation of the Society for the Promotion of Christian Knowledge. During the 18th cent. this aided the Danish-Halle Mission and other missions in India, but its principal work since 1813 has been the publication and circulation of Christian literature, both at home and abroad. In 1701 the Society for the Propagation of the Gospel was founded to provide clergy for the colonies and dependencies of Great Britain and also to take steps for 'the conversion of the natives'; but little was done for the latter object till after 1817. These three societies are connected with the Church of England.

The revival of spiritual religion in Germany known as Pietism (*q.v.*) resulted in two missionary movements during the 18th century. Frederic William IV., king of Denmark, feeling responsibility for his colonial dominions, found the men whom he needed in Bartholomæus Ziegenbalg and Heinrich Plütschan, followers of the great Pietist leader, Hermann August Francke. They were sent out in 1705 to the Danish settlement of Tranquebar in S. India, and there founded a work which was developed by many successors of note, especially Christian Friedrich Schwartz (1749-98). Their work was partly maintained by the S.P.C.K. The other far-reaching missionary movement of

German origin was the Moravian. Members of the Unitas Fratrum of Moravia, driven from their homes for their faith, were settled by the Pietist Nikolaus Ludwig, Count von Zinzendorf, on his estate at Herrnhut in Saxony in 1722. Very soon their zeal led them to send missionaries to the Negroes of the W. Indies and to the Greenlanders who had been evangelized by the Norwegian, Hans Egede, but were left after his return uncared for. This was the beginning of a world-wide work, carried on by a community never numbering more than 40,000 souls in Europe, but with 100,000 converts abroad, and a roll of more than 2000 missionaries, sent out since its foundation. See, further, art. MORAVIANS.

The Presbyterian Society for the Promotion of Christian Knowledge, founded in Scotland in 1709, deserves mention, because among a few missionaries whom it sent to the Indians of N. America was David Brainerd, the evangelist of the Delaware Indians. He died after only three years' work, but his biography powerfully influenced William Marsden of New Zealand, William Carey and Henry Martyn of Bengal, and many others.

By the middle of the 18th cent. these early movements of Protestant missions had greatly slackened owing to the religious deadness which had overtaken the various Churches. But the antidote to this was already working in the evangelical revival connected on the Continent with the names of Francke and Zinzendorf, and in England with those of John Wesley (1703-91) and George Whitefield (1714-70). The inevitable result in the revival of zeal for the evangelization of the outside world became manifest towards the end of the century. The two great leaders and their immediate followers were ministers of the Church of England, but, owing to the deadness of her leaders and people, the movement, while powerfully influencing the Church, resulted in the formation of the strongest of the Protestant bodies, the Methodists of England and America. But it was to another dissenting body that the missionary call first came effectively. The great pioneer William Carey and his fellows founded the Baptist Missionary Society in 1792. In 1795 followed the second society, at first called simply the Missionary Society. It was founded by Church of England, Independent, and Presbyterian ministers. In 1796 two Scottish associations were established, known as the Edinburgh and Glasgow Societies. In 1799 Evangelical members of the Church of England decided to establish the Church Missionary Society, and the undenominational society already mentioned became known as the London Missionary Society. Though others are not excluded, it has since then practically remained the organ of the English Congregationalists. The British and Foreign Bible Society was set on foot in 1804 by the joint action of churchmen and dissenters. The Wesleyan Methodists had already been carrying on missionary work in East and West since 1786 under the personal guidance of Thomas Coke, but after his death in 1814 they established their own society. The societies named, together with the revived operations of the S.P.G., represent the formative beginnings of Protestant missionary work in Great Britain. The American Board of Commissioners for Foreign Missions, formed mainly by Congregationalists in 1810, and the American Baptist Missionary Union (1814) were the earliest societies in America. Before sketching the development of these and indicating the minor societies, it is desirable to mention two outside movements which greatly influenced the history of missions in Africa and the East.

It is reckoned that the African slave-trade during the hundred years preceding 1786 conveyed

no fewer than 2,000,000 Negroes into British colonies, chiefly the W. Indies and British N. America; but even in England Negroes were sold and bought till the judgment pronounced by Lord Chief Justice Mansfield in 1772: 'As soon as any slave sets his foot on English ground, he becomes free.' This formed the starting-point for the campaign against the slave-trade in the entire British possessions, carried on within and without Parliament by William Wilberforce from 1789 till its victorious climax amid the throes of the Peninsular War in 1807. The abolition of the slave-trade did not as yet do away with slavery in British possessions outside the United Kingdom, nor with the slave-trade carried on by foreign nations. But it gave a powerful impulse to missionary work among Negroes, and arrangements were made at Sierra Leone for the reception of liberated slaves, of whom many thousands were settled there under the care of C.M.S. missionaries, the same thing being done later on the E. African coast near Mombasa. Meanwhile, the agitation against slavery in the British dominions was continued by Wilberforce and his successors till it was crowned with success in the Emancipation Act of 1833, which liberated 1,000,000 slaves in the W. Indies at a cost to the State of £20,000,000 paid to the owners as compensation. Slavery in the United States, and the trade that fed it, continued till Emancipation Proclamation in 1863. Since then what remained of slavery under Christian rule has been abolished, and slavery in Muslim and pagan lands has been greatly limited. As a result of the shifting of populations, there are now some 12,000,000 Christianized Negroes in the United States and W. Indies, apart from those who have been brought in through missionary effort in Africa.

In the East the greatest of all colonial empires was built up by English merchant adventurers. The East India Company dates its charter from the year 1600, but for 150 years little was done for the spiritual benefit of its European servants, and nothing for the evangelization of the natives of the land. After the battle of Plassey in 1757 things improved somewhat among Europeans, but, when Parliament, on the motion of Wilberforce, in 1793 was ready to afford facilities for missionary work in India, the opposition of the E.I.C. threw out the clauses, and for the next twenty years Christian missionaries were rigorously excluded from its territories. At length in 1813, when the E.I.C. charter was once more revised, not only was the entry of missionaries conceded, but an ecclesiastical establishment was provided for Europeans, the representatives of which have done not a little to forward the cause of missions.

1. BRITAIN.—The later development of British societies, especially Anglican, was strongly influenced by several religious movements. The Irish Revival of 1859 affected England in 1860 and gave an impetus to the formation of undenominational societies, such as the China Inland Mission. In 1875 Dwight L. Moody's first revival in London and the first Keswick Convention marked the beginning of a movement which resulted in an immense growth of missionary zeal, both in offerings and in service on the part of university men, especially in connexion with the C.M.S. The Tractarian Movement had influenced one side of the Church of England for a generation before it began to appear extensively on the mission-field during the last quarter of the century.

(a) *Anglican*.—The *Society for the Propagation of the Gospel* in 1817 was supporting a few clergy and schoolmasters in the N. American colonies and elsewhere. From that time it began its missions to non-Christians (1823) by sending men to Bengal and to S. India, where Robert Caldwell was dis-

tinguished as linguist and bishop. It has carried on all its missions under the direct superintendence of the diocesan bishops in the mission-field, and it has included in its activities the provision of ministrations to white men in the colonies and on the continent of Europe. Its work among non-Christians has steadily increased and now absorbs £165,000 out of an income of £250,000. In India it has occupied Calcutta, Lucknow, Delhi, Bombay, Madras, Assam, and Burma. In 1821 it advanced to S. Africa, in 1848 to Borneo, in 1862 to the Pacific, in 1863 to N. China, in 1873 to Japan, in 1889 to Korea, in 1892 to Manchuria, and in 1903 to Siam. By constitution the S.P.G. is as broad as the Church of England, but as a matter of fact it has represented mainly the High Church side. It has developed in varying degrees the community type of missions. The Oxford Mission to Calcutta (1881) is now independent; the Cambridge Mission to Delhi and the Cawnpore Christ Church Brotherhood are still connected with the S.P.G. Its most flourishing missions are those to the Tamils of Tinnevely and to the Kols of Chota Nagpur, both in India.

The principal other societies of this type are: (1) the *Melanesian Mission*, founded in 1846 by George A. Selwyn, afterwards bishop of Lichfield, and carried on by the martyr John C. Patteson; (2) the *Universities Mission to Central Africa*, a response made in 1859 to the call of David Livingstone, who appealed to the youth of Oxford and Cambridge to carry on his work. Bishop Edward Steere was its most distinguished scholar and statesman.

The earliest missionaries of the *Church Missionary Society*, like those of the S.P.G. and S.P.C.K., were Germans, and the Basel Missionary Institution, established in 1815, supplied no fewer than 88 C.M.S. missionaries, including the Arabic scholar and writer, K. G. Pfander, and the E. African explorers, J. Rebmann and L. Krapf. Its first mission was in W. Africa (1804). India was entered in 1813, when 'Abd-al-Masih, the disciple of Henry Martyn, opened work at Agra. In 1814 Madras and New Zealand were occupied; Travancore in 1816; Ceylon in 1818; N.W. Canada in 1822; in 1820 C. T. E. Rhenius began work in Tinnevely. In 1837 L. Krapf first went to E. Africa, and in 1841 H. W. Fox and L. L. Noble began the Telugu Mission in S. India. In 1847 China was entered by W. A. Russell and R. H. Cobbold. In 1850 the Sindh Mission was begun, and in 1852 the Panjāb Mission was started at Amritsar. The N.W. Frontier was first touched at Peshāwar in 1854, British Columbia in 1856, and Kashmir in 1864. Uganda was opened up in 1876, Persia and Japan in 1869, Egypt (the revival of a previous mission) in 1882.

The C.M.S. represents the Evangelical school of the Church of England, in touch with the more pronounced Anglicanism on the one side and with nonconformist and interdenominational effort on the other. Its missionaries, after the first supply of German recruits, were drawn largely from its college at Islington, but of late years they have been furnished in increasing numbers by the universities. It is the largest of the Protestant missionary societies, with a missionary roll of 1340, an annual income of £400,000, and 450,000 adherents in the mission-field.

The *Church of England Zenana Missionary Society*, founded in 1880, works side by side with the C.M.S. in India and China. In 1913-14 it had 224 women missionaries, 27,239 pupils in zenanas and schools, and an income of £60,000. The *South American Missionary Society* (1851) carries on the Patagonian work begun by Allen Gardiner, and also works in Paraguay and S. Chile.

Most of these societies have associations in Ireland and Scotland, but the contributions and missionaries from those countries are not separately given.

(b) *English Free Churches*. — Only the chief societies can be dealt with here. The earliest is the *London Missionary Society* (1795). The discoveries of Captain John Cook moved the founders to send their first mission to the South Sea Islands, where John Williams, after years of work, was martyred on the island of Erromanga (1839). In 1798 S. Africa was occupied, and the labours of Robert Moffat, followed by those of his yet more distinguished son-in-law, David Livingstone, became classical. The most remarkable of L.M.S. missions was that in Madagascar, founded in 1820, and resumed, after long expulsion of the missionaries, with extraordinary fruitfulness. In N. and S. India L.M.S. work has been going on since 1804, extending to Bengal, the United Provinces, Madras, and Travancore. Robert Morrison of this society was the first missionary to enter China (1807), and missions are now planted in S., C., and N. China. C. Africa was taken up as a memorial to Livingstone in 1877. In 1913-14 this mission had 294 missionaries, an income of £214,000, and 316,000 adherents.

The *Baptist Missionary Society*, founded in 1792 on the impulse of William Carey, cobbler, preacher, missionary, and linguist, sent him out as its first messenger. Moved by the narrative of Cook's voyages in the South Seas, his first desire was to go there, but his destination was changed to India, and, being debarred by the E.I.C.'s regulations from settling in British territory, he started the first mission in Bengal at the Danish settlement of Serampore. This became the centre of a unique literary and linguistic work, carried on by Carey with the help of his colleagues, Joshua Marshman and William Ward. From Bengal the English Baptists extended their work eastwards to Assam, north-westwards to Agra, Delhi, and Simla, and southwards to Orissa; also to Ceylon, where a considerable work is done, to three provinces of China, and in Africa to the Lower and Upper Congo; they also did work in Kamerun, which was eventually made over to German missionaries when their government occupied the country. In 1913-14 they had 463 missionaries, an income of £99,000, and 25,170 Church members.

The Wesleyan Methodists had already begun work in the British W. Indies under Thomas Coke in 1786, and in W. Africa from 1811. After his death the *Wesleyan Methodist Missionary Society* was founded as a separate organization, and the work advanced in 1814 to Ceylon, in 1815 to S. Africa, in 1817 to India, in 1822 to Australasia, and in 1851 to China. In the last region, and in S. Africa and the W. Indies, many of the churches are no longer under the management of the society. Like the Baptists in the north of India, the Wesleyans in the south have done much for the cause of vernacular literature. In 1913-14 their missionaries numbered 392, their income was £130,000, and their adherents 307,000.

Of societies connected with the minor sects of Methodism it must suffice to mention the Methodist New Connexion (1824), working in China; the United Methodists (1837), in China, E. and W. Africa, and Jamaica; and the Primitive Methodists (1869), in Africa. The Methodist missions generally are an integral part of the Church organizations. The Welsh Calvinistic Methodists (1840) are, properly speaking, Presbyterian. They have an exceptionally successful work among the Khâsis of the Assam hills.

For convenience we may add here the *Friends' Foreign Mission Association* (1865), working in

Madagascar, India, Ceylon, China, and Syria. Like the Moravians, though very much later in time, the Friends prosecute their missionary operations to an extent that is in striking contrast to the smallness of their community, reckoned, as it is, at some 30,000 members.

(c) *Presbyterian*. — The Presbyterian societies, like the Methodist, are part and parcel of the Church organization.

Scottish Churches. — The *Glasgow and Scottish Missionary Societies*, founded in 1796, carried on their work in the face of considerable indifference and even opposition. In 1824, at the instance of John Inglis, the General Assembly undertook a mission to India, and the sending out in 1829 of Alexander Duff, followed by Murray Mitchell and John Wilson, marked an epoch in the history of educational missions in India, which these men opened up with marvellous ability and zeal. The work at Lovedale in Kaffraria (1841) became famous among industrial missions. At the Disruption in 1843 the missionaries in India and Kaffraria cast in their lot with the Free Church, and this new body soon greatly increased its operations, adding Natal, Nyasaland, the New Hebrides, Syria, and S. Arabia. Since the union of the Free Church with the United Presbyterians the United Free Church field has included operations in W. Africa, the W. Indies, China, and Japan. The work of the Established Church was also revived and extended in India, C. Africa, and China.

The *English Presbyterian Church* (1847) is working in China, Formosa, the Straits Settlements, and India; the *Irish Presbyterian Church* (1840) in Manchuria and India.

All these societies have their organizations for women's missionary work, in some cases distinct from the main body, but mostly as a department of it. Generally speaking, the women's societies or auxiliaries are later developments, for it was hardly practicable to send out unmarried women as missionaries till after the middle of the last century; before this, work among women was carried on by the wives of missionaries, to whom some of the most important organizations owe their foundation and development. In the figures given the women's work is included in that of the main society.

(d) *Undenominational*. — Among undenominational societies we notice the two most prominent. The *Indian Female Normal School and Instruction Society* was founded in 1852 for the educational purposes indicated in its name. In 1880 the majority of the Church of England members seceded, and started the *Church of England Zenana Missionary Society*. Under the new name of the *Zenana, Bible, and Medical Mission* the original body has continued to co-operate with Church of England and Presbyterian missions in India, and has developed medical work. The *China Inland Mission* was founded in 1865 by J. Hudson Taylor, who had already worked in China as an evangelist from 1853. Vocation and spiritual preparation are insisted on, but not high educational attainments; careful training, however, is given in language-schools on the field. No direct appeals for funds are made at the home base, and no fixed salary is guaranteed to the missionary. The plan of advance has been to 'occupy' province after province by stationing missionaries in the inland provincial capitals, instead of remaining in or near the treaty ports on the coast. The sending out of seven Cambridge athletes in 1885 created great enthusiasm. The work of the C.I.M. has spread rapidly and given an impetus to advance by other societies into Inland China. In the Boxer Rebellion of 1900 the martyr roll of missionaries of this society far exceeded that of any other. The

Salvation Army has been doing missionary work, principally in India, since 1883; its operations have been mostly of a social kind, such as industrial undertakings and reclamation of certain criminal tribes. The *North Africa General Mission* works mainly in Algeria and Morocco; the *Egypt General Mission* as indicated by its name; the *Regions Beyond* and the *Sudan United Missions* in W. and C. Africa.

(c) *Missionary publishing societies.*—In all Protestant missionary work the rule has been to give converts and others access to the Christian Scriptures as soon as possible. Occasionally this may have resulted in premature productions which have afterwards been the cause of misunderstanding or hindrance, but, taken as a whole, the translation of the Scriptures into the languages of the non-Christian world has been one of the most signal and fruitful achievements of modern missions. The Bible, as a whole or in part, is now printed in about 500 languages and dialects. The great bulk of this work has been and is being done by the *British and Foreign Bible Society* (1804), which has issued 487 of these versions up to 1914. The number of these is being increased year by year, and the work of revision of older versions in the light of the best scholarship is constantly proceeding. Many scores of these languages possessed neither book nor script before they were reduced to writing by the missionaries, who soon followed up the spelling-book and the school-reader with the Gospels, and gradually added the whole NT and in many cases the OT also. The B. and F.B.S. circulated, in 1914, 10,162,413 copies of the Scriptures. It received a charitable income (exclusive of sales) of £90,000. The *National Bible Society of Scotland* and the *Trinitarian Bible Society* in the same year circulated respectively 2,762,616 and 154,952 copies in 13 and 2 languages (besides those dealt with by the larger society).

For the production of Christian literature of a more general kind the *Society for the Promotion of Christian Knowledge*, already noticed, is the oldest society. It helps Church of England missions in all parts of the world, principally with books of devotion and theology, but also with works of a more general nature. It has published in 99 languages. The *Religious Tract Society* (1799), with an income (apart from sales) of £17,196, does a similar work on an interdenominational basis, and it has been the means of founding several daughter societies in India and China. It publishes in 200 languages. The *Christian Literature Society for India* was founded in 1858 as a Christian reply to the mutiny. Under John Murdoch (1859–1904) it developed a wide-spread activity in production, both of educational works and of religious and general literature. A similar *Christian Literature Society for China* has done much in producing high-class literature under the leadership of Timothy Richards and others. The *Nile Mission Press* at Cairo (1902) produces Arabic literature for missions to Muslims in the Near East. But the mission presses at work in the four quarters of the globe run into many hundreds.

ii. AMERICA.¹—The *American Board of Commissioners for Foreign Missions*, founded in 1810, sent out its first missionaries to India in 1812; but, owing to the hostile attitude of the E.I.C., they did not secure a footing in W. India till 1814, and in the same year they entered Ceylon. The other principal steps forward were to Oceania (1819), W. Africa (1830), S.E. Africa (1835), China (1847), and Japan (1869). Since the separation from this

¹ The figures given are exclusive of work among Indians or others in home territories. Unless otherwise specified, they are for the year ending Dec. 31st. Generally speaking, these American Boards are part of the official organization of their respective Churches. The principal ones only are mentioned.

Board of the Dutch Reformed and the Presbyterian missions the A.B.C.F.M. represents the Congregationalists of the U.S.A. Income, £200,978; missionaries, 615; adherents, 193,742.

The *American Baptist Missionary Union* came into existence in 1814, when Adoniram Judson entered Burma. In 1827 he began a remarkably successful work among the Karen tribe, which has come over in masses to Christianity. Another Indian mission of the A.B.M.U. in the Telugu country (from 1840) has been the sphere of a large movement. The Union entered China in 1843, the Congo Territory in 1866, and Japan in 1872. The Southern Baptist Convention, an off-shoot from the main body, carries on missions in China, W. Africa, and Japan. Income, £222,885; missionaries, 701; adherents, 505,600.

The *Methodist Episcopal Church* represents the Wesleyan movement in the U.S.A. The larger, or Northern, branch carries on its missions to non-Christians in S. India (1833), China (1847), N. India (1856), Japan (1872), Korea (1885), and Malaya (1889). The Southern branch began missionary work in 1846, and carries it on in India, China, and Japan. The foreign work of this denomination has spread rapidly and widely. Income, £296,506; missionaries, 1396; adherents, 687,368.

The *Presbyterian Church in the U.S.A.* is also a leading missionary force. It separated its work from that of the A.B.C.F.M. in 1837, and has missions in Syria, Persia, India, Siam, W. Africa, China, and Japan. Its educational work in India especially is of a high order. The Presbyterians of the Southern States (*Presbyterian Church in the U.S.A.*; 1861) work in China, Japan, Congo Territory, and Korea. The *United Presbyterian Church* (1859) maintains a vigorous work in China, India, and Egypt (the last named chiefly among Copts); in their Panjāb Mission accessions have been very large. The *Dutch Reformed Church* (1832) works in China, Japan, India, and on the Persian Gulf. The *Disciples of Christ* have missions in China, Japan, India, and Turkey. The first of these denominations in 1914 had an income of £561,142, 1537 missionaries, and 370,238 adherents.

The *Lutheran Churches of the U.S.A.*, numbering over 2,000,000 communicants (and, say, 10,000,000 adherents), are divided into six chief sects, whose first mission was undertaken in 1841. They work mainly in India, where their most important mission is in the Telugu country. Income, £68,907; missionaries, 81; adherents, 70,426.

The total figures for Protestant Missions in N. America amount to 6627 missionaries and 1,396,631 adherents.¹

Canada has eight leading Protestant missionary societies. The principal of these are the *Baptist*, the *Methodist*, the *Presbyterian*, and the *Anglican*.

In addition to the Boards connected with the various Churches, one organization, connected with no Church in particular, has powerfully influenced the missionary life of all, not only in America, but in the United Kingdom, and on the continent of Europe. The going out of the 'Cambridge Seven' to China in 1884 excited great interest among the students of America as well as among those of Great Britain, and at a conference of students summoned in 1886 by Moody at Mount Hermon, Mass., the *Student Volunteer Missionary Union* was formed on the basis of a declaration by each member of his or her intention to become a foreign missionary. The same movement continued in a less organized form in Britain till it was formally established there also, in Edinburgh, in 1892. It soon became evident that the appeal for missionary

¹ It is impossible to estimate accurately the distribution of income between home and foreign missions.

service could not be effective without a strengthening of the general Christian life of the student world at large, and in 1893 the *Student Christian Movement for Great Britain and Ireland* was started. This has now a membership of over 9000 students, including those in theological colleges, and it is affiliated to the *World's Student Christian Federation*, with a membership of over 180,000 students in some 40 countries. The S.V.M.U. has become a department of the more general work. Since 1896 it has systematized the study of missions among its members and outside by the formation of study circles and the provision of suitable textbooks for them. The Liverpool Conference of 1912 co-ordinated the foreign missionary and home social problems of the movement more closely than before, and the S.C.M. works at the solution of both as inseparable the one from the other. From the British branch of the S.V.M.U. over 2000 students have left in thirteen years for the mission-field; 700 are still in college, and 600 are undergoing post-collegiate training for missionary work. The Union sends out no missionaries itself, but only through the societies.

iii. GERMANY.—In the latter part of the 18th cent. the Danish-Halle Mission died out, its missionaries being taken over by other societies. The *Moravians* quietly continued their work and celebrated their first centenary in 1832 with much cause for rejoicing; their influence was felt, too, in new undertakings elsewhere. During their second century the work has increased till it embraces 21 mission-fields, mostly in America, but also in Africa, Australia, and India. The income from home contributions is little more than one-third of the total expenditure, the balance being met from free-will offerings in the mission-field, government grants, and trade profits. The fields of work are largely the most remote and inhospitable lands, such as Greenland, Labrador, Alaska, the Mosquito Coast, N. Australia, and Lesser Tibet.

Other German Protestant missionary efforts began with the training of missionaries for societies outside of Germany. Johann Jaenicke from 1800 to 1827 carried on a missionary seminary in Berlin whose *alumni* were sent out from Holland and England. They included pioneers in Tinnevely (C. T. E. Rhenius) and China (C. Guetzlaff). In S. Germany Christian life was strongest in Württemberg, Baden, and German Switzerland, and here missionary interest resulted in the foundation of the *Basel Missionary Institute* in 1815, from which 88 candidates were passed on to the C.M.S., many of whose early missions were founded or conducted by them. In 1822 the *Basel Evangelical Missionary Society* was founded, largely through the efforts of Christian Gottlieb Barth. Their first permanent mission was started on the Gold Coast in 1828. In 1843 work was begun on the south-west coast of India, in 1846 in China (Kwantung), and in 1886 Kamerun, becoming a German colony, was taken over from the Baptist Missionary Society. The Industrial Association connected with the Basel Mission has taken a lead in industrial work in S. India, where it carries on weaving, tile-making, etc., at Mangalur and other centres.

The *Berlin Missionary Society* sent out its first missionaries to Africa in 1834, and in 1872 it took over work in S. China, and in 1891 in E. Africa. The valley of the Wupper in Rhenish Prussia was a strong centre of active Christian life, and here, after much preliminary work, the *Rhenish Missionary Society* was founded in 1828. This, too, began work first in S. Africa, extending in 1834 to Borneo, in 1862 to Sumatra, in 1865 to Nias, in 1846 to China, and in 1887 to Kaiser Wilhelmsland. The missions in S. Africa have attained a large measure of self-support, and in Sumatra many

Muhammadans have been brought in, together with masses of pagans.

The year 1836 saw the foundation of three German societies. The *Bremen Missionary Society* has had a chequered career, its principal mission being in W. Africa, where the deadly climate has carried off many missionaries. The *Leipzig Missionary Society* was first established in Dresden, and transferred to Leipzig by its director, K. Graul, in 1848. It makes more use of university graduates as missionaries than do the other German missions, which generally employ seminarists. It also more than others represents the pronounced Lutheran element. The Leipzig M.S. in 1840 took over what remained of the old Danish-Halle Mission, and in 1892 it opened work in German E. Africa. The *Gossner Missionary Society* was founded by a Berlin pastor of that name. He began on his own responsibility to train missionaries in Scripture and the devotional life, and within 22 years he had sent out 178 to Australia, British and Dutch India, N. America, and W. Africa. Not a few of them proved able and successful evangelists. After Gossner's death in 1858 many of them joined other societies, but the work among the Kols of Chotā Nāgpur, which had been specially fruitful, was put under a board, since then known as the Gossner M.S. Notwithstanding the secession of several missionaries with their flocks to the S.P.G. in 1868, the Gossner Mission (113,000 adherents) represents the largest group of Christians in the Province of Bengal.

Another mission which belongs to the extreme Lutheran section of German Protestantism, and which also owes its origin to the enterprise of a single man, is the *Hermannsburg Missionary Society*, begun by Ludwig Harms in 1849. After parting with certain fields to others, this mission has work now in S. Africa and India.

Besides the eight societies mentioned above, the following have been founded later: *Schleswig Holstein* (1877), *Neukirchen* (1882), *General Evangelical Protestant* (1884), *Berlin Missionary Society for E. Africa* (1886), together with a number of minor bodies, including several small societies for women's work. The G.E.P. Society is the only body representing a modernist standpoint approximating to Unitarianism. It has a few missionaries in Japan.

iv. HOLLAND.—Owing, perhaps, to the State propagation of the faith in former years, independent missionary societies have not multiplied here so rapidly as elsewhere. The *Dutch Missionary Society*, founded in 1797, has worked in the Malay Archipelago, and the results of its work have largely—especially in Minahassa in Celebes—been taken over by the Established Church, which maintains 36 pastors and 26 assistants, who minister both to converts and to colonists. A number of minor societies have been formed from time to time. The Dutch missions have had considerable success among the Muslims of their colonies.

v. FRANCE.—In France the cause of Protestant missions is represented by the *Société des Missions Évangéliques*, founded in Paris in 1824. Its chief mission is the very successful one among the Basutos in S. Africa with which the name of François Coillard is connected. It has also taken over work from English and American societies in territories such as Madagascar, Gabun, and the Society Islands, which had come under French domination. In French Switzerland the *Mission Romande* was founded in 1879; it works in N. Transvaal and Delagoa Bay.

vi. SCANDINAVIA.—In Scandinavia the *Danish Missionary Society* was founded in 1862, and works in S. India and China. The *Norwegian Missionary*

Society (1842) has missions among the Zulus and in Madagascar. There are minor missions connected with the China Inland, the Alliance, and other societies. Sweden also has had its own *Swedish Missionary Society* since 1835, working in S. India and S. Africa, and a *Swedish Missionary Union*, since 1878, with missionaries in Algeria, the Congo, Ural, Persia, China, and Chinese Turkestan, besides minor associations. Finland has a *Lutheran Missionary Society* with work in S. Africa and *Free Church* missions in China and India.

vii. **BRITISH COLONIES.**—The British colonial Churches of various denominations maintain a considerable and increasing amount of missionary work. This is done partly through societies locally formed, partly by assisting the older societies in home lands. Australia and New Zealand, in addition to work among their own aborigines, send men and women principally to Asiatic countries, the S. African churches to the pagans of their own territories, the now independent W. Indian Churches to their own neighbours and to their race-fellows in Africa. In India and China, though very few churches are as yet self-supporting, various indigenous missionary societies have been formed, such as the *Tinnevely Missionary Society* and the *National Missionary Society*, for work in various parts of India. These two had 2416 adherents, 5 missionaries, and an income of about £4000 in 1912.

2. **Preparation of missionaries.**—In the beginnings of societies the first step taken was frequently the establishment of a missionary seminary. As a rule, the candidates required some school training before entering on their theological course. The fact that many of them had been engaged in trades or handicrafts rendered them all the better suited to the pioneer work which largely fell to their lot, but not a few distinguished scholars developed among them. The Free Churches in England and America have drawn their missionaries mainly from the theological colleges of their denominations, but the Scottish Churches have usually sent out graduates of the universities. In the Anglican Church, missionary seminaries have a more important position, the most prominent being the C.M.S. College at Islington (797 missionaries up to 1913, of whom 13 are bishops) and St. Augustine's College at Canterbury (307 and 5 respectively). On the Continent the great majority of missionaries are seminarists, but their training is generally most thorough, and they seem to have produced as many scholars in proportion as the university-trained men. In American missions it is difficult to distinguish accurately between university and non-university men. In any case, both there and in Europe the S.V.M.U. has greatly tended to bring men and women of good university attainments into the missionary ranks—a tendency emphasized by the rapidly increasing demands of higher education in the mission-field.

Till recently good theological training with a university degree was considered the *ne plus ultra* of missionary preparation from the intellectual side. But since the beginning of this century the conviction has been gaining ground that the task of the missionary demands, besides these, a technical training proper to it. This opinion was voiced by Commission VI. of the Edinburgh Conference, which recommended the establishment of Boards of Study for the special preparation of missionaries both in Britain and in America. This was carried into effect. The American Board of Missionary Studies is working on a somewhat wider basis, taking in theological subjects as well as others, whereas the British Board of Study, by mutual agreement, as an interdenominational body, deals only with general subjects (history and methods of

missions, phonetics, linguistics, comparative and special study of religions, ethnography, anthropology, sociology, hygiene, business methods, educational methods). Some colleges already give themselves more or less to the teaching of these subjects: in America the Kennedy School of Missions at Hartford, Conn., the Missions Department of Yale University, the Bible Teachers' Training School, New York, the College of Missions, Indianapolis, the Cincinnati Missionary Training School, in Britain the U.F.C. Women's Missionary College, Edinburgh, and the Kingsmead Training Institution, Birmingham, take up many of these subjects, and it is in contemplation to merge the British Board of Study in a Central College of Missionary Study.

3. **Missionary conferences.**—The lack of unity and co-ordination in Protestant missions has long exercised the minds of their promoters, and the effort has been made to overcome this difficulty by gatherings for common counsel. The general missionary conferences thus far were held in Liverpool in 1860 (126 members); London, Mildmay Park, 1878 (158 delegates); London, Exeter Hall, 1888 (1494 delegates); New York, 1900 (2300 members); and Edinburgh, 1910 (1206 delegates). The bulk of the membership in these has consisted of delegates of missionary societies and boards, supplemented by missionaries from the field and experts of eminence. The composition of these conferences has become increasingly interdenominational and international; and in Edinburgh not only did High Anglicans attend as members, but messages of greeting were received from Greek and Roman prelates, while Asiatics, Africans, Australasians, Americans, and Europeans of many nationalities took part. The conferences have no legislative or executive authority, but the 'findings' which are formulated as the result of their debates exercise great practical influence on missionary work and methods. The reports of these conferences form a valuable record of the progress of missionary life and policy and a storehouse of missionary thought and argument. The report of the Edinburgh Conference especially (in 9 vols., London and New York, 1910) is indispensable to the student of missions. Its investigations and discussions are carried on by a Continuation Committee which publishes the quarterly *International Review of Missions*. The same kind of work has been carried on in the mission-field by periodical conferences of representatives from different missions at such centres as Madras and Shanghai, and in 1912-13 J. R. Mott convened a series of Continuation Committee Conferences in India, China, and Japan, the findings of which are published in a bulky volume (New York, 1913). By these and other means a large amount of practical union in work has been attained, and the tendency in the mission-field and at the home base towards closer unity has been promoted.

4. **The field.**—i. **AMERICA.**—The spread of Christianity in this continent has been mainly through immigration. Paganism is now only a fringe of the total population of 170,000,000. The work of Protestant missions has been chiefly in N. America, among Eskimos, Indians, and Negroes. For our purposes the W. Indian Islands and Guiana go together with N. America. S. America has been touched in Patagonia and Paraguay.

(a) *Eskimos.*—The Norsemen who immigrated to Greenland in the Middle Ages had a bishopric of their own, but both they and their faith died out before the 18th century. In 1721 a Norwegian pastor, Hans Egede, having heard of them, repaired to the west coast of Greenland and began work among the Eskimos under great difficulties owing to their utter indifference. It was continued, how-

ever, by his son, and eventually taken up by the Danish M.S. The west coast population in this region is Christianized, and missionary work is going on among the pagans of the east coast. Further south on the west coast the Moravians, beginning in 1733, founded the settlement of New Herrnhut, and from that centre Christianized the tribes, so that in 1899 they were able to hand over this territory to the care of the Danish Church. In Labrador since 1771 the scattered Eskimos have been mainly brought in by the Moravians, and they are cared for with the help of trade carried on by the mission ship 'Harmony.' On the other side of the continent the U.S. territory of Alaska contains a relatively considerable population of Eskimos, besides Aleutians, Indians, immigrant Chinese, and white men. Here in 1877 a Presbyterian mission was founded, followed by Moravians, American Anglicans, and others, totalling about 6000 Christians. The race, about 40,000 in number, is intellectually apathetic and feebly organized; hence its contact with white traders has been unfavourable to the development of independent Church life, but missionary work has meant their salvation from extinction through strong drink, disease, and exploitation.

(b) *Indians*.—These number now in the U.S. and Canada under 400,000. Over one-half live on reservations; the rest are scattered among their white fellow-citizens. From the 17th cent. onwards the relations of the colonists, whether French, English, or Dutch, with the Indians were those of perennial warfare and commercial exploitation, till the peace of the country was fully established and a more sensible and humane policy was gradually introduced. Missionary efforts were never entirely wanting. John Eliot (from 1646), David Brainerd (from 1743), and David Zeisberger (from 1745) gathered many thousands of Indians into Christian congregations of peaceful citizens, but again and again their work was destroyed by civil war. The later and more gradual settlement of Canada was advantageous to the Indian population, as the missions of all Churches were able to gain a hold, before land-grabbing and commercial greed came strongly to the fore. The first Protestant mission was begun in the Hudson's Bay Territory in 1820; it has been developed largely by the C.M.S., and much heroic work was done by its pioneers among the sparse native population before the colonists came in. Now the whole dominion is parcelled out in dioceses of the Anglican Church, and work among the Indians is carried on by other denominations also, Presbyterians and Methodists being specially active. Since the separation from England the evangelizing of Indians in the U.S. has been more and more taken over by the various Churches, and the still pagan Indians are a small remnant. Their assimilation as citizens of the Republic is still an incomplete process.

(c) *Negroes*.—These number (including coloured or mixed population), in the U.S. 9,827,763 (1910), and in the W. Indies 1,280,000. Their introduction into the latter dates from the Spanish conquest, into the U.S. from 1640. Organized missions among the U.S. Negroes practically began about 1860, but during their time of slavery large numbers had been Christianized, especially by the Methodists and Baptists. The bulk of these Negroes are now connected with the various Protestant Churches. In 1913 they contributed about £20,000 for home missions and £10,000 for foreign missions, besides maintenance of churches, ministry, and education. The Negroes of Cuba and Haiti are but little touched by Protestant work, but in the remaining islands they are incorporated into self-supporting churches, the result of previous missionary effort, and their economic condition is less complicated by

an overweight of white population than in the U.S. They number about 1,000,000.

(d) *S. America*.—The territory of Guiana is closely connected with the W. Indies. Anglicans, Moravians, and Methodists have gathered converts amounting to 90,000. These are partly from among the E. Indian indentured coolies working on the sugar-plantations (who are also to be found on the islands). Catechists and clergy of Indian nationality work among them, and coolies returning home help to spread the faith in India.

Of the 38,000,000 in S. America the aborigines number about 5,000,000, mostly belonging to the Roman Catholic Church. Protestant missions have touched them in Patagonia, where the work set on foot by the heroic pioneer, Allen Gardiner, changed the opinion of Charles Darwin as to the susceptibility of a savage race to higher culture. The Indians of the Chaco in Paraguay have also begun to come in, and the mission among them has been recognized by the government of the Republic as the best mediator between white and coloured peoples.

ii. *AFRICA*.—(a) *W. Africa*.—It is this part of the continent that, owing to the slave-trade, has had the earliest and most intimate connexion with Protestant lands, especially with N. America. The endeavour to influence Africa directly by means of the liberated slave is chiefly represented by the little republic of Liberia, founded in 1824 by the American Colonisation Society. The Christian Negroes who settled there were hardly ripe for administering the Free State proclaimed in 1847, but from this centre work is being carried on by sundry societies among the neighbouring non-Christians. A certain number of American Negroes have been sent as missionaries to Africa by their Churches in the U.S.A., but the effective shaping of their work is a problem that awaits solution.

The north-west coast of Africa as far as the Senegal borders on sparsely-inhabited Muhammadan territory which has scarcely been entered as yet. From this to the mouth of the Congo is the region of Protestant mission-work.

At Sierra Leone the settling of liberated slaves began in 1808, after the abolition of the slave-trade, and its capital received the name Freetown. Up to 1846, 50,000 African slaves had been brought there, chiefly by British cruisers. For years great loss of life was experienced among the C.M.S. and other missionaries who worked there, and among the welter of tribes represented the only common language available was English. To some extent the varying elements were sifted out, and Christianity spread by means of those who rejoined their kindred elsewhere. In 1852 an Anglican bishopric was constituted, and in 1861 the Church, in which meanwhile education had spread rapidly, was made self-governing. It carries on missions among its pagan neighbours. Here and elsewhere in W. Africa the missionary comes into contact increasingly with Muslims from the north. Among a population of 75,000 in the colony 57,000 are Protestant Christians.

The Gold Coast Colony has a population of 1,500,000. The western part is worked by Wesleyan missionaries, the eastern by the Basel Society. The latter, since 1828, has penetrated effectively into the back country formerly under Ashanti rule; the Wesleyans, too, have moved into the northern territory. The country is being opened up by railways, and the rapid increase of commerce is enriching the Christian community here as elsewhere in W. Africa, to the advantage of self-support, but not always to that of spiritual life and morals. The Christian community now numbers upwards of 30,000.

The German colony of Togoland, next on the

east, has considerably developed missionary work from that country, during the last few years, among the Ewe nation. Good linguistic work has been done. The community numbers some thousands.

The work in the lower basin and delta of the Niger has assumed increased importance since the constitution of Nigeria, the richest of Britain's African possessions, as a Crown Colony, with a population of 18,000,000. The first mission stations (from 1846 onwards) were started to look after natives of the Yoruba country who had returned from Sierra Leone to their own people. Lagos, the great port of the palm-oil trade, and the large interior towns of Abeokuta and Ibadan were occupied, and considerable Christian communities were gathered, amounting (1913) in the Yoruba province to 50,000. Economic development is going on rapidly, and the demand for education, especially in English, is increasing year by year.

After the Niger had been opened up by three voyages of exploration (1841, 1854, 1857), an African priest of the C.M.S., Samuel Crowther, was sent to this region. He planted several stations, and in 1864 was consecrated bishop. The work was carried on by Africans, with some vicissitudes but with substantial progress, till Crowther's death in 1891, when W. Equatorial Africa was placed under an English bishop, assisted by two Africans, the wealthy churches of the Delta being granted self-government. In N. Nigeria the town of Lokoja had been occupied in 1865, but it was not till the end of the century that an effective advance was made into this territory, where a predominantly Muhammadan population alternates with large patches of paganism, while the spread of Islam continues in a southerly direction. The work here is still in its beginnings. In Calabar at the south-east corner of Nigeria a Christian community of 11,000 has been gathered in by the U.F.C. mission.

Kamerun, a German colony since 1884, was originally evangelized by English Baptists, but their work was taken over mainly by the Basel Society, who were pushing into the back country before the outbreak of the great European war. The Christians number about 15,000 out of an estimated population of 3,000,000.

The Congo River was first opened up completely by Stanley in 1876-77, and the Congo Free State, under the protection of Belgium, has been the scene of rapid missionary advance along the river. Yakuso, the furthest point, near Stanleyville, is 1200 miles from the mouth. Among the first explorers in detail were the English Baptists G. Grenfell and W. H. Bentley from 1879 onwards. Other missionaries of various nationalities followed. Owing to the difficulties of climate and the great multitude of tribes and languages, progress has been limited, but some dozen societies are now at work in this area. Indigenous churches are being formed, and elementary education is being pushed.

The characteristic problems of the W. African missions generally are presented by the constant advance of Islam from the north, the demoralization of commercial intercourse caused by the liquor-trade, and the unsettling effects of a rapid acquisition of wealth formerly undreamt of. On the other hand, the removal of the evils connected with the slave-trade, the increase in prosperity and intelligence, and the creation of a Christian standard of conscience and morals, with the opportunity given to the natives of rising to a higher life, are elements in appreciable progress towards the regeneration of the Negro peoples.

(b) *S. Africa*.—In this we include the regions south of the river Kunene on the east and the Zambesi on the west. It contains three African races: the Bantu (including Zulus and Kafirs), the

Nama or Hottentot, and the Bushman, the last two scarcely remaining pure, the first virile and prolific. The climate being temperate, Christianity has spread by immigration from western nations, and the white population is reckoned at 1,300,000. Hence the racial problem is at its acutest in S. Africa, and it specially affects the work of missions, which aim at raising the native populations to a higher level, religious, moral, and social, and at giving them the best education which they are capable of assimilating. The earliest Dutch colonists regarded the natives as an inferior class of beings whom it was both lawful and expedient to keep in subjection, and this attitude has not been confined to one section of the white races. Thus there has been a persistent prejudice against, and often actual antagonism to, the work of missions, sometimes aggravated by lack of prudence on the part of the missionary and by unbalanced policy on the part of the government. The conviction is gaining ground, however, that without the moral influence of Christianity the problems resulting from the contact and blending of two cultures cannot be thoroughly solved. Among some 4,000,000 natives there are now about 750,000 Christians, the result of the work of 30 missionary societies belonging to 8 nationalities. The racial factor is especially in evidence in the 'Ethiopian Movement', composed of groups of congregations who in 1892 formally seceded from their missionary connexions. Some of them in 1899 joined the Anglican Church as 'the Ethiopian Order'; the remainder do not appear to be progressive either in internal life or in external expansion.

In what became in 1886 German S.W. Africa the principal work has been done by German missionaries of the Rhenish Society since the forties. The fruits of their persevering and systematic efforts have suffered greatly through colonial wars. Protestant Christians in the colony number, by last figures, 13,000.

The largest indigenous Christian population is in Cape Colony, numbering 1,145,000 out of a total of 2,500,000; it comprises westwards, broadly speaking, bastardized Hottentots, and, eastwards, Kafirs of relatively pure race. The Moravians, who began work in 1737, were followed in 1799 by the L.M.S., whose missions in Bechuanaland are remarkable for their great pioneers, R. Moffat and, above all, Livingstone. Through the persistence of John Mackenzie and the intervention of the British Government, all attempts to block the northward way of the missionary were frustrated, and the path of the gospel was opened up to the C. African lakes and eventually from the Cape to Cairo. The converts of the L.M.S. in Cape Colony now form a Congregational Union with some 35,000 adherents. Efforts of later dates are represented by the adherents of the Wesleyans (over 90,000, now independently organized), Rhenish M.S. (16,000), Berlin M.S. (50,000), and Scottish Presbyterians (25,000). The majority of the white colonists belong to the Dutch Reformed Church, which for a long time held aloof from missionary work. Since the middle of the 19th cent. its attitude has changed, and it carries on missions within and beyond Cape Colony. In the latter it counts over 80,000 native Christians, the majority of whom are under the charge of its parochial clergy. The Anglican Church in the three dioceses of the Colony claims over 70,000 adherents.

Among the Zulus and Swazis of Natal the work of many denominations has been greatly hindered by frequent and destructive wars, but Christian congregations have grown, and some converts have been gained from among the Indian coolies. Basutoland, blessed with a more quiet development since

it became a Crown Colony in 1884, has been worked principally by the Paris M.S., which now counts about 70,000 adherents. Among the Bechuana of the Transvaal and Orange River Colony Dutch, Anglican, Wesleyan, and Lutheran missions have gathered a Christian community of considerable importance. The problems of moral and social development are greatly complicated by the congestion of labourers, both Christian and non-Christian, in the mine compounds of Johannesburg and the Rand. The thinly-populated Bechuanaland Protectorate includes Khama's Country, where a Christian African prince rules his people well.

Madagascar has been a land of great vicissitudes in missionary work. The first missionaries of the L.M.S. began work with considerable success among the Hovas, the ruling race of the central province, in 1820. In 1836 the accession of a hostile queen brought about the expulsion of the missionaries, and for twenty-five years the Christians were severely persecuted, yet they increased considerably. In 1861 a new ruler recalled the missionaries, and, when another queen was baptized in 1869, conversions began in masses. To cope with the situation other societies, Friends, S.P.G., and Norwegians, entered the island. In 1895 Madagascar was annexed by France, and Protestant mission work was so severely hampered that the L.M.S. was fain to give over a large part of its work to the Paris M.S. The total number of Protestant Christians in Madagascar is estimated now at 287,000, while the scholars number 44,577.

(c) *E. and C. Africa.*—Missionaries helped to open up these lands both from the east coast and from the interior southwards. In 1844 Ludwig Krapf, a German in C.M.S. service, landed on the island of Mombasa and began work on the mainland opposite. He planned (1) to carry a chain of mission stations across Africa from Mombasa to Gabun; (2) to establish on the east coast a colony for liberated slaves like that in Sierra Leone on the west; and (3) to work for an African ministry under an African bishop. The second of these objects was accomplished at Freetown in 1874; the first and third are in process of realization now. In 1846 Krapf was joined by Johann Rebmann. After nine years Krapf was invalided; Rebmann held on for twenty-nine years. By their discovery of the snow-peaks of Kilimanjaro and Kenia on the equator, and of the great inland-sea of Nyanza, they revolutionized the geography of C. Africa, and their linguistic labours prepared the way for later workers in a fruitful field.

The yet greater work of David Livingstone is part of history. From his first station of Kolobeng in S. Africa he constantly pressed northwards, crossed Africa from east to west, and opened up the lake regions of Nyasa and Tanganyika, exploring ceaselessly till he died at Ilala in 1873. In his opinion the end of the geographical feat was the beginning of the missionary enterprise. He desired to uproot the slave-trade, and to open up Africa to legitimate commerce and to Christian culture with faith as its root. The Universities Mission to Central Africa undertaken by members of the Church of England, the L.M.S. mission on Lake Tanganyika, and the Scottish Presbyterian missions in Nyasaland are the direct results of his lifework; but it affected the whole missionary enterprise of inland Africa. To Stanley it was given to complete the work of Livingstone by his exploration of the Congo valley, and in the course of it he gave the impulse which has resulted in the formation of a virile Christian State in the centre of Africa, now the kingdom of Uganda. Stanley found the king, Mutesa, hesitating between the claims of Christianity and Islam. Through a

Swahili Christian interpreter he put the Christian case before the monarch and straightway appealed to English Christendom to enter this open door. The result was the sending of the well-known C.M.S. mission in 1875. The murder of James Hannington and the barbarous persecution of the early converts only served to increase zeal and enthusiasm. After sundry conflicts and imminent risk of abandonment by the Colonial Office, Uganda became a British Protectorate, under which mission work has gone forward peacefully. The country now contains 96,000 Protestant Christians, with a somewhat larger number of Roman Catholics and a smaller number of Muhammadans. The schools contain scholars up to a secondary standard. The growing Church now forms an effectual breakwater against the rising tide of Islam.

The two protectorates of E. Africa, the English and the German, have each brought the country under civilized administration, and the British Government has opened up its territory by a railway, preceded or accompanied by missionaries. The English work in German territory has been partly made over to German missions since the establishment of the colony in 1884, but a group of C.M.S. missions remains round Mpwapa, and another of the U.M.C.A. opposite Zanzibar. The German work is chiefly on the northern frontier and on the north shore of Lake Nyasa and its vicinity. The principal missions of the Nyasaland Protectorate are those of the Scottish churches, with the two industrial centres of Livingstonia in the north and Blantyre in the south—fit memorials of the great Scottish missionary pioneer. His successors have seen the slave-trade entirely wiped out and fierce animist tribes subdued by the influence of Christian love, exemplified in medical missions, and brought under training in civilized industry and commerce. The Anglo-Egyptian Sudan in its Muhammadan parts is closed to missionary effort by government ruling; among the pagan Dinkas, Azandi, and other tribes missionary work is in its first stages.

iii. *OCEANIA.*—Missions in Oceania date from 1769, and owe their first impulse to the interest excited by the story of Cook's voyages in the South Seas. The major part of this area is suitable for European colonization, and the aborigines belong to more or less primitive states of culture, in which their physical as well as mental stamina has remained weakly. Owing partly to this and partly to unscrupulous exploitation by white settlers and traders, the result of contact with the white races has been the rapid diminution, and in some cases, as in Tasmania, the entire extinction, of the native races. The work of missions has therefore largely consisted in the rescue of weaker races from extermination through contact with exponents of higher civilizations not imbued with the Christian spirit. In no part of the world have the results of missions been more rapid and wide-spread, but stability is sometimes lacking. The effects of kidnapping, strong drink, and disease have been appreciably counteracted.

Work in *New Zealand* was started by Samuel Marsden in 1814, and after a time made rapid progress. In 1840 the islands became a British colony; unfortunately wars broke out, and in 1864 the strong Hau Hau apostasy, a recrudescence of pagan cults mixed with Christian heresies, drew away great numbers. In spite of this the leading missions of the C.M.S. and Wesleyans were able, before the end of the century, to make over their converts to the local Church organizations. The New Zealand Parliament also has its Maori members. The Maori population of New Zealand is about 50,000, of whom some 30,000 belong to Reformed communions. There appears to be some

hope that, in place of declining, the native population is beginning to increase.

In *Australia* the aborigines have dwindled to 74,000, living mostly in the northern parts of the continent. After several abortive attempts missions, with a strong industrial element, have been continuously carried on since 1851 by English bodies of various denominations, as well as by Moravians and Lutherans. Despite pessimism, the aborigines have proved susceptible to the elevating influence of the gospel, and decadence has been to some extent arrested, though independence is not yet in sight. The number of Protestant Christians is computed at 6000.

The *Islands of the Pacific* may be roughly grouped into Polynesia (south of Hawaii), Melanesia (west of Polynesia), and Micronesia (north of Melanesia). Among the larger islands of Polynesia, Hawaii, now a United States territory with Honolulu for its capital, was first evangelized by the American Board from 1820 onwards and Christianized within fifty years. It has sent out and supported missionaries to several other islands. Tahiti, occupied by missionaries of the L.M.S., had a similar history, but after the annexation of the group by France it became necessary to transfer the work to the Paris M.S. Raiatea, the sphere of the famous John Williams, has remained in British connexion. In the Tonga and Viti, or Fiji, Islands the Wesleyans have been the principal workers. Practically the entire population is Christian, and is efficiently ruled by princes of the same faith. Education is wide-spread, and evangelists from Fiji have carried the faith to many other islands.

Melanesia has a population of 475,000, of whom 111,000 are Protestant Christians. The gathering in of these numbers has cost not a few missionary lives, owing to resentment on the part of islanders who had been oppressed by traders. The missionaries are British, German, Dutch, and Norwegian. The martyrdom of Bishop Patteson in 1871 called forth much enthusiasm and service, and during his long life John G. Paton of the United Presbyterian Mission saw 20,000 natives converted in the New Hebrides and contributing £1300 in one year for Church purposes.

On the Micronesian Islands, now under British, German, and American protection, developments since 1852 have been similar. Missionaries from Australia have taken part. Roman Catholic work is stronger here than in the other islands; out of 30,000 Christians the Roman Catholics claim 12,000.

New Guinea, or Papua, was first entered in 1871, when Christians from L.M.S. missions in Polynesia volunteered for the work, in which many of them laid down their lives. They had a great leader in James Chalmers (1876-1901). The Christians now number 35,000. Anglican, Wesleyan, German, and Dutch missionaries have taken part.

In various parts of Oceania, especially Australia, Hawaii, and Fiji, missionary work is carried on among the Asiatic immigrants from India, Japan, and China with the help of native preachers from those countries, not without some result. The barriers of caste and social opposition are less rigid than at home, but the restraints of conventional morality are also loosened.

The total population of Oceania, excluding Australia and New Zealand, is reckoned at some 2,000,000, of whom 320,000 are Christians.

iv. **INDIA.**—The impact of Christianity on India has been conditioned by certain outstanding features of the land and people. The peninsula is isolated by land and sea. The culture of the people ranges from the most primitive to a highly developed, though stationary, form. Its religion

contains a similar variety of cults, ranging from spiritual adoration to cruel and obscene orgies, all bound together intellectually by a subtle pantheistic philosophy, socially by the unique system of caste (*q.v.*). Its contact with the outer world during recent centuries has been mainly through the immigration of foreign invaders, who have brought with them the monotheistic religion and polity of Islām, so that Indian Musalmāns now constitute by far the largest Muslim nation of the world. Most recently, however, India has come into connexion with a seafaring nation of the West more intimately than any other Asiatic land. Here, as elsewhere, the missionary has employed in the first instance the agencies of preaching and persuasion, but the form which the results of his work have assumed has mainly been determined by the conditions of the classes to whom he has addressed his message. To bring out the chief features of it, we may deal with 'mass movements,' education, and philanthropy as main channels of evangelization.

The earliest form of Christianity in India is that of the Syrian Churches of Travancore and Cochin, which probably owe their origin to the Nestorian community of Persia, whose members traded with the Malabar Coast in their early days. From about the 4th cent. a trading and landholding community accepted the Christian faith, and has continued as a local caste to the present day. Early in the last century they were aroused from lethargy by contact with Anglican Christianity, and the work of the C.M.S., first in combination, and afterwards side by side, with the Syrians, has stimulated reform and progress, both in education and in evangelizing zeal. The work of St. Francis Xavier, Roberto de Nobili, and other great Roman Catholic missionaries of the Portuguese period is principally in evidence now in the masses of fisher folk and other labouring castes in the west and south of India; and in the earliest Protestant missions the same factor of community-movements appears. In the Danish-Halle Mission of the 18th cent. the greatest name is that of C. F. Schwartz (landed 1750, died 1798). The 20,000 Christians whom he gathered in Tanjore and elsewhere were mainly from the village labourers. After his death the work dwindled, till it was taken over by the Anglican Church, and during the first half of the 19th cent. the work of the C.M.S. and S.P.G. in Tinnevely (principally among the palm-tree climbers), together with that of the L.M.S. in S. Travancore, yielded much more than half the entire number of Protestant converts in India, and naturally also the best organized churches. In 1851 these missions had 51,355 adherents, the remainder of the Madras Presidency 23,821, and all the rest of India 16,916. In the succeeding sixty years these missions and others in S. India have greatly developed, largely through the agency of American societies. The Protestant Christians now number 870,425 (besides over a million and a half Roman Catholics and Syrians), and they contribute £33,721 to the support of worship and schools. The Indian ministry includes 492 ordained men as against 487 foreign missionaries, and the self-administration of the churches is on the increase. Self-extension, too, is shown by the activity of more than one mission of the Indian Churches. The largest is the Tinnevely Missionary Society, with an income of 12,000 rupees, 4 ordained men, and 2000 converts in a mission which they carry on in the Nizam's territory. Part of their work was made over to the diocese of the first Indian bishop, V. Azariah of Dornakal, when he was consecrated in 1913.

In Travancore a similar movement has made headway in the L.M.S. and C.M.S. missions, which

now number 73,000 and 57,000 Christians respectively. Still more wide-spread is the movement in the Telugu country north of Madras. Here, especially since the great famine of 1877-78, the out-caste village labourers have pressed into the churches in myriads. The Christians belonging to Anglicans, American Baptists, Lutherans, and others are estimated at some 150,000.

In Bengal an older movement in the forties of the last century left a considerable church in the Nadiya district; more recently the Namasūdras of E. Bengal are turning their hopes towards Christianity, and the B.M.S. has admitted some hundreds from among them. In the United Provinces of Agra and Oudh the Chamars (leather-workers) and sweepers have been principally gathered in by the American Methodist Episcopalians, who record congregations numbering 102,000 adherents, while other Protestant missions have 22,000. The most rapid movement during the last decade was in the Panjāb, where the Christians entered in the government Census returns had increased from 37,000 in 1901 to 163,000 in 1911 chiefly in the American Presbyterian missions.

The movements among the Indian village proletariat which have resulted in these large and growing accessions to Christianity all form part of one upward tendency of populations representing pre-Aryan inhabitants, enslaved by the Aryan conquerors and kept for millenniums in servitude, but now afforded the opportunity of emancipation by rulers whose political and social ideals are bound up with Christianity and whose rule has been accompanied by active Christian efforts of teaching and philanthropy. The effect of these efforts in raising the masses who have responded to them is expressed thus by the Hindu Census superintendent of the Mysore State:

'The enlightening influence of Christianity is patent in the higher standard of comfort of the converts, and their sober, disciplined and busy lives' (*Census of India, 1911*, Calcutta, 1913, vol. 1. pt. 1. p. 138).

To this we may add that evidences of spiritual regeneration and devotional life are also to be found.

The populations so far referred to are the 'untouchables' who live among the Hindus and Musalmāns of the plains. They may number (accuracy is very difficult to secure) some 30,000,000. But there are some 10,000,000 more of non-Hindu aborigines, living mainly in hilly regions, among whom the Christian faith has found ready entry. Such are the Karens of Burma, the Khāsis of Assam, the Kols and Santāls in Bengal. The Christian communities among these amount to some 200,000 persons. Both among these and among the out-castes the expansion of the movement appears to be limited only by the capacity of the Christian Church adequately to shepherd and educate the candidates for discipleship. The effect of education and Christian influence in raising the status of the Christian community as compared with its Hindu and Muhammadan neighbours has been very marked. Some progress has been made in improving their position as agriculturists; in the Panjāb the Christians have been recognized by Government as an agricultural tribe, and in the irrigation colonies there are several flourishing villages of Christian cultivators, holding land direct from the State.

Education of a simple kind, including that of girls, was from the first a regular part of missionary activity, but it was brought into prominence by the Scottish missionary, Alexander Duff (1830-57). He set out to evangelize the upper classes of Bengal by means of higher education, given through the medium of the English language,

which, through the efforts of Macaulay and others, had already been adopted by Government as the vehicle of learning for India. Duff was assisted in his plans by Rājā Rām Mohan Ray, the founder of the Brāhma Samāj (*q.v.*). Duff's converts were counted rather by the score than by the hundred, but they included men who made their mark on the Christian Church as leaders throughout N. India. His school also had a powerful effect on the development of the Brāhma Samāj and other liberal movements in Hinduism, and not less did he influence the educational policy of the Government of India, which in 1854 founded departments of public instruction, and in 1857 established universities in Calcutta, Madras, and Bombay, followed later by others in Lahore and Allāhābād, and recently by a Hindu university at Benares and a Muslim one at Aligarh. Duff's school soon developed into a college, and no fewer than 8 other colleges were founded in different parts of India during Duff's lifetime. The most noteworthy contemporary of Duff as an educator was John Wilson of Bombay, who founded the college which bears his name, and added to his English work a profound acquaintance with Hinduism. There are now 38 Protestant missionary colleges in India, containing, in 1912, 5447 students, including 61 women, the latter practically all Christians. Of the total, 4481 students were Hindus, 530 Muhammadans, and 436 Christians. There is a fully-organized missionary college for women in Lucknow; and a college department works in connexion with a girls' high school in Lahore.

The work of elementary and secondary education was powerfully forwarded by the system of grants-in-aid which the Government instituted in 1854. The grants are made in proportion to the educational efficiency of schools, regardless of the religion of the managers. Educational efficiency being greatest among the missionaries, they have earned the chief portion of the grants, though their lead in this respect is no longer so marked as it was. Their secondary schools number 233, with 62,602 boys and 8400 girls; 880 boarding-schools contain 22,193 boys and 17,566 girls, all Christian. In 87 theological schools 1852 students are in training, and 127 training-schools have 1904 male and 1173 female students. The boarding-schools are partly secondary and partly primary. The result of secondary education in conversions has been small, but the influence on social ideals and practice and on religious thought has been very great. The care bestowed on the education of the Christian community, especially the women, has made it, with the exception of the Parsis, the most literate in India, far above the average of the Hindus generally, and little, if any, behind the Brāhmins. The number of Christian officials and teachers is large in proportion to the size of the community, and it is not easy to keep pace with their need for a highly educated ministry, while satisfying the wants of the large rural populations. The provision of elementary education for these is the most urgent missionary problem of the day. True, the elementary pupils in mission schools throughout India number about 450,000, but the great majority of these are non-Christian. In missionary colleges and schools of every kind 576,371 persons were being educated in 1912—about one in ten of all pupils.

Christian literature took its first effective start with the work of the great pioneer, William Carey (1793-1834). Together with Marshman and Ward, he worked chiefly at Bible translations into a multitude of different languages, and also founded a missionary college in Serampore. Most of these versions were mere *ballons d'essai*, but the Bengali became the foundation of all further work in that

tongue. Henry Martyn at the same time produced his remarkable Urdu version of the NT, and a long line of translators and authors followed, supported by the publishing societies mentioned above. Krishna Mohan Banerjee among Hindu converts, 'Imād-al-Din among Muslims, and John Murdoch among English writers and publishers of Christian literature are outstanding names. Besides Bible versions there is also an incipient Christian literature in all the principal Indian languages, amounting in some of them to several hundred works. These are directed both to the training of the Christian Church and to convincing and persuading outsiders.

Among the philanthropic auxiliaries to the gospel message, medical work takes a foremost place. The effective prosecution of this in India dates from the middle of last century, when W. Lockhart of the L.M.S. was sent to Travancore, and Henry M. Scudder of the American Board to Ceylon. The chain of medical missions on the N. W. Frontier was begun in Kashmir in 1864, and has since then extended to Peshāwar, Bannu, Derā Ismā'il Khān, and Quetta. The attitude of a turbulent, fanatical, and treacherous Muhammadan population has been greatly modified by the work of medical missions, and, while converts have shown their faithfulness in martyrdom, Christian Scriptures and literature, illustrated by the example of disinterested Christian love, have penetrated far into regions otherwise inaccessible to the missionary. Similar effects have been produced on the intolerance of the caste-proud Hindu, and, while suffering is impartially relieved, regardless of creed or condition, the ministry of healing has brought many to the discipleship of the Healer. The first qualified woman-doctor came to India in 1880, though medical work by women had been carried on long before. Medical missionary women have led the way in relieving the once hopeless suffering of secluded Indian womanhood, given over to treatment by ignorant and clumsy midwives and barber-women. Of the Indian women-doctors now serving under the Dufferin Fund and other public bodies the great majority are Christians, with a sprinkling from the Brāhma Samāj.

Closely allied with general medical work is that of the leper missions. Of the unfortunate leper community, hitherto uncared for, several thousands are under care in Christian institutions, and many of them have accepted Christianity. Christian institutions for the blind and the deaf and dumb are the only ones for these classes in India. Famine orphanages are common, and have furnished an appreciable fraction of the Christian community, especially in N. India; these have in recent years found imitators among non-Christians, and, owing to the influence and example of mission schools and colleges, the conception and practice of social service are spreading among Indian students, as shown by the society of the 'Servants of India,' promoted by G. K. Gokhale.

India affords the largest and most influential sphere of work among the Muslims of the world. Its Musalmān community numbers 65,000,000, and it is both specifically Indian in type and cosmopolitan by ties of religion—a fact which gives this community a greater political importance than its numerical proportion to the Hindu population would warrant. The largest Muhammadan community of India, that of Bengal, now numbering 24,000,000, came under British rule after the battle of Plassey in 1757, but the first effective Christian work among them was done by the chaplain-missionary Henry Martyn when he translated the NT and much of the OT into the Muhammadan *lingua franca* of India—the Urdu, or camp dialect of Hindōstāni. His one convert, 'Abd-al-Masīh,

was the forerunner of many ex-Muslims who have joined the Christian ministry. It is impossible to estimate accurately the number of converts among the laity, but with their descendants they must run into several myriads. The circulation of the Scriptures, which the Muslim professedly recognizes as divine, is especially effective as a means of evangelism.

Among the Buddhists of Burma and S. Ceylon the results of work have been similar to those among the middle classes in India; i.e., conversions have been sporadic, occasionally in families, with here and there outstanding personalities. The Census of 1911 gave the number of Protestant Christians in India as 1,452,759, compared with 970,385 in 1901. The largest proportion is in S. India (626,000), where the work has been established longest and is most systematic. The distribution elsewhere varies chiefly according to the incidence of mass movements. Protestant Christians in other parts number: Bengal, 178,000; United Provinces, 135,000; Panjāb, 155,000; Bombay, 51,000; Central Provinces and C. India, 24,000. In the native States they are generally fewer—e.g., Haidarābād, 29,000; Mysore, 9,000; Panjāb States, 500; Kashmir, 700.

Syncretism, in the shape of reform movements, both religious and social, is much in evidence. The earliest organized body of this kind is the theistic Brāhma Samāj, founded in 1828 by Rāja Rām Mohan Ray—a small sect, but influential owing to the social standing, literary ability, and philanthropic zeal of its members. The teaching of its sections ranges from a modified Hinduism to a kind of Unitarian Christianity with Indian atmosphere. The Ārya Samāj (q.v.), founded in 1875 by Dayānand Sarasvatī, represents a cruder modification of original Hinduism, professing to hold to the Vedas as absolutely inspired, and accordingly forcing their interpretation to fit modern standards. It has a strong political and nationalist vein, and is bitterly hostile to Christianity; but it has done good work in the cause of education and social reform. It prevails chiefly in the Panjāb and United Provinces. In Bombay the Prārthanā Samāj (q.v.) does a similar work. These bodies, following missionary example, are beginning to interest themselves in the amelioration of the depressed classes by education, and the Ārya Samāj actually admits them and also Muhammadans into the 'Vedic religion' by a ceremony of purification (*suddhi*).

Modernist movement among the Muhammadans dates from the efforts of Sir Sayyid Ahmad, who began in 1858 to arouse his fellow-religionists to the imperative need for English education, which resulted in the establishment of the Anglo-Muhammadan College at Aligarh and the All-Indian Muslim Conference. It has also produced something of a school of liberal theology. A more wide-spread movement was inaugurated by Ghulam Ahmad of Qādiān in the Panjāb in the year 1879. He, like Dayānand, harked back to his sacred Scriptures, and treated the Qur'ān as verbally inspired, interpreting it in a new fashion with an eye to modern thought. This sect, too, is strongly opposed to Christianity, and some members of it have started a mission to England at Woking. Despite their attitude of opposition, these new sects all owe more or less of their originating impulse and of their specific doctrine to the message of Christian missions. The Indian national movement has a tendency to bring the reformed sects nearer together, and its influence is being felt in the Christian community also in a certain touchiness and impatience of foreign influence. At the same time there are signs of an increased feeling of responsibility for the evangelization of

India, marked by the establishment of the National Missionary Society and other efforts.

The Dutch possessions known as Indonesia were previously under Hindu rule, but since the 12th cent. they have gradually been overrun by Muslim chieftains, and out of the total population of 38,000,000 all but 2,000,000 are now Muhammadan. The Dutch East India Company, while building up its Eastern empire, also Christianized the natives after a fashion, but their condition at the beginning of the 19th cent. was very low. Since then it has improved, and the so-called permanent congregations (*gevestigde gemeenten*) are under the care of clergy appointed and maintained by the State; churches of later converts are from time to time placed under this organization. Modern missionary work began in the second decade of last century, and has been carried on mainly by Dutch and German missionaries on the four principal islands of Sumatra, Java, Celebes, and Borneo, as well as on some of the smaller ones. Large numbers of converts have been gathered in Java, in the Batak country on the north coast of Sumatra, and in the Minahassa district of Celebes. In the second of these an effective barrier has been erected to the inland advance of Islam. The total number of converts from Islam in these islands is estimated at 40,000.

v. CHINA.—In contrast with India, China has but one standard language and literature, and may therefore be regarded as a unity, despite its size and diversity. Modern missionary work was begun by Robert Morrison of the L.M.S. in 1807. He baptized the first convert in 1814, and before his death (1834) he had translated the Bible into Chinese, besides writing many pamphlets. But neither he nor his colleague, Robert Milne, was able to enter the jealously-guarded empire of China; they could only reside in the Portuguese settlement of Macao or in British territory at Malacca. The opening of China to foreign intercourse, including missionary effort, was the result of a series of wars, internal and external, the first of which, while it helped to admit the missionary, did much to discredit his message. The three 'opium wars' of 1842, 1858, and 1860 resulted in the opening of twenty-four 'treaty ports' to foreign intercourse, and it was in these, especially Shanghai, Hangchow, Tientsin, and Canton, that Protestant missions first gained a footing. Up to 1850, 3 English societies, 1 German, and 7 American had begun work, and the converts may have amounted to 100. The preponderance of American workers in China became more marked as time went on, and the same is true of Japan.

The next great convulsion was an internal one, the Taiping rebellion, which lasted from 1850 to 1864, and was eventually suppressed by the 'ever victorious army' of a Western leader, General Charles George Gordon, himself in deep sympathy with Christian missions. The leader of the rebellion had once come under the influence of a Christian missionary, and he claimed to have received a divine revelation to destroy idolatry and to put an end to the Manchu dynasty. The second of these aims was accomplished half a century later by another great convulsion, and we may believe that the Taipings did much towards preparing the way for the first, which is yet to come; but we may also be thankful that their iconoclasm did not prematurely succeed before the constructive forces of Christian faith and practice were ready to step into the breach. Meanwhile, missions on the coast were increasing their work, and the year after interior China had been quieted (1865) Hudson Taylor formed the China Inland Mission, which led the way to the formation of a network of stations during the last half century, now extend-

ing to the remotest interior of the Republic. This mission alone now numbers 1076 foreign missionaries, as against 473 of all societies and nationalities in 1877. In that year the number of converts was reckoned at 13,000.

The final break-up of the Manchu dynasty was first marked by the Boxer outbreak of 1900, directed, with the connivance of the Empress, against both foreigners and Chinese Christians; 135 missionaries, with 53 of their children, were killed, and some 16,000 Chinese Christians were massacred, many of them accepting death willingly rather than deny the faith. A strong impression was created by the refusal of missionary societies to accept a money indemnity from the Chinese Government for the missionary lives laid down freely for the gospel. During the succeeding decade the number of foreign missionaries in China increased almost 50 per cent (2785 to 4175, including wives of missionaries), and the number of converts more than doubled (204,672 to 469,896 in 1910). In 1913 the number of 'full members' was given as 235,303. Counting children and other adherents who are not included in their statistics by many bodies, the total may be estimated at about 500,000. Foreign missionaries, including wives, are 5186, and Chinese workers 17,879.

The revolution of 1911-12 was the final stage in the opening up of China to Western culture and Christianity. There has, it is true, been a slight reaction from the abolition of Confucianism as the religion of the State, but a stronger power than the iconoclasm of the Taipings is shaking the foundations of the old cults, namely the re-casting of the world-old system of Chinese education in Western and 20th cent. moulds. Moreover, the official request made by the Chinese Government on 27th April 1913 for the prayers of its Christian subjects, whatever motives of policy may have inspired it, was a recognition of Christianity as a power affecting deeply the interests of the nation; and Sun Yat Sen, the leader of the Cantonese revolutionary section and almost of the Republic, is a Christian who seeks to model his political policy on the principles of the Bible. Happily, too, the establishment of the Chinese Republic has coincided with the final abolition of the Indian opium traffic once forced on China by Britain.

The situation thus created has offered to the Christian Churches unexampled opportunities of access to the educated classes of China. These had hitherto looked with contempt on teachers who in very few cases could master the intricacies of their literature, but now they are ready to welcome Western language, literature, and science. Great efforts have been made, especially by the American missions, to grapple with the task of providing centres of higher education on a Christian basis throughout China, and in this, as well as in general work, the tendency towards co-operation between allied bodies is strong and helpful. No fewer than 9 university colleges are in effective operation, 7 in coast provinces, 1 in the centre, and 1 in the west. In several the medical faculty is strong, and Christian missions at present lead in the training of qualified doctors for China. There are some 264 mission hospitals (1913) with 126,788 in-patients and 2,129,774 out-patients for the year. Among the agencies which have been particularly active in taking advantage of the present opportunities the Y.M.C.A. has been specially in evidence. The evangelistic meetings conducted by J. R. Mott, and still more by George Sherwood Eddy (1912-14), were attended by large audiences of educated Chinese, sometimes up to 4000, in many of the principal towns of China. Among the hearers were officials of high rank, of whom one was baptized, while thousands of men promised to study

the Bible, and hundreds have actually joined the Christian Church.

The creation of a Christian literature for China has been carried on mainly by co-operation between the missions represented in the Christian Literature Society for China, under the guidance of Timothy Richards and others. The rapid opening of the mind of China to appreciation and reception of Western thought has given missionary scholars both the opportunity and the task of providing not only religious but general and scientific literature for readers, whether Christian or non-Christian. Both this and the work of Bible translation in China have been greatly facilitated by the existence of a common standard of written language, though versions of the Bible are being produced in several local vernaculars, as also in a popular form of the Mandarin. The circulation of the Bible is increasing by leaps and bounds; in 1910 a million and a half copies of Bibles, New Testaments, or single books were circulated; in 1914 two million and a quarter.

The first L.M.S. woman missionary to China was appointed in 1868. The work among women has been greatly hampered by the custom of foot-binding and by social prejudice, but these have been in great measure overcome, largely as the result of missionary effort, and the desire for the education of women is greatly on the increase; some are using their education not only to qualify for the medical and teaching professions, but also for social service. Over 600 members have been enrolled in a Student Volunteer Movement for the Christian ministry, putting aside prospects of lucrative careers. The tendency in this class is to work for the formation of an indigenous Chinese Church free from Western control, and some progress is being made in the self-support of native churches. Meanwhile the various cognate bodies which have hitherto been carrying on separate missions, such as Anglicans, Presbyterians, and Methodists, are amalgamating their organizations as a first step towards larger union.

In the outlying provinces of China work is still in its beginnings. It is furthest advanced in Manchuria, where Presbyterians and Lutherans have a community of some 33,000. The devoted work of James Gilmour (1870-91) in Mongolia left little visible result, and the societies which are following it up are gathering a few converts amid great difficulties. In Chinese Tibet these are insuperable, and the only quarter from which the gospel has entered that land is Little (or Western) Tibet, belonging to India, where Moravian missionaries have some small congregations, and have done much for the investigation of Tibetan language, literature, and history. Among the Muslims of Chinese Turkestan Swedish and China Inland missionaries are in the early stage of work.

vi. JAPAN, KOREA, AND FORMOSA.—Here, as in China, we have countries in which, after periods of notable success on the part of Roman Catholic missions, the native rulers have turned upon them as politically dangerous, and have violently persecuted the Christian Church, almost to extinction, till, through political changes, intercourse with the West has been resumed, but on a different footing, and with this the way has been opened for missions of the Reformed communions also. In the case of Japan this re-opening dates from the year 1859, when American missionaries were the first to settle in the country. The first Protestant Christian was baptized in 1864, but meanwhile persecution of Christians continued, sometimes with severity, till the Revolution of 1868, which once more brought the Mikado to power, and inaugurated the modern government of Japan. G. Ensor (C.M.S.), who arrived in 1869, was the first English missionary,

but full religious toleration was not granted till 1873, to be speedily followed by the serious suggestion that Christianity should be made the State religion. This was, however, negated, and subsequently there was a distinct reaction against foreign influences, among which Christianity was included, especially during the first decade of this century. But a swing back of the pendulum was indicated by the action of the Minister of Education in 1912, when he announced that the Government had resolved to recognize Christianity, alongside of Shinto and Buddhism, as a religion deserving of encouragement, expressing, at the same time, the hope that Christianity would conform itself to national aspirations. In this connexion it is noteworthy that the Christian message in Japan has appealed specially to men of culture. A quite disproportionate number of Christians are found among members of Parliament, high military and naval officers, doctors and professors, and Count Okuma has recorded that 'the indirect influence of Christianity has poured into every realm of Japanese life' (*Intern. Review of Missions*, Oct. 1912, i. 654). The number of Protestant Christian adherents in Japan may be reckoned at about 100,000. Forty per cent of the mission stations are said to be self-supporting. Three-fourths of the converts are attached to one or another of four amalgamated Churches representing the Anglican, Congregational, Presbyterian, and Methodist missions respectively. The great majority of the Protestant missions have established an organization for the promotion of common work, called the 'Federated Missions of Japan.' This has formed a general Christian Literature Society, and promoted joint efforts for evangelization, both in the towns and in the hitherto neglected rural districts.

The work of missionary education bulks less largely at present in Japan than in China, owing to the fact that from the first opening of the country education has been steadily taken in hand by the State, which now provides a completely organized system of education from the primary schools (at which attendance is compulsory) up to the universities and technical schools. There are 14 Protestant middle schools, with about 5500 scholars, and two colleges of university grade, of which the Doshisha College at Kyoto, founded by Joseph Niishima, has 700 students. Elementary missionary education is backward, as Christian children have access to well-worked Government schools. The educational work of the Y.M.C.A. has been much appreciated in Japan, and has strongly influenced the student world; and the Y.W.C.A. is reaching women increasingly. Christian missionary efforts among the aboriginal Ainus of Yezo have been appreciated by the Japanese Government, who bestowed a decoration on John Batchelor of the C.M.S. in recognition of his work for this dying race.

Among the dependencies of Japan, Formosa, first entered in 1865, now has some 30,000 Christians. Korea, after three and a half centuries of absolute seclusion, was not effectively entered till 1882, first by American missionaries, and, in 1890, by Anglicans. The growth of the work has been phenomenal, especially in the years following the Russo-Japanese war of 1905-06. Adherents in 1913 numbered 185,000, over 19,000 children were under education in mission schools, and 20 hospitals and 23 dispensaries were in operation. This progress has been accompanied by remarkable zeal in the study of Scripture and by reformation of life.

vii. THE NEAR EAST.—Under this term we include the lands, stretching from Morocco to Persia, in which Islam first arose and spread. Owing to the long dominance of Islam the work of Christian

missions to Muslims in this region is either non-existent or in its infancy. For our present purpose, we are not dealing with missions to the surviving Abyssinian, Coptic, Armenian, Syrian, Nestorian, or Jacobite Churches. We may, however, note that the educational work carried on among Oriental Christians, principally by American missionaries, in the Turkish empire and Egypt has resulted in the formation of considerable Protestant communities, whose progress in intelligence, morality, and zeal has raised the Christian name in the eyes of the Muslims and reacted favourably on the ancient churches by stimulating a desire for reform and progress. There is among the Protestant Orientals also the dawn of a desire to evangelize the Muslim—a feeling that had been eradicated from the Oriental Christian by a thousand years of oppression and misrule, which prevented him from seeing in the Muslim anything but an irreconcilable tyrant. The most effective missionary work done by men of these nationalities is that of Bible colporteurs. The Muslim verbally acknowledges the Scriptures of the OT and NT to be inspired, and, if once induced to study them, he is in many cases led to see that the theory of their corruption subsequently to Muhammad is a figment of his divines. Thus their witness to Christ, as well as their incompatibility with the Qur'an, is a powerful influence in the conversion of the Muslim. The British and Foreign Bible Society employs in the countries referred to 71 colporteurs, and has 27 depots, through which 128,926 copies of Bibles, Testaments, and portions are circulated. Individual conversions through these means are fairly frequent, but the building up of Christian communities is a slower process, hampered by special obstacles.

In Morocco, Algeria, Tunis, and Tripoli, among a total population of about 14,000,000, work is carried on mainly by the N. Africa Mission and other undenominational agencies. There are converts here and there. The principal agency, besides that of colportage, is schools, which are elementary. In Egypt work was begun in 1854 by the American United Presbyterians, principally among the Copts, and resuscitated by the C.M.S. in 1882. Considerable access has been gained among the Effendi class, and a number have been baptized, while medical work has to some extent reached the masses, in both town and country. Schools, primary and secondary, contain 17,094 pupils (largely of Coptic faith or origin), and a scheme for the establishment in Cairo of a Christian university is being actively promoted by American missionaries. German and English missionaries are pushing out into the Anglo-Egyptian Sūdān, and, though Christian propaganda is barred among the Muslims of that region, yet in Omdurman some educational work is being done. Cairo is the chief literary centre of the Muhammadan world, and from the Christian side vigorous efforts are being made by the Nile Mission Press, an Anglo-American undertaking, to produce and circulate evangelistic literature in Arabic.

In Asia Minor and Syria Protestant work has been done chiefly by American missions working among the ancient churches. The system of education which they have developed, from primary schools to colleges, especially the Roberts College in Constantinople, has notably affected the Muslim community in thought and attitude towards Christianity. Medical missions, in Palestine especially, have tended in the same direction. Arabia is touched on its outskirts at Baghdād, Bahrain, and Aden by schools, medical work, and colportage. Persia was first entered by Henry Martyn, when he completed his translation of the NT at Shirāz in 1811. In 1829 K. G. Pfander visited Persia, and wrote his

celebrated *Balance of Truth*, laying the foundation of a Persian Christian literature, built upon later by W. St. Clair Tisdall and others. In 1871 American Presbyterians organized work among the tribes of N. Persia, and in 1875 S. Persia was occupied by R. Bruce of the C.M.S. Medical and educational work has developed largely, and the demand for schools on a Western model far exceeds the power of the missionaries to supply it. The modernist sect of Baháism, sprung from the Bábí reform movement, has borrowed freely from Christianity but does not so far make much return (see art. BĀB, BĀBÍ). Throughout these missions work among women, visiting, teaching, and medical, has initiated or helped on the movement perceptible in Muslim lands for the elevation of the female sex.

viii. MISSIONS TO JEWS.—The Jewish population of the world is approximately 12,000,000. Protestant missionary work among them is carried on by 95 societies, maintaining 500 men and 350 women missionaries. The *London Society for Promoting Christianity among the Jews* (253 missionaries; income in 1914, £51,000) is the principal one. Statistics are quite imperfect. Some 250 of the Anglican clergy are converts or sons of converts from Judaism. J. F. de le Roi estimates baptisms during the 19th cent. in Protestant churches at 72,740; Roman Catholic, 57,300; Greek, 74,500. The theologians Neander and Edersheim, the missionary bishops Schereschewsky, Hellmuth, Alexander, and Gobat, were Christian Jews.

III. GENERAL ASPECTS.—1. Principles.—As a result of the work of missions by the Reformed Churches since the end of the 18th cent. there is now a growing community of some 6,000,000 native Christians belonging to the most varied races and cultures, from the primitive aborigines of Australia to the progressive people of Japan. Yet in the age which has seen this unexampled expansion of Christianity in every direction the question has been raised whether Jesus of Nazareth ever intended that His disciples should carry the message of His redemption into all the world, though it is fully allowed that the world mission of His faith was the legitimate and necessary consequence of the principles which He enunciated and exemplified. To suppose that the Originator of this life and teaching, which have persisted in spreading their vitalizing influences among the nations for nineteen centuries, was Himself without desire for or intention of producing such an effect would be to face the most insoluble enigma of history. The development which we have sketched makes it abundantly clear that the mainspring of this world-wide enterprise of missions has been the conviction that its promoters and messengers were carrying out the conscious purpose and explicit command of the Saviour of the world. At the same time it would be unnatural that the reconstruction of thought which our age is experiencing in every sphere of life should leave the conception of foreign missions entirely unaffected. Among the Reformed Churches more especially Zinzendorf's motto of 'souls for the Lamb' as the one goal of missionary effort has expanded, under the influence of teachers like G. Warneck in Germany and B. F. Westcott in England, into the wider and deeper conception of a call to regenerate the nations spiritually, morally, intellectually, and socially, and to build up the universal Church of Christ. Moreover, the results of research into Christian origins have helped us, with a truer historical perspective, to test our contemporary missionary work by the example and spirit of the Apostolic Age. From subsequent early and mediæval history, too, the Churches have been learning lessons of the manifold adaptation of the form of missionary work to the conditions and needs of different ages and peoples, and of these lessons the

whole modern development is an amplification. But this larger sweep of outlook and effort has by no means made the first aim of individual conversion superfluous. On the contrary, this remains the vital centre of the whole, and it is as this is expanded and co-ordinated in the larger aim that the true end of missionary work is attained.

2. *Methods, apostolic and contemporary.*—The radical question is raised again and again whether the close following of the methods of St. Paul is not the true solvent of our most fundamental difficulties, particularly of the lack of spiritual and economic independence in our mission churches. Were the evangelist to make brief sojourns instead of settling down, to devolve authority straightway on native helpers instead of keeping them in long tutelage, to demand instead of giving pecuniary assistance, Christian congregations might, it is urged, be smaller, but they would be stronger and self-reproducing. Each of these paths has been tried in modern missions, generally with scant success, for the same end under different conditions may demand different means. Where there was a Jewish diaspora standing at the threshold of Christianity, teaching and discipline had been assimilated which may now require a generation; where habitat and civilization of evangelist and evangelized were practically identical, the problems now arising from disparity of civilizations and distance of abode were non-existent. Recognizing these and other special difficulties and defects of modern missionary work, we have to seek their solution not in the forms of apostolic, or any other, evangelism, but in the principles embodied in those forms. Thus in the adventure of faith undertaken by the C.I.M., which has so remarkably opened up China to the gospel, we have a contemporary adaptation of the Pauline method, rapidly following the main lines of communication and occupying the chief cities of an empire which in culture and administration offers much analogy to that of Rome. Or, again, in the revival of community life in the brotherhoods and sisterhoods of Anglican missions we have a useful adaptation of early and mediaeval monasticism to the conditions of the mission-field of to-day. But both of these have the defects of their qualities.

The effect of modern thought on the adaptation of NT principles to contemporaneous missionary work may be traced in the development of the chief missionary methods. The mission school and college have no precedent in apostolic times, and they differ greatly from the cloister school of monastic missionaries, their original purpose being to serve as a means of conveying the message to the children of the literate, or would-be literate, classes who are otherwise not easily reached, and of bringing them into the Christian Church when they have arrived at years of discretion. The most notable effect of earlier educational work was the conversion of men of mark, who exercised great influence on the development of the Church. Within the last generation this aspect of the work has receded into the background; the conception of educating the mind of a nation and creating an atmosphere permeated by Christian ideals has exercised increasing influence on missionary educators, especially in high schools and colleges, and it is certain that their successes have lain mainly in this direction. The value of such preparation of the community for the eventual reception of Christ as Lord and Master is immense, and it may be hoped that much of the work which commonly falls to be done after conversion is thus being accomplished beforehand. But there is need of balanced judgment and steadfast will, lest elaboration of the scaffolding delay or even prevent the erection of the building. Similarly, in the now indispens-

able work of medical missions the physical benefits conferred were at first entirely subsidiary to the spiritual aim; but the conception of a Kingdom of God to be realized in things temporal as well as spiritual has led to emphasis upon the fact that the work of healing, even apart from any spiritual effects, is a worthy aim of the missionary. This involves the risk that the medical missionary may be merged in the philanthropist. The modern medical missionary would not, if he could, ignore the demand for the greatest possible scientific efficiency, for he will not allow Christian zeal to be the bosom friend of second-rate professional skill; yet he will lay the decisive emphasis of his calling on the specific aim of the missionary to carry home his message. Again, in the delivery of that message by the general missionary a comparative study of religion and sociology has modified the method of approach by the Christian messenger to non-Christians. He is less inclined to attack their observances and rites than to elicit the need latent in each human heart of something higher, less prone to controvert their doctrines and deities than to set forth Christ in life and teaching. The conviction is gaining ground among his hearers that he is no ruthless iconoclast of their national religion, but a sympathetic guide who would lead them to satisfactions which it fails to supply. But, if he is to do this, his aim must still be that they may be 'redeemed from the vain manner of life handed down from their fathers' (1 P 1¹⁸) and come to know the only true God. Without attacking concrete sin and error this cannot be done. The manner of controversy has been rightly modified, and it is well to use points of agreement as a basis for approach; but the reason for adopting one faith in place of another cannot lie in their points of resemblance, but only in those of difference. Hence controversy or polemic, in the right form, can never become obsolete as a missionary weapon. Once more, in the case of missionary work for women its first, and most worthy, aim was simply to deliver sisters whom the Christian woman found in degradation, ignorance, and suffering from these evils into the liberty of Christian womanhood. As, in the course of generations, they laboured for this end, the great task of training new types of Christian motherhood suited to each nation gradually dawned upon them, and they became aware that they had stimulated a greater awakening than they had dreamed of among the women of China, India, and Africa. But Christian personality remains the key of the position, and the feminist movement, which is growing in East and West alike, finds its true regulative everywhere in the principles of the gospel.

3. *Cognate activities.*—A bare mention must suffice of the achievements of missionaries in works ancillary to their main calling. The names of Livingstone, Krapf, and Rebmann among explorers, of James Legge, R. Caldwell, H. A. Jaeschke, and Carl Meinhof among philologists, and of R. Codrington and John Roscoe among anthropologists are but a few among many. In civil life, too, missionaries have sometimes held a prominent place—e.g., C. F. Schwartz in Tanjore and John Mackenzie in Bechuanaland; and in India municipal offices have occasionally been held by them. To outsiders these public services have been a vindication of the missionary's usefulness; to some among the missionary public it has seemed that they might be a hindrance to it. In the nature of things such services must remain exceptional, rendered by isolated individuals who possess the ability and energy. As by-work they have been of service; were they more than this, they would prove a hindrance.

4. Results and problems.—The present condition of the world mission-field shows off-shoots of the Reformed Churches in every stage of growth. Their members, as always, vary in genuineness and strength, but everywhere they include whole-hearted followers of Christ, and, as a body, they have advanced greatly in tone and conduct from their former non-Christian manner of life. The animist, the pantheist, the agnostic, and the deist have come to believe in one almighty Father, one sinless Saviour, one indwelling sanctifying Spirit. From this faith grow the fruits, both of higher morality and of social amelioration, enhanced culture, and intellectual progress. In many directions the desire is shown to hand on the benefits of the gospel to others, and readiness to make sacrifices in so doing is evident. It has been remarked that the churches of the mission-field have produced no first-class heresy, implying thereby a lack of serious intellectual striving. But other causes may more reasonably be assigned for this. The intellectual training and status of the foreign teacher is so far superior, in the great majority of cases, to that of his converts that it would be difficult for them to maintain positions contrary to those which he has laid down—all the more so as the possible variations of intellectual formulation have been fairly fully worked out by previous heresies, the weaknesses of which have been pointed out to them. Moreover, no inconsiderable part of the effect produced by Christian missions is to be found in the change of attitude, the new beliefs and ideals of conduct, individual and social, taken over from them by the still non-Christian world. In this process the analogues of early Christian heresies are to be found in the teachings of bodies outside the Christian Church. Thus the Brāhma Samāj reform of Hinduism represents a kind of Arianism; the Bahai offshoot of Islām would stand for one variety of Gnosticism, and theosophy (*q.v.*) for another. Generally speaking, syncretism is largely practised, and in many cases by men of noble character who are striving for a reconciliation of the old and the new, but the religion of the amateur collector is not more likely to stand now than in the early centuries, though it is a pitfall of which the abler intellects of the young churches need to beware.

Analogous to this is the problem of unity in the Reformed Churches. The majority of the divisions which have sprung up in the West from local and temporary causes have naturally no meaning to the Eastern convert; and the same holds good of many dividing lines in doctrine. The resulting tendency to unity in faith and practice, in face of powerful opposing forces, is healthy and hopeful. There is, however, a danger that members of the young churches should regard all distinctions in doctrine and discipline indiscriminately as mere Western peculiarities which may be swept aside in order to construct an edifice of truly indigenous Christianity. A sound attitude of the missionary teacher towards questions of race and nationality will do much to meet this danger.

Next to the essential spiritual element no factor in missionary work is more weighty than the social progress which it has initiated or stimulated. From these successes a difficulty often springs. In the contact of two deeply-separated civilizations the convert naturally assimilates that of his Western teacher, but without the exercise of wisdom and restraint he may evolve a mere caricature of Western culture without its balance and restraint, thereby repelling alike his own countrymen and his Western fellow-Christians; and among higher races he may acquire needs and habits which will involve him in economic difficulties. Meanwhile, Western culture and commerce are ceaselessly flooding into mission lands,

and the change of life connected with them is affecting non-Christians scarcely less than Christians. As a result of this the efforts of the missionary to promote a simple indigenous style of living may be resented as intended to repress the progress of the native Christian. One of the missionary's most difficult and delicate tasks is to decide and to convince his charges what is justly due to the decencies and progress of Christian life and what is illegitimate as ministering to extravagance and parasitic growth.

Thus social progress is intimately connected with the great difficulty presented by the economic dependence of the mission churches on their parents at the home base. The amount annually expended by home churches on the maintenance of ministers, preachers, and teachers of indigenous races is estimated at £7,000,000. The amount recorded as raised by the native churches in the same connexion is £1,500,000. Allowing for a liberal margin of error, the disparity is still immense, even when we consider that a large number of the converts are drawn from impoverished strata of society whose financial weakness must be great for some time to come. Almost every advance is dependent on fresh exertions made by the mother churches, who also contribute largely to the maintenance of worship, pastoral care, and teaching. In the last resort the economic dependence of mission churches is part of the larger problem of the economic dependence of the coloured races on the white, and in all probability the one will not be solved without the other.

Everywhere we are brought up against the racial problem. It was there from the first, and the success of missions has been in proportion to that of the messenger in understanding and treating with wise sympathy people of a foreign race. As the races have become conscious of their common ideals, traditions, and interests, the racial question in the mission-field has developed into the national. Everywhere the missionary is met, actively or passively, by insistence on the rights of the race in its own sphere and a demand for equal opportunity, as against the old idea of the inherent superiority of the white man. The opposition thus engendered reacts against the white man's religion, and there is on each continent a restiveness and impatience of control on the part of converts and churches such as did not exist a generation ago. To deal with this firmly and sympathetically as a sign of healthy growth, and as a pathway to new and fruitful relations, is the part of wisdom. Premature independence and unduly delayed emancipation both have their dangers. Smartness and efficiency may be made an idol; but it is also a temptation to take the easy path of lowering the ideals of the gospel, and this leads to deterioration. The problem is to be solved only by patient, tenacious charity on the part of the missionary who understands the national and racial feeling, and whose watchword is the responsibility of the stronger.

LITERATURE.—H. U. Weitbrecht, *Bibliography for Missionary Students*, Edinburgh, 1918. Special mention may be made of: G. Warneck, *Outline of a Hist. of Protestant Missions*, do. 1906 (new Germ. ed., Berlin, 1913), *Evangelische Missionslehre*, 5 vols., Gotha, 1897-1908; J. S. Dennis, *Christian Missions and Social Progress*, 3 vols., Edinburgh, 1899-1906; *Report of the World Missionary Conference*, do. 1910; J. R. Mott, *The Continuation Committee Conferences in Asia, 1912-13*, do. 1913; J. Warneck, *Paulus im Lichte der heutigen Heidenmission*, Berlin, 1918; J. N. Farquhar, *Modern Religious Movements in India*, New York, 1915; C. H. Robinson, *Hist. of Christian Missions*, Edinburgh, 1916.

H. U. WEITBRECHT.

MISSIONS (Muhammadan).—The materials for the history of Muhammadan missionary activity are much less abundant than those for the history of the propagation of Christianity. Muhammadan

historians appear to have been singularly incurious as to the spread of their own faith, and only scanty references to conversions are found at rare intervals in the vast historical literature of the Muhammadan world. The absence of a priesthood in Islām, implying the setting apart of a separate body of men as exponents of the doctrines of the faith, has had its counterpart in a lack of ecclesiastical annals; there have been no Muslim missionary societies (except towards the end of the 19th cent.), no specially trained propagandists, and very little continuity of missionary effort; even the religious orders of Islām, which have at times done much for the spread of the faith, have not cared to set on record the story of the success that has attended their preaching. There is, therefore, nothing in Muhammadan literature to correspond to the abundant materials for the history of Christian missions provided in the biographies of Christian saints, the annals of the Christian religious orders, and the innumerable journals and other publications of the various Roman Catholic and Protestant missionary societies. In fact, the fullest details as to Muslim missionary activity are generally to be found in the writings of the Christian clergy who have watched with apprehension the rapid extension of Islām. Yet to this poverty of information from Muhammadan sources there is one notable exception, namely, the biography of Muhammad himself. The missionary activity of Islām begins with the life of the founder, and the numerous biographies of the Prophet are full of stories of his efforts to win over unbelievers to the faith.

In the Qur'ān itself, the duty of missionary work is clearly laid down in the following passages (here quoted in chronological order according to the date of their revelation):

'Summon thou to the way of thy Lord with wisdom and with kindly warning: dispute with them in the kindest manner' (xvi. 128). 'They who have inherited the Book after them (i.e. the Jews and Christians) are in perplexity of doubt concerning it. For this cause summon thou (them) to the faith, and walk uprightly therein as thou hast been bidden . . . and say, In whatsoever Book God hath sent down do I believe: I am commanded to decide justly between you: God is our Lord and your Lord: we have our works and you have your works: between us and you let there be no strife: God will make us all one: and to Him shall we return' (xlii. 14). 'Say to those who have been given the Book and to the ignorant, Do you accept Islām? Then, if they accept Islām, they are guided aright: but if they turn away, then thy duty is only preaching' (iii. 19). 'Thus God clearly sheweth you His signs that perchance ye may be guided, and that there may be from among you a people who invite to the Good, and enjoin the Just, and forbid the Wrong; and these are they with whom it shall be well' (iii. 99 f.). 'To every people have we appointed observances which they observe. Therefore let them not dispute the matter with thee, but summon them to thy Lord: Verily thou art guided aright: but if they debate with thee, then say: God best knoweth what ye do' (xxii. 66 f.). 'If any one of those who join gods with God ask an asylum of thee, grant him an asylum in order that he may hear the word of God; then let him reach his place of safety' (ix. 6).

Further, the faith of Islām was to be preached to all nations, and all mankind were to be summoned to belief in the One God.

'Of a truth it (i.e. the Qur'ān) is no other than an admonition to all created beings, and after a time shall ye surely know its message' (xxxviii. 87 f.). 'This (book) is no other than an admonition and a clear Qur'ān, to warn whoever liveth' (xxxvi. 69 f.). 'We have not sent thee save as mercy to all created beings' (xxi. 107; cf. also xxv. 1 and xxxiv. 27). 'He it is who hath sent His apostle with guidance and the religion of truth, that He may make it victorious over every other religion, though the polytheists are averse to it' (xii. 2).

In the hour of Muhammad's deepest despair, when the people of Mecca turned a deaf ear to his preaching, when the converts that he had made were tortured until they recanted and others had to flee from the country to escape the rage of their persecutors, the promise was revealed:

'One day we will raise up a witness out of every nation' (xvi. 80).

The life of the Prophet himself presented, for succeeding generations, an ensample of Muslim

missionary activity. When he began his prophetic career, his first efforts were directed towards persuading his own family; his earliest converts were his wife, Khadijah, his adopted children, Zaid and 'Alī, and some members of his immediate circle. He did not begin to preach in public until the third year of his mission, but he met only with the scoffing and contempt of the Qurāish. In the fourth year of his mission he took up his residence in the house of al-ʿAṣam, one of the early converts, and many Muslims dated their conversion from the days when the Prophet preached in this house, which was in a central position, much frequented by pilgrims and strangers. The conversion of 'Umar b. al-Khattāb about two years later was a source of great strength to the little band of Muslims, who now began publicly to perform their devotions together round the Ka'bah. Though Muhammad continued to teach for ten years, the number of converts remained very small, and an attempt to win adherents outside Mecca, in the town of Tā'if, ended in complete failure; but some pilgrims from Yathrib (or, as it was afterwards called, Medīna) showed themselves to be more receptive, and Muhammad sent one of his early converts, Muṣāb b. 'Umair, to Yathrib to spread the faith in that city. Muṣāb's mission was so successful that in the following year he was accompanied by more than seventy converts in the pilgrimage to Mecca; they invited Muhammad to take refuge in Yathrib, and he accordingly migrated thither in September 622—a date which was afterwards adopted as the beginning of the Muhammadan era. In Medīna the little Muslim community gradually developed into a political organism that spread over the greater part of Arabia before the death of Muhammad in 633, and political expediency tended to thrust purely religious considerations into the background; but the proselytizing character of the new faith was not lost sight of, and the Arab tribes that submitted to the political leadership of Muhammad accepted at the same time the faith that he taught. But of distinctively missionary activity there are only scattered notices, and for some time after the death of Muhammad there is a similar lack of evidence of distinctively proselytizing effort on the part of the Muslims during the expansion of Arab rule over Syria, Persia, N. Africa, and Spain, though in all these countries large numbers of persons from among the conquered populations passed over to the dominant faith. There is one notable exception in the case of the pious 'Umayyad khalifah, 'Umar b. 'Abd al-'Aziz (717–720), who was a zealous propagandist and endeavoured to win converts in all parts of his vast dominions from N. Africa to Transoxania and Sind.

With the decline of the Arab empire the Muslim world was faced with the task of converting its new rulers. The conversion of the Turks proceeded very slowly; the earliest converts appear to have been the Turkish soldiers who took service under the khalifah in Baghdad; there are a few legends of proselytizing efforts in Turkestan, but the history of the conversion of the Turkish tribes is obscure, and Islām seems to have made little way among them before the 10th cent., when the Seljūq Turks migrated into the province of Bukhārā, and there adopted Islām. The conversion of the main body of the Afghāns probably belongs to the same period or a little earlier, though national tradition would carry it back to the days of the Prophet himself.

A more formidable task was the conversion of the Mongols, and here Islām had to enter into competition with two other missionary faiths, Buddhism and Christianity, both of which at the outset met with greater success. The devastations

of the Mongols had brought ruin to the centres of learning and culture in the Muhammadan countries which they overran, and it was only by slow degrees that Islām began to emerge out of the ruins of its former ascendancy and take its place again as a dominant faith. From the latter part of the 13th cent. converts began to be made from among the Mongols, and a new epoch in Muslim missionary history then commenced, in which the religious orders, and the Naqshbandi in particular, played a prominent part. In the profound discouragement which filled the Muslims after the flood of the Mongol conquest had poured over them their first refuge had been in mysticism, and the *pīr*, or spiritual guide, who during this period began to exercise an increasing influence, became of special importance among the proselytizing agencies at work. The first Mongol ruling prince to profess Islām was Baraka Khān, who was chief of the Golden Horde from 1256 to 1267; according to one account, he owed his conversion to two merchants whom he met coming with a caravan from Bukhārā; but the conversion of their prince gave great offence to many of his followers, and half a century later, when Uzbeg Khān (who was chief of the Golden Horde from 1313 to 1340) attempted to convert the Mongols who still stood aloof from Islām, they objected, 'Why should we abandon the religion of Jenghiz Khān for that of the Arabs?' In other parts of the Mongol empire the progress of Islām was still slower and more fluctuating, and it did not become the paramount religion in the kingdom of the Ilkhāns of Persia until 1295, or among the Chaghatāy Mongols until three decades later. The first Muhammadan king of Kāshgar (which the break-up of the Chaghatāy dynasty had erected into a separate kingdom) was Tūgluq Timūr Khān (1347-63), who is said to have owed his conversion to a holy man from Bukhārā, by name Shaikh Jamāl al-Dīn; but so late as the end of the 16th cent. a dervish named Ishāq Walī found scope for his proselytizing activities in Kāshgar and the neighbouring country, where he spent twelve years in spreading the faith.

The extension of Mongol rule over China gave an impulse to the spread of Islām in that country; though Muslim merchants had been found in the coast towns from a much earlier period, the firm establishment of their faith in China dates from the 13th cent., and the settlements of immigrants from the west, which were founded from that period, developed into the great communities of Chinese Muslims of the present day—through various causes, of which proselytism has been one. The rise of the Mongols was also incidentally the cause of renewed missionary activity in India; Islām had gained a footing in Sind and on the Malabar coast as early as the 8th cent., and in the north after the establishment of Muhammadan rule at the close of the 12th cent., but the terror of the Mongol arms caused a number of learned men and members of religious orders to take refuge in India, where they succeeded in making many converts.

To the period of the Mongol conquests—though in no way connected therewith—is traditionally ascribed the first establishment of Islām in the Malay Archipelago. Sumatra appears to have been the first island into which it was introduced—probably by traders from India and, later, Arabia; but the extension of the new faith was very slow, and even to the present day large sections of the population of this island remain unconverted. The conversion of Java, according to the native annals, began in the 15th cent. and spread from this island into the Moluccas and Borneo. The arrival of the Portuguese and, later,

of the Spaniards, in the 16th cent. checked for a time the growing influence of Islām in the Malay Archipelago, and the rival faiths of Christianity and Islām entered into conflict for the adherence of its peoples; but the oppressive behaviour of the Spaniards and their attempts to enforce the acceptance of their religion ultimately contributed to the success of the Muslim propagandists, who adopted more conciliatory methods for the spread of their faith, intermarried with the natives, and conformed to their manners and customs. The missionary activity of Islām has been carried on spasmodically in these islands up to the present day—for the most part by traders. From the very nature of the case, there has been little historical record of their labours, and this little is chiefly found in the reports of Christian missionaries. Legendary accounts of the arrival of the earliest apostles of Islām in several of the islands have been handed down, but they are uncritical and of doubtful historical value.

The history of the spread of Islām in India by missionary effort is not quite so scanty, but it has largely been overshadowed by the absorbing interest of political events; for, though the Indian Muhammadans have produced a large body of historical literature, their references to the propaganda of their faith in these histories are few. The biographies of saints, however, and local traditions contain many references to a successful propaganda, and, among much that is legendary and fantastic, there is evidence of the activity of a number of missionaries from the beginning of the Muhammadan period. Among these may be mentioned Shaikh Ismā'il, a Bukhārī Sayyid who preached in Lahore in 1005, Sayyid Nādir Shāh, the patron saint of Trichinopoly (where he died in 1039), and 'Abd Allāh, who landed in Cambay in 1067, and is said to have been the first missionary of the Musta'li Ismā'ilī sect (known in India as 'Bohorahs'). Towards the close of the same century another Ismā'ilī missionary, but of the Khojah sect, Nūr al-Dīn (generally known as Nūr Satāgar), carried on a successful propaganda in the Hindu kingdom of Gujarāt. In 1236 there died in Ajmer one of the greatest of the saints of India, Khwājah Mu'in al-Dīn Chishtī, who settled in that city while it was still under Hindu rule and made a large number of converts; ten years later died one of the apostles of Islām in Bengal, Shaikh Jalāl al-Dīn Tabrizī, the forerunner of a long series of missionaries in that province. Of importance in the history of Islām in the Panjāb is the settlement in that part of India of saints of the Suhrawardī order; e.g., to the preaching of Bahā' al-Dīn Zakariyā, and of Sayyid Jalāl al-Dīn and his descendants, many of the tribes of the Panjāb owe their conversion. These are but a few out of the long series of preachers of Islām who carried on a distinctively missionary work, side by side with the various influences, social and political, that contributed to the spread of Islām in that country.

Of the vast history of the spread of Islām in Africa it is not possible here to give more than a brief sketch. For the early period of the Arab conquest of Egypt and N. Africa, though conversions took place on a large scale, there is little evidence of active missionary effort. The opposition of the Berbers in the west and the Nubians in the Nile valley checked for a time the southward movement of Muslim influences. By slow degrees, however, Islām penetrated among the Berbers, but acquired an ascendancy over them only when it assumed the form of a national movement with the rise of the native dynasties of the Almoravids in the 11th, and the Almohads in the 12th, century. The Berbers introduced Islām into the lands

watered by the Senegal and the Niger, and Arabs from Egypt spread their faith in the eastern Sūdān during the 12th cent., to which period the conversion of Kordofan and Kanem appears to belong. In the 13th cent. the Mandingos come forward as zealous missionaries of Islām, to be followed by the Hausas, whom they had converted, and the Hausas have carried their faith with them from one end of the Sūdān to the other. Their propagandist efforts were intermittent, however, and many parts of the Sūdān remained untouched by Muslim influences until the 19th century.

Except in India and the Malay Archipelago, there are few records of Muslim missionary activity from the 15th to the 18th century. Nevertheless many conversions occurred during this period; e.g., the Turkish conquests in Europe in the 14th and 15th centuries were followed by conversions to Islām on a large scale, and in the 17th cent. thousands of Christians in Turkey in Europe went over to the religion of their rulers; similarly the conquests of Aḥmad Grāñ in Abyssinia (1528-43) were signalized by numerous conversions to Islām; but there is little evidence of any direct propagandist efforts on the part of the Muslims.
